"Despite some tree torching, the Peterson Hollow Fire [has] made no significant runs," Hellstrom reported.

Meanwhile, central Utah's Briggs Fire was being monitored by about 10 firefighters, but otherwise being allowed to burn in the Beaver District of the Fishlake National Forest. In spots, back fires were set to deprive the blaze of uncontrolled fuels.

"Over the last 14 days a lot of progress has been made in firing operations, improving contingency lines and protecting values at risk," said Fire Information Officer Daniel Claessen, adding that it likely will take the onset of winter and snowfall to finally snuff the last of the flames.

The lightning-sparked fire had burned 3,418 acres along the south fork of North Creek since it was first reported on Aug. 9, about 10 miles northeast of Beaver.

Several other, smaller wildfires also were being allowed to burn throughout the state where potential for structural damage was nil, and the benefits to the health of forest lands involved were deemed positive in the long term.

Wildfire crew members killed in crash on way to fight Utah fire (St George News)

Written by Kimberly Scott

ST. GEORGE — A group of firefighters from Michigan on their way to the Box Canyon wildfire in Utah were involved in a crash on Interstate 35W in Anoka County, Minnesota, which left two firefighters dead and multiple others seriously injured.

The driver of the truck was subsequently charged with two counts of criminal vehicular homicide.

At approximately 3 p.m. Saturday, a truck carrying nine members of a wildland firefighting crew left the roadway for an unknown reason, struck the median cable barriers and rolled, according to a statement issued by Minnesota State Patrol.

The wildland fire crew was from the Beartown Firefighters, which is based in Baraga on Michigan's Upper Peninsula and is managed by the Keweenaw Bay Indian Community and the federal Bureau of Indian Affairs.

State Patrol officials identified the driver of the truck as 28-year-old Michael Johnson.

Eight of the passengers were identified as 23-year-old James Shelifoe; 25-year-old Alan Swartz; 26-year-old Dave Varline; 33-year-old Ross Jaukkuri; 34-year-old Gavin Loonsfoot and Joseph Jossens, all of Michigan; 29-year-old Shashaywin Sandman, of Minnesota; and 26-year-old Tyler Tolonen, of Wisconsin.

Shelifoe and Swartz were pronounced dead at the scene, according to the State Patrol.

The Keweenaw Bay Indian Community released a statement about the crash on its Facebook page Saturday night: "Our hearts are broken and our prayers are with the family members and those injured."

In a separate statement Sunday, the tribal government said that the injured firefighters were expected to recover, but released no details about their conditions.

Eleven other firefighters were also en route to the Box Canyon Fire in Utah when the fatal crash occurred

Eleven other firefighters were also en route to the Box Canyon Fire in Utah when the fatal crash occurred, according to the statement. The wildland fire crews were reportedly traveling in a convoy of three but became separated from the truck that crashed.

"Those firefighters are understandably shaken and are getting much-needed support from local agencies," the statement said.

Officials investigating the crash said Johnson showed "signs of impairment and combative behavior" when officers arrived at the scene of the crash, according to charges filed Monday in Anoka County District Court documents and obtained by ABC News.

Johnson later told investigators he believed he had fallen asleep at the wheel

Johnson later told investigators he believed he had fallen asleep at the wheel and that he hadn't slept more than 45 minutes in more than 24 hours, according to a criminal complaint.

Johnson also allegedly admitted to using marijuana early Saturday and to using cocaine two days earlier. Toxicology results are pending.

As a result of the crash and subsequent investigation, Johnson was arrested and charged with two felony counts of criminal vehicular homicide.

The Box Canyon Fire in Summit County east of Park City had consumed 4,000 acres as of Monday.

Unstable weather systems brought heavy winds into the area, increasing the fire's activity, according to a press release from U.S. Forest Service.

Officials said Sunday that the Utah National Guard had been activated to assist in battling the wildfire.

Utah Guard's 97th Aviation Troop Command and 2nd Battalion 211th Aviation responded to the Box Canyon Fire with two UH-60 Black Hawk helicopters, according to a press release from the Utah National Guard.

The human-caused fire is reportedly 20 percent contained.

Persons arrested or charged are presumed innocent until found guilty in a court of law or as otherwise decided by a trier-of-fact.

WYOMING

Grand Teton National Park - Berry Fire Update - Aug. 29 (Teton Valley News)

Since its discovery, Grand Teton National Park has been actively managing the Berry Fire for ecological benefits. The fire originated in the northern portion of the park, near Berry and Owl Creeks on the west side of Jackson Lake. Extreme fire behavior as a result of high winds and low relative humidity on Monday, August 22 pushed the fire across Jackson Lake and into the Teton Wilderness on the Bridger-Teton National Forest. A Type 2 Great Basin Incident Management Team took command of the fire on August 24th.

Closures:

At this time, fire managers anticipate being able to reopen Highway 89/191/287 tomorrow, Tuesday, August 30. This is subject to change dependent on weather and fire conditions. Until then the highway does remain closed for safety between the South Gate of Yellowstone National Park and Leeks Marina.

While Grand Teton and Yellowstone National Parks and Bridger Teton National Forest all have area closures in effect, both National Parks are open to visitors. This includes Leeks Marina and most visitor destinations and services. Travel times to Yellowstone may be increased depending on planned routes. Check before you go. And please drive carefully, with lights on, due to both visibility concerns from smoke and increased vehicle numbers.

Current Situation:

The Berry Fire was much more active yesterday. Most of the growth occurred on the northeast corner of the fire - in the Teton Wilderness - and the southwest portion of the fire - along Jackson Lake. Firefighters

have completed preparatory actions around Flagg Ranch, as well as on historic cabins and lookouts to minimize impacts from the fire, in the event the fire should reach those locations.

Today's weather will again be warmer and drier with atmospheric instability, which can contribute to rapid fire growth. Temperatures will rise into the mid-80s, and the relative humidity may drop into single digits. Light winds will prevail over the fire area. Despite the shorter days, thermal belts are allowing the fire to burn actively throughout the night.

Western Wyoming is experiencing historical lows for fuel moistures. Currently, no significant moisture is in the extended forecast. The conditions are similar to 2012, when fires burned actively well into September. The Berry Fire will continue to burn in the coming weeks, accomplishing the goal of rejuvenating the ecosystem through the natural process of wildland fire.

Firefighters expect to finish their work along Highway 89/191/287 today. Unless fire behavior or weather conditions change today, the road will reopen to the general public tomorrow.

For more information:

Follow Grand Teton National Park and Bridger-Teton National Forest on social media: @GrandTetonNPS and @BridgerTetonNF on both Facebook and Twitter. Information on other fires in western Wyoming is available at www.TetonFires.com. And information on fires burning in eastern Idaho can be found at www.IdahoFireInfo.com, or by filtering Idaho incidents on InciWeb.

One Day In August (Teton Valley News)

Bruce Mason -- Teton Valley Weather

August 27, 2016. The Tie Canyon fire had been slow the last couple of days, but the wind was forecast to gust up from the west in the afternoon. As that afternoon wind increased, near Hoback in Wyoming there was an earthquake. True story with a happy ending. Our amazing firefighters from Great Basin Team 5 had put down barriers which successfully held the fire from progressing toward Victor. In addition, the earthquake was magnitude 4.8, a light quake. It was felt throughout Teton Valley but no damage was reported. It was a good day.

Saturday is also a good reason to stop and think what might have happened. Not to scare, but because playing the “what if” game in your mind can make you more ready to take action should a number of things go bad at once. When situations turn really dicey, it's usually not just one thing that's gone wrong, but a combination. What if Saturday had gone differently?

Suppose that the wind had picked up more than forecast and pushed the fire toward Victor. And suppose that at the same time, the earthquake had been much stronger and much closer to Teton Valley. Well planned and prepared evacuations would have begun just as the earthquake damaged the roads and bridges making evacuations as planned impossible. Families would be separated. Shelters would have been set up by the Red Cross in Driggs and Alta for the Victor evacuees, but how could they get there with, say, Yellow Bridge gone or Highway 33 buckled and impassable? Are alternate routes available? Do the drivers on the roads in front of you know them? Do you know them? Can those routes handle the traffic? Were they damaged, too? And

what about the fire; is it going to stop at the predesignated evacuation zone or go beyond, further clogging the blocked roads with frightened residents?

This past week was a great drill if it prompted us to make individual and family disaster plans. Where will your family meet up? Do you each have a go bag, jump bag, or 72 hour kit packed with the essentials you'll need away from home a while? Have you thought about what you would grab if you could only take an armload of items with you from your home? Can you easily get from point A to point B by more than one route? Does each family member know how to contact the one person, preferably outside of the valley, who will be your central information point?

Did you know that detailed suggestions for this kind of plan have been made by Teton County Emergency Management? It has been tailored to Teton Valley and the kinds of disasters we are most likely to face here. Part one of this guide can be found at:

These guides are meticulously detailed and will take more than a quick glance by everyone in the family for them to be effective. Make the time now, because as the guide says, when disaster strikes, the time to prepare has passed.

And one more thing this week showed, the value of the CodeRED emergency alert system. Should an emergency occur near you, with CodeRED you will be notified by phone, and if you choose, on your smart phone using the app. If you have a land line phone in Teton Valley, you are already enrolled and will get a call should something important come up. If you have a cell phone, you will have to go on line and register with CodeRED to receive notifications on it. You can do that at:

Either way, you will receive word of impending situations faster by phone than if you have to wait for an officer to knock on your door.

Drugs Used To Fight Hepatitis, Worm Infections Might Stop Zika (NBC News)

By Maggie Fox

NBC News, August 29, 2016

A drug already on the market to treat worm infections and another being tested against liver diseases may also help treat Zika virus infections, researchers reported Monday.

The findings are a rare bit of good news about Zika, which has caused epidemics across Latin America and the Caribbean, and smaller outbreaks in Florida, the Pacific and southeast Asia.

Zika has caused smaller epidemics of birth defects, notably brain damage that can cause miscarriages or profound developmental injuries in babies. It can also cause a paralyzing condition called Guillain-Barré syndrome.

It’s spread by mosquitoes and by sex. As of now, there is no vaccine or treatment.

The team at the National Institutes of Health (NIH), Johns Hopkins University and Florida State University looked first in a library of existing drug compounds for products that might act to stop Zika from killing brain cells and perhaps stop it from replicating itself.

“It takes years, if not decades, to develop a new drug.”

"It takes years, if not decades, to develop a new drug," says Hongjun Song of Johns Hopkins, who worked on the project. "In this sort of global health emergency, we don't have that kind of time."

But libraries of existing compounds let researchers use a computer to look for drugs that work in specific ways.

"So instead of using new drugs, we chose to screen existing drugs," said Dr. Guo-li Ming, a neurology professor at Johns Hopkins University School of Medicine. "In this way, we hope to create a therapy much more quickly."

They were delighted to find a drug already on the market and considered safe to use in pregnant women. "Niclosamide is an FDA-approved drug (trade name Niclocide) that has been used in humans to treat worm infections for nearly 50 years, and it is well tolerated," the team wrote in their report, published in the journal Nature Medicine.

"It is known to inhibit several viruses in culture systems, including the Japanese encephalitis flavivirus."

Japanese encephalitis is a relative of Zika and also carried by mosquitoes.

Tests on human brain stem cells in lab dishes showed it could interfere with Zika's replication in those cells. "Niclosamide is a category B drug, which indicates that no risk to fetuses has been found in animal studies. It has low toxicity in mammals," they added. "Emricasan was well tolerated in human trials, and there were no significant adverse events."

Another drug, called emricasan, helped prevent Zika from killing those cells.

"Emricasan is currently being evaluated in phase 2 clinical trials for the reduction of hepatic injury and liver fibrosis caused by chronic hepatitis C infection," the team wrote.

"Emricasan was well tolerated in human trials, and there were no significant adverse events."

A third compound called PHA-690509 also helped stop Zika replicating and from killing nerve cells, they said.

While the drugs work well in lab dishes full of cells, "we don't know if they can work in humans in the same way," Song said.

Niclosamide works in the gut, but it's not clear if it's possible to get it into the brain, Song said.

The researchers think the drugs might work best as a cocktail, attacking the virus from several fronts — in much the same way as drug cocktails fight the human immunodeficiency virus (HIV) that causes AIDS.

"To address these questions, additional studies need to be done in animal models as well as humans to demonstrate their ability to treat Zika infection," Ming said in a statement. "So we could still be years away from finding a treatment that works."

The White House has asked for $1.9 billion in federal funding to help pay for studies like these and to keep them going after Zika is no longer making headlines. But Congress could not agree on a funding plan and took a seven-week break without appropriating any cash.

The NIH, the Centers for Disease Control and Prevention and other agencies have taken money from other programs to pay for urgent Zika research.

At the beginning of the Ebola epidemic in West Africa, researchers complained that they'd been working on drugs and vaccines for years but that inconsistent funding and a lack of interest from Congress and from drug companies made it impossible to make better progress. More than 11,000 people died in Sierra Leone, Liberia and Guinea before the Ebola epidemic wound down last year.

COLORADO:

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline. The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform’s glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the

road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a “team player,” as it helps North Dakota with security during the pipeline dispute.

“We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc,” said Erickson.

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one’s home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

“Our focus on Zika has changed,” said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up “almost every day” in Recife’s maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a “causal agent” for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

“Now we’ve settled on Zika as the smoking gun, but we don’t know who pulled the trigger,” said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil’s last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

“Sexual habits and hygiene may also play a role,” he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

“We suspect the villain has an accomplice, but we don’t know who it is,” Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies’ brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother’s first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

“If you don’t know about something, you better take preventative measures to minimize the risks,” Espinal said. “So maybe the fact that we don’t have a lot of microcephaly means that we were doing our jobs” and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador’s government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

STORIES

COLORADO:

Colorado Springs homeowners clean up after "catastrophic" hail storm

(KOAA-Pueblo)

Lena Howland | August 1, 2016

COLORADO SPRINGS - The cleanup continues in the aftermath of last week's hail storm on the south end of Colorado Springs. Insurance companies say they've seen so much damage, they are now calling it a catastrophic weather event.

“It just sounded like literally someone was throwing baseballs at my house!" Sharon Navarrette said.

This house on the eastern edge of Colorado Springs took a beating during the storm.

"I started running from room to room and the hail was just hitting and I was expecting every window to shatter," she said.

A family room window, a skylight, a car, and even her sunflowers, destroyed.

"It wasn't a tornado but the damage that it did to homes was almost as devastating," she said.

A storm so big, insurance companies have now classified it as a catastrophe.

"Anytime that there's a significant number of claims like this, it will reach a threshold between a storm and the number of claims in a given area in which we categorize a catastrophe," Rich Johnson, a spokesman for USAA said.

That's why USAA has deployed its Catastrophe Response Team in the JCPenny parking lot off of Powers. The last time they needed this type of response in Colorado Springs was after nearly 500 homes were destroyed in the Black Forest Fire three summers ago.

"We want a convenient place for them to be able to drive up, maybe have a cold drink, bottle of water and start their claim," Johnson said.

USAA alone has already received more than 15,000 hail damage claims.

"Auto body shops, glass shops, roofing repair companies, they're going to see an influx in volume, and so really having that patience, materials are going to get low," he said.

With an estimated $40,000 worth of damage done to Navarette's house, she says she's just grateful she has the insurance to cover it.

"We will rebuild, they will get the new roof on and repaint our house and everything and have it looking like it's supposed to be when we bought it," she said.

Moving forward, insurance companies recommend you file your claims online whenever possible, do what you can to prevent further damage to your property, make sure you document those repairs and be patient along the way.

They say it could still be a matter of several weeks before the entire city has cleaned up.

MONTANA:

New DES director survives 1st trial by fire (Billings Gazette)

Mike Ferguson | July 31, 2016

Last week's Fritz fire may have been his baptism by fire, but Brad Shoemaker has emerged unsinged from that significant early test in his new job as the county's director of disaster and emergency services.

"The key to success" in such a large, cooperative effort to save lives and property, he said this week, "is getting everyone to operate toward the same goal, and in this case, I think all the agencies did an excellent job doing that."

Shoemaker, 29, began work April 1 after previous stints with the U.S. Forest Service, the National Park Service and the Montana Department of Natural Resources and Conservation. He said he had an idea last winter that the current fire season would be a challenge after taking a look at the area snowpack. That suspicion was confirmed in May, "when we started looking at fuel numbers and how things were trending, that we'd have an above-average year," he said.

He began meeting with fire chiefs around the county "so we'd all be on the same page and so we could do some preseason preparation."

Others charged with protecting the public in Yellowstone County say they appreciate Shoemaker's openness and proactive approach, as well as his ability to communicate — both among fire and law enforcement agencies and with the public.

"The Fritz Fire was a pretty big deal here in Yellowstone County, and for him to be able to make the call for graders and dozers and other county resources and to work with the DNRC to start mobilizing equipment from surrounding counties, that sure took a lot of the load off me," said Rick Cortez, chief of the 20-member Blue Creek Volunteer Fire Department and the incident commander for the fire west of Billings. "That freed me up to concentrate on the incident at hand."

“He is very knowledgeable and easy to talk to,” said Yellowstone County Sheriff Mike Linder. “He’s proactive, which doesn’t surprise me based on the experience he’s had from previous positions. He’s enthusiastic about the job, and from what I’ve seen, I think he will work out very well.”

“He is engaged, especially as a public information officer,” said Billings Fire Chief Paul Dextras. “That makes a real difference when all kinds of people are calling him at once or he’s dealing with the media. His job is to let people know there’s a plan in place and the progress that's being made, and from that aspect he’s doing a stellar job. It’s more than a full-time job, but he seems to be managing and prioritizing things well.”

Shoemaker earned his undergraduate degree in forestry from Virginia Tech University and a master’s degree in emergency management from Anna Maria College in Paxton, Mass. He and his wife have a 15-month-old daughter. During the weekend of the Fritz fire July 22-24, he got home once, for five hours, which he spent, understandably, sleeping.

“We’re used to the summer busy season, so we do our traveling around Thanksgiving and Christmas,” he said.

Everything in its place

Even an initial glance at his third-story office in the Yellowstone County Courthouse proves Shoemaker prefers order over chaos. The office is full of thick three-ring binders and maps — even a couple white boards with columns of what Shoemaker refers to as “my half-baked ideas" — but not turnout gear or self-contained breathing apparatuses.

There’s a reason for that, he said.

“Credit for the actual responsibility of saving all those homes goes to the guys in the engines, trucks and helicopters who are doing the hard work,” he said. “My job is to coordinate it and get it moving in the same direction.”

The list of agencies involved in the Fritz fire response is extensive, including “nearly every fire district in the county,” the sheriff’s office, Montana Highway Patrol, DNRC fire and air personnel, private aircraft providers, Red Cross, contract U.S. Forest Service firefighters — even the Yellowstone County Extension Service, which helped gather and protect livestock, among other duties.

“What I try to do is fit together individuals and groups with different skill sets,” he said. “I did very little of the actual work” of dousing the Fritz fire, he said. “They get all the credit for getting the work done.”

Where Shoemaker can take credit, fire chiefs and law enforcement officials say, is in upgrading the county's disaster planning.

“The plan itself is important, but it has to be written in a flexible way,” Shoemaker said. “You can’t predict every input.”

He’s worked to involve all the fire agencies and districts as well as law enforcement in the planning process.

“They have to have face-to-face interaction, and a prior relationship,” he said, to ensure that “an element of trust has been developed. A lot can be taken care of just bringing in the right people, and that’s my job.”

Once the fire season winds down, emergency and disaster managers in the West typically turn to planning. Shoemaker said he’s already working on communications systems among the county’s various responders to improve both fire and ambulance response. He hopes to be successful writing grants to purchase about $600,000 in radio system upgrades, since grants will pay for up to 75 percent of the cost.

“I hope we can finish that over three years,” with the upgrades occurring in stages, he said.

“The quick way to go is to ask for money and then spend it out your ears if you want to,” he said. But a better route is to develop a long-term communications plan “that’s well thought-out and well written, stretched out over a timeline. There are federal and state funds to get that paid for out of other pockets. I want to pursue those grants to be as responsible as we can be.”

Another key communications component — between his office and the public — will also be improved, once a software upgrade can be purchased to allow text blasts to be effectively sent to smart phones in Yellowstone County in times of emergency.

Then there are longer-term projects, including the modernization of the county’s emergency operations center, now in the basement of Fire Station No. 1 in Billings. That will also be mostly grant-funded, he said.

All the while, Shoemaker said a review of the county’s emergency operations plan continues to move forward.

“If we stopped our monthly meetings every time we have an incident, I’d never make any progress,” he said, adding that the potential for spring floods and potential disasters at the county’s three refineries and extensive pipeline system “are year-round items.”

“Even after the Fritz fire, I still came to work for the rest of the week, because there was still stuff to do,” he said. “I went home and slept for those five hours — and those were five really good hours.”

Roaring Lion fire claims one life, 14 homes near Hamilton (Montana Standard)

Rob Chaney | August 2, 2016

The Roaring Lion fire has claimed one life, but the scores of people who fled the flames Sunday were still waiting Monday night to learn the fate of their homes as officials kept the area off limits.

“It was still too hot and too volatile to let people back in,” said Ravalli County Sheriff Chris Hoffman. “Those areas will remain closed for now.”

Bruce Lee Robinson, 64, died of cardiac arrest during the mandatory evacuation from the fast-moving fire southwest of Hamilton.

The Ravalli County Sheriff’s Office confirmed late Monday that at least 14 homes have been destroyed. Specific addresses were being withheld until the owners could be notified.

The Roaring Lion capitalized on some exotic wind conditions during its Sunday evening takeoff, and it will have more atypical weather on Tuesday.

“We expect to upgrade to red flag warnings on Tuesday afternoon, when a strong cold front moves in,” National Weather Service meteorologist Genki Kino said Monday. “A cold front this strong for this time of year is unusual.”

The front should bring winds with gusts between 25 and 35 mph through the Bitterroot and Missoula valleys on Tuesday afternoon, with speeds in the mountain ridges topping 50 mph around Tuesday evening. That’s likely to make firefighting on the 3,505-acre Roaring Lion fire 5 miles southwest of Hamilton even more challenging.

About 150 firefighters have been deployed to the blaze, with a Type I incident command team – deployed on the most serious fires — expected to take over operations Tuesday morning. The Roaring Lion fire has triggered evacuations of at least 500 people, with another 1,000 residents on pre-evacuation notice. The fire threatens about 400 primary homes as well as about 100 secondary homes near Hamilton.

Rick Potts has spent the summer at the St. Mary Peak fire lookout, about 23 air miles from Roaring Lion Canyon. Although he served on an initial attack team during the catastrophic Yellowstone National Park fires of 1988, he said he’d never witnessed fire behavior like Sunday’s in the Bitterroots.

“Watching that go from a thin plume of smoke to a roaring inferno within half an hour – I’ve never seen that,” Potts said. “It went from something you might handle with initial attack to something you couldn’t get close to. And the Forest Service and Hamilton Fire (Department) moved on it almost instantly. They had engines and a helicopter up there but by the time they got to it, it exploded up the hill, spotted and started a second fire. It just engulfed the whole mouth of the canyon.”

Many observers noticed the fire and smoke column rotating as it rose on Sunday evening. Kino said that’s because a regular down-canyon evening wind created spinning vortexes as the fire’s uphill heat pushed the opposite direction. The effect is similar to whirlpools that form between the main downstream current of a river and the upstream flow of a streamside eddy. In the Roaring Lion fire, the wind shear also created fire whirls that lifted tornadoes of flame hundreds of feet into the air.

Tuesday’s cold front should pass out of the Bitterroot Mountains area by Wednesday morning. But it will be followed by persistent hot weather leading to a weekend of potential dry thunderstorms. Those storms carry lightning that could trigger more wildfires.

Missoula County fire officials raised the local fire danger status “very high” on Monday.

“All fuels both live and dead have dried to the point that fires will become very active quickly,” said Jordan Koppen, spokesman for the Montana Department of Natural Resources and Conservation. “We can’t afford for anyone to be careless during activities that have the potential to start a fire, so we urge the public to be extremely cautious with fire.”

Koppen added that equipment operators and motorists towing trailers should be especially careful about controlling hot metal and friction sparks while outdoors. More information on fire-safe tactics is available at http://firesafemt.org/.

On Monday afternoon, the U.S. Department of Homeland Security announced Roaring Lion firefighting efforts were eligible for federal assistance. Federal Emergency Management Agency funds can be used to cover 75 percent of state and local firefighting costs. However, the grants do not provide assistance for individual home or business owners affected by the fire, or other infrastructure damage related to the fire. FEMA spokesman Randy Welch said the money would pay for field camps, equipment use, repairs and replacement, tools materials and supplies.

The increased tempo of fire activity has forced state and federal fire crews to prioritize their resources. Lolo National Forest spokesman Boyd Hartwig said three 20-person Hotshot crews have been released from the 13-acre South Tamarack fire 6 miles north of St. Regis after reaching mop-up status on Monday. A Type-II initial attack crew remains on the scene, where the fire is 20 percent contained.

The Northern Region Geographic Area, which includes Montana, shifted to Preparedness Level 3 on Monday. That reflects the changing tempo of fire starts and need for personnel, equipment and aircraft. The Northern Region remains ranked fourth out of seven geographic areas as fires in Colorado and parts of the Southwest demand higher priority. As dry weather shifts to the Northwest, that priority will shift as well.

Statewide, Montana fire observers reported 15 new fires including two large incidents (Roaring Lion and Copper King). Those come on top of five existing large fires and dozens of smaller blazes.

The Copper King fire 8 miles east of Thompson Falls should move to a Type II incident command management on Tuesday. It has burned about 700 acres. As of Monday, it had a crew of 33 backed up by a helicopter on the line.

While no evacuations have been ordered, residents in the Copper King and Snider communities have been warned to prepare their structures for fire defense.

Several roads along the west side of the Thompson River have been closed for fire safety, as have the Copper King and Clark Memorial campgrounds.

Zero containment on Copper King Fire (ABC-FOX Montana)

Mackenzie Allen | August 1, 2016

KALISPELL - Officials with the Lolo National forest say the Copper King Fire, burning just outside of Thompson Falls has grown to 700 acres.

The fire broke out Sunday afternoon and a cause has not been identified.

According to spokesman John Hamilton there is no containment on the fire and personnel have begun notifying the 10-15 nearby residents of the situation, but he says he's "very confident" an evacuation will not be necessary at this point.

A Type II Incident Management Team is on their way and is scheduled to take over firefighting operations early Tuesday morning.

Currently 33 personnel, a helicopter and several engines are on scene.

A public meeting is scheduled for 7 p.m. Monday night at the Thompson Falls Community Center.

NORTH DAKOTA:

Lightning causes fire, spill at oilfield facility (Forum News Service)

Aug 1, 2016

NEW TOWN, N.D. – A lightning strike is blamed for a fire at a saltwater disposal well that occurred Sunday in Mountrail County, the North Dakota Oil and Gas Division said.

Whiting Oil and Gas Corp. reported that 400 barrels of produced water, or 16,800 gallons, were released, contained and recovered from a fire at a disposal well about 10 miles north of New Town.

Saltwater is a waste byproduct of oil production.

The fire, which involved five tanks at the location, is extinguished, said Alison Ritter, spokeswoman for the Oil and Gas Division. A state inspector visited the location.

SOUTH DAKOTA:

Flood Of 2011 Gavins Point Withstood Historic River Surge (Yankton Daily)

Brayton Hagge | August 1, 2016

EDITOR'S NOTE: This is part of a series of stories this summer to commemorate the fifth anniversary of the Missouri River flood of 2011.

In comparison to the repairs needed after the Missouri River flood in 2011, this year's Gavins Point Dam repairs are relatively minor.

"We've had really major stuff going on with the flood repairs from 2011 to 2015," said Dave Becker, operations project manager for the U.S. Army Corps of Engineers at Gavins Point. "Now we're just doing minor repairs out there. Things are in good working order."

This year's projects include installing new safety railings on the spillway and completing gate maintenance.

"Each year they bring (the gates) up and down to do maintenance on them," Becker said. "They clean them, power wash them and inspect the rollers on them to make sure they are functioning well. They are making sure those gates are ready to use when we need them."

He said none of this year's projects are related to the damages caused by the 2011 flood.

"The repairs of the flood damages were all completed last year," he explained.

After the flood, the dam was left in need of nearly $20 million worth of repairs. Becker said the damages were to be expected considering the record amounts of water which passed through the spillway gate, but the U.S. Army Corps of Engineers did face public concern on the matter.

"The public was in a very heightened state," Becker said. "They were very aware of the flood going on, so they were very watchful and concerned."

However, he maintained that the damages the dam sustained were in no way reflective of its ability to handle the flood.

"We had no concerns (about the dam), although we were monitoring it very closely," he said. "We had no big warning signs or anything like that (indicating) there were any major problems. Any time something is working hard, you just watch it closely."

After water levels lowered, crews began commencing work on major repair projects.

"One of the big (projects) was the repair of the spillway gates," Becker said. "(Workers) redid a fair number of the welds on the gates and inspected them. They repainted them and put new cables on them to lift and lower them. They also did maintenance on the gear boxes for the gates."

Repairs on the spillway apron, which consists of the concrete below the gates, comprised another large repair project.

"There was a tremendous amount of debris that was removed," he said. "We had issues with our frost blanket drains that needed to be corrected, and we had a very thorough underwater inspection done of the spillway slab."

The Corps also installed 35 new relief wells and brought in 75,000 tons of riprap to replace the rock that had been swept away by the fast flowing waters.

Becker felt some of the adjustments made during the flood repairs could decrease the amount of work required to rehabilitate the dam in the case of another record flood.

"I would think our damages would be less than that because we went in with a bigger size of stone (riprap) that doesn't wash away as readily," he said. "But any time something gets a real hard workout like that, there's something that needs to be repaired."

According to Becker, now that all the flood repairs have been finished, the maintenance projects being completed this year are all the dam currently requires to stay in peak condition.

The only other projects currently in the works involve resurfacing Crest Road this summer and updating the power plant throughout the next five years.

"We've been able to keep up with routine things because we have good funding and support, and because of that, we don't really have any real major work on the horizon," he said.
Becker predicted the 59-year-old dam could be kept in good working condition for many more years.
"Really as long as the public is supportive of the dam being here, we can continue to do the necessary operations and maintenance on it," he said.

Following the South Dakota drought online (KELO-Sioux Falls)

Mark Russo | August 1, 2016

PIERRE, SD (KELO-AM) South Dakota now has a website with updated drought information.

The website: drought.sd.gov,

Governor Daugaard says the website will help keep farmers and ranchers in the know.

"The website will include information such as the latest U.S. Drought Monitor, fire conditions, weather reports and agricultural information," says the Governor. "We know many people are impacted by the dry conditions and we want to provide the best information we can."

Other features on the website include a map comparing this year's drought to the 2012 drought and a fire map showing the number of acres burned and the perimeter of the fires on state jurisdictional land.

While there has been recent rainfall in some areas, extremely dry conditions exist in other parts of the state. An emergency fire declaration earlier had been declared for 13 central and western South Dakota counties impacted by the drought conditions. Those counties are Butte, Custer, Fall River, Haakon, Harding, Hughes, Jackson, Jones, Lawrence, Meade, Pennington, Perkins and Stanley.

UTAH:

Some evacuated areas open back up as Tokewanna Fire continues to burn 1,300 + acres (KUTV-Salt Lake City)

Cimaron Neugebauer | August 1, 2016

(KUTV) A wildfire that has been burning for the past 5 days near the Utah/Wyoming border has charred 1,300 acres and is 24 percent contained, as of Monday morning.

About 500 firefighters have been fighting the blaze, primarily on private land, located near the Meeks Cabin Dam about 15 miles south of Mountain View, Wyoming in Uinta County. The cause of the fire is unknown and still under investigation.

A few residents who were evacuated will be allowed to return to their homes today.

At noon on Monday residents living north of the intersection of Blacksfork Drive and County Road 271 (Meeks Cabin Dam Road) and the intersection of Wapati Road and East Wapati Road (including East Wapati Road itslef) will be allowed to return to their homes. These areas include Meeks Ridge and Aspen Springs subdivisions north of Cattle Guard 7. The Burearu of Land Management noted that residents may not have electrical power when they return. At this point, a few other areas remain closed to the public while firefighting efforts continue.

STILL CLOSED:

- The Uinta County Youth Camp
- Tokewanna and BlacksFork River Estates
- County Road 271 south to Meeks Cabin remain closed

The area of primary attention and concern has been protecting structures in the Tokewanna and Blacks Fork River Estates areas.

Continued hot temperatures and low relative humidity combined with the possibility of thunderstorms in the area will bring potential for increased fire activity in the area.

There will be a community meeting on Aug. 2 at 7 p.m. at the Mountain View High School located at 330 7th Street, Mountain View, Wyoming to give an update and discuss the state of the Tokewanna Fire.

WYOMING:

Beware of rattlesnakes this time of year (Casper Star-Tribune)

Kelsey Dayton | August 1, 2016

It feels like a slap and sounds like a pop. It’s the shimmying sound of the rattle afterward that’s terrifying.

Zack Walker, now non-game supervisor with Wyoming Game and Fish, was once working near Waltman studying rattlesnakes as the state herpetological coordinator. He jumped off a rock and had barely landed when he felt something hit him in the leg and heard the warning rattle.

“I jumped right back out of there,” he said.

It’s not a sound anyone wants to hear.

If you spend time in snake country, be especially careful this time of year, Walker said. While rattlesnakes usually spread across the landscape, they congregate to breed in mid-summer. If you see one, there’s probably more around, Walker said.

The snakes are found throughout the state, usually staying within 3 or 4 miles of where they hibernate.

“When you are in that pocket, you know you are in that pocket,” Walker said.

Despite emerging from hibernation a couple of weeks earlier than normal in the beginning of May, anecdotally, this year's snake sightings seem to reflect a normal season, Walker said.

Eugene DuQuette, an emergency room doctor at Wyoming Medical Center, said in the hospital's health news service that during one particularly wet spring and summer, he saw eight bites. Wyoming Medical Center reported only one bite so far this year.

Snake bites are rarely fatal in the United States. According to Wyoming Medical Center, without antivenin, snake bites have a 2 percent mortality rate and only .2 percent with it. In Wyoming there are even fewer as the rattlesnake isn't as poisonous as some breeds.

The seriousness of a bite depends on the amount of venom the snake injects. Between 10 percent and 20 percent of snake bites are dry, meaning they don't inject venom, Wyoming Medical Center reported.

Rattlesnake bites might cause heart arrhythmias, nose bleeds, bloody stools or vomit and, more rare in Wyoming, neurological changes like paralysis and weakness. They are treated with antivenin.

Walker has been struck more than once by rattlesnakes, but snake-proof gaiters protected him from ever being bitten.

"I've had many close encounters, but I've never had one get their fangs in me," he said.

It doesn't stop the jolt of adrenaline whenever he feels one strike and he wonders if it broke through.

Avoid a bite

- Make noise while walking in snake country, especially in grass where snakes are hard to spot. Wyoming snakes are not aggressive and usually strike because they are startled.
- Know where to look. Snakes are often in grassy areas where they are hard to see.
- Leave snakes alone. Don't dig in burrows where snakes may live. Don't try to catch a rattlesnake, even if you are trying to confirm a friend was bitten by one.
- Wear high-legged boots and gloves. Boots can prevent fangs from puncturing the skin, or minimize the amount of venom the snake can inject. Gloves will protect your hands.
- Watch the kids. Venom travels faster in smaller bodies.

What to do if you're bitten

- Call 911 immediately.
- Note the size. The smaller the snake, the more concentrated the venom.
- Do not apply a tourniquet.
- Do not attempt to suck out the venom. You can poison yourself if it gets in the mouth and you can cause tissue damage around the bite.
- Keep bitten limb in a neutral position --- do not elevate.
- Do not ice the bite area.

- Stay calm. If you aren't in cell range, send someone else to get help. You have four to five hours before the venom has time to fully circulate.

COLORADO:

Colorado Springs homeowners clean up after "catastrophic" hail storm

(KOAA-Pueblo)

Lena Howland | August 1, 2016

COLORADO SPRINGS - The cleanup continues in the aftermath of last week's hail storm on the south end of Colorado Springs. Insurance companies say they've seen so much damage, they are now calling it a catastrophic weather event.

“It just sounded like literally someone was throwing baseballs at my house!" Sharon Navarrette said.

This house on the eastern edge of Colorado Springs took a beating during the storm.

"I started running from room to room and the hail was just hitting and I was expecting every window to shatter," she said.

A family room window, a skylight, a car, and even her sunflowers, destroyed.

"It wasn't a tornado but the damage that it did to homes was almost as devastating," she said.

A storm so big, insurance companies have now classified it as a catastrophe.

"Anytime that there's a significant number of claims like this, it will reach a threshold between a storm and the number of claims in a given area in which we categorize a catastrophe," Rich Johnson, a spokesman for USAA said.

That's why USAA has deployed its Catastrophe Response Team in the JCPenny parking lot off of Powers. The last time they needed this type of response in Colorado Springs was after nearly 500 homes were destroyed in the Black Forest Fire three summers ago.

"We want a convenient place for them to be able to drive up, maybe have a cold drink, bottle of water and start their claim," Johnson said.

USAA alone has already received more than 15,000 hail damage claims.

"Auto body shops, glass shops, roofing repair companies, they're going to see an influx in volume, and so really having that patience, materials are going to get low," he said.

With an estimated $40,000 worth of damage done to Navarette's house, she says she's just grateful she has the insurance to cover it.

"We will rebuild, they will get the new roof on and repaint our house and everything and have it looking like it's supposed to be when we bought it," she said.

Moving forward, insurance companies recommend you file your claims online whenever possible, do what you can to prevent further damage to your property, make sure you document those repairs and be patient along the way.

They say it could still be a matter of several weeks before the entire city has cleaned up.

MONTANA:

New DES director survives 1st trial by fire (Billings Gazette)

Mike Ferguson | July 31, 2016

Last week's Fritz fire may have been his baptism by fire, but Brad Shoemaker has emerged unsinged from that significant early test in his new job as the county's director of disaster and emergency services.

"The key to success" in such a large, cooperative effort to save lives and property, he said this week, "is getting everyone to operate toward the same goal, and in this case, I think all the agencies did an excellent job doing that."

Shoemaker, 29, began work April 1 after previous stints with the U.S. Forest Service, the National Park Service and the Montana Department of Natural Resources and Conservation. He said he had an idea last winter that the current fire season would be a challenge after taking a look at the area snowpack. That suspicion was confirmed in May, "when we started looking at fuel numbers and how things were trending, that we'd have an above-average year," he said.

He began meeting with fire chiefs around the county "so we'd all be on the same page and so we could do some preseason preparation."

Others charged with protecting the public in Yellowstone County say they appreciate Shoemaker's openness and proactive approach, as well as his ability to communicate — both among fire and law enforcement agencies and with the public.

"The Fritz Fire was a pretty big deal here in Yellowstone County, and for him to be able to make the call for graders and dozers and other county resources and to work with the DNRC to start mobilizing equipment from surrounding counties, that sure took a lot of the load off me," said Rick Cortez, chief of the 20-member Blue Creek Volunteer Fire Department and the incident commander for the fire west of Billings. "That freed me up to concentrate on the incident at hand."

"He is very knowledgeable and easy to talk to," said Yellowstone County Sheriff Mike Linder. "He's proactive, which doesn't surprise me based on the experience he's had from previous positions. He’s enthusiastic about the job, and from what I’ve seen, I think he will work out very well.”

“He is engaged, especially as a public information officer,” said Billings Fire Chief Paul Dextras. “That makes a real difference when all kinds of people are calling him at once or he’s dealing with the media. His job is to let people know there’s a plan in place and the progress that's being made, and from that aspect he’s doing a stellar job. It’s more than a full-time job, but he seems to be managing and prioritizing things well.”

Shoemaker earned his undergraduate degree in forestry from Virginia Tech University and a master’s degree in emergency management from Anna Maria College in Paxton, Mass. He and his wife have a 15-month-old daughter. During the weekend of the Fritz fire July 22-24, he got home once, for five hours, which he spent, understandably, sleeping.

“We’re used to the summer busy season, so we do our traveling around Thanksgiving and Christmas,” he said.

Everything in its place

Even an initial glance at his third-story office in the Yellowstone County Courthouse proves Shoemaker prefers order over chaos. The office is full of thick three-ring binders and maps — even a couple white boards with columns of what Shoemaker refers to as “my half-baked ideas" — but not turnout gear or self-contained breathing apparatuses.

There’s a reason for that, he said.

“Credit for the actual responsibility of saving all those homes goes to the guys in the engines, trucks and helicopters who are doing the hard work,” he said. “My job is to coordinate it and get it moving in the same direction.”

The list of agencies involved in the Fritz fire response is extensive, including “nearly every fire district in the county,” the sheriff’s office, Montana Highway Patrol, DNRC fire and air personnel, private aircraft providers, Red Cross, contract U.S. Forest Service firefighters — even the Yellowstone County Extension Service, which helped gather and protect livestock, among other duties.

“What I try to do is fit together individuals and groups with different skill sets,” he said. “I did very little of the actual work” of dousing the Fritz fire, he said. “They get all the credit for getting the work done.”

Where Shoemaker can take credit, fire chiefs and law enforcement officials say, is in upgrading the county's disaster planning.

“The plan itself is important, but it has to be written in a flexible way,” Shoemaker said. “You can’t predict every input.”

He’s worked to involve all the fire agencies and districts as well as law enforcement in the planning process.

“They have to have face-to-face interaction, and a prior relationship,” he said, to ensure that “an element of trust has been developed. A lot can be taken care of just bringing in the right people, and that’s my job.”

Once the fire season winds down, emergency and disaster managers in the West typically turn to planning. Shoemaker said he’s already working on communications systems among the county’s various responders to improve both fire and ambulance response. He hopes to be successful writing grants to purchase about $600,000 in radio system upgrades, since grants will pay for up to 75 percent of the cost.

“I hope we can finish that over three years,” with the upgrades occurring in stages, he said.

“The quick way to go is to ask for money and then spend it out your ears if you want to,” he said. But a better route is to develop a long-term communications plan “that’s well thought-out and well written, stretched out over a timeline. There are federal and state funds to get that paid for out of other pockets. I want to pursue those grants to be as responsible as we can be.”

Another key communications component — between his office and the public — will also be improved, once a software upgrade can be purchased to allow text blasts to be effectively sent to smart phones in Yellowstone County in times of emergency.

Then there are longer-term projects, including the modernization of the county’s emergency operations center, now in the basement of Fire Station No. 1 in Billings. That will also be mostly grant-funded, he said.

All the while, Shoemaker said a review of the county’s emergency operations plan continues to move forward.

“If we stopped our monthly meetings every time we have an incident, I’d never make any progress,” he said, adding that the potential for spring floods and potential disasters at the county’s three refineries and extensive pipeline system “are year-round items.”

“Even after the Fritz fire, I still came to work for the rest of the week, because there was still stuff to do,” he said. “I went home and slept for those five hours — and those were five really good hours.”

Roaring Lion fire claims one life, 14 homes near Hamilton (Montana Standard)

Rob Chaney | August 2, 2016

The Roaring Lion fire has claimed one life, but the scores of people who fled the flames Sunday were still waiting Monday night to learn the fate of their homes as officials kept the area off limits.

“It was still too hot and too volatile to let people back in,” said Ravalli County Sheriff Chris Hoffman. “Those areas will remain closed for now.”

Bruce Lee Robinson, 64, died of cardiac arrest during the mandatory evacuation from the fast-moving fire southwest of Hamilton.

The Ravalli County Sheriff’s Office confirmed late Monday that at least 14 homes have been destroyed. Specific addresses were being withheld until the owners could be notified.

The Roaring Lion capitalized on some exotic wind conditions during its Sunday evening takeoff, and it will have more atypical weather on Tuesday.

“We expect to upgrade to red flag warnings on Tuesday afternoon, when a strong cold front moves in,” National Weather Service meteorologist Genki Kino said Monday. “A cold front this strong for this time of year is unusual.”

The front should bring winds with gusts between 25 and 35 mph through the Bitterroot and Missoula valleys on Tuesday afternoon, with speeds in the mountain ridges topping 50 mph around Tuesday evening. That’s likely to make firefighting on the 3,505-acre Roaring Lion fire 5 miles southwest of Hamilton even more challenging.

About 150 firefighters have been deployed to the blaze, with a Type I incident command team – deployed on the most serious fires — expected to take over operations Tuesday morning. The Roaring Lion fire has triggered evacuations of at least 500 people, with another 1,000 residents on pre-evacuation notice. The fire threatens about 400 primary homes as well as about 100 secondary homes near Hamilton.

Rick Potts has spent the summer at the St. Mary Peak fire lookout, about 23 air miles from Roaring Lion Canyon. Although he served on an initial attack team during the catastrophic Yellowstone National Park fires of 1988, he said he’d never witnessed fire behavior like Sunday’s in the Bitterroots.

“Watching that go from a thin plume of smoke to a roaring inferno within half an hour – I’ve never seen that,” Potts said. “It went from something you might handle with initial attack to something you couldn’t get close to. And the Forest Service and Hamilton Fire (Department) moved on it almost instantly. They had engines and a helicopter up there but by the time they got to it, it exploded up the hill, spotted and started a second fire. It just engulfed the whole mouth of the canyon.”

Many observers noticed the fire and smoke column rotating as it rose on Sunday evening. Kino said that’s because a regular down-canyon evening wind created spinning vortexes as the fire’s uphill heat pushed the opposite direction. The effect is similar to whirlpools that form between the main downstream current of a river and the upstream flow of a streamside eddy. In the Roaring Lion fire, the wind shear also created fire whirls that lifted tornadoes of flame hundreds of feet into the air.

Tuesday's cold front should pass out of the Bitterroot Mountains area by Wednesday morning. But it will be followed by persistent hot weather leading to a weekend of potential dry thunderstorms. Those storms carry lightning that could trigger more wildfires.

Missoula County fire officials raised the local fire danger status "very high" on Monday.

"All fuels both live and dead have dried to the point that fires will become very active quickly," said Jordan Koppen, spokesman for the Montana Department of Natural Resources and Conservation. "We can't afford for anyone to be careless during activities that have the potential to start a fire, so we urge the public to be extremely cautious with fire."

Koppen added that equipment operators and motorists towing trailers should be especially careful about controlling hot metal and friction sparks while outdoors. More information on fire-safe tactics is available at http://firesafemt.org/.

On Monday afternoon, the U.S. Department of Homeland Security announced Roaring Lion firefighting efforts were eligible for federal assistance. Federal Emergency Management Agency funds can be used to cover 75 percent of state and local firefighting costs. However, the grants do not provide assistance for individual home or business owners affected by the fire, or other infrastructure damage related to the fire. FEMA spokesman Randy Welch said the money would pay for field camps, equipment use, repairs and replacement, tools materials and supplies.

The increased tempo of fire activity has forced state and federal fire crews to prioritize their resources. Lolo National Forest spokesman Boyd Hartwig said three 20-person Hotshot crews have been released from the 13-acre South Tamarack fire 6 miles north of St. Regis after reaching mop-up status on Monday. A Type-II initial attack crew remains on the scene, where the fire is 20 percent contained.

The Northern Region Geographic Area, which includes Montana, shifted to Preparedness Level 3 on Monday. That reflects the changing tempo of fire starts and need for personnel, equipment and aircraft. The Northern Region remains ranked fourth out of seven geographic areas as fires in Colorado and parts of the Southwest demand higher priority. As dry weather shifts to the Northwest, that priority will shift as well.

Statewide, Montana fire observers reported 15 new fires including two large incidents (Roaring Lion and Copper King). Those come on top of five existing large fires and dozens of smaller blazes.

The Copper King fire 8 miles east of Thompson Falls should move to a Type II incident command management on Tuesday. It has burned about 700 acres. As of Monday, it had a crew of 33 backed up by a helicopter on the line.

While no evacuations have been ordered, residents in the Copper King and Snider communities have been warned to prepare their structures for fire defense.

Several roads along the west side of the Thompson River have been closed for fire safety, as have the Copper King and Clark Memorial campgrounds.

Zero containment on Copper King Fire (ABC-FOX Montana)

Mackenzie Allen | August 1, 2016

KALISPELL - Officials with the Lolo National forest say the Copper King Fire, burning just outside of Thompson Falls has grown to 700 acres.

The fire broke out Sunday afternoon and a cause has not been identified.

According to spokesman John Hamilton there is no containment on the fire and personnel have begun notifying the 10-15 nearby residents of the situation, but he says he's "very confident" an evacuation will not be necessary at this point.

A Type II Incident Management Team is on their way and is scheduled to take over firefighting operations early Tuesday morning.

Currently 33 personnel, a helicopter and several engines are on scene.

A public meeting is scheduled for 7 p.m. Monday night at the Thompson Falls Community Center.

NORTH DAKOTA:

Lightning causes fire, spill at oilfield facility (Forum News Service)

Aug 1, 2016

NEW TOWN, N.D. – A lightning strike is blamed for a fire at a saltwater disposal well that occurred Sunday in Mountrail County, the North Dakota Oil and Gas Division said.

Whiting Oil and Gas Corp. reported that 400 barrels of produced water, or 16,800 gallons, were released, contained and recovered from a fire at a disposal well about 10 miles north of New Town.

Saltwater is a waste byproduct of oil production.

The fire, which involved five tanks at the location, is extinguished, said Alison Ritter, spokeswoman for the Oil and Gas Division. A state inspector visited the location.

SOUTH DAKOTA:

Flood Of 2011 Gavins Point Withstood Historic River Surge (Yankton Daily)

Brayton Hagge | August 1, 2016

EDITOR'S NOTE: This is part of a series of stories this summer to commemorate the fifth anniversary of the Missouri River flood of 2011.

In comparison to the repairs needed after the Missouri River flood in 2011, this year's Gavins Point Dam repairs are relatively minor.

"We've had really major stuff going on with the flood repairs from 2011 to 2015," said Dave Becker, operations project manager for the U.S. Army Corps of Engineers at Gavins Point. "Now we're just doing minor repairs out there. Things are in good working order."

This year's projects include installing new safety railings on the spillway and completing gate maintenance.

"Each year they bring (the gates) up and down to do maintenance on them," Becker said. "They clean them, power wash them and inspect the rollers on them to make sure they are functioning well. They are making sure those gates are ready to use when we need them."

He said none of this year's projects are related to the damages caused by the 2011 flood.

"The repairs of the flood damages were all completed last year," he explained.

After the flood, the dam was left in need of nearly $20 million worth of repairs. Becker said the damages were to be expected considering the record amounts of water which passed through the spillway gate, but the U.S. Army Corps of Engineers did face public concern on the matter.

"The public was in a very heightened state," Becker said. "They were very aware of the flood going on, so they were very watchful and concerned."

However, he maintained that the damages the dam sustained were in no way reflective of its ability to handle the flood.

"We had no concerns (about the dam), although we were monitoring it very closely," he said. "We had no big warning signs or anything like that (indicating) there were any major problems. Any time something is working hard, you just watch it closely."

After water levels lowered, crews began commencing work on major repair projects.

"One of the big (projects) was the repair of the spillway gates," Becker said. "(Workers) redid a fair number of the welds on the gates and inspected them. They repainted them and put new cables on them to lift and lower them. They also did maintenance on the gear boxes for the gates."

Repairs on the spillway apron, which consists of the concrete below the gates, comprised another large repair project.

"There was a tremendous amount of debris that was removed," he said. "We had issues with our frost blanket drains that needed to be corrected, and we had a very thorough underwater inspection done of the spillway slab."

The Corps also installed 35 new relief wells and brought in 75,000 tons of riprap to replace the rock that had been swept away by the fast flowing waters.

Becker felt some of the adjustments made during the flood repairs could decrease the amount of work required to rehabilitate the dam in the case of another record flood.

“I would think our damages would be less than that because we went in with a bigger size of stone (riprap) that doesn’t wash away as readily,” he said. “But any time something gets a real hard workout like that, there’s something that needs to be repaired.”

According to Becker, now that all the flood repairs have been finished, the maintenance projects being completed this year are all the dam currently requires to stay in peak condition. The only other projects currently in the works involve resurfacing Crest Road this summer and updating the power plant throughout the next five years.

“We’ve been able to keep up with routine things because we have good funding and support, and because of that, we don’t really have any real major work on the horizon,” he said.

Becker predicted the 59-year-old dam could be kept in good working condition for many more years.

“Really as long as the public is supportive of the dam being here, we can continue to do the necessary operations and maintenance on it,” he said.

Following the South Dakota drought online (KELO-Sioux Falls)

Mark Russo | August 1, 2016

PIERRE, SD (KELO-AM) South Dakota now has a website with updated drought information.

The website: drought.sd.gov,

Governor Daugaard says the website will help keep farmers and ranchers in the know.

“The website will include information such as the latest U.S. Drought Monitor, fire conditions, weather reports and agricultural information,” says the Governor. “We know many people are impacted by the dry conditions and we want to provide the best information we can.”

Other features on the website include a map comparing this year’s drought to the 2012 drought and a fire map showing the number of acres burned and the perimeter of the fires on state jurisdictional land.

While there has been recent rainfall in some areas, extremely dry conditions exist in other parts of the state. An emergency fire declaration earlier had been declared for 13 central and western South Dakota counties impacted by the drought conditions. Those counties are Butte, Custer, Fall River, Haakon, Harding, Hughes, Jackson, Jones, Lawrence, Meade, Pennington, Perkins and Stanley.

UTAH:

Some evacuated areas open back up as Tokewanna Fire continues to burn 1,300 + acres (KUTV-Salt Lake City)

Cimaron Neugebauer | August 1, 2016

(KUTV) A wildfire that has been burning for the past 5 days near the Utah/Wyoming border has charred 1,300 acres and is 24 percent contained, as of Monday morning.

About 500 firefighters have been fighting the blaze, primarily on private land, located near the Meeks Cabin Dam about 15 miles south of Mountain View, Wyoming in Uinta County. The cause of the fire is unknown and still under investigation.

A few residents who were evacuated will be allowed to return to their homes today.

At noon on Monday residents living north of the intersection of Blacksfork Drive and County Road 271 (Meeks Cabin Dam Road) and the intersection of Wapati Road and East Wapati Road (including East Wapati Road itslef) will be allowed to return to their homes. These areas include Meeks Ridge and Aspen Springs subdivisions north of Cattle Guard 7. The Burearu of Land Management noted that residents may not have electrical power when they return. At this point, a few other areas remain closed to the public while firefighting efforts continue.

STILL CLOSED:

- The Uinta County Youth Camp
- Tokewanna and BlacksFork River Estates
- County Road 271 south to Meeks Cabin remain closed

The area of primary attention and concern has been protecting structures in the Tokewanna and Blacks Fork River Estates areas.

Continued hot temperatures and low relative humidity combined with the possibility of thunderstorms in the area will bring potential for increased fire activity in the area.

There will be a community meeting on Aug. 2 at 7 p.m. at the Mountain View High School located at 330 7th Street, Mountain View, Wyoming to give an update and discuss the state of the Tokewanna Fire.

WYOMING:

Beware of rattlesnakes this time of year (Casper Star-Tribune)

Kelsey Dayton | August 1, 2016

It feels like a slap and sounds like a pop. It's the shimmying sound of the rattle afterward that's terrifying.

Zack Walker, now non-game supervisor with Wyoming Game and Fish, was once working near Waltman studying rattlesnakes as the state herpetological coordinator. He jumped off a rock and had barely landed when he felt something hit him in the leg and heard the warning rattle.

"I jumped right back out of there," he said.

It's not a sound anyone wants to hear.

If you spend time in snake country, be especially careful this time of year, Walker said. While rattlesnakes usually spread across the landscape, they congregate to breed in mid-summer. If you see one, there's probably more around, Walker said.

The snakes are found throughout the state, usually staying within 3 or 4 miles of where they hibernate.

"When you are in that pocket, you know you are in that pocket," Walker said.

Despite emerging from hibernation a couple of weeks earlier than normal in the beginning of May, anecdotally, this year's snake sightings seem to reflect a normal season, Walker said.

Eugene DuQuette, an emergency room doctor at Wyoming Medical Center, said in the hospital's health news service that during one particularly wet spring and summer, he saw eight bites. Wyoming Medical Center reported only one bite so far this year.

Snake bites are rarely fatal in the United States. According to Wyoming Medical Center, without antivenin, snake bites have a 2 percent mortality rate and only .2 percent with it. In Wyoming there are even fewer as the rattlesnake isn't as poisonous as some breeds.

The seriousness of a bite depends on the amount of venom the snake injects. Between 10 percent and 20 percent of snake bites are dry, meaning they don't inject venom, Wyoming Medical Center reported.

Rattlesnake bites might cause heart arrhythmias, nose bleeds, bloody stools or vomit and, more rare in Wyoming, neurological changes like paralysis and weakness. They are treated with antivenin.

Walker has been struck more than once by rattlesnakes, but snake-proof gaiters protected him from ever being bitten.

"I've had many close encounters, but I've never had one get their fangs in me," he said.

It doesn’t stop the jolt of adrenaline whenever he feels one strike and he wonders if it broke through.

Avoid a bite

- Make noise while walking in snake country, especially in grass where snakes are hard to spot. Wyoming snakes are not aggressive and usually strike because they are startled.
- Know where to look. Snakes are often in grassy areas where they are hard to see.
- Leave snakes alone. Don’t dig in burrows where snakes may live. Don’t try to catch a rattlesnake, even if you are trying to confirm a friend was bitten by one.
- Wear high-legged boots and gloves. Boots can prevent fangs from puncturing the skin, or minimize the amount of venom the snake can inject. Gloves will protect your hands.
- Watch the kids. Venom travels faster in smaller bodies.

What to do if you're bitten

- Call 911 immediately.
- Note the size. The smaller the snake, the more concentrated the venom.
- Do not apply a tourniquet.
- Do not attempt to suck out the venom. You can poison yourself if it gets in the mouth and you can cause tissue damage around the bite.
- Keep bitten limb in a neutral position --- do not elevate.
- Do not ice the bite area.
- Stay calm. If you aren’t in cell range, send someone else to get help. You have four to five hours before the venom has time to fully circulate.

NOAA Region VIII Weekly Outlook

Today-Wednesday

- Critical fire weather conditions will continue across eastern CO through this evening. Ongoing fires will have the potential to continue to grow quickly
- A marginal risk for severe thunderstorms exists across E SD this afternoon. Primary threats will be gusty winds and large hail
- Strong winds will continue across southern portions of WY which could result in impacts to transportation along Interstates 25 and 80
- Periods of valley rain and mountain snow will continue through mid-week across portions of the Intermountain West and Northern Rockies
    - Impacts to travel across mountain passes are possible but should lessen after tomorrow

Thursday-Sunday

- A ridge of high pressure is expected to build across the area late in the week and into the weekend keeping the threat for widespread impactful weather low

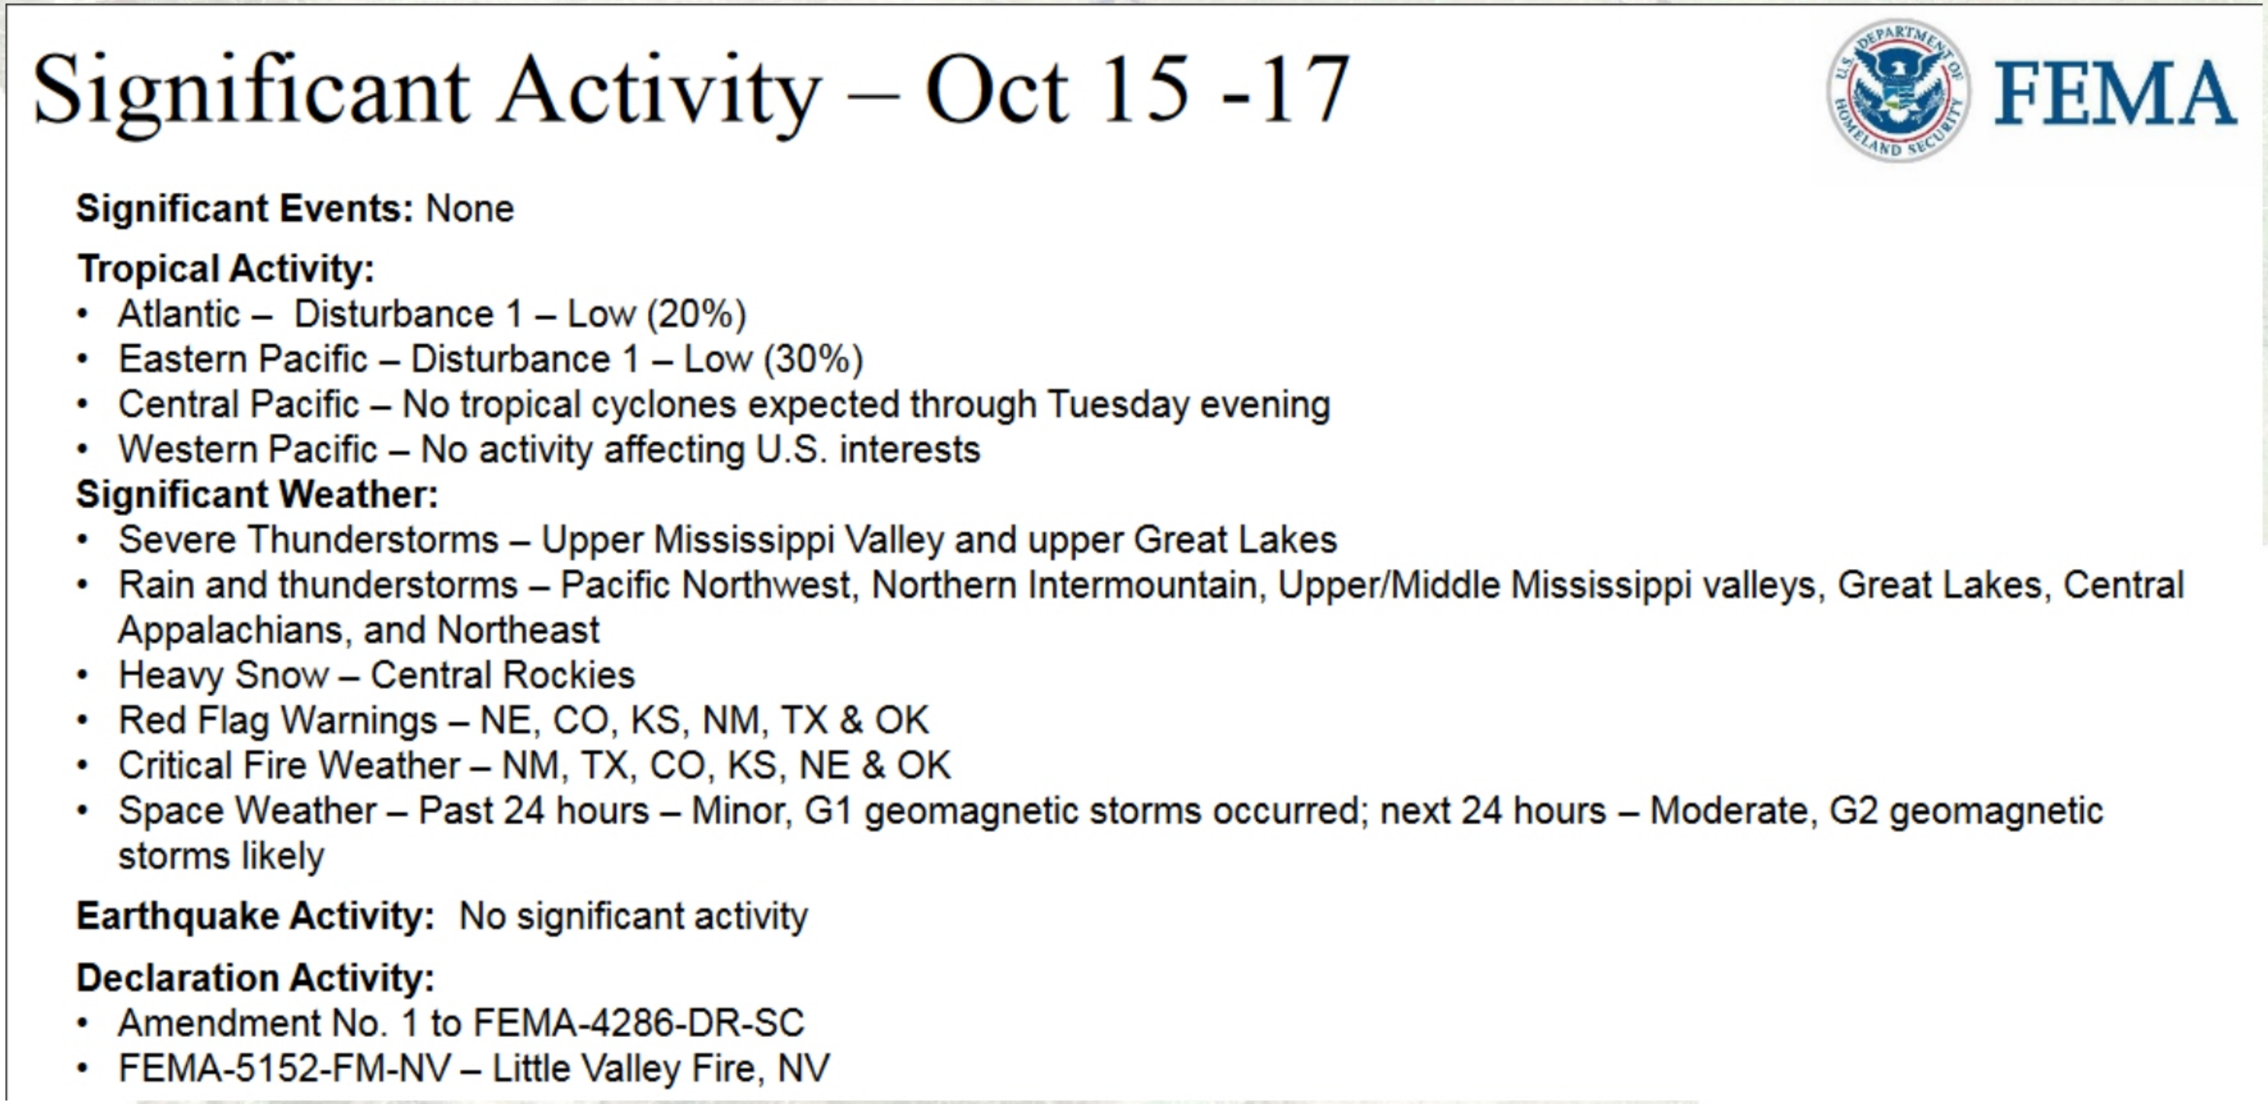
Significant Activity



Significant Activity – Oct 15 -17

FEMA

Significant Events: None

Tropical Activity:
- Atlantic – Disturbance 1 – Low (20%)
- Eastern Pacific – Disturbance 1 – Low (30%)
- Central Pacific – No tropical cyclones expected through Tuesday evening
- Western Pacific – No activity affecting U.S. interests

Significant Weather:
- Severe Thunderstorms – Upper Mississippi Valley and upper Great Lakes
- Rain and thunderstorms – Pacific Northwest, Northern Intermountain, Upper/Middle Mississippi valleys, Great Lakes, Central Appalachians, and Northeast
- Heavy Snow – Central Rockies
- Red Flag Warnings – NE, CO, KS, NM, TX & OK
- Critical Fire Weather – NM, TX, CO, KS, NE & OK
- Space Weather – Past 24 hours – Minor, G1 geomagnetic storms occurred; next 24 hours – Moderate, G2 geomagnetic storms likely

Earthquake Activity: No significant activity

Declaration Activity:
- Amendment No. 1 to FEMA-4286-DR-SC
- FEMA-5152-FM-NV – Little Valley Fire, NV

Eastern Pacific Tropical Assessment

Hurricane Seymour (Category 1): *(Advisory #17 as of 5:00 a.m. EDT)*

- Located 820 miles WSW of southern tip of Baja California
- Moving NNW at 12 mph
- A turn N expected today, followed by a NE motion on Friday
- Maximum sustained winds 90 mph
- Rapid weakening expected; forecast to weaken to a tropical storm today and remnant low on Friday
- Hurricane force winds extend 25 miles
- Tropical storm force winds extend 80 miles
- No coastal watches or warnings in effect

NOAA Region VIII Weekly Outlook

Today-Saturday

- An elevated fire danger risk for Wyoming this afternoon
- A storm system will cross the northern Rockies Friday
  - Valley rain/mountain snow for southern Montana and western Wyoming
  - Strong winds are possible across northern Utah

Sunday-Wednesday

- A stronger storm system will cross northern Rockies/Northern Plains
  - Mountain snow for western Wyoming and southwestern Montana Sunday into Monday
  - Strong winds in Colorado and Wyoming Sunday then in Wyoming Monday

NATIONAL NEWS

Obama Declares Disaster In 12 Texas Counties

Associated Press, June 11, 2016

HOUSTON (AP) – President Barack Obama has declared a major disaster in 12 Texas counties throughout the state that suffered severe flooding last month during heavy rainfall.

The declaration, approved on Saturday, covers Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Travis, Waller, and Washington counties.

It enables residents to received federal grants for temporary housing and home repairs, low-cost loans to cover uninsured property losses and other programs to help individuals and business owners recover.

The declaration also approved funding for local and state response costs and sheltering.

Texas Gov. Greg Abbott thanked Obama and said the declaration lets Texans "begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Abbott says more counties could be added to the declaration.

Some Residents Of Flood-evacuated Texas Checking Damage

Associated Press, June 12, 2016

ANGLETON, Texas (AP) – Floodwaters are receding in parts of South Texas and residents of some areas evacuated since last week are getting a chance to check their damaged property.

Brazoria County has begun limited re-entry, via boat or land vehicle, to formerly flooded areas as some evacuation orders remain. Some roads remained closed Sunday due to lingering high water or damage.

County Judge Matt Sebesta, in a statement Saturday, said people must show proof of residency to be allowed in to evaluate property or retrieve supplies.

President Barack Obama on Saturday declared 12 Texas counties federal disaster areas due to heavy rain and flooding since late May.

The declaration covers Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Travis, Waller and Washington counties. Residents are eligible to seek federal assistance.

Rookie Firefighters Test Mettle Ahead Of Wildfire Season

By Nathan Brown

Associated Press, June 12, 2016

FAIRFIELD, Idaho (AP) – More than 40 rookie wildland firefighters spent the past week learning about their new trade at a camp in the Sawtooths north of Fairfield.

On Thursday, they put out a fire for the first time.

Crew boss Adam McKean knelt down and drew a diagram in the dirt path, explained to his crew what they were about to do and gave them tips like paying attention to the wind and weather and trying to chat and get to know their colleagues as they worked. The firefighters, some wearing the Bureau of Land Management's black helmets and others from the U.S. Forest Service and wearing yellow or light blue ones, leaned on their tools – some with shovels, some with combis – a tool that combines a pick and a shovel, some carried a pulaski – a combination cutting/digging implement named after Ed Pulaski, the northern Idaho forest ranger who invented it a century ago – and listened.

They headed up the nearby hill into the woods, where a few test fires had been set. Walking in a line – a technique known as gridding, where firefighters find small fires in an area by walking in a grid and covering the ground systematically – they practiced building fire lines, which is when firefighters dig a trench around a fire to contain it by cutting it off from any nearby fuels.

"This is where they put everything they've learned all week long," said B.J. Stauffer, an engine captain with the BLM and one of the co-leaders of this year's rookie school.

Then, they put the fires out, practicing techniques such as bone piling – piling up branches, logs and other flammable materials that have been left within the fireline so they burn up and out faster.

"It's important to get down to where there's no material that'll burn in there," said Kurt McDonald, field training officer with the BLM.

One of the values in this training, which is held every year at the Sawtooth United Methodist Camp, is that it brings Forest Service and BLM crews together, Stauffer said. Fire crews from both agencies frequently work together and respond to fires on each other's land, and the training lets them meet and practice working together.

For 19-year-old Tristan Kulhanek, who graduated from Kimberly High School, his new job, which he intends to make a career of, puts him on the path to fulfill a lifelong dream. He has family members who are firefighters both with the BLM and with city departments.

"It's always been a passion of mine ever since I was little," he said.

Kulhanek and the others came to the camp last week, waking up at 6 a.m. and starting their days with an hour of physical training before breakfast. Then, they would take classes until dinner, learning about firefighting and fires. Much of Wednesday was spent outside, practicing gridding and other techniques without an actual fire so they would be ready for Thursday's practice. When Kulhanek and the others are done, they will be Firefighter Type Twos.

"After tomorrow, we'll be available to be on fires," he said.

The National Interagency Fire Center's Predictive Services released its fire outlook for the summer last week, predicting a normal June fire season for Idaho, but above-normal risk in much of southwestern Idaho and northern Nevada in July and August, due to more rain than normal earlier this year, which has led to an above-average grass crop in the region.

Stauffer said the rookies will likely spend most of fire season in south-central Idaho, but they could also be sent to other states if there's a big fire and their help is needed.

This area includes both hilly, wooded environments like the Sawtooths north of Fairfield and sagebrush deserts, and they pose different challenges to firefighters. Generally, forest fires move more slowly but take more time and effort to put out, while in the desert you get "light, flashy fires" that consume the sage brush and desert grasses quickly, said Chris Anthony, fire operations specialist with the BLM.

"They move faster," he said. "But they don't take near as much effort to extinguish."

High Waves During Storm? New Forecast Model Tries To Predict

By Martha Waggoner

Associated Press, June 11, 2016

RALEIGH, N.C. (AP) – When John Couch is certain a storm will hit Hatteras Island, he goes into action, moving merchandise in his auto parts store from bottom shelves to top ones and hauling away the most valuable items.

But at 64 years old, Couch is less and less enamored of spending eight hours packing up his property. So his ears perked up when he learned about a new forecasting model from the U.S. Geological Survey and the National Oceanic and Atmospheric

Association that's intended to give a better idea of how much ocean water will overrun an area.

"Any and all information is always helpful," says Couch, who owns the Lighthouse Service Center and Lighthouse Auto Parts along North Carolina's Outer Banks. "You don't want to put up stuff unless you really have to."

The USGS is running its coastal change forecast model to predict how far a storm's waves will push water up the beach – whether it will go just to the dunes, over the dunes, or even farther onto roads and property. Oceanographers are in the pilot stages of a new implementation of the model that would predict beach changes in all weather conditions.

As part of the pilot program, hour-by-hour forecasts of potential beachfront changes caused by wave conditions are underway in some areas of North Carolina, Massachusetts and Florida, said USGS research oceanographer Hilary Stockdon. The pilot program runs all the time for all sorts of weather, not just big storms such as hurricanes and nor'easters. Eventually, the forecasts – which give details for the coming days – will be available for all Gulf and Atlantic states up to 102 hours before storms.

The pilot program was running in North Carolina during recent Tropical Storms Bonnie and Colin, but the forecasts aren't yet available publicly. Officials hope the information for the three states will be online in three months.

"In places like the Outer Banks, there could be a high tide and winds from a particular direction that are going to overwash Highway 12 and cut off transportation," Stockdon said, referring to the narrow road that provides the only nonferry access to Hatteras Island. "Those are the kind of events we want to be able to help locals with."

Since 2011, the model has been used to forecast coastal change during storms that make landfall. USGS used it most recently when Colin made landfall in Florida; researchers are studying the results to determine the accuracy of their forecasts. Those are available to the public through the USGS coastal change hazards portal.

The model adds data about what's called wave run-up to information on storm surge and tides. That results in a total on the amount of water that will come ashore in any kind of storm, said USGS research oceanographer Joseph Long. Storm surge measures how high the ocean will rise; wave run-up determines how big the waves will be at the shoreline, on top of the rising ocean.

"It's the addition of the two," he said. "They're both important. In the past the forecasts have only given us the storm surge. ... A lot of times, they're equally important."

The new model could save lives on vulnerable barrier islands such as the Outer Banks by advising residents of when escape routes might be cut off, said Jeff Masters, meteorology director of the private Weather Underground.

For example, Masters wrote in an email, during Hurricane Ike in 2008, residents of Texas' Bolivar Peninsula had their only route cut off nearly 24 hours before the storm arrived. Seven people died on the peninsula from storm surge – several while attempting to escape, he said.

Last fall, Hurricane Joaquin stayed well to the east of the Outer Banks. Yet the USGS model accurately forecast dune erosion that occurred in Duck and overwash on a road in Kitty Hawk, Long said.

"Water levels got pretty high, but there wasn't a big surge," he said. "That's the kind of event you would miss if you're only forecasting storm surge."

The USGS uses a camera that takes before and after photos at the Army Corps of Engineers field station in Duck to check the accuracy of its forecasts. Officials also want to install cameras on the northeast coast of Massachusetts; in Jupiter, Florida; and on the Gulf of Mexico at Tampa Bay.

On the Outer Banks, Dare County didn't issue a mandatory evacuation before Sandy struck in 2012, buckling part of N.C. Highway 12. Drew Pearson, now emergency management director for the county, said, "This product may have told us what we were going to get, and we may have been able to make a different decision."

Minor Flooding Continues In Central And Southeast Wyoming

Associated Press, June 10, 2016

CHEYENNE, Wyo. (AP) – Flood warnings have been posted for areas of central and southeast Wyoming as rivers and streams overflow their banks with runoff from the melting mountain snowpack.

So far, flooding has been limited to low lying areas along the rivers and streams in Fremont, Carbon, Albany and Lincoln counties.

In Fremont County, the North and Middle Forks of Popo Agie (pah-POE'-shuh) river were running near flood stage Friday in the Lander area.

The Wind River at Riverton has been rising but has remained below flood stage so far.

In Carbon County, minor flooding is occurred along the North Platte River at Saratoga, where sandbags are protecting the town. Minor flooding also is occurring at Laramie from the Laramie River.

In southwest Wyoming, the Green River at LaBarge is near flood stage.

The Latest: Some Evacuated Yarnell Residents To Return Home

Associated Press, June 10, 2016

YARNELL, Ariz. (AP) – The Latest on a wildfire that has led to evacuations near Yarnell, Arizona. (all times local):

6:30 p.m.

Some residents of Yarnell and Peeples Valley who were evacuated by a brush fire are being allowed to go back home.

At 4 p.m. Friday, authorities reopened a 7-mile stretch of Highway 89 that has been shut down since Wednesday when the blaze began.

About 250 Yarnell residents were evacuated Wednesday night and 30 residents of nearby Peeples Valley were evacuated Thursday afternoon after winds fanned the flames.

Fire officials say Peeples Valley residents and evacuated residents from the west side of Yarnell are being allowed to return home Friday night.

Homes on the east side of town closest to the fire remain under mandatory evacuation, but authorities say that order could be lifted sometime Saturday.

______

5:15 p.m.

Some residents evacuated by a brush fire near in the north-central Arizona town of Yarnell are being allowed to go back home.

At 4 p.m. Friday, authorities reopened a 7-mile stretch of Highway 89 that has been shut down since Wednesday when the blaze began.

About 250 Yarnell residents were evacuated Wednesday night and 30 residents of nearby Peeples Valley were evacuated Thursday afternoon after winds fanned the flames.

Fire officials say residents on the west side of Yarnell are being allowed to return home Friday night.

Homes on the east side of town closest to the fire remain under mandatory evacuation, but authorities say that order could be lifted sometime Saturday.

The human-caused fire remains 10 percent contained. It has charred more than 5 square miles, but officials say the fire continues to move away from the towns.

______

4 p.m.

Authorities have reopened a major road that has been shut down by an Arizona brush fire near Yarnell.

Highway 89 was reopened at 4 p.m. Friday.

A 7-mile stretch through Yarnell was shut down Wednesday after the blaze began.

The fire forced roughly 300 people to evacuate. It has grown to roughly 5 square miles and remains 10 percent contained.

There is no immediate word when evacuees can return to their home.

_____

1:08 p.m.

Officials are weighing whether to reopen a major road that has been shut down by an Arizona brush fire.

Fire spokesman Gerry Perry says firefighters will determine Friday afternoon whether to reopen part of State Route 89 near Yarnell.

A 7-mile stretch through Yarnell was shut down because of the blaze, which started Wednesday and is 10 percent contained.

The fire forced roughly 300 people to evacuate and grew overnight to roughly 5 square miles.

Overcast clouds will bring slightly cooler temperatures as firefighters continue efforts to control the fire.

Forecasts predict the weather will stay mostly the same as Thursday, which had light winds of 5-10 mph, but with a slight increase in humidity.

Arizona Public Service is working to fix power outages caused by the fire.

8:10 a.m.

Firefighters are hoping to gain control of an Arizona brush fire that has forced the evacuation of about 300 people and has since more than doubled in size.

Fire officials said Friday that overnight mapping determined the blaze is now burning roughly 5 square miles.

Officials are scheduled to hold a morning news briefing on the blaze that broke out close to Yarnell, a community where a 2013 wildfire killed 19 members of an elite firefighting crew.

The fire is currently 10 percent contained.

It has not damaged any homes but three structures such as sheds have been burned.

Firefighters are hopeful the fire will not grow out of control and containment could happen by early next week.

Crews Box In Juab County Desert Wildfire Ahead Of Wind Gusts

Associated Press, June 10, 2016

EUREKA, Utah (AP) – Fire crews are trying to box in a relatively small desert wildfire that could grow Friday as winds push the flames through dried up sagebrush and grass.

Fire spokesman Adam Solt says no structures or people are threatened by the fire burning in central Utah's Juab County but crews are working to reign it in.

Solt said Friday afternoon that the lightning-caused fire was a little larger than 2 square miles. It's burning about 25 miles southwest of Eureka.

Officials said Thursday they would evacuate the nearby Cherry Creek camping area, but Solt says no campers were there at the time.

Solt says officials have not closed off any areas near the fire.

5.2 Quake Near Borrego Springs Gives The Southland A Jolt

By Times Staff

Los Angeles Times, June 10, 2016

A shallow magnitude 5.2 earthquake was reported Friday morning 13 miles from Borrego Springs, according to the U.S. Geological Survey. The temblor occurred at 1:04 a.m. Pacific time at a depth of -0.6 miles.

According to the USGS, the epicenter was 16 miles from La Quinta, 19 miles from Palm Desert, and 20 miles from Rancho Mirage. There were several aftershocks.

Borrego Springs is a community of about 3,000 people in eastern San Diego County, near the Imperial County line. The quake was felt throughout the Southland. A Downey woman called KNX 1070 and said it struck with "a soft roll," then later "hit again stronger." A caller from Costa Mesa described a "back and forth" sensation.

As of 1:30 a.m., there were no reports of damage.

Earthquake: 3.1 Quake Strikes Near Borrego Springs, Calif.

By Quakebot

Los Angeles Times, June 10, 2016

A shallow magnitude 3.1 earthquake was reported Friday afternoon 13 miles from Borrego Springs, Calif., according to the U.S. Geological Survey. The temblor occurred at 4:42 p.m. Pacific time at a depth of 5.6 miles.

According to the USGS, the epicenter was 15 miles from La Quinta, Calif., 17 miles from Palm Desert, Calif. and 19 miles from Rancho Mirage.

In the last 10 days, there have been eight earthquakes of magnitude 3.0 or greater centered nearby.

This information comes from the USGS Earthquake Notification Service, and this post was created by an algorithm written by the author.

'Like A Disney Ride': Southern California Shakes From Quake

Associated Press, June 11, 2016

PALM SPRINGS, Calif. (AP) — Doriel Wyler was asleep at her home outside Palm Springs when her cats bolted off the bed and things started jolting and swaying early Friday — turning her room into a surreal theme park ride.

The magnitude-5.2 earthquake that struck near the desert city woke up people across much of Southern California but reportedly caused no significant damage.

"It became like a Disney ride," said Wyler, who lives in La Quinta, a resort city near Palm Springs. "I love earthquakes!"

The breakfast restaurant she owns, called the Egg Cafe, escaped without damage, but she said the liquor store at the end of the street smelled "like vodka" from its broken bottles.

And one La Quinta couple had mirrors fall off the wall and shatter, news station KESQ-TV reported (http://bit.ly/1UGQ1bI).

People in San Diego and Los Angeles, about 100 miles to the west, posted on Facebook and other social media that they felt the shaking.

Saum Yermian, a longtime Los Angeles resident who has been through his share of quakes, posted video on Instagram of a chandelier still swaying after the ground stopped moving.

He was in bed getting ready to go to sleep when he felt the jolt.

"Within the first 2 seconds or so, I noticed this was a large-size quake," he said. "The jolt was strong enough for me to recognize this wasn't a (magnitude) 3 or 4."

It touched off dozens of smaller aftershocks, including a magnitude-3.8 less than a minute later, according to the U.S. Geological Survey.

The Los Angeles County Fire Department and the Riverside County Sheriff's Department said they had no reports of damage. But it shook nerves.

Dudley Detamore was working at Domino's Pizza in La Quinta when he felt the store vibrating.

"I felt like I wanted to get sick," he told KESQ.

The quake struck in a region covered by the rugged expanse of Anza-Borrego Desert State Park, which sprawls over more than 900 square miles.

Veteran seismologist Lucy Jones, who recently retired from the Geological Survey, tweeted that the earthquake occurred near the San Jacinto Fault, which is historically the most active in Southern California.

The quake was near the locations of a magnitude-6 in 1937 and a 5.3 in 1980, she said.

Deadly But Little-known: Why Scientists Are So Afraid Of The San Jacinto Fault

By Rong-Gong Lin Ii, Shelby Grad And Joseph Serna

Los Angeles Times, June 10, 2016

The 5.2 magnitude earthquake that hit the desert southeast of Los Angeles on Friday was centered along the San Jacinto fault, which is one of the region's most active and potentially dangerous fault lines.

The fault runs through populated areas such as San Bernardino, Colton, Moreno Valley, Redlands, Loma Linda, Hemet and San Jacinto, as well as near Riverside, Rialto and Fontana. The epicenter of Friday's quake was in a more isolated area near Borrego Springs in eastern San Diego County.

The quake, which struck at 1:04 a.m., triggered more than 450 aftershocks but caused no major damage.

Experts have been warning for some time, however, that the San Jacinto fault — while less well known than the San Andreas — poses a major threat to the region.

Globalized Economy More Susceptible To Weather Extremes, Scientists Warn

Still Waiting For A Monster El Niño Storm? Forget It

By Hector Becerra

Los Angeles Times, June 9, 2016

Remember those monstrous storms that bore down on Southern California this year courtesy of El Niño, and how they caused mudslides, mass flooding and general pandemonium on the freeways?

Neither do we.

The National Oceanic and Atmospheric Administration has declared El Niño, the climate pattern that can bring powerful rains to the region, over – and after a rather anemic showing.

"We're sticking a fork in this El Niño and calling it done," NOAA said in a statement. "The king is dead!"

Though the ocean-borne El Niño helped conjure strong rain and snow in Northern California, it did very little in this regard for the Los Angeles area. From October 1 to midnight Wednesday, downtown L.A. had 6.88 inches of rain. That was even less than the 7.71 inches that fell during the same stretch the year before.

The average rainfall in downtown L.A. during that period is 14.59 inches.

"We're still in an extreme drought situation … for Southern California," said Stuart Seto, a weather specialist for the National Weather Service in Oxnard.

Southern California would need about three years of substantially above-normal rainfall – as much as 10 inches each year – to climb out of that situation, Seto said. And nothing in L.A.'s recent history would suggest that that is going to happen.

"The last five years we've been getting half of the normal rainfall," Seto said.

Hopes had been high that El Niño would be a force in Southern California this year. February was expected to be one of the wettest on record. Instead, by one measure at least, it became the hottest. Many weather experts said the conditions in the Pacific appeared similar to the El Niño of 1997-98, which dumped double the average amount of rain in Los Angeles and San Francisco.

Instead, the amount of warm water under the surface was less this time around and the atmospheric response was generally weaker.

"In short … no two El Niños are alike," the NOAA said.

The National Weather Service said it now appears that come the late fall and winter, Southern California could be in the grip of La Niña, which could bring drier-than-average conditions. And the summer is expected to have above-normal temperatures, Seto said.

"Everybody that was looking at it was expecting a 'Godzilla' El Niño," he said. "But nature has its way."

El Nino Has Runs Its Course. But Did It End California's Drought?

By Lucy Schouten

Christian Science Monitor, June 10, 2016

El Niño has passed on its merry way after 17 months of unusual warmth, wet weather, and unusual storms from the Pacific Ocean around the world.

The big story for this El Niño has been whether it would aid dry California's comeback from a drought. The answer is mixed.

"In California, it's all about location, location, location," Jan Null, San Francisco meteorologist said, according to USA Today.

The wet-weather patterns certainly helped the state, filling some low reservoirs and showering rain on dry land, but after years of drought, California needs more than one good winter – even an unusually wet one – to solve its problems completely.

The power was there, as it was one of the largest patterns in history, but the question was where it went. This El Niño was "very strong," comparable to only two others in the 60 years since the National Oceanic and Atmospheric Administration has made records of these patterns, according to analysis by Mr. Hull. The two previous El Niño patterns to receive "very strong" ratings – one in 1982-1983 and the other in 1997-1998 – drenched the entire state of California with rainfall 4 to 10 inches above the average.

This El Niño was equally generous in its rainfall but somewhat different in its allocation. Northern California still received the customary, well-above-average rainfalls this winter, as did the Pacific Northwest to an unusual degree. Southern California did not, and rainfall throughout the Southwest was disappointingly average to low. For this reason, Hull gave the pattern an A- for northern California, a C for the central part of the state, and failing marks in its southern climes.

Peter Gleick, president of the California-based think tank Pacific Institute, was also unimpressed.

"[El Niño] was not enough water to bail us out of the drought, but it was enough water to make many people believe, wrongly, that the drought has ended," he told USA Today.

The weather pattern's rain-giving focus was so far north that for southern regions where a long-term drought was in place before the El Nino, long-term drought remains, according to the University of Nebraska-Lincoln-based US Drought Monitor.

The early-June record heat blast – with temperatures up to 12 degrees F. above average in the West – suggests a hot, dry summer has begun, although the Drought Monitor predicts summer monsoons will begin soon.

El Niño affected the country's southern coasts more typically, offering the Southern states and Texas unusual tornadoes and flooding throughout the winter, as The Christian Science Monitor reported:

El Niño patterns typically hit the Deep South with cool, wetter-than-average weather during the late winter and spring months when the jet stream shifts, leaving an unusually deep trough of air pressure to transport storms from the Gulf of Mexico. The likelihood of extreme, wet weather between January and March increases by twofold during an El Niño year, according to the National Weather Service's Jackson, Miss., office.

As the Golden Gate Weather Services meteorologist and top El Niño tracker Null has said, the 2015-2016 El Niño has been a "poster child" for his mantra, "All El Niños are not the same!"

Humans Caused 5-square-mile Arizona Wildfire

By Ricardo Cano And Ron Dungan

USA Today, June 10, 2016

PEEPLES VALLEY, Ariz. — Residents of Yarnell, Ariz., learned Thursday that a fire, which erupted the day before across a major highway from the fatal 2013 Yarnell Hill wildfire, didn't come from a lightning strike but instead came from human activity.

Exactly who started the Tenderfoot Fire, which has been burning between slopes southeast of Yarnell since about 3:15 p.m. MST Wednesday, and whether it was arson or unintentional is not yet known, said Dolores Garcia, a federal Bureau of Land Management spokeswoman. Fire officials have set up their command center in Peeples Valley, Ariz., about 5 miles from the fire's origin.

Aerial infrared photo mapping overnight showed the blaze at a little more than 5 square miles and 10% contained.

So far, the fire is posing no eminent threat to homes or structures and has not crossed any containment lines, Garcia said late Thursday.

Wildfires tend to calm down as evening approaches but often grow in the heat of the day when vegetation is at its driest and windy conditions propel flames. The fire is about 80 miles northwest of Phoenix and less than a mile southeast of Yarnell, a community of about 700 residents best known for a lightning-caused wildfire in which 19 members of the Granite Mountain Hotshots firefighting team were killed June 30, 2013.

About 300 people who had been evacuated from the potential path of the fire were hoping to return home Thursday if only to retrieve necessities but ultimately were not allowed back in the area, Garcia said.

“The last thing we want to do is have residents go back into unsafe situations,” she said.

Friday’s forecast calls for a high of 92 degrees with no chance of rain and winds from the southwest at 10 mph, weather often duplicated in the summer in the high desert.

On its first day, the fire burned three structures — all out buildings — and appeared to move northeast, burning upslope just east and away from Yarnell, on the east side of Arizona 89. A photo showed flames moving up Y Mountain, just beyond a monument honoring the firefighters who died in 2013. By nightfall, the fire had reached the top of the ridge, destroying cellphone towers there, said Dwight D’Evelyn, a Yavapai County Sheriff’s Office spokesman.

Conditions in central Arizona are extremely dry with a high fire danger, Garcia said.

The last measurable rainfall in the area was in Prescott, Ariz., about 30 miles to the northeast, which had 0.04 inches May 17 and traces of rain May 18. The highest temperature was 69 degrees both days. Since then, the area has seen warmer temperatures and high winds in the afternoon, drying up plants, said meteorologist Hector Vasquez of the National Weather Service.

“The vegetation has gotten dryer,” Vasquez said. “That’s why it’s fire season. Everything is bone dry. Any moisture that fell in the spring is gone by now until the July monsoon season.”

The Latest: FEMA Authorizes Funds To Help Fight Arizona Fire

Associated Press, June 9, 2016

YARNELL, Ariz. (AP) — The Latest on a wildfire burning near Yarnell, Arizona. (all times local):

3:45 p.m.

Federal authorities have authorized the use of federal funds to assist the Arizona Department of Forestry fight a brush fire burning near Yarnell.

The U.S. Department of Homeland Security’s Federal Emergency Management Agency will provide funding for up to 75 percent of eligible firefighting costs.

The fire is believed to be human-caused and already has burned about 2 square mile of brush and grass.

The flames broke out Wednesday, leading about 250 people to evacuate their homes close to Yarnell, a community about 60 miles northwest of Phoenix where a 2013 blaze killed 19 members of an elite firefighting crew.

Authorities ordered additional evacuations Thursday, including about 30 homes in the Peeples Valley Area, as they feared the fire might make its way down to Highway 89.

___

2:30 p.m.

Authorities have ordered additional evacuations for a brush fire near Yarnell, an Arizona community where a June 2013 blaze killed 19 members of an elite firefighting crew.

About 30 homes in the Peeples Valley area were evacuated Thursday afternoon as authorities fear the fire might make its way down to Highway 89.

That brings the total of evacuees to near 300 in the area. But authorities remain confident that the fire won’t grow out of control and containment could still be made by sometime early next week.

Fire officials on Thursday put the fire near Yarnell at roughly 2 square miles, up from the square mile estimated late Wednesday.

They say the fire is 10 percent contained and still burning away from Yarnell.

___

12:35 p.m.

A brush fire burning outside an Arizona town near where 19 firefighters died in a 2013 wildfire has been mapped as being twice as large as previously estimated.

Fire officials on Thursday put the fire near Yarnell at roughly 2 square miles, up from the square mile estimated late Wednesday.

Bureau of Land Management spokesman Delores Garcia says the fire continues to burn but that the doubling in its estimated size is a result of GPS mapping.

Containment remains at 10 percent, and Garcia says the fire continues to burn away from Yarnell.

She says authorities now believe State Route 89 through Yarnell can be reopened Thursday evening.

There had been talk of reopening the highway Thursday afternoon but Garcia says fire managers want to avoid any congestion for movement of firefighting equipment during the heat of the day.

___

7:45 a.m.

Officials say weather conditions are favorable for fighting a brush fire burning outside an Arizona town near where 19 firefighters died in a 2013 wildfire.

The fire has burned nearly a square mile but incident commander RobRoy Williams says its growth slowed overnight. He says light winds Thursday morning are blowing the fire away from Yarnell and that the weather forecast is favorable for several days.

Around 200 firefighters and other personnel are assigned to the fire, which is 10 percent contained.

Williams says the origin of the fire is under investigation but a human cause is suspected.

About 250 to 300 residents left their homes but Williams say the evacuation order could be lifted as early as Thursday afternoon if favorable conditions continue.

The fire has not burned any homes but three structures such as sheds have burned.

___

6:55 a.m.

Calm weather near an Arizona community allowed firefighters to get some sleep overnight as they resume the fight against a wildfire that has burned nearly a square mile of brush and grass.

The fire is burning near Yarnell, where a 2013 blaze killed 19 members of an elite firefighting crew.

Bureau of Land Management spokeswoman Dolores Garcia says 250 to 300 people left their homes in Yarnell about 60 miles northwest of Phoenix.

Garcia says winds may pick up late Thursday but calm and cooler conditions with higher humidity overnight helped firefighters.

There have been no reported injuries. The fire has burned close to Yarnell but so far the only structures reported to have burned are three unoccupied buildings such as sheds.

The cause of the fire isn't known.

Grand Isle Gets $3.4M To Elevate Houses; More Sought

Associated Press, June 10, 2016

GRAND ISLE, La. (AP) — The federal government is providing almost $3.4 million to elevate houses on Grand Isle, but officials said that money will help only a fraction of the island homeowners whose structures are subject to flooding.

The latest funds from the Federal Emergency Management Agency funds are enough for about 20 houses, far less than the number of homeowners who are seeking the funds from the Federal Emergency Management Agency, The Times-Picayune (http://bit.ly/1YdM3Nm) reported.

Jefferson Parish's floodplain management director Michelle Gonzales said 390 repeat-flood houses on Grand Isle have filed a total of 1,200 flood claims with FEMA. The payments total $26.4 million.

There are 42 houses that have either been approved to receive FEMA money for elevation or are in the process of being approved. The Jefferson Parish Council approved the houses after seeking and approaching property owners whose homes best met FEMA's requirements.

Gonzales estimated that an additional 100 to 150 homes are still in need of elevation.

She said the process of distributing funds can be challenging, as federal money usually becomes available in connection with natural disasters.

"It gets difficult, if your house has 4 feet of flood water in it and you need to elevate it before you rebuild, to wait on grants to come down 12 to 24 months later," she said.

Gonzales urged homeowners who are still awaiting elevations to maintain flood insurance because the federal government wants to see that homeowners who have previously been given federal money have kept up with regulations. She also recommended homeowners file claims if their homes get flooded.

Responders Hone Parachuting, Other Skills At Doomsday Drill

By Rachel La Corte

Fairfield (CT) Citizen, June 10, 2016

SHELTON, Wash. (AP) — The parachutes slowly float down from Chinook helicopters, first carrying boxes of supplies and then the paratroopers who set up a field operations center as part of a readiness drill for a megaquake and tsunami.

Chief Warrant Officer James Pierce packed up his parachute and grabbed his gear shortly after hitting the ground Thursday at Sanderson Field, an airfield in the small city of Shelton on the west side of Puget Sound.

Parachuting in may be the only option for some responders following a massive earthquake, especially to get to remote locations that are rendered undriveable.

"It's a good, effective way to get gear to the ground," Pierce said.

Thursday's exercise was part of a four-day event that ends Friday, called Cascadia Rising, built around the premise of a 9.0 magnitude earthquake 95 miles off the coast of Oregon that results in a tsunami. Both events would likely destroy buildings, roads and buildings and disrupt communications.

For the drill, the airfield and adjoining Mason County Fairgrounds have been converted into a staging area with hundreds of members of the National Guard, a tactical operations center where officials communicate directly with officials at Camp Murray and a trauma center.

Emergency officials believe Shelton — about 70 miles east of the Washington Coast — will be the closest airfield to the coast to survive the disaster.

"After a Cascadia Subduction Zone earthquake, we fully anticipate that roads are going to be cut off, bridges are going to be down and we're going to have isolated pockets of people that are going to need some help and support," said Major General Bret Daugherty, commander of the Washington National Guard.

Research suggests that the Cascadia Subduction Zone — a 600-mile-long fault just off the coast that runs from Northern California to British Columbia — on average produces magnitude 9.0 quakes every 500 years. Big quakes have been separated by as few as 200 years and as many as 1,000, so it's impossible to predict when the next monster quake occurs. However, tectonic stresses have been accumulating for more than 300 years and seismologists say it could rupture any time.

Officials say about 20,000 people have been involved in the disaster drill throughout the Pacific Northwest, representing federal agencies, the U.S. military, and state and local emergency response managers from Washington, Oregon and Idaho, Native American tribes and emergency management officials in British Columbia. More than 8 million people live in the zone, which includes the population centers of Portland and Seattle.

One main goal is to test how well they will work together to minimize loss of life and damages when a mega-quake unleashes a tsunami. They're also testing their ability to communicate without the internet or phones; delivering services in emergency conditions; and search and rescue, decontamination and evacuation abilities.

On Wednesday, one exercise showed the Navy's capability to deliver personnel and equipment to a disaster zone where ports would be destroyed by tsunami waves.

The Navy sent the USNS Bob Hope with about 500 sailors to build a temporary camp on a Naval Magazine Indian Island, a munitions depot in the Puget Sound.

It took the Navy four weeks from loading the Bob Hope to setting up the camp — a similar timeline would be expected after the earthquake.

In Port Angeles, a shoreline city on Washington's Olympic Peninsula, members of the Washington National Guard practiced decontaminating vehicles and first responders. Tsunami waves hitting this area would pick up biohazards while surging through land.

First Sgt. Kent Keller of the Washington National Guard said that these drills allow them to make mistakes now, so they don't make them later during the real thing.

"We are going to learn, and we're going to change the way we behave based on the lessons learned in this training," he said.

FEMA's 2016 National Preparedness Report Shows Health Care On Right Path

By Jamie Morgan

Health Facilities Management, June 10, 2016

FEMA's 2016 National Preparedness Report shows health care on right path

The Federal Emergency Management Agency (FEMA) released its 2016 National Preparedness Report, which evaluates emergency preparedness among individuals, communities, private and nonprofit sectors, faith-based organizations and all levels of government. FEMA reported on key findings in five areas: prevention, protection, mitigation, response and recovery.

Regarding health care and public health sectors, the report states, "Planning; public health, health care and emergency medical services; and risk and disaster resilience assessment are three core capabilities in which the nation has developed acceptable levels of performance for critical tasks, but that face performance declines if not maintained and updated to address emerging challenges."

FEMA cites the United States' 2014 Ebola response as an example, stating that although federal, state and local health partners began addressing challenges such as personal protective equipment for health care workers and medical countermeasures, the presence of the outbreak itself highlights the need to sustain and build capabilities to counter other infectious outbreaks.

ASPR issues Zika planning resources for health care providers, coalitions

The Department of Health & Human Services' Assistant Secretary for Preparedness and Response has issued resources to help health care providers and coalitions plan for a real or potential Zika virus outbreak.

"A Zika outbreak is unlikely to result in large numbers of acutely ill patients needing simultaneous care, making surge planning for Zika unique from that of conventional disaster events, including those with an infectious disease component (e.g., pandemic influenza, Ebola)," the resource guide states. "In contrast, the known and suspected complications of Zika infection (including Guillain-Barré syndrome, microcephaly and other neurological disorders) are likely to disproportionately affect certain patient populations, most notably pregnant women and their developing fetuses. Treatment of these complications will likely require the participation of health care specialties and social services that may have limited experience with preparedness activities."

CDC releases toolkit to reduce risk of Legionella

The Centers for Disease Control and Prevention (CDC) released a new toolkit to prevent Legionnaires' disease outbreaks. The toolkit builds off of ASHRAE 188: Legionellosis: Risk Management for Building Water Systems.

The toolkit provides an easy-to-understand interpretation of ASHRAE Standard 188, as well as worksheets, checklists and scenarios of common water-quality problems. It also contains special sections and considerations for health care facilities.

In the last year, about 5,000 people were diagnosed with Legionnaire's disease and more than 20 outbreaks were reported to the CDC. The most common source of building-associated Legionnaires' disease outbreaks was drinkable water (56 percent), such as water used for showering, followed by cooling towers (22 percent), and hot tubs (7 percent).

House members call for flexible payment rule for hospital outpatient facilities

A bipartisan group of 235 House members urged the Centers for Medicare & Medicaid Services to provide flexibility in the implementation of the Medicare payment reductions for new off-campus hospital outpatient departments (HOPD) under the Bipartisan Budget Act to protect patients' access to care. Specifically, they said the site-neutral payment reductions under Section 603 of the Act should not affect existing off-campus HOPDs that relocate, rebuild, change ownership or types of services, and should not affect services provided by a dedicated emergency department. They also urged the agency's regional offices to use the rule of "reasonable proximity" when evaluating on-campus status.

Preparedness bill clears House panel with AHA-backed provision

The House Energy and Commerce Committee approved the Strengthening Public Health Emergency Response Act (H.R. 3299) with a provision supported by the American Hospital Association (AHA) that would require the Government Accountability Office to report on state, local and hospital preparedness programs. The Department of Health & Human Services' Hospital Preparedness Program (HPP) is the primary federal program for hospital emergency preparedness.

The AHA also urged Congress to fully fund the program at the authorized level of $374.7 million, noting that appropriations have been reduced by more than 50 percent since the program began.

Visual triggers increase hand-hygiene compliance, study says

Unpleasant images may motivate hospital staff to comply with hand-hygiene guidelines, according to a new study that will be presented at the Association for Professionals in Infection Control and Epidemiology's annual conference June 11.

The infection control team at Henry Ford Health System in Detroit used images of bacterial growth to provoke feelings of disgust. They tested the images on hospital units that had low hand-hygiene compliance rates. Compliance in these units increased by between 11 and 46 percent in units in which the study was conducted.

"Hospital staff wanted to wash their hands after looking at the book and picturing similar contamination on their own skin," said Ashley Gregory, MSL (ASCP), an infection prevention specialist who co-led the project.

NFPA releases updated Emergency Evacuation Planning Guide for People with Disabilities

The National Fire Protection Association (NFPA) released the second edition of its Emergency Evacuation Planning Guide for People with Disabilities. The guide is free and accessible online, and features updated statistics, graphics, photos and links. It also includes an expanded and more detailed checklist for planning an evacuation process.

"Accessibility among the disabled community is a relatively recent subject that we've begun to address in fire and building codes, but it's one we must continue to proactively focus on, so that we can fully meet the safety needs of people with disabilities," says Allan Fraser, senior specialist for NFPA's Building Fire Protection division. "Moving forward, we plan to update the guide more frequently with timely updates and information that reflect the continually changing and evolving built environments in which we all work and live."

FEMA Pre-Disaster Mitigation Grants Axed In DHS Funding Bill

By Brandon Ross

Bloomberg BNA, June 10, 2016

The Federal Emergency Management Agency's funding for its pre-disaster mitigation grant program would be slashed nearly in half to about $55 million under a bill approved by a House Appropriations Committee panel.

The Homeland Security Appropriations Subcommittee in bipartisan fashion advanced the Department of Homeland Security's fiscal year 2017 spending measure on a June 9 voice vote without any amendments.

But Rep. Nita Lowey (N.Y.), the full committee's top Democrat, criticized the cut in pre-disaster mitigation spending, echoing complaints from insurers, real estate interests, wildlife advocates and others. She said widespread evidence shows that spending on such measures, such as the establishment and enforcement of stricter building codes, yields savings compared with the money spent on post-disaster recovery (See previous story, 04/06/16) (See previous story, 02/23/16).

Lowey also noted that the bill would cut $12.5 million from FEMA's flood zone mapping functions compared to FY 2016, bringing funding to $177.5 million for mapping.

"The more we invest in mitigation, the more we save when disasters inevitably strike," Lowey said, calling the cuts "troubling."

Insurers: Savings a 'Mirage.'

The mitigation cuts represent a "backwards approach" to the goal of saving taxpayers' money, Jimi Grande, senior vice president of federal and political affairs for the National Association of Mutual Insurance Companies (NAMIC), told Bloomberg BNA in a June 9 e-mail statement.

"Any savings for taxpayers from these cuts are just a mirage, because the inevitable—and inevitably much, much bigger—disaster aid bill following the next catastrophe will come off-budget," Grande said in the statement.

Despite the criticism from Grande and Lowey, the subcommittee and President Barack Obama had other priorities. The pre-disaster mitigation cut falls in line with what Obama requested for the DHS's FY 2017 budget.

Overall, the subcommittee-approved budget would boost funding $432 million over the White House request.

Several Injuries Reported After Tornado Hits Eastern Montana

Associated Press, June 12, 2016

BAKER, Mont. (AP) – Several people were injured and one person had to be rescued after a tornado destroyed several homes and damaged a dozen others Saturday night in Baker in eastern Montana.

National Weather Service meteorologist Wright Dobbs says it happened about 7 p.m. Authorities say everyone in the town of about 1,900 people near the North Dakota border has been located.

Electricity was out and phone service was limited after the storm hit.

Dobbs says severe weather, including hail up to 2 inches in diameter, was reported near Miles City, 80 miles west of Baker.

ABC: Severe Weather. ABC World News Tonight (6/12, story 8, 0:30, Muir, 14.63M) reported, "And we're seeing severe weather across the nation. Here are some of the pictures coming in this evening. A tornado in Montana hitting late Saturday destroying several homes, even lifting an RV right off the ground. In the heartland, heavy rain and flash flooding forcing water rescues like this one. And look at the map, this weekend's heat will continue. Temperatures topping 90s from Texas to the Carolinas."

NBC: Arizona Wildfire. NBC Nightly News (6/10, story 10, 0:20, Holt, 16.61M) reported, "Firefighters in Arizona are still trying to contain a big wildfire tonight. Some 400 of them now involved in that effort. The Tender Foot Fire near Yarnell, Arizona, has burned more than 3,000 acres and forced the evacuation of several hundred people. This is the same area where a wildfire killed 19 firefighters back in 2013."

NFIP AND FLOOD MAPS

On The Move: What Newcomers Need To Know About Flooding, Flood Insurance

By Michelle Sandlin

Houston Chronicle, June 10, 2016

The Houston area has taken quite a beating over the past several weeks, as rain and flooding have continued to take their toll on the city and its residents.

Unfortunately, many Houstonians have learned the hard way, that although history has a way of repeating itself, it isn't always reliable. So, just because their home or neighborhood hasn't fallen victim to flooding in the past, doesn't mean that they are safe from flooding in the future.

That is why obtaining a flood insurance policy is strongly urged for people who are moving to Houston and buying a home, even if that property is located in a low-risk flood zone.

Ed Wolff, president of Beth Wolff Realtors Real Living, shares both his professional advice and personal experiences with his relocation clients when it comes to the importance of having flood insurance. As a two-time flood victim himself, he knows first-hand what flooding can do to a home.

He said that for people who have been through a flood, that it is the psychological ramifications of that experience that leaves a much deeper and lasting impression than the actual effects on a property's value in the marketplace.

"Houston is a city that is very resilient, and from a property value standpoint, we consistently see, even in neighborhoods that have flooded repeatedly, that value and market memory is substantially shorter than the psychological effects on people who have been through a flood," said Wolff.

He added that the consistency of the rainfall has prolonged the marketing time for many properties that might have otherwise been sold over the past several weeks.

This is a result of that psychological effect, which he said has instilled some fears in home buyers about the properties and neighborhoods that they might have been considering.

While that fear might have hindered a number of home sales, Wolff said, "Value will rebound and value will come back, and anybody who mitigates their damage will see a return on that investment, but it's just going to be a matter of time and distance from past, current and future events."

He said that because no property is immune to flooding, he recommends flood insurance for all home buyers and current homeowners and warns his clients against making rash decisions. He tells them to take their time and carefully consider how to best put their homes back together.

Chris Badger, owner of Badger Insurance, said that the recent flooding, compounded by the threat of hurricane season, has many new and current Houston residents taking out flood insurance policies. Ideally, he said that homebuyers should obtain a flood insurance policy when they buy a new home.

"I always tell Realtors that as soon as their clients find a house that they like, that they need to call an insurance agent and have them run a Flood Zone Determination," Badger said. "This will tell them exactly where the property is mapped, and give them an idea of what the rate is going to be for flood insurance for that location."

According to Badger, the cost for flood insurance is relatively low when compared to the potential risk posed by flood damage, and the subsequent loss of property and personal belonging.

"For example, if the home is your primary residence, and you are in Flood Zone X, which is the lowest premium zone, you can obtain a preferred risk policy for $450 through FEMA. That covers you for $250,000 on the structure, and $100,000 on contents with a $1,250 deductible per clause. So, if you have a loss that encompasses both sides of the policy, your total out-of-pocket expense will only be $2,500," Badger said.

He added that FEMA wants to prevent property owners from jumping in and out of policies if they are in lower-risk areas, so there is a 30-day waiting period before a flood insurance policy can go into effect, and the premiums for those policies must be paid in full and in advance each year.

For properties that are in a higher-risk flood zone, home buyers should also be aware that mortgage companies do require flood insurance, and as such the policy would be effective at the time of closing.

6.8 Million U.S. Homes At Risk Of Hurricane Storm Surge Damage In 2016

By Michael Gerrity

World Property Journal, June 10, 2016

Total Reconstruction Cost Value for All Homes Over $1.5 Trillion

According to CoreLogic's 2016 Storm Surge Report, more than 6.8 million homes on the Atlantic and Gulf coasts are at potential risk of damage from hurricane storm surge inundation with a total reconstruction cost value of more than $1.5 trillion.

In addition to the number of homes at risk, the analysis also provides the reconstruction cost value (RCV), which is the cost to completely rebuild a property in case of damage, including labor and materials by geographic location, assuming a worst-case scenario at 100-percent destruction. Using more advanced and granular data than in previous years, the 2016 analysis shows an increase from 2015 in the overall number of homes at risk of storm surge as well as an increase in the reconstruction value of these homes. Despite the overall increases, the 2016 analysis shows a decrease in the most extreme category for both the number and value of homes at risk.

The CoreLogic analysis examines risk from hurricane-driven storm surge for homes along the Atlantic and Gulf coastlines across 19 states and the District of Columbia, as well as for 88 metro areas. Homes are categorized among five risk levels, including Low, Moderate, High, Very High and Extreme.

"Using more granular-level data has given us an even clearer picture of which homes are at risk of storm surge damage," said Dr. Tom Jeffery, senior hazard risk scientist for CoreLogic. "Despite the overall increases in risk, we were glad to see that the number and value of homes in the most extreme, and dangerous, category actually declined. It just goes to show the power of how advanced data can improve risk assessment at the property level."

At the regional level, the Atlantic Coast has just under 3.9 million homes at risk of storm surge with an RCV of $953 billion, and the Gulf Coast has just over 2.9 million homes at risk with $592 billion in potential exposure to total destruction damage (Table 2).

At the state level, Texas and Florida, which have the longest coastal areas, consistently have more homes at risk than other states. Florida ranks first with 2.7 million at-risk homes across the five risk categories and Texas ranks third with 531,169 at-risk homes (Table 3). Since the number of homes at risk strongly correlates with the accompanying RCV, these two states rank first and fifth, respectively for having the largest RCV (Table 4). States with less coastal exposure but lower-lying elevations that extend farther inland, such as Louisiana (ranked second at 800,521 at-risk homes) and New Jersey (ranked fourth at 468,823 at-risk homes), tend to have more total homes at risk because of the potential for surge water to travel farther inland. Louisiana and New Jersey are also near the top of the list for RCV, with Louisiana totaling $184 billion (ranked second) and New Jersey totaling $139 billion (ranked fourth).

At the local level, 15 Core Based Statistical Areas (CBSAs) account for 67.3 percent of the 6.8 million total at-risk homes and 68.3 percent of the total $1.54 trillion RCV (Table 5). This disproportionate distribution of homes suggests that the location of hurricanes that hit land is often a more important factor than the number of storms that may occur during the year. The Miami CBSA, which includes Fort Lauderdale and West Palm Beach, has the most homes at risk totaling 780,482 with an RCV of just under $144 billion. By comparison, the New York City CBSA has slightly fewer homes at risk at 719,373, but a significantly higher total RCV totaling $260 billion.

The CoreLogic storm surge analysis also complements Federal Emergency Management Agency (FEMA) flood zone information to provide a snapshot of potential damage exposure at the property level since many properties located outside designated FEMA flood zones are still at risk for storm surge damage. Standard FEMA flood zones are designed to identify areas at risk for both freshwater flooding, as well as storm surge, based on the likelihood of either a 100-year or 500-year flood event. They do not differentiate risk based on storm severity, and as a result, do not accurately reflect the total extent of potential risk along coastal areas. Homeowners who live outside designated FEMA flood zones often do not carry flood insurance, given that there is no mandate to do so, and therefore may not be aware of the potential risk that storm surge poses to their properties.

East Gloucester Waterfront Rezoning Meetings Begin

By Sean Horgan

Gloucester (MA) Times, June 12, 2016

The city is embarking on the public process for developing a new zoning district for the East Gloucester waterfront properties removed in 2014 from the Designated Port Area (DPA).

The Planning Department, in conjunction with consultants from the Urban Harbors Institute at the

University of Massachusetts at Boston, will hold the first public meeting Thursday, June 16, at 6:30 p.m. at Maritime Gloucester to explain the process, which will include several more public meetings and is expected to last into the fall.

In April 2014, the state approved the redrawing of the city's DPA boundaries within the inner harbor, removing from the DPA all but two East Gloucester and Smith Cove waterfront parcels — the East Gloucester Cold Storage site and the Gloucester Marine Railways parcel at the end of Rocky Neck.

Those changes, designed to spur a more diverse and increased development along the city's historic waterfront, also generated the need for developing a new zoning district. It was the first modification of the city's DPA footprint since it was established in 1978.

Currently, according to city Planning Director Gregg Cademartori, the neighborhood of East Gloucester primarily is zoned marine industrial, but includes a mix of uses such as residential, commercial, marine industrial and marine commercial.

The city, he said, is considering the formation of a new water-dependent zoning district that could preserve existing uses while embracing a future mix of residential, commercial and marine uses.

The Urban Harbors Institute has been tasked with creating zoning recommendations within the parameters of state and federal regulations associated with public access, flood risk, the existing Chapter 91 and FEMA floodplain regulations.

Selectmen Say Door Not Shut On North Attleboro Joining Federal Program To Save Residents Money On Flood Insurance

By Andrew Doerfler

Attleboro (MA) Sun Chronicle, June 10, 2016

NORTH ATTLEBORO — Before Monday's Town Meeting rejected a $13,600 proposal to join a federal program that would save residents money on flood insurance, one Representative Town Meeting member had an idea: The 327 households affected by FEMA's expanded flood plain could pay for the town to enter the program — at about $41 each.

Cindy Desisto of Phillips Street took his advice.

At Thursday's board of selectmen's meeting, she held up her $41.60 at the lectern and wondered whether the money could truly be allocated to join the FEMA's Community Rating System, or if it would just fall into the general fund.

She denounced RTM's decision as "short-sighted."

Later in the meeting, selectmen and the town administrator assured residents that the door was not shut on joining the program, which rewards municipalities with reductions on flood insurance if they exceed standards on flood mitigation.

FEMA's updated flood maps took in many new households, requiring them to buy expensive flood insurance for the first time. Residents protested, but North Attleboro's appeals of the expanded flood plain were denied by FEMA.

The town accepted the flood maps so that it would remain eligible for certain grants.

The proposal before RTM would have directed $12,000 to consultants and $1,600 to the Southeastern Regional Planning and Economic Development District, a planning agency that would help North Attleboro and other communities join the program.

Town Administrator Michael Gallagher said that the town could look into joining the system without SRPEDD, and possibly save money in the process.

Joining the program, he said, is "something we definitely need to pursue."

Selectmen, who had all previously voiced support for joining the program, agreed. More residents and businesses, they suspected, should expect to be affected as FEMA expands the flood plain.

Selectwoman Anne Lonzo said that high flood insurance costs would risk driving off homeowners and businesses.

"We're going to be losing income," Lonzo said.

As for Desisto's $41.60, Selectman John Rhyno encouraged her to hold onto it for the time being.

Austin's Flood-prone Home Buyouts Puzzle Locals, Leaders

By David Barer

KXAN-TV Austin (TX), June 10, 2016

AUSTIN (KXAN) — An ongoing city program to buy out swaths of homes in flood-prone parts of South Austin has puzzled some homeowners and raised questions from a city leader about inflated appraisals.

City council pushed along $50 million in non-voter approved debt, in the form of certificates of obligation, Thursday, for the ongoing buyout programs in neighborhoods along Onion and Williamson creeks, where multiple floods have devastated homes and killed residents in recent years.

City officials told KXAN some home appraisals in flood-prone areas have increased year over year due to high demand, desirable creek frontage and remodeling done with insurance money. The purpose of the buyouts is to ultimately remove people and property from danger. The Austin Watershed Protection Department oversees the buyout program.

City councilwoman and realtor Ellen Troxclair said she's seen appraisals for certain homes that appear inflated, and the city has sought to buyout homes that have never flooded. Russell Julian points to the ground floor of his home, which was elevated four feet to avoid flooding. He has refused a city buyout offer. (KXAN Photo)

"I certainly understand the need to help people who have found themselves in a bad situation," Troxclair said. "But the reality is, when you look at the average market value the average sale price of homes in these areas versus what the city of Austin is paying for them, there is a significant difference."

When KXAN visited Onion and Williamson creek neighborhoods Friday, several homeowners still living in buyout areas unburdened themselves with a mix of concerns about the programs. One Onion Creek resident said the city did not offer him enough money to justify selling his home.

Another resident, Russell Julian, who lives next to Williamson Creek, said city-hired appraisers placed significantly divergent values on neighboring Heartwood Drive properties. Julian said he turned down city requests for a buyout. Years ago, Julian hired an engineer and paid to have his home elevated by four feet, which took it out of flood danger.

"The discrepancies are incredible in buyout appraisals," Julian said.

Overall the city has so far bought 715 homes, and it plans to buy 138 more. Buyouts along the two creeks have cost the city $125.6 million, including $8 million from the U.S. Federal Emergency Management Agency, according to records provided by the Austin Watershed Department.

At an Austin City Council meeting on Feb. 4, 2016, Troxclair said she was concerned about average appraisals for some homes jumping nearly $100,000 in a single year. At the meeting, Alex Gale with Austin Real Estate Services, said appraisal averages for those homes increased from $276,000 to $360,000 from 2014 to 2015.

In an interview with KXAN on Thursday, Gale said the concerns over inflated appraisals have originated more in Williamson Creek rather than Onion Creek.

Gale said values of many properties have gone up, despite being in danger of flooding.

Homeowners "took their flood insurance money and completely renovated and remodeled their homes. So, that led to these homes, the fair market value of these homes, being a little bit higher," he said.

The Onion Creek buyout program got its start after the historic Halloween floods of 2013. In September of 2014, the city approved $60 million in funding for the watershed department to spend on buyouts. In March of 2015, City Council approved purchasing 232 homes in the 100-year floodplain. The city is purchasing those homes in two phases, placing priority on higher-risk homes, according to the city.

In addition to buying properties, the city gives assistance money to help homeowners afford to purchase and move into comparable homes. The city also pays for demolition of the homes it purchases, which can include asbestos abatement. The program has assisted moving families out of harms way and into new homes.

We Are On Way To Water Solutions

By Larry Kiker, Lee County Commissioner District 3

Fort Myers (FL) News-Press, June 11, 2016

Dirty water, red drift algae, too much water release, too little water release, brown water, algae bloom, dead fish, big sugar, too much fertilizer, clean water, Lake O, and land purchases – if it took a long time to get it this way, how long will it take to get if fixed?

Recently in Washington, D.C., Lee County Commissioner Frank Mann, county staff and I were able to meet with our senators, Congressmen and/or their staff in addition to the U.S. Army Corps of Engineers, which manages the federal Everglades projects. There is little doubt that our Congressmen are keenly aware of the issues and opportunities surrounding water quality, FEMA Flood insurance, flood maps, Restore funding and transportation.

Some highlights:

FEMA continues to be on the front burner, considering that it was a short program that requires re-authorization next year; it affects many business and homeowners in Lee County.

Flood maps are behind schedule, and the product does not live up to the needs of our communities when it comes to how the new ones are being produced and how much it could cost a property owner if he or she ever needs to challenge them.

Transportation is an exciting subject on its own. We have asked for them to prioritize existing funds for communities that have a fast growth rate and are willing to participate with the funding; we are making progress.

On the water front, our elected officials have written bills, co-sponsored bills and been proponents of buying conservation lands; they also support the water quality initiatives for this year. Our meetings exhibited among our Congressmen an unusual acceptance of how best to work with the Army Corps of Engineers to ensure all of this happens in the now and future; they were all supportive of the Corps efforts, with an emphasis on budgeting.

As it turned out, our last scheduled meeting was with the Corps' civil deputy chief. We discussed a master schedule for federal projects, noting the need to help facilitate and articulate expectations for everyone. We offered that an opportunity may exist here in Lee County to sponsor a "town hall" regarding Corps work and efforts.

Authorizing and budgeting by our federal administration is key to the success for the 20-year plan. Much of the discussion postured projects differently than I have ever had it explained before, giving a truth about what is actually being done to remedy the age-old problems that plague our environment, economy and quality of life. Some of the information was a bit difficult to digest since many of the projected completion dates seem so far away. The first major deliverable is targeted to be finished in 2024: Complete the Herbert Hoover Dam project. As you have heard, the safety of those who live near the dam is critical to the Corps' major role as well as expanding the functionality of the dam for water retention.

In that perspective, the conversation shed a different light on the "other" projects that seem to come out of nowhere and – according to local critics – appear to be just another band aid for our serious situation. There are three major intermediate projects, two of them are designed to send more water south, which most agree needs to happen, and one is the much talked about C-43 reservoir, which will be designed for additional water storage. We strongly recommended that the Corps add a water-quality component to that project now, not later.

After a detailed explanation of the steps that need to occur and how budgeting affects the outcome, we had two questions: Is there a chance to speed up that project? (Answer: Yes); and, what can we do in the meantime?

Along with the work in federal and state-funded programs, local projects continue to be a focus in Lee County. Our projects include $316 million spent on 25,000 acres of Conservation 20/20 land, $25 million already spent on water quality projects in the past 10 years with another $12.2 million planned for the future, plus another $60 million in estimated capital expenditures during the next 15 years for state-mandated Total Maximum Daily Load (TMDL) compliance. Overall, Lee County has spent approximately $96 million during the last five years for stormwater-related activities, not including land purchases. Lee County Commissioners have placed a referendum for the continuation of a conservation program on the ballot for this year.

It is time to re-think how individuals and groups intend to work with each other because this problem only becomes more difficult when the words being used are as toxic as the water that we are trying to clean. Our environment is one of the only things that we all share together as we put our collective best foot forward.

NJOP To Lead Discussion, Workshops During Sandy Memorial Wall Tour Stop At Stafford Town Hall June 23

Surf City (NJ) Sandpaper, June 10, 2016

The New Jersey Organizing Project, based in Southern Ocean County and "standing together for community solutions," brings its message – that more than 3½ years after Superstorm Sandy, some 5,000 families are still struggling to get home – and a memorial wall to Sandy-affected residents on Thursday, June 23, from 6:30 to 8 p.m. in the Stafford Township municipal building; and the following week, Tuesday, June 28, from 6:30 to 8 p.m. at the Tuckerton Seaport. The organization urges the public to take action against private insurance companies that take advantage of policy holders in the National Flood Insurance Program.

The presentation is one of several the organization is holding in the area while on tour with its Sandy Memorial Wall, created in Trenton during a three-night campout at the statehouse to mark the three-year anniversary, last October.

"We use our Sandy Memorial Wall to bring people together and bring out the best in our communities."

The public is invited to add photos and mementos to the wall and "hear from groups on the front lines, community leaders and elected officials (speakers list in development) on how we recover, protect, prepare and thrive. Connect with resources that are available if you're still struggling to get home, and compare notes with fellow Sandy survivors."

The wall was recently featured on PBS Frontline's "The Business of Disaster," according to Amanda

Devecka-Rinear, the head of the organization. "Speakers will talk about whether we've recovered from Superstorm Sandy or not, and if we're ready for the next storm, and what kind of action we can take to help us recover and get ready. Nonprofit organizations that assist Sandy survivors will be tabling. All community members (are) welcome."

Part of taking action is signing an online petition to tell Congress to cut the private insurance companies from the NFIP.

The Frontline program brought to light some important details, as pointed out by NJOP spokeswoman Krista Sperber: The insurance companies made more than $400 million in profits just from the flood program after Sandy; and the Federal Emergency Management Agency (i.e. taxpayers) pays all the legal bills for the private insurance companies when homeowners sue them over unfair settlements.

"It's by standing shoulder to shoulder and fighting for our homes and communities that we set things right," Sperber said. —V.F.

FEMA Set To Change Flood Maps At Lake Of The Ozarks

KOLR-TV Springfield (MO), June 12, 2016

LAKE OF THE OZARKS, Mo- FEMA has decided to change the flood maps they made for Lake of the Ozarks in 2011. The change comes after complaints by lake area stakeholders and two major floods that happened last year.

The properties on the main channel will not be affected by the new map, only these tributaries off the main channel of the lake:

- Niangua River
- Little Niangua River
- Grand Glaize River
- Linn Creek
- Gravois Creek

Property owners up there have to wait for the FEMA calculations to depend on if they have to pay for flood insurance, according to Brian Myers of Schultz Surveying and Engineering. Mortgage lenders require borrowers to pay flood insurance, if the property is designated by FEMA to be in a flood hazard zone.

Flood Insurance can cost anywhere from $800 to $3,000.

Myers recommends property owners conduct a new survey, once the final map is released, to see if they can lower their insurance premiums, or in some cases, eliminate the need for insurance all together.

The news of the change was released during a FEMA Flood Risk Review Meeting on Wednesday, June 8, attended by lake area surveyors, engineers, government officials and realtors at Wilmore Lodge in Lake Ozark.

FEMA Risk Analysis Branch Chief Richard J. Leonard discussed the revised flood mapping at the meeting, saying the new map was a result of a new Flood Insurance Study.

According to FEMA, they are committed to sending officials the preliminary revised flood insurance rate map panel by the end of June. The revised rate map is anticipated by the end of calendar year 2017.

Another community meeting will be scheduled in July to discuss the findings. Then, a 90-day appeals period. An appeal can be submitted, if it can demonstrate that a change is needed in the map, because it is incorrect.

FEMA will then have to send community officials a "letter of final determination" declaring the final map changes. Once the letter is sent, there will be a six-month compliance period before the new maps become effective. "The entire process will take approximately 18 months," Leonard said. This timeline can change according to how many appeals are submitted and how long it takes to resolve the appeals.

"While there is still much work to be done, the Congressman is encouraged by the progress that has been made on the new Flood Assessment Risk map that was presented at yesterday's meeting," said Luetkemeyer's Communications Director Kristina Weger.

"This will also affect the housing industry because people will be willing to purchase homes that were once considered in the flood plain, that are now out of the flood plain, according to the new map," SSE Survey Technician Brian Myers said. Myers advises property owners in the new floodplain map area get a new survey to see if they can lower their insurance cost. "A lot of people previously denied a LOMA certificate will now be eligible by just reapplying," Myers said.

"Camden County property owners who were previously turned down for a construction permit by Camden County Planning and Zoning may now be able to build," Myers added.

Carpentersville Creek Restoration Could Reduce Flood Insurance Costs

By Erin Sauder

Elgin (IL) Courier News, June 12, 2016

Carpentersville is continuing to make progress on the Carpenter Creek restoration project that could reduce flood insurance costs on as many as 40 properties, including businesses and residences, located along Sedgewick and Brook streets.

At Tuesday's board meeting, Kevin Gray, assistant director of public works and village engineer, gave board members an update.

Construction began last fall on the $1.1 million project to address erosion and establish more accurate base flood elevations around Carpenter Creek in Old Town, as well as stabilize 9,200 feet of stream bank in the area north of Carpenter Park.

As of late May, construction activities have been substantially completed, Gray said.

Representatives of HR Green, which the village partnered with on the project, are having the land surveyed. They will then send their findings to the Federal Emergency Management Agency in order to revise the existing flood plain and potentially remove existing structures from the flood plain, Gray said.

It will take about 12 months before the new flood plain maps go into effect, he said.

Property owners taken out of the flood plain are still urged to get a low-cost, preferred-risk flood insurance policy.

"So they still have the full benefits of having flood insurance but not having to pay a large premium," Gray said.

"Instead of paying $3,000 a year, it's typically $80 a year, depending on the property value."

Omaha-area Flood Plains Might Recede On New FEMA Maps

By Roseann Moring

Omaha (NE) World-Herald, June 11, 2016

Flood plains in the Omaha area could shrink when the Federal Emergency Management Agency issues new maps next year.

Preliminary information shows that new data and new reservoirs are likely to produce smaller flood plains, said John Winkler, general manager of the Papio-Missouri River Natural Resource District.

The NRD's board on Thursday approved a $167,000 study to produce final data. The board voted 10-0. Director Scott Japp abstained.

If FEMA agrees to use the new data, the district will pay Fyra Engineering to study water patterns in the area.

Winkler said the flood plain could shrink along the Big, Little and West Papio Creeks.

He said that over 40 years, flood plains in this area have only increased.

"This would truly be a reversal," he said.

If the data comes in as expected, the next step would be another study — at a cost of about $500,000 — to create a flood plain map from the data. The NRD expects to pay about $300,000 of the cost of that study, if it happens, Winkler said.

The district hopes to use new rainfall intensity and distribution data from National Oceanic and Atmospheric Administration to build the new flood plain map.

And officials want to take into account four new reservoirs. One has been built in Papillion, one is being built near 168th and Fort Streets, and the district is in the process of acquiring land in Sarpy County for two more.

Voters denied the district a bond issue that would have allowed it to quickly build six new dams. But the district already has the funds to move forward with the three sites in progress.

One member of the public spoke about the vote. The woman, Shawn Melotz, asked that the district seek bids on the contract.

Winkler responded that Fyra Engineering already has done work in the area and has the data needed to move forward.

Japp asked why the district didn't ask state legislators to help fund the project. Winkler said the study would be specific to the Papio-NRD and wouldn't be as useful to other entities.

The information is due to FEMA in mid-October, Winkler said.

Papio-Missouri River NRD Board To Update Floodplain Data

KETV-TV Omaha (NE), June 10, 2016

OMAHA, Neb. —The Papio-Missouri River NRD Board of Directors has approved contracting for an update of Papillion Creek Watershed hydrology to provide new flood hazard information which could potentially factor into floodplain mapping due for release by the Federal Emergency Management Agency (FEMA) in 2019. Much of the Omaha metro area is within this watershed.

The contract with FYRA engineering will total $167,000 and will cover FYRA's study of the watershed that will incorporate new rainfall data and the flood protection benefits being realized by the recently completed Prairie Queen Reservoir, Dam Site 15A now under construction and two additional reservoirs being designed for construction in the watershed.

"We hope that the new FEMA floodplain maps, due to be published in 2019, take into account all the latest flood protection efforts by the NRD in the watershed," said John Winkler, NRD General Manager. "We also have new rainfall intensity and distribution data, recently published by the National Oceanic and Atmospheric Administration (NOAA), which could show a significant reduction in peak flows within the watershed," he said.

Rainfall frequency and distribution was last published for this area by NOAA during the 1960s.

"This process has the potential to remove thousands of homes and businesses from currently designated floodplains and to keep countless others from being placed in floodplains," said Winkler. "This effort represents one of the main benefits of Nebraska's Natural Resources District system in that we stay abreast of the most current information and technology available and we deploy these resources when appropriate to protect lives, property and the economic well-being of our constituents."

The NRD, along with the Papillion Creek Watershed Partnership, recently completed Dam site WP-5 west of Papillion, now known as Prairie Queen Recreation Area. Dam Site 15A is now under construction near 168th and Fort Streets in Omaha. Two additional sites in Sarpy County are being designed.

"If preliminary results hold true, this will demonstrate without a doubt, that these new reservoirs will have a dramatic impact in protecting our floodplains and reducing flood potential," said Winkler. "Without question, the new data and new floodplain conditions present today should be considered."

A preliminary study by FYRA Engineering of the West Branch Papillion Creek Watershed showed much-improved protection for the Papillion and Millard areas produced by the new reservoirs, floodplain mapping techniques, and other updated data.

MITIGATION

Coan Lake Seawall Reconstruction Begins At Heritage Park

By Dave Herndon

Southgate (MI) News Herald, June 12, 2016

It's been several years since the seawall at Coan Lake, inside Taylor's Heritage Park, has been in effective working order.

Thanks to a grant from the Federal Emergency Management Agency that wall will soon be in perfect working order. The grant is not to exceed $229,845.

Work on replacing the seawall began after Memorial Day when workers from Cross Lake Construction began tearing out the old wall. Temporarily the damaged old wall is being stacked in the parking lot near Maggie's Sweet Shop, residents are asked to use caution near the debris pile.

The seawall repair is just part of the Heritage Park renovations that Mayor Rick Sollars recently talked about.

"We recognize that Heritage Park is one of the most beautiful parks in the entire region," Sollars said. "It is heavily used, not only for recreation purposes, but for literally anything you can think of during the warm-weather months. Wedding and prom photos, fishing – you name it, Heritage Park-goers are interested in it. We know that we need to spend some time and give the park some TLC."

Beyond the seawall construction, the city also will be taking on repairs to the bridge and the deteriorating areas surrounding it in the historical area of the park, the white wooden fencing at the Petting Farm and the walking path.

The Downriver campus of WCCCD also is partnering with the city, working on starting up the waterwheel, adding decorative lighting and creating a space that is similar to carnival wheels like in other parks across the country.

Through another partnership with WCCCD, the park's walking/jogging/cycling path will be connected to the college campus, creating a serene pathway from points in Heritage Park, through the wooded areas, into the back lots of WCCCD and back out to the sidewalks along North Line Road that reconnect with the park.

Right now, the pathway is unfinished along the northern boundary of the park and WCCCD. City leaders hope this will entice local runners and cyclists to bring their athletic and leisure activities to the center of the community.

"Runners and walkers will have a long-distance route without having to cross city streets, and it will be a boon for the ever-increasing cycling crowd," Sollars said.

Penfield Pavilion Project Cost Increases As Town Forgoes State Grant

Fairfield (CT) Patch, June 12, 2016

Fairfield, CT — The town's share of the cost of the project to rebuild the Penfield Pavilion will increase from about $1.5 million to $2 million after the Penfield Building Committee voted to forgo a $500,000 state grant, according to the Fairfield Citizen.

The Citizen reports First Selectman Mike Tetreau said the state grant came with some strings attached, mainly that the building would need to be raised another foot and it presented too many challenges at this point in the project.

Also, while the state DEEP was reviewing plans for the grant, it notified the town that a bulkhead that was installed in front of the pavilion several years ago wasn't properly permitted, according to the Citizen.

Rather than risk the 75-percent FEMA reimbursement for the $7.4 million project, the town removed a portion of the bulkhead, according to the Citizen.

City Park Volunteer Cleanup Day A Big Success

By J. Michael Ross

Stephenville (TX) Empire-Tribune, June 11, 2016

As most city residents know, Stephenville City Park was hit hard by the recent thunderstorms and park maintenance crews needed some extra hands for the cleanup. They got plenty of that from volunteers on a foggy Bosque River Saturday morning in the park.

Community Services Director Jeremy Allen and his staff put the word out earlier in the week that there would be a volunteer workday on Saturday and Allen says it turned out to be a real success.

The E-T caught up with him next to the tennis courts that sit very close to the river and were badly flooded.

"It's hard to tell how many people turned out at the moment because they're spread out all over the park right now. But Allsup's sent a crew of 25, and most of them are here cleaning up the courts," Allen said. "I can't believe how much silt was on these courts, but the Allsup's people are doing a great job of scraping and sweeping it all up and getting it in piles outside the fence. We really appreciate them and everybody that turned out for this."

City Council members in attendance that we spotted were Sherry Zachary, Carla Trussell and Allen said Mayor Kenny Weldon was out in the weeds somewhere. That doesn't mean there weren't other council members and city staff there, but as Allen said, folks were spread out all over the park and we didn't find all of them.

Stephenville Parks and Cemeteries Supervisor Jesus Coronado and his son, Dasiel, were cruising the Bosque River Trail in a four-wheeler and we managed to hitch a ride back to the center of the park.

Oh, and there was also a pair of geese with their little gosling in tow doing their part to serenade the volunteers with a cacophony of quacks and honks.

Here's a list of damage and debris areas that were addressed:

- Large, eroded portions of the trail next to the river
- Downed trees
- General debris all over the park.
- Tennis courts [as mentioned]
- Main city park parking lot and parking areas on both sides of the Graham Street Bridge.
- The RV park [electrical damage]
- Lights under the Washington Street Bridge
- The fishing dock [a total loss]
- Downed light pole on the Bosque River Trail

This by no means implies that repairs and cleanup are complete, as much of it – electrical, asphalt, concrete, etc. – will require licensed contractors as well as City of Stephenville and FEMA funding.

Counties Receive Emergency Funds

Dalton (GA) Daily Citizen, June 12, 2016

Whitfield and Murray counties have been awarded federal funds made available through the Department of Homeland Security/Federal Emergency Management Agency under the emergency food and shelter national board program.

Whitfield County will receive $51,863 and Murray County will receive $21,740 to supplement emergency food and shelter programs in each county.

The selection was made by a national board that is chaired by the U.S. Department of Homeland Security's Federal Emergency Management Agency and consists of representatives from the American Red Cross, Catholic Charities USA, National Council of Churches of Christ in the USA, the Jewish Federations of North America, the Salvation Army and United Way Worldwide. Each county local board is charged to distribute funds appropriated by Congress to help expand the capacity of food and shelter programs in high-need areas around the country.

Each local board reflects the makeup of the national board and includes representation from the county and will determine how the funds awarded to each county are to be distributed among the emergency food and shelter programs run by local service agencies in the area. Each local board is responsible for recommending agencies to receive these funds and any additional funds made available under this phase of the program.

Under the terms of the grant from the national board, local agencies chosen to receive funds must be private voluntary nonprofits or units of government; be eligible to receive federal funds; have an accounting system; practice nondiscrimination; have demonstrated the capability to deliver emergency food and/or shelter programs; and if they are a private voluntary organization, they must have a voluntary board. Qualifying agencies are urged to apply.

Whitfield County has distributed Emergency Food and Shelter funds previously with Dalton Organization of Churches United for People (DOCUP), the Salvation Army, Northwest Georgia Family Crisis Center, Oak Haven, City of Refuge, Dalton Greater Works, Soul Station Ministries and Family Promise.

Murray County has distributed Emergency Food and Shelter funds previously with the Dalton-Whitfield Community Development Corp., Murray County Next Step, the Salvation Army and the Northwest Georgia Family Crisis Center.

Public or private voluntary agencies interested in applying for Emergency Food and Shelter Program funds and receiving the phase 33 application must contact Margaret Zeisig, director of community solutions for the United Way of Northwest Georgia, at (706) 876-1599 or at margaret.zeisig@ourunitedway.org for an emailed application. Completed applications must be emailed to Zeisig no later than 5 p.m. on Friday, June 17.

EYE ON JEFFERSON: County To Consider Monday Undi Road Repair

Peninsula (WA) Daily News, June 11, 2016

The three Jefferson County commissioners will discuss options for Undi Road when they meet Monday.

The discussion will be at the commissioners' briefing session at 1:30 p.m. in commissioners' chambers at the Jefferson County Courthouse, 1820 Jefferson St., Port Townsend.

The regular meeting will begin at 9 a.m. in the same location.

The commissioners will consider whether to continue repairs of the West Jefferson County road. Repair of the washed-out road is estimated at $1.8 million.

At 10 a.m., commissioners will interview two applicants — Jean Ball and Michael Nilssen — and possibly appoint one to the District 3 seat on the county planning commission.

They plan an executive session at 10:30 a.m. to discuss potential litigation.

At the afternoon briefing, they will hear reports on the Federal Emergency Management Agency and the Endangered Species Act, Beckett Point's potential request for special historic shoreline community designation, a comprehensive plan update and amendments to the Unified Development Code.

Items on the consent agenda include:

■ An agreement terminating the employment of interim Department of Community Development David Goldsmith, who served in that position for nine months until a permanent director was hired.

■ The appointment of Malloree Weinheimer to a two-year term on the Jefferson County Parks and Recreation Advisory Board.

Port Townsend city

The Port Townsend hearing examiner will consider a conditional use and height variance for a personal wireless installation Monday.

The hearing will begin at 1:30 p.m. in council chambers at historic City Hall, 540 Water St.

The council workshop scheduled for Monday has been canceled.

Council office hours, during which members of the public can discuss any topic with a member of the City Council, take place from 2 p.m. to 4 p.m. Tuesday in the mayor's office at 540 Water St.

Port Townsend schools

The Port Townsend School Board will consider agreements with companies involved in the replacement of Grant Street Elementary when it meets Monday.

The meeting will begin at 6 p.m. in the Gael Stuart Building, 1610 Blaine St.

The board will consider approving a fee proposal from Integrus Architecture of Seattle and an interim agreement with Robinson Co. of Seattle for project management services for the school project.

It will review its policy on effective communication in light of a settlement agreement between a blind parent and Seattle Public Schools and hear a preliminary budget report.

Jefferson Healthcare

Jefferson Healthcare commissioners will hear the results of a 2015 financial auditor report when they meet Wednesday.

The meeting will begin at 3:30 p.m. in the Jefferson Healthcare conference room at 2500 W. Sims Way, Port Townsend.

Peninsula College

Peninsula College trustees will meet at 2 p.m. Tuesday.

The meeting will be in the Cornaby Center at Peninsula College, 1502 E. Lauridsen Blvd., Port Angeles.

The full agenda will be available 24 hours prior to the meeting at www.pencol.edu/aboutpc/board/agendas.

Steele County's Public Works Building Phase 1 On Track To Begin This Month

By Ashley Stewart

Owatonna (MN) People's Press, June 10, 2016

OWATONNA — Nearly all the pieces have fallen into place for construction to begin on the first phase of Steele County's new public works building this month.

Anita Benson, Steele County engineer and Public Works division director, said the county is in the process of gathering paperwork from the contractors awarded the project and expects work to begin within the next week or two.

"We're on track for Phase 1 to be completed by end of this year, which was the deadline given by [Minnesota Homeland Security and Emergency Management]," she said.

Meeting that deadline, she said in March, was dependent on the completion of the environmental assessment and the approval of the improved project application, both of which were completed in May.

"There's always a light at the end of the tunnel, but sometimes there's a longer tunnel that's more circuitous," Benson said.

The $12.6 million public works building will be built on land north of old Highway 14, also known as County Road 2, and west of 28th Avenue that Steele County purchased after its old highway maintenance operations complex on Hoffman Drive was damaged in the 2010 flood.

The cost and scope of the project was determined in August when the Steele County Board of Commissioners in a 3-2 vote moved the project forward for the first time since June 2012, when it was halted because of public outcry about the county board's original building proposal, which carried a $13.6 million price tag.

Prior to that decision, however, the county board unanimously voted to construct the public works project in two phases to retain the $1.5 million Federal Emergency Management Agency reimbursement, which requires work to be completed by Dec. 31, 2016.

The first phase includes the construction of a salt and shed, fueling station, parking lot and building pad as well as all the site work that will be funded through FEMA and county reserves.

The second phase includes the construction of the 71,094 square-feet precast building that will be funded through state bonds, reserves and bonding from the county.

And because of that, the two phases have different timelines.

In March, the Steele County Board approved the authorizing of bids for Phase 1 of the building, and on May 24, the commissioners unanimously awarded a total of six bids totaling about $1.8 million for the project, contingent on notification from Homeland Security and FEMA's funding obligation.

Benson said that week, Steele County was notified its improved project application had been approved and it'd be reimbursed $1.6 million for Phase 1, which is a little more than originally stated.

The county also received favorable low bids for Phase 1 of the project, which was anticipated to cost $2.5 million, and because of that Benson said it'll cost about $2.2 million, including general conditions, contingency and construction management.

For the second phase of the project, the county board unanimously authorized the submission of the county's grant application to the Minnesota Department of Employment and Economic Development, or DEED, which is required to secure the $4 million in state bonds it was awarded last spring, earlier this year.

The grant submission was one of Steele County's first steps in receiving the bond dollars it's been allocated, according to the Minnesota Capital Grants manual.

The application — and the project — will also be reviewed by the Minnesota Department of Administration, DEED and Minnesota legislative committees.

According to a tentative schedule created by Benson, she anticipates the state grant agreement process to be completed by this fall.

In the meantime, the county is continuing work on the building's design for the second phase as well as its capital improvement plan and bond authorization.

Steele County Treasurer Cathy Piepho said a timeline for the capital improvement plan and bonding will be discussed at Committee of the Whole at 4 p.m. on Tuesday.

According to the proposed time schedule document in the Committee of the Whole packet posted online Friday afternoon, the commissioners will vote on the capital improvement plan and schedule a public hearing on Nov. 15 — a week after the general election.

Project To Install Northend Pump Station Advancing As Planned

By Andrew Parent

Shore News Today (NJ), June 10, 2016

OCEAN CITY — City business administrator Jim Mallon told City Council Thursday, June 9 that the city will move forward with plans for a pump station on Sixth Street after several months of discussions with state representatives.

Plans for the estimated $8.7 million project, which officially say will help improve drainage between First to Eighth streets from Asbury Avenue to the bay, were presented to the public in a November 2015 meeting.

Mallon said the location for the pump's outfall pipe will stay at Sixth Street on the bay as planned. Officials had explored moving the outfall to the city's Bayside Center in response to complaints from residents in the area of Sixth Street who did not want the outfall put there.

According to a press release sent Friday by officials, the city has spent the last six months trying to get permission to move the outfall pipes to the Bayside Center. Talks have included discussions with Cape May County, which owns the property.

Pending final permits and a public construction bid for the job, work could begin in late 2016, according to the release.

Mallon added that sticking with a new plan to move the outfall to the Bayside Center would have added "significant time and expense to the project," and that it would have been a "long uphill battle with no guarantee of approval."

"The people who lived at the end of Sixth Street asked, 'You own city property just down the way. Why don't you consider it there instead of the end of our street?'" Mallon said Thursday.

Some residents openly complained about the plan when the city proposed it in a November 2015 public meeting, and were afraid the work on the project would damage their homes. They also feared the additional water flowing out at the street end would cause problems, with one resident saying the water flowing out of the outfall after heavy rain "sounds like it's going to be a waterfall."

"We're just supposed to support this because the city says so? I don't think so," another commenter said at that meeting.

Another resident suggested the city had been keeping the project a secret, and that the city should expect a lawsuit.

On Thursday, Mallon said the agencies that have worked with the city on possibly moving the outfall to the Bayside Center which include the New Jersey Department of Environmental Protection (NJDEP), the state Green Acres program and the Division of Land Use Regulation and Coastal Regulation, understood the residents' concerns.

"All of our government partners in this project acted professionally … and were open to the request to consider the Bayside Center, while honestly portraying the requirements facing the city," Mallon said. "Ultimately we decided that, along with facing time restrictions related to the permitting and the grant requirements, the residents of this entire neighborhood have waited long enough for this project to move forward. If the neighborhood wants to see relief any time in the foreseeable future, the city will have to stick to the initial plan."

The project will be funded in part by a $5 million Federal Emergency Management Agency grant, the largest grant received in the city's history.

Mallon said the city's request for a CAFRA permit has been deemed complete for final review, and that the city expects to hear from the DEP on whether the permit will be approved by August.

"This fits the timeline we outlined in the public meeting, that the CAFRA permit would take six to nine months," Mallon said.

The city is also waiting hear back on a Green Acres permit, required because a small portion of the underground station would be located directly under the soccer field on Sixth Street and Bay Avenue, a Green Acres property, city public information officer Doug Bergen said. Bergen said he couldn't give an estimate on when Green Acres may notify the city of the permit's status, but he said that process will likely take longer than that of the CAFRA permit.

The city allotted $17.4 million on road and drainage projects in its 2016 capital plan, and has set aside $34.6 million total over the next five years.

A $1.6 million drainage replacement and road paving project was recently completed from 14th to 16th streets on the bayside of the island, while the city has set aside $4 million for a paving and drainage project involving most of the area between 26th and 34th streets from Bay to West avenues.

Drainage systems between 28th and 33rd streets would be reconfigured, and three pump stations are planned as part of that project, which officials have said should start in the fall.

Ocean City North End Drainage Project Moves Forward

Cape May County (NJ) Herald, June 11, 2016

OCEAN CITY – Following several months of discussions with representatives of permitting agencies, including the N.J. Department of Environmental

Protection administration, the state Green Acres program and the Division of Land Use Regulation and Coastal Regulation, the city has decided it is prudent to move forward with its north-end pump station project with the outfall located at Sixth Street, where it was originally proposed.

Based on feedback from neighbors, the city spent six months trying to get permission to move the outfall pipes to the Bayside Center, including discussions with Cape May County, owner of that property.

"Although not completely impossible, this change would have added significant time and expense to the project, and would have been a long uphill battle with no guarantee of approval," Ocean City Business Administrator Jim Mallon said.

"All of our government partners in this project acted professionally, understood the public's concerns, and were open to the request to consider the Bayside Center, while honestly portraying the requirements facing the city. Ultimately, we decided that, along with facing time restrictions related to the permitting and the grant requirements, the residents of this entire neighborhood have waited long enough for this project to move forward. If the neighborhood wants to see relief any time in the foreseeable future, the city will have to stick to the initial plan."

The plan calls for a new stormwater pumping station near Sixth Street and Bay Avenue to improve drainage from 1st Street to 8th Street from Asbury Avenue to the bay. The estimated $8.7 million project will use a $5 million FEMA grant, the largest Ocean City has ever received.

The project remains on the schedule outlined at a public meeting in Nov. 2015. Pending final permits and successful bid submissions, construction could begin in late 2016.

Santa Clara Seeks Funds To Help FEMA Landslide Grant

By Kevin Jenkins

St. George (UT) Spectrum, June 11, 2016

Santa Clara is hopeful that federal funding will soon be available to help it move residents out of a Heights neighborhood that is regarded as a critical area for controlling a years-long landslide, and approved a loan application this week to provide some of the needed project money.

The City Council agreed Wednesday to seek a state loan-grant mix from the Community Impact Fund Board that would help it in turn qualify for a matching grant from the Federal Emergency Management Agency to buy four properties on Truman Drive.

"The engineers have said the weight of the homes is causing pressure that makes the hillside move," City Councilman Ken Sizemore said. "The intent is to remove homes from willing sellers."

Mayor Rick Rosenberg said Santa Clara is asking for $351,000 as a half-and-half loan-grant combination from the state CIB fund.

The $351,000 would serve as the 25 percent community match FEMA requires for its "Pre-Disaster Mitigation Grant."

Rosenberg said Thursday that the city is "very close" to obtaining the federal grant, having completed an environmental review and other preliminary steps necessary to satisfy the grant's requirements.

"They're pretty detailed when it comes to property acquisition," he said.

If the grant is approved, the city will buy and destroy three homes in the Heights and leave the property, as well as an undeveloped fourth lot, empty.

The city acquired one home at the base of the slide zone in 2013 with the same intent. It had already been vacated due to damage from the shifting land.

City officials removed some land from the top of the slide zone that year to help reduce some of the weight on the hillside, using the soil for repairs on the washed-out Laub Wash detention dam and Santa Clara river banks damaged during flash flooding the previous September.

After the Hillside Commission determined in 2013 that there were new signs of instability in the sloping land of the Heights, commission member David Black informed the council that the three primary solutions for tackling the blue clay slide were to reduce the weight at the top of the slide zone, create a buttress at the foot of the slide to restrain downward movement, and remove as much water feeding the slide as possible, primarily through drains that intercept and carry the water away.

Rosenberg and Sizemore said Thursday that the city is pursuing all three options.

"We're obtaining the maximum-risk properties, relocating the people that are there, and lessening the risk for adjoining properties in the process," the mayor said.

"The rest of the money will be used to grade the slope so it's not so steep, and to build a buttress at the foot of the hill so it doesn't slide," Sizemore said.

"There will be some additional geotechnical work … some drainage work," Rosenberg added.

Rosenberg said there are no signed sales agreements yet, but the property owners in question on the south rim of the Heights overlooking Santa Clara

Drive and the now-dead end Chapel Street have signed "willing seller" agreements.

"We're hoping to be able to go to work later this summer, but until we get formal notice from FEMA, I don't know (when it will be)," he said.

Some Heights rim residents who aren't in the impacted Truman Drive area that have nonetheless suffered slide damage have complained about not being similarly compensated for damages by the city.

During a 2014 community meeting about the FEMA grant proposal, Patricia Nunnely said her 4,315-square-foot Crestview Drive home has seen an increasing degree of damage during the two decades she has lived there.

"We fell in love with the area, and got gypped on the house," she said. "I've watched the hill slide down. ... We're not on Truman Drive, but we have a lot at stake."

Food, Shelter Funds Made Available

By Kristy Carter

Sampson Independent, June 12, 2016

While many people aren't aware of the need for food and shelter across Sampson County, the Department of Homeland Security and Federal Emergency Management Agency have recognized that need and provided local funds to be used to supplement emergency food and shelter programs.

According to Nancy Carr, chair of the Emergency Food and Shelter program for Sampson County, $27,849 in federal funds has been made available to Sampson County, that will be used in situations where there is a need to assist with providing food and shelter.

"We have a significant need in Sampson County on all levels that EFSP provides," Carr said. "This assistance can make a difference in someone being homeless or not."

The local EFSP board will be charged to distribute funds appropriated by Congress to help expand the capacity of food and shelter programs in the high-need areas across the county.

Under the terms of the grant, Carr said local agencies who receive funds must be a private voluntary non profit or unit of government, eligible to receive federal funds, have an accounting system, practice nondiscrimination, have demonstrated the capability to deliver emergency food and/or shelter and have a voluntary board.

The funds must be utilized in providing food, shelter, rent/mortgage and utility assistance.

The selection for federal funds, Carr said, was made by a national board that is chaired by the U. S. Department of Homeland Security's Federal Emergency Management Agency and consists of representatives from American Red Cross; Catholic Charities, USA; National Council of the Churches of Christ in the U. S. A.; The Jewish Federations of North America; The Salvation Army; and United Way Worldwide.

According to Carr, the local board has representatives from City of Clinton, County of Sampson, The United Way of Sampson County, The Salvation Army, the Catholic church, American Red Cross, Department of Social Services, Coharie Indian Tribe, a local physician, dentist, banker and local churches. The local board is responsible for recommending agencies to receive these funds under this program.

Sampson County has distributed Emergency Food and Shelter funds previously with U-Care Domestic Violence Shelter, First Baptist Church 900 College Street Food Pantry, Rock Ministry, Inc. (Garland), Mr. Window Soup Kitchen, Backpack Buddies – First United Methodist Church, Enlighten the World Ministries Community Assistance Program, Harrells Community Center, and First Baptist Church 408 College Street Soup Kitchen. Last year in Sampson County there was $28,965 in funds distributed under this program.

Public or private voluntary agencies interested in applying for Emergency Food and Shelter Program funds must contact Nancy Carr c/o United Way of Sampson County, P.O. Box 1677, Clinton NC 28329; 910-592-4263 for an application. The deadline for applications is Tuesday, June 21.

Union Pacific Investing In Kansas Project

By Ray Scherer

St. Joseph (MO) News-Press, June 12, 2016

Later this month, Union Pacific will deploy from 120 to 140 laborers in Atchison, Kansas, for the replacement of track segments in northeast Kansas.

The Atchison Globe said public works and utilities director Justin Pregont told the city commission about the project on June 6.

Hotels are expected to host the workers, bringing a temporary boost to the economy.

The railroad plans to invest more than $70 million in the state this year to improve its infrastructure. Officials said the work is designed to improve employee, community and customer safety and increase operational efficiency.

Taken alone, the improvements between Atchison and Huron will represent more than $6 million of investment to replace 12 miles of rail.

Summit Street work begins in Smithville

Activity has started on a $450,000 project for West Summit Street.

The Smithville Herald reported the work seeks to keep the road and additional ground from sliding down a hillside.

Problems began surfacing about a year ago, city officials said, when ground on the north side of the street loosened and a two-story house slipped partially off its foundation. Large fissures appeared in the ground, including one that reached up to West Summit.

The affected area is located south of downtown.

Missouri Gas Energy is relocating its lines. Meanwhile, Pyramid Excavating has undertaken the task of relocating impacted water lines.

The Federal Emergency Management Agency is covering 75 percent of the project, with the city providing the remaining 25 percent.

New Hiawatha postmaster settling into new duties

Mark Hoffman is the new postmaster for Hiawatha, Kansas.

The Hiawatha World said Hoffman comes to the city following a transfer from St. Mary's Post Office.

He began his U.S. Postal Service career in 1999 as a clerk and carrier in Blue Rapids, Kansas. He later transferred to Seneca, Kansas, before returning to Blue Rapids.

He was chosen for the Hiawatha post from among several applicants last fall.

Jacksonville Accepts Bid For Work On Reservoir Dam Spillway

By Tony Boom

Medford (OR) Mail Tribune, June 10, 2016

JACKSONVILLE — Enlargement of the spillway at Jacksonville's reservoir on Jackson Creek will probably start in July after the City Council voted Tuesday to accept the low bid of $73,825 from Kogap Enterprises for the project.

Without the spillway work, a catastrophic flood in Jackson Creek might cause the dam to collapse, imperiling life and property downstream, officials said. The U.S. Army Corp of Engineers issued a permit authorizing the work in January.

"We are tickled to death. We can't believe how cheap it is," said City Administrator Jeff Alvis. The city looked at a number of options, some costing nearly $800,000, before the spillway proposal was developed and approved.

Work in the stream must be done between June 15 and Sept. 15 to prevent impact to fisheries. The work can't proceed until the reservoir water level drops.

"We are probably looking at the latter part of July," said Alvis. "We had a pretty wet season. Last year, we could have worked in there at this time."

KOGAP will construct a couple of roads into the site and clean up the top of the dam so that operations can be conducted from there. Work to enlarge the spillway is estimated to take about two weeks, Alvis said.

The next lowest bid was $110,620 from Pilot Rock Excavation. Ledford Construction Company bid $157,320, and LaDuke Construction bid $166,048. City Engineer Scott Pingle reviewed the bids to ensure they met proposal requirements and recommended the award go to Kogap. Pingle had estimated the work would cost $80,000.

In 2012, the city set aside $200,000 from the sale of land in the watershed above the reservoir to fund the work. Kogap will compact material that is removed to enlarge the spillway in an area below the dam. The city will plant trees and vegetation this fall on the material to prevent erosion.

While much of the dam will remain in place, the project is considered a breeching. The old concrete spillway will be demolished and replaced with a 10-foot-wide channel that exceeds FEMA's 500-year flood flow estimates. The new spillway will be about 12 feet below the current dam face slope. Up to 873 cubic yards of riprap can be used for the spillway.

Patience in exploring alternatives over a two-year period resulted in a plan the city could afford, said Alvis.

"You have to wait on all these things," said Alvis. "Don't take the first option."

Keith Mills, dam safety engineer with the state Water Resources Department, deserves credit for helping devise the plan, said Alvis. Mills and Alvis met several times and visited the site to explore options.

"We are very happy that they are moving forward. It is making the dam safe," said Mills. As a high-hazard dam, it is subject to annual inspection until the correction is completed, he said.

The Oregon Department of Environmental Quality and Oregon Department of Fish and Wildlife, the National Marine Fisheries Service and Oregon's Division of State Lands were all consulted on the project. Those agencies will be notified that work will proceed.

In 1999, a state study classified the dam as a high hazard. Constructed in 1910 to provide water for the town, use was discontinued in the 1950s when the city connected to the Medford Water Commission system.

Sediment has filled much of the reservoir. The city no longer has water rights in Jackson Creek.

Federal Aid Is Needed For Our Lake Michigan Bluffs

By Journal Times Editorial

Racine (WI) Journal Times, June 12, 2016

When we talk about "federal assistance" for disater relief, we obviously mean money and personnel subsidized by federal taxpayers. That includes those of us living here in Wisconsin. We didn't personally deliver the federal aid in times of need. But indirectly, through the taxes we pay, we did.

We haven't had a full-fledged disaster here along the Lake Michigan shoreline in Racine County. But in the erosion of the bluffs along the lakeshore in Mount Pleasant and Caledonia, we do have a crisis which requires federal assistance. Put simply, it's our turn to be helped by the federal government.

Late last month, Racine County Executive Jonathan Delagrave issued a declaration of emergency due to the erosion. Such a declaration better positions the county to get state and federal assistance and gives the county authority to make personnel and resources available, according to a news release.

The declaration also allows the county to close public streets and, if necessary, evacuate residents from their homes, Delagrave said.

High Lake Michigan levels have eroded the bluffs, putting homes in Mount Pleasant and Caledonia in danger. One home has already been removed and officials say 10 to 12 other homes in Mount Pleasant and multiple properties in Caledonia are threatened.

In addition to homes, officials are worried about public utilities and streets, Delagrave said, and fear a strong storm could move through and erode more of the bluffs. "We don't want homeowners to lose their houses unnecessarily and we're also concerned about erosion encroaching on public utilities," Delagrave said.

State Rep. Peter Barca, a member of the Federal Emergency Management Agency National Advisory Council, said he has also contacted federal and state entities and hopes for a quick solution.

"There are people in Wisconsin right now who could wake up tomorrow without a home. We need to take action as quickly as possible," said Barca, D-Kenosha, whose district includes the Lake Park neighborhood of Mount Pleasant. "For the people of Mount Pleasant, time is of the essence."

This is most definitely true, in Mount Pleasant and in Caledonia.

During Tuesday night's meeting at the Mount Pleasant Village Hall, several residents called for the state and Gov. Scott Walker to get more involved. Walker has not issued an executive order regarding the erosion, but has directed staff to provide support in the area, said Pat O'Connor, director of the Bureau of Response and Recovery for Wisconsin Emergency Management.

Apparently, Racine County got the governor's attention, and he responded: On Friday, he made public a letter he sent to the U.S. Army Corps of Engineers, requesting assistance under Section 14 of the 1946 Flood Control Act, which gives the corps emergency authority.

During his June 3 visit with the Journal Times Editorial Board, House Speaker Paul Ryan said that his office is working with the Army Corps and local officials, including Delagrave and Mount Pleasant Village Administrator Kurt Wahlen.

The Army Corps is determining whether the issue fits under the agency's Section 14 emergency authority, Ryan said. Under Section 14, the Army Corps "is authorized to construct bank protection works to protect endangered highways, highway bridge approaches, and other essential, important public works, such as municipal water supply systems and sewage disposal plants, churches, hospitals, schools, and non-profit public services and known cultural sites that are endangered by flood-caused bank or shoreline erosion."

"We're moving as fast as can be done, meaning we've gotten this moving faster than I've ever seen it," said Ryan, whose district includes all of Racine County. "The question is, how long will it take for them to study this situation, and what resources are available there."

We don't seem to have reached the higher threshold required for Federal Emergency Management Agency assistance, but we definitely have an issue with regard to local infrastructure: It's a short trip north along the shoreline from the worst of the existing Caledonia erosion to We Energies' Oak Creek Power Plant.

Our situation isn't at the level of New Orleans after Hurricane Katrina in 2005, or the New York-New Jersey area after Superstorm Sandy in 2012. But with our shoreline erosion crisis, we have an issue which calls for a remedy from an arm of the federal government; in this case, it's the Army Corps of Engineers.

To our fellow federal taxpayers, we say: We helped you then. You must help us now.

U.S. FIRE ADMINISTRATION

NFPA S Firefighter Fatalities Report Shows 68 On Duty Firefighter Deaths In 2015

By Lorraine Carli

KCSG-TV St. George (UT), June 12, 2016

NATIONAL – The National Fire Protection Association (NFPA) has released its annual U.S. Firefighter Fatalities report, which showed that a total of 68 firefighters died while on duty in the United States in 2015. This represents the fourth time in the past five years that the total number of deaths has been below 70. The number of deaths of volunteer firefighters was the second lowest total ever reported (32 deaths).

The largest share of firefighter deaths occurred while firefighters were operating at fires (24 deaths), accounting for just over one-third of the on-duty deaths last year. This is the fourth time in the last six years that the total has been fewer than 25 deaths.

“For several years, the number of on-duty firefighter deaths averaged around 100 deaths per year, but recently there’s been a fairly consistent decrease in the annual totals,” said Rita Fahy, NFPA’s manager of fire databases and systems. “The 10-year average has now dropped from approximately 100 firefighter deaths to 81.”

Of the 68 firefighter fatalities last year, 32 were volunteer firefighters, 24 were career firefighters, six were employees of federal land management agencies, three were federal contractors, one was an employee of a state land management agency, one was a civilian employee of the military, and one was a state prison inmate.

Overexertion, stress and medical issues accounted for by far the largest share of firefighter deaths. Of the 40 deaths in this category, 35 were classified as sudden cardiac deaths, usually heart attacks, with onset while the victim was on duty. This reflects only one less death than the 2014 total, reinforcing last year’s finding, which showed that the general downward trend in on-duty sudden cardiac deaths since 2007 has stopped. Cardiac-related events accounted for 51 percent of the deaths in 2015, and 42 percent of the deaths over the past 10 years.

“While it’s encouraging to see an overall decline in the number of firefighter fatalities, areas of concern remain, particularly sudden cardiac deaths,” said Fahy. She also noted the significant number of cancer deaths and suicides among current and former firefighters that are not captured in the report that only tracks on-duty deaths.

The firefighter fatality study is made possible by the cooperation and assistance of the United States Fire Service, the Public Safety Officers’ Benefits Program of the Department of Justice, the CDC National Institute for Occupational Safety and Health, the United States Fire Administration, the Forest Service of the U.S. Department of Agriculture, the Bureau of Indian Affairs, and the Bureau of Land Management of the U.S. Department of the Interior.

Founded in 1896, NFPA is a global, nonprofit organization devoted to eliminating death, injury, property and economic loss due to fire, electrical and related hazards. The association delivers information and knowledge through more than 300 consensus codes and standards, research, training, education, outreach and advocacy; and by partnering with others who share an interest in furthering the NFPA mission.

DHS/FEMA GRANTS

Officials Pin Hopes On Grant To Cover Long List Of Fire Rescue Needs

By Livi Stanford

Leesburg (FL) Daily Commercial, June 12, 2016

TAVARES — Citing the need to increase manpower, Lake County officials have made it abundantly clear that Lake County Fire Rescue has glaring staffing deficiencies, outdated fire stations and equipment.

There have also been concerns raised about the department’s inability to meet National Fire Protection Association standard 1710, a metric calling for the assembly of 15 firefighters to the scene in eight minutes.

A sampling of nine fire reports over the last year in outlying areas shows it takes an average of 36 minutes to assemble 15 firefighters to the scene.

The majority of the 24 fire stations in the county are staffed with just two firefighters on each shift, making it particularly difficult to respond adequately to emergencies in outlying areas such as Pine Lakes, Astor and Sorrento without jeopardizing the safety of firefighters and citizens, according to the local fire union.

But when the county’s Public Safety Deputy Director John Molenda presented his budget to county commissioners this week, he did not ask for a budget increase to address those issues. Instead, he presented a status quo budget at $23 million.

County officials, who long spoke of increasing manpower, believe the budget request is adequate at this time because plans are still being ironed out to implement a timeline for funding the fire department's needs.

Those officials say there are missing pieces preventing the completion of that timeline such as: the results of a study to evaluate whether EMS should partner with Lake County Fire Rescue to provide medical transport services in certain geographic areas to improve response times; and whether the county will receive a Staffing for Adequate Fire and Emergency Response Grant to hire 15 firefighters.

"I think if we don't explore the SAFER grant we are doing an injustice to the taxpayers of Lake County," Commissioner Tim Sullivan said. "It is a wise use of dollars …"

But this means the hiring of more firefighters will not occur for at least another year. The fire department has not received or asked for a budget increase in years, leaving the department limping along with the limited resources they have.

The county has put on hold a plan to replace aging and dilapidated stations and has slowed the purchase of equipment to a trickle because of budget constraints. Half of the firetrucks in service are more than 10 years old, and 27 percent have more than 150,000 miles on them.

But a draft of a strategic plan — obtained through a public records request and written by a committee consisting of three firefighters, three lieutenants, a battalion chief and an assistant chief — lists six goals in order of importance for the department, including staffing, an apparatus replacement plan, operational effectiveness, advanced life support, fire stations and firefighting personal protective equipment.

The committee cites many weaknesses in the department: It is understaffed and underfunded in comparison to other similar fire departments in the Central Florida area; Fire Rescue needs to increase firefighter and paramedic staffing to meet the 26 percent increase in call load; and it is experiencing an increased turnover rate of experienced personnel.

In year one, the committee suggests implementing 24 new firefighter positions, six new lieutenant positions, two new fire inspector positions, three new battalion chief positions and one new division chief of training.

"The staffing has not increased to match the community needs," according to the plan.

Over the years, the county has a history of delaying action on fire stations. Station 90 in Clermont will finally be completed in July after an eight-year wait for firefighters who were staying in the Value Place Hotel off of State Road 50.

Further, in Altoona, the building continues to deteriorate. A portion of the ceiling has fallen through in the last year. A new station was expected to be completed at the end of 2015 but did not occur. Now, four years later, fire officials say they will finally put in a new station.

Lt. Brian Gamble, vice president of the Professional Firefighters of Lake County, said it was certainly disappointing the manpower shortage was not addressed this budget season.

"It seems we are counting on the SAFER grant to go through," he said. "We are all hoping it does."

Even if the grant is approved, it will only meet a fraction of the manpower needs in the department, Gamble said.

County officials bristle at the notion that they are once again delaying improvements in the fire department, stating they have faith the grant will come through.

"We should be able to obtain the grant for much-needed manpower, but if it doesn't come through then we will regroup and address what needs to be done as quickly as possible," Commissioner Leslie Campione said.

Commissioner Sean Parks agreed, stating he was also confident.

But the grant is competitive, according to Danon Lucas, FEMA Region IV external affairs spokesman.

He added for fiscal year 2014 there were "1,335 applications for the $340 million appropriated for the program nationwide." Out of those applicants, 254 were awarded the grant.

What happens if the grant is not approved? Officials are vague on this answer, stating they will weigh different options.

Sullivan said one of those options would be looking at the fire assessment and other revenue sources. County staff recommended this year the assessment remain the same at $175.

But Sullivan also said the fire department is doing well, particularly in receiving an improved Insurance Service Organization rating.

However, that same ISO rating cited problems with water supply and manpower issues.

Public Safety Director Molenda said the department is making progress, particularly in expanding ALS services over a three-year period beginning with fire station 53, Lady Lake and harbors. It is also certifying six firefighters to paramedics.

In addition, he said the department is purchasing property for future fire stations for Lake Yale and the Seminole Springs area.

"The key is appropriating the money and having a timeline when to implement certain steps in the plan along the way," he said.

Asked about why the strategic plan had not been implemented, Molenda said it had yet to be finalized.

Diverse Native Landscapes Are Best Bet For Fire Safety In The East Bay Hills

By Michelle Myers, Director of the Sierra Club San Francisco Bay chapter

East Bay (CA) Times, June 11, 2016

We all cherish the Bay Area's open space and parklands, and it is the Sierra Club's mission to protect these areas for wildlife and public enjoyment. Because the stakes are so high, any changes to how these lands are managed and maintained will understandably raise questions and concerns.

That's the case with an ongoing debate over vegetation management for fire safety in the East Bay hills. But especially when there's so much at stake, it's important to get the facts right.

The Sierra Club has urged FEMA to allow three East Bay agencies – the city of Oakland, the East Bay Regional Park District, and the University of California – to use promised grant money to carry out a well-considered and scientifically approved fire-mitigation plan in our hills.

This preferred strategy entails removing the most highly flammable trees like eucalyptus – in phases, and only in select high-risk areas.

When the most flammable trees are selectively cut and mulched, they rapidly deteriorate and return to the soil. Species like oaks and bays in the eucalyptus understory are preserved during the selective tree removal, and in the restored landscape they can get the sunlight and water they need to thrive.

This restoration process will take place slowly, over time, giving native ecosystems the opportunity to rebound.

Under our preferred approach, many thousands of acres of eucalyptus and other non-natives will remain in the East Bay hills.

Our proposal only covers areas near homes and businesses where a fire would be most costly to lives and property. In fact, removing monoculture eucalyptus groves and providing for the return of native ecosystems will create a much richer landscape than the alternative – the thinning of eucalyptus groves – which requires regularly scraping away the forest floor to remove flammable debris.

Our approach has many benefits, most notably fire prevention and greater biodiversity. Eucalyptuses are among the most flammable trees on Earth.

They are notorious for quickly spreading canopy fires and for releasing flammable gases and long-burning embers; this is what made the Oakland Hills fire of 1991 so devastating. And today's hotter, drier climate means fire is a greater concern than ever.

Native plants, on the other hand, are generally far less of a fire hazard. They also support greater biodiversity. Oak woodlands support the richest wildlife community of any habitat in California – ecosystems estimated to be ten times more diverse than eucalyptus forests.

We also understand and share concerns over broadcasting herbicides. We should always be alert to their misuse and overuse. In this case, herbicides have been proposed as a solution to stopping the rapid regrowth of eucalyptus suckers.

We encourage the land-management agencies to explore all viable, natural solutions. In the event that herbicides are the most effective remedy available, we insist on a full environmental review and the strictest controls to prevent possible negative effects.

Fortunately, work by environmental professionals shows that the careful use of herbicides can assist in the successful restoration of native habitat, whether it be nesting sites for the endangered California least tern along the San Francisco Bay shoreline, or important dune habitats at Point Reyes's Limantour Beach.

The Sierra Club has worked on this issue for 25 years – ever since the Oakland Hills fire of 1991 – and in that time we have listened to all sides and considered a wide range of views.

While cutting down any tree is a painful thing to consider, selective removal and restoration will make our hills safer, more sustainable, and richer in native plants and wildlife.

FIRE GRANTS

Gary Fire Department Looking To Upgrade Equipment

By Ed Bierschenk

Times of Northwest Indiana, June 12, 2016

GARY — Millions of dollars worth of improvements may be made at the Gary Fire Department over the next year.

The fire department recently bought some new ambulances and officials hope over the next year to add several new fire engines and an aerial ladder truck to its inventory, according to Fire Chief Paul Bradley.

The department recently received a $758,044 grant that will be used to buy 133 self-contained breathing apparatus devices, which supply air to firefighters when fighting fires.

The money came from the Federal Emergency Management Agency's Assistance of Firefighters Grant program. Bradley said the city is also seeking another grant from that program to buy a new aerial ladder truck, which can cost between $700,000 and $1 million.

The department currently has three trucks in service while one is being overhauled.

"We need to have four in service every day, but you always need to have a spare," Bradley said.

Equipment and personnel shortages have been an issue for some time, but things seem to be improving, according to some observers.

In December 2010, under the administration of former Mayor Rudy Clay, 35 positions were eliminated in the fire department, which went from 236 to 201 firefighters. Firefighters joined police officers in 2014 and again early last year in picketing over inadequate equipment and salaries, which was said to be responsible for personnel leaving for other departments that paid more money.

The city now has 187 firefighters, but raises were approved last year and Lt. Adam Friday, vice president of Gary Firefighters Association Local 359, believes things are improving. In addition to raises that are expected to eventually increase annual salaries by $10,000, Friday said equipment has gotten a lot better.

"It's better, but we have a ways to go," said Friday.

Mayor Karen Freeman-Wilson said "it's all about dollars and cents."

She said when she came into office "there were some large gaps with equipment. They (the firefighters) were grossly underpaid. So every year we've worked with the chiefs (including past chief Teresa Everett) to find more dollars. But they have also been very active in finding dollars for themselves," she said.

For instance, Bradley said a new company is doing a better job now of collecting fees for ambulance service. The money collected is being used to help get new ambulances.

One of the issues still remaining, according to Friday, is a new fire station to permanently house Station 5 firefighters, who have been working out of temporary quarters for the last several years. Bradley said the city has been approved for federal assistance for a new fire station that will be located in the 4900 block of Pennsylvania Street. He hopes to break ground on it this year. Bradley also said he has improved furnishing at the stations.

Friday said another issue the union and administration are working on has to do with obtaining additional personal protective equipment and additional cleaners for that gear. The equipment helps protect firefighters against hazardous chemicals they might encounter when responding to a call.

Freeman-Wilson also is working with department heads, union officials, and the council to create public safety positions. These employees would be trained to perform both police and firefighting duties to some degree.

Bradley and Freeman-Wilson said it will be up to employees to decide whether they want to apply for these positions. Bradley said some firefighters have expressed interest in the positions.

In addition to paying a higher salary, Bradley said employees might be attracted to the position because of the opportunity to learn new skills.

$900K Federal Grant Will Allow Paulding To Buy New Ladder Fire Truck

Marietta (GA) Daily Journal, June 10, 2016

Paulding's fire department has received a major injection of funds to allow it to buy a new aerial ladder truck without using money from county taxpayers.

Paulding County Fire and Rescue Department announced Thursday it received a federal grant totaling $909,091. The funds, earmarked to purchase a new aerial ladder truck, will help improve emergency response and save lives, department officials said.

"Grants like this are crucial for departments like ours," said Paulding Fire Chief Joey Pelfrey.

"We rely on our firefighters to function on a limited budget to get the job done. This federal grant will allow the men and women of our department to have the most up-to-date, lifesaving equipment without having to make harmful budget cuts or add to local taxes.

"With continued growth in the county this vehicle acquisition will enhance fire suppression and rescue capabilities to the citizens of Paulding. We are extremely happy to have earned this grant, and appreciate the federal government's contribution back to our taxpayers," Pelfrey said.

The funds came form the Federal Emergency Management Agency's Assistance to Firefighters Grant

(AFG) program. They are designed to help communities meet their emergency response needs without placing an additional burden on their local budgets, a news release stated.

U.S. Sen. Johnny Isakson said, “This grant is important to the safety and well-being of my constituents in Georgia. Funding will enable the department to purchase an aerial apparatus for its fleet to replace aging equipment and increase the ability to respond to incidents involving taller structures.”

The federal grant program awards more than $300 million annually to fire departments and EMS organizations nationwide in an effort to improve public safety and responsiveness in times of emergency.

West Sac Firefighting Grant Aids County Agencies

Woodland (CA) Daily Democrat, June 11, 2016

A consortium of regional fire agencies led by the West Sacramento Fire Department has been awarded a $1.1 million grant through FEMA’s Assistance to Firefighters program.

Other cities and agencies that will benefit include Davis, and fire protection districts in Madison, Yolo, Zamora, Esparto, Knight’s Landing, West Plainfield, and Elkhorn, and the Yocha Dehe Wintun Nation.

Grant funds will be used to purchase Self Contained Breathing Apparatus, air compressors, and related equipment that will improve interoperability and firefighter safety throughout the region.

Congresswoman Doris Matsui was instrumental in securing the grant. “Our firefighters are true heroes in our communities, and are so deserving of this great news,” said the Congresswoman. “This federal funding will ensure our first responders are supplied with up-to-date equipment and gear as they protect us from fire and other natural disasters, which ultimately strengthens our efforts to keep our entire region safe.”

West Sacramento Mayor Christopher Cabaldon said, “It is comforting to know that our front line emergency crews will now be better equipped to protect our community. Thank you to all of our Yolo County partners as well as the OES for assistance in developing the Grant.”

Training on the new equipment will be provided by the West Sacramento Fire Department and Davis Fire Department.

TOP STORIES

Mariposa County Fire Department Call Log: May 23

Sierra (CA) Sun Times, June 11, 2016

Monday, May 23 thru Sunday, May 29
EMS – 8
Fires – 1
Public Assists – 1
Auto Collisions – 3

Mariposa County Fire Department supports the county with 14 volunteer stations located throughout the county. If you are 18 years of age and possess a valid CA driver’s license, we would love to hear from you! Positions are available for fire, medical, and various support duties. No experience necessary – we will train you! – Please call (209) 966-4330 today for more information!

Safety Tip: Toddler Fire Safety

Children are curious about fire and do not understand the dangers of fire. FEMA shares that new parents and others who care for babies and small children need to pay special attention to fire safety.

Children under age 5 are twice as likely to die in a fire than the rest of us. In fact, toddlers age 3 to 4 actually cause a large number of home fires by playing with lighters and matches. And, when fire breaks out, babies and toddlers can’t escape without your help. Practice and teach fire safe behavior in your home.

- Calmly but firmly explain to your child that matches and lighters are tools for adults to use carefully. Teach young children to tell an adult if they see matches or lighters.
- Always store matches and lighters out of children’s reach and sight, preferably in a locked cabinet.
- Purchase only child-resistant lighters. Remember: no lighter is child proof!
- Never use lighters or matches as a source of amusement. Children may imitate what you do.
- Always supervise young children closely.
- Prevent fires by practicing and teaching fire safe behaviors in your home. Keep children 3 feet away from the stove when cooking, don’t overload outlets, have your heating systems checked annually and use deep ashtrays and soak the ashes in water, if you smoke.

Helpful Information from Mariposa County Fire Department

Special Note:

Mariposa County Fire Department would like to remind you of the dangers in leaving children, animals and the elderly in closed vehicle, especially as the weather gets hotter. According to the National Highway Traffic Safety Administration, a locked car sitting in the summer sun quickly turns into an oven, and temperatures can climb from 78 degrees to 100 degrees in just three minutes, to 125 degrees in 6-8 minutes. Parking in the shade, cracking windows open and tinted windows do not make a difference in the interior temperature of a closed car, according to pediatric researchers.

Kids and Adults are at great risk for heat stroke, which can lead to a high fever, dehydration, seizures, stroke and death. Animals do not sweat so their body temperature heats up quickly making them at risk of overheating (hyperthermia), heatstroke and death. Think that quick trip back into the house to get that forgotten item will be ok?... Think again... Even five minutes locked in a car when it's hot outside endangers children, adults and pets.

PLEASE USE CAUTION!!!

Vegetation fires are preventable if you follow some basic safety rules:

Do your property clearing before 10 A.M.

When driving, if you need to pull off the road, do not park in dry vegetation.

Don't leave candles unattended.

Make sure to properly dispose of all cigarette butts.

And remember, fireworks are illegal throughout Mariposa County year round.

Driving Reminder

Mariposa County Fire Department would like to remind you to limit possible distractions that could take your attention away from driving. When driving at high speeds on our mountain roads it is of the utmost importance you concentrate on the roads, your vehicle and the weather conditions. A distraction of just a split second can be disastrous.

Thank You

Still 1,930 Acres, 44 Percent Contained; Cooler Weather Is A Help

Bend (OR) Bulletin, June 9, 2016

Cooler weather helped firefighters make "solid progress" Thursday on the Akawana Fire burning 13 miles north of Sisters.

The fire on private land protected by the state remained at 1,930 acres and was 44 percent contained, according to a news release Thursday night from the Oregon Department of Forestry.

Burning in grass, brush and timber, the fire moderated and crews were able to fight it right at its edge,

The evacuation level for the Three Rivers area near the blaze was lowered to 1 ("get ready"), but the Forest Park, Air Park and Rim Park subdivisions and outlying properties are still at Level 2 ("get set"). That's a total of 262 structures at level 2, according to the release. No residences have burned.

There were spot fires in a few areas Thursday, but they were quickly contained. Planes and helicopters played a big part in getting the fire further under control, according to the release.

Firefighters plan to mop up hot spots Friday and strengthen fire lines along the northeast corner of the blaze.

The fire caused by a lightning strike was first reported Tuesday afternoon and is named for nearby Akawana Butte.

About 3,000 people live in the area immediately threatened by the fire, which is near Lake Billy Chincook, according to the Federal Emergency Management Agency, which is paying some firefighting costs associated with the fire. Most of the homes in the area are secondary homes, although about 250 are primary homes. FEMA approved using federal funds to assist in paying for firefighting costs Wednesday night.

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

Hilton Head Beach Renourishment Project Comes Summer After Record Tourism Year

By Rebecca Lurye

Hilton Head Island (SC) Packet, June 10, 2016

Each year, Hilton Head Island's calm tides and cool waters attract millions of dollars in tourism. And each year, those same waters cost the island millions of dollars, sweeping at least 150,000 cubic yards of sand out to sea.

This week, likely Wednesday, work will begin on a $20.7 million project to restore much of what Hilton Head has lost since its last beach renourishment in 2007 — about 2.2 million cubic yards of sand along eight miles of shoreline.

It's a rebuild that town officials and hospitality representatives had hoped would start earlier in the year instead of in June, the start of the island's tourism season.

But inclement weather and a backup in the contractor's schedule delayed the February start date. Town engineer Steve Liggett said contractors hope to begin Wednesday, although there is still some flexibility in the schedule.

Most hotels reached for comment this week said they're not worried the project will stymie revenues, which are on track to beat last year's record tourism season.

The most optimistic are those located along Hilton Head's central shoreline, which won't see any work until late August to October.

"I don't doubt we may have another record year again," said Jay Wiendl, general manager of the Sonesta Resort. "The way I look at it is, I can't wait for our Visitor's Convention Bureau to be able to say, 'Come see our new beautiful beaches.' "

Hilton Head saw 2.65 million visitors in 2015, up from nearly 2.62 million the year before.

There were other indicators of a record tourism year in 2015:

- Hotel occupancy rates were up 1.6 percent from 2014 and by a total of 4.6 percent from 2013, according to the University of South Carolina Beaufort Lowcountry and Resort Islands Tourism Institute.
- The hotels' average daily rate also rose by 4.9 percent and by 12.5 percent from 2013.
- Together, those figures gave the island a 17.6 percent jump in revenue per available room between 2013 and 2015.

Those gains translated into big money for the town. Last year, Hilton Head had a record-breaking haul of nearly $3.1 million from its local accommodations tax, which is money collected on overnight lodging from visitors. That's up from about $2.8 million the year before. As of April, the town had already received nearly $2.1 million, up from $1.9 million at the same point last year.

In March, some business owners expressed concerns that the project could hurt tourism. Leaders of Sea Pines Resort, which declined to comment this week, said that it would face a slew of cancellations if the town moved forward with the project in the summer rather than delaying the work until next winter.

Ariana Pernice, vice president of the visitor and convention bureau of the Hilton Head Island-Bluffton Chamber of Commerce, said at the time that the project would be a "pretty substantial hit," as the chamber would need to spend five to 10 times more to change someone's mind about a negative experience as it would to attract a new visitor.

While only 1,000 feet of beach is restricted at a time, and the project moves about 300 feet each day, it will be moving through the heel of the island in June and July and through Sea Pines' South Beach from mid-July to mid-August.

Rob Jordan, of the island's biggest employer, SERG Restaurant Group, said he thinks the town was smart to rework the project schedule to avoid the central shoreline during the summer months. And while SERG does not operate any restaurants on the beach, Jordan doubted the island would see fewer visitors because of the months of loud, noisy work.

"I think (visitors will) just move 50 yards down the beach and enjoy the day," Jordan said. "(The rebuild) is important. It's our lifeblood. We'll get through it."

The five-month-long project involves submerging pipelines into underwater sandbars, or shoals, to pump the material onto the beach. Trucks then spread the sand to recreate the shape of the shoreline.

To date, the town has spent about $50 million to renourish and protect its beaches through regular rebuilds. This year's is especially timely, as severe storms last October washed away about 150,000 cubic yards of sand at once.

The lost sediment alone is worth about $1.7 million, and the town hopes to be reimbursed for up to $6-7 million for the total cost of replacing the sand. The Federal Emergency Management Agency is processing Hilton Head's claim that the damage was associated with a declared disaster, Hurricane Joaquin, said town engineer Scott Liggett.

Surveyors have been using high-tech equipment to scan the dredging area for any sub-par sand, such as overly muddy material, or obstacles, including old anchors or shrimp trawler doors and chains.

"We're obviously not trying to dredge up an old ship wreck or something like that," Liggett said.

The project will begin at Mitchelville Beach Park, and the town will post daily updates about the location of the work on its beach renourishment website.

Those who want to walk or bicycle on the beach can access temporary walkways past the dunes once they reach a worksite, Liggett said.

More likely to be impacted than tourists are sea turtles that are in the middle of their nesting and hatching season.

Volunteers with the Hilton Head Island Sea Turtle Protection Project have been on the beach daily since mobilization for the project began and, as of Thursday, have moved about 70 nests out of about 130 nests on the island's beaches, according to Liggett.

"They've been up to their eyeballs with turtle-nesting activities," he said. "It's a very active and demanding time for them."

FLOODS

Obama Approves Federal Money For Flooded Texas Counties

By Staff Report

Houston Chronicle, June 11, 2016

President Barack Obama on Saturday approved a request from Gov. Greg Abbott for federal aid for the Texas counties hardest hit by the latest run of storms that flooded thousands of homes and streets with reckless force.

Obama declared a major federal disaster in the 12 counties, including Brazoria, Fort Bend and Montgomery, where the powerful storms and flooding swamped cars, ruined houses and businesses, washed out roads and snapped trees and power poles.

The president already had declared disasters in many of the same places after flooding in April – an unfortunate fact that Abbott highlighted in his letter requesting another round of federal help.

ON THE MOVE: What newcomers need to know about flooding, flood insurance

"I would like to thank the President and FEMA for their quick response in granting assistance to those affected by the severe weather and flooding of the past couple weeks," Abbott said Saturday in a statement. "Texans have always risen to meet the challenges they face and this time will be no different. With this latest development Texans can now begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

The president granted money for sheltering and local and state response costs. Additional money for debris remains on hold as water continues to recede and pending additional damage assessments.

Other counties may be added to the request once they meet the threshold required by the federal government.

With a presidential declaration, people whose homes were damaged or destroyed can apply for a grant up to $33,000 from the Federal Emergency Management Agency. The amount will depend on the severity of the reported damage.

In addition to repair costs, some aid can be used for certain medical expenses, funeral costs and damage to clothing or household items, among other losses.

Abbott has declared a disaster state in 46 counties since June 1, but his request for federal aid only covers those with storm-related damage "of such severity and magnitude that effective response is beyond the capabilities of the state and affected local governments."

Abbott wrote that the most recent storms, which began May 26, dumped up to 20 inches of rain in parts of Southeast Texas that typically receive between 40 and 50 inches of rain a year.

Brenham alone had 16 inches on the first day of the storms, shattering the Washington County city's one-day rainfall record by more than 6 inches.

At least 20 deaths

To make matters worse, the region has been pounded with heavy rain for weeks, so the ground already was saturated, the rivers, bayous and creeks already brimming. This latest rain had nowhere to settle.

By the time the Brazos River crested June 4 near Rosharon, it was nearly 10 feet above flood stage, the Nation Weather Service said. Officials expected the river to remain out of its banks through at least Wednesday as the high water makes its way to the Gulf of Mexico.

Cypress Creek and the Colorado, San Jacinto and Trinity rivers also reached major flood stages.

The severe storms were blamed for at least 20 deaths, including nine soldiers who were killed when their truck was overturned by swift water near Fort Hood, north of Austin.

READ MORE: Family uses boat to rescue area pets stranded by flood waters

A Montgomery County man, 77, was swept away while walking outside. In Washington County, the body of a 21-year-old Guardsman was found downstream from where his overturned truck had been located earlier.

"Texas is suffering from disaster fatigue," wrote Abbott, who promised to push for federal relief after an aerial tour of flooded areas near Houston a week ago. "There seems to be nowhere safe from the most recent severe weather."

In all, Abbott said the flooding threatened nearly 90,000 homes and forced mandatory evacuations in Bastrop, Brazoria, Fort Bend, Hood, Parker and Wharton counties.

Officials estimated that the flooding destroyed or damaged more than 5,500 houses and nearly 300 businesses.

Montgomery County Judge Craig Doyal said in a statement that he is "very hopeful" that the federal government will move quickly with disaster aid, "given the extent of the damage" from the floods, which ruined nearly 900 homes in the suburban county.

Fort Bend County Judge Robert Hebert said the county was "very pleased" by the governor's request.

"Those folks are going to need all the help they can get," he said.

While a majority of Fort Bend County residents have returned to life as usual as the floodwaters receded this week, Hebert said as many as 30,000 people are continuing to confront the aftermath of "real disaster."

The county reported damage to more than 1,200 homes. There also was roughly $14 million in damage to roads, bridges and water systems, "and that number will only grow," Hebert said.

Water receding

In Brazoria County, the flooding has affected at least 100,000 residents, or roughly one-third of its population, officials said. Floodwaters inundated or cut off hundreds of homes in a slow rise that spread from near Rosharon to Lake Jackson.

The water continued to recede Friday, but officials expected levels to remain high in the south county for days.

"There are areas that are going to have water for several days," said Sharon Trower, spokeswoman for Brazoria County's Office of Emergency Management. "Weeks, possibly."

Harvey Rice and Emily Foxhall contributed to this report.

Obama OKs Disaster Aid For 12 Texas Counties

By Brian Rogers

Houston Chronicle, June 11, 2016

President Barack Obama on Saturday approved a request from Gov. Greg Abbott for federal aid to the Texas counties hardest hit by the latest run of storms that flooded thousands of homes.

Obama declared a major federal disaster in 12 counties, including Brazoria, Fort Bend and Montgomery, where powerful storms washed away cars, swamped houses and businesses and flooded roads.

"It's needed. We've seen widespread devastation," said Brazoria County Judge Matt Sebesta. "There's going to be millions of dollars, and probably hundreds of millions of dollars, in damage."

Sebesta said the process to determine which homes, businesses and roads are seriously damaged, and how much it will take to fix them, will take months.

The president already had declared disasters in many of the same places after flooding in April – an unfortunate fact that Abbott highlighted in his letter requesting another round of federal help.

"Texans have always risen to meet the challenges they face, and this time will be no different," Abbott said Saturday in a statement. "With this latest development Texans can now begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Other counties may be added to the request for assistance once they meet the threshold required by the federal government to request federal disaster aid, Abbott said.

With a presidential declaration, people whose homes were damaged or destroyed can apply for a grant up to $33,000 from the Federal Emergency Management Agency. The amount will depend on the severity of the damage.

In addition to repairs, some money can be used for certain medical expenses, funeral costs and damage to clothing or household items, among other losses.

Abbott has declared a disaster state in 46 counties since June 1, but his request for federal aid only covers those with storm-related damage "of such severity and magnitude that effective response is beyond the capabilities of the state and affected local governments."

Abbott wrote that the most recent storms, which began May 26, dumped up to 20 inches of rain in parts of Southeast Texas that typically receive between 40 and 50 inches of rain a year.

Authorities estimated that the flooding destroyed or damaged more than 5,500 houses and nearly 300 businesses. The severe storms were blamed for at least 20 deaths.

In addition to the large counties around Houston, the other counties that will benefit are Austin, Brazos, Grimes, Hidalgo, Hood, San Jacinto, Travis, Waller and Washington. Harris County was not included in the request for federal dollars.

Abbott Seeks Federal Aid For Recent Storms, Flooding

By Matthew Tresaugue

Houston Chronicle, June 10, 2016

Gov. Greg Abbott is seeking federal aid for the Texas counties hardest hit by the latest run of storms that flooded thousands of homes and streets with reckless force.

In a letter dated Thursday, Abbott asked President Obama to declare a major federal disaster in 12 counties, including Brazoria, Fort Bend and Montgomery, where the powerful storms and flooding swamped cars, ruined houses and businesses, washed out roads and ripped apart trees.

The other counties earmarked by Abbott are Austin, Brazos, Grimes, Hidalgo, Hood San Jacinto, Travis, Waller and Washington.

The governor's action is a necessary first step before Obama decides whether to release funds to the counties as they clean up from the storms. U.S. Rep. Kevin Brady tweeted that the state's congressional delegation had written Obama in support of Abbott's request. Officials said they expect a decision within days.

The president already had declared disasters in many of the same places after major flooding in April — an unfortunate fact that Abbott highlighted in his letter requesting more federal help. Major storms and flooding have hammered the Houston area on the last two Memorial Day weekends.

"The last year has taken a terrible toll on the people and the property of this state," he wrote Thursday. "Texans are resilient, but few can recover without assistance when disaster after disaster hits in the middle of recovery."

With a presidential declaration, people whose homes were damaged or destroyed can apply for a grant of up to $33,000 from the Federal Emergency Management Agency. The amount will depend on the severity of the reported damage.

In addition to repair costs, some aid can be used for certain medical expenses, funeral costs and damage to clothing or household items, among other losses.

Although Abbott has declared a disaster in 46 counties since June 1, his request for federal aid only covers those with storm-related damage "of such severity and magnitude that effective response is beyond the capabilities of the state and affected local governments."

Abbott wrote that the most recent storms, which began May 26, dumped up to 20 inches of rain in parts of Southeast Texas that typically receive 40 to 50 inches of rain a year.

Brenham alone had 16 inches on the first day of the storms, shattering the Washington County city's one-day rainfall record by more than 6 inches.

To make matters worse, the region had been pounded with heavy rain for weeks, so the ground already was saturated, the rivers, bayous and creeks already brimming. This latest rain had nowhere to settle.

The severe storms were blamed for at least 20 deaths, including nine soldiers who were killed when their truck was overturned by swift water near Fort Hood, north of Austin.

President Grants Disaster Request For All Counties Affected By Flooding

Houston Community Newspapers, June 11, 2016

The President today granted Governor Greg Abbott's federal disaster request for individual assistance for all 12 counties affected by the recent flooding, including: Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Travis, Waller, and Washington.

Public Assistance Category B (Emergency Protective Measures) for local and state response costs and sheltering was also granted. Category A (Debris) remains on hold as water continues to recede, and pending additional damage assessments.

"I would like to thank the President and FEMA for their quick response in granting assistance to those affected by the severe weather and flooding of the past couple weeks," said Governor Abbott. "Texans have always risen to meet the challenges they face and this time will be no different. With this latest development Texans can now begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Additional counties may be added to the Governor's request for assistance once they meet the threshold required by the federal government to request federal disaster aid.

Texas Congressional Delegation Asks Obama To Declare Flood Disaster For Second Time Since April

By Stephen Green

Houston Community Newspapers, June 11, 2016

Texas Gov. Greg Abbott and 25 Texas members of Congress are asking President Barack Obama to issue a disaster declaration to help residents affected by the late May and early June floods.

Abbott sent in his request to the White House Thursday; and, led by U.S. Rep. Kevin Brady, R-The Woodlands, the delegation of congressmen followed up with a bipartisan letter.

"This month's severe weather and flooding devastated the properties and lives of thousands of Texans across the state," Abbott said in a statement. "Today's disaster declaration is the first step in helping these Texans rebuild their lives. Texans are resilient by nature, and with the proper resources, we will together overcome the challenges we face."

If Obama gives his OK, residents of Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Travis, Waller and Washington counties could be eligible for Individual

Assistance grants of up to $33,000 from the federal government, and low-interest disaster loans from the U.S. Small Business Administration.

"We write to express support for Governor Abbott's request for a major disaster declaration on behalf of Texas counties impacted by severe storms and flooding beginning on May 26, 2016," the congressional delegation wrote in its letter. "These storms caused widespread flooding and damage to numerous areas including many impacted by the Tax Day floods just over one month ago.

"Texas has experienced six major disasters over the past 13 months, including three major flood events this year. These most recent storms occurred just as many of our local communities and residents were beginning the recovery process from the Tax Day floods. Residents, emergency responders, local governments and volunteer agencies have shown tremendous fortitude in their response; however, the seemingly continual storms and flooding have taken their toll. The continued response and long-term recovery from this round of storms will require federal assistance."

More than 800 homes, including 20 businesses, were damaged or destroyed in the recent bout of flooding — by far eclipsing the damage from April's storms, according to Montgomery County Judge Craig Doyal.

FEMA officials toured flood-damaged homes in Montgomery County Monday, a key step toward clearing the way for a federal disaster declaration and the federal aid that would flow to residents, Doyal stated in a release Monday afternoon.

"Given the extent of the damage from May's floods, I am very hopeful that the federal government moves quickly to support a disaster declaration for the county," Doyal stated.

According to data from the National Weather Service, some areas of the county received more than 20 inches of rain between May 26 and June 6. The average annual rainfall for Conroe is 48 inches.

The storms led to more than 200 water rescues, downed trees in homes, and a tornado. At one point, more than 35,000 residents were without power, due to destroyed power lines from high winds, until Sunday, May 29.

Doyal signed a disaster declaration for Montgomery County May 27 — the second such declaration in two months. Abbott issued his declaration soon after.

12 Texas Counties Granted Federal Disaster Declaration After...

KPRC-TV Houston, June 11, 2016

HOUSTON – President Barack Obama granted Governor Greg Abbott's federal disaster request for Individual Assistance for all 12 counties affected by the recent flooding, including: Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Travis, Waller, and Washington.

Public Assistance Category B (Emergency Protective Measures) for local and state response costs and sheltering was also granted. Category A (Debris) remains on hold as water continues to recede, and pending additional damage assessments.

"I would like to thank the President and FEMA for their quick response in granting assistance to those affected by the severe weather and flooding of the past couple weeks," Abbott said.

"Texans have always risen to meet the challenges they face and this time will be no different. With this latest development Texans can now begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Federal Disaster Declaration Granted For Texas Counties

KTVT-TV Dallas, June 11, 2016

AUSTIN (CBSDFW.COM) – President Barack Obama granted Governor Greg Abbott's federal disaster request Saturday for assistance in 12 counties that were affected by recent flooding.

The counties affected are Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Travis, Waller, and Washington.

Public Assistance Category B, which are emergency protective measures, for local and state response costs and sheltering were also granted.

Category A, which is debris assistance, remains on hold as water continues to recede and damage is assessed.

"I would like to thank the President and FEMA for their quick response in granting assistance to those affected by the severe weather and flooding of the past couple weeks," said Governor Abbott. "Texans have always risen to meet the challenges they face and this time will be no different. With this latest development Texans can now begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Additional counties may be added to Governor

Abbott's disaster request once they met the threshold required by the federal government to request aid.

Federal Disaster Declaration Granted For Travis, Other Texas Counties

Austin (TX) American Statesman, June 12, 2016

President Barack Obama approved on Saturday Gov. Greg Abbott's request seeking federal assistance and funding for a dozen Texas counties, including Travis, that suffered from flooding and other damage during recent storms.

Abbott asked Obama for a federal disaster declaration Thursday.

The preisdent granted individual assistance for 12 counties affected by the recent flooding, including: Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Travis, Waller and Washington, according to a media release from the governor's office.

Assistance for local and state response costs and sheltering was also granted, which is classified as Public Assistance Category B for Emergency Protective Measures, officials said. Category A, for debris, remains on hold pending additional damage assessments as water continues to recede, officials said.

"I would like to thank the president and FEMA for their quick response in granting assistance to those affected by the severe weather and flooding of the past couple weeks," said Abbott in the statement. "Texans have always risen to meet the challenges they face and this time will be no different. With this latest development Texans can now begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Additional counties may be added to the governor's request for assistance once they meet the threshold required by the federal government to request federal disaster aid, officials said.

President Grants Disaster Request For 12 Texas Counties

By Nadine Bonewitz

KXAN-TV Austin (TX), June 11, 2016

AUSTIN (KXAN) — President Obama granted a federal disaster request for all 12 counties affected by recent floods on Saturday.

Individual assistance will be available to flood victims in Travis County, along with Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Waller and Washington counties.

The federal funding will also cover local and state response costs and sheltering. Funding to help with debris remains on hold as water continues to recede. The grant could be approved after damages are assessed.

Governor Greg Abbott said in a statement that he was thankful to the President and to FEMA for quickly responding to the needs of Texas flood victims.

"Texans have always risen to meet the challenges they face and this time will be no different," he said. "With this latest development Texas can now begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Additional counties could be added to the disaster request once they meet the federal requirements needed to request for aid.

Federal Disaster Declaration Granted For 12 Texas Counties

KHOU-TV Houston, June 11, 2016

On Saturday, President Barack Obama granted Texas Governor Greg Abbott's federal disaster declaration request for all 12 counties affected by recent flooding.

Those counties include Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Travis, Waller and Washington.

"I would like to thank the President and FEMA for their quick response in granting assistance to those affected by the severe weather and flooding of the past couple weeks," Governor Abbott said in a statement. "Texans have always risen to meet the challenges they face and this time will be no different. With this latest development Texans can now begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Public Assistance Category B (Emergency Protective Measures) for local and state response costs and sheltering was also granted by President Obama.

Category A (Debris) remains on hold as water continues to recede and pending additional damage assessments.

Other counties may be added to the request for assistance once they meet the threshold required by the federal government to request federal disaster aid.

The Brazos River Flood Recovery Center is the central hub for flood victims seeking immediate help. It's located at BF Terry High School in Rosenberg. It will be open from 7 a.m. to 7 p.m. everyday until July 3rd.

Texas Counties Granted Federal Funds After Recent Floods

KEYE-TV Austin (TX), June 11, 2016

WASHINGTON, D.C. — President Obama has granted Texas Governor Abbott's federal disaster request for assistance to all 12 counties affected by flooding.

The counties named in the federal disaster request were Austin, Brazoria, Brazos, Fort Bend, Grimes, Hidalgo, Hood, Montgomery, San Jacinto, Travis, Waller, and Washington County.

Emergency protecting actions for local and state response costs were also funded.

"I would like to thank the President and FEMA for their quick response in granting assistance to those affected by the severe weather and flooding of the past couple weeks," said Governor Abbott. "Texans have always risen to meet the challenges they face and this time will be no different. With this latest development Texans can now begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Obama Declares State Of Disaster For 12 Texas Counties

Bryan College Station (TX) Eagle, June 12, 2016

HOUSTON — President Barack Obama has declared a major disaster in 12 Texas counties — including Brazos, Grimes and Washington — that suffered severe flooding last month during heavy rainfall.

The declaration, approved on Saturday, also covers Austin, Brazoria, Fort Bend, Hidalgo, Hood, Montgomery, San Jacinto, Travis, and Waller counties.

It enables residents to receive federal grants for temporary housing and home repairs, low-cost loans to cover uninsured property losses and other programs to help individuals and business owners recover.

The declaration also approved funding for local and state response costs and sheltering.

According to Brazos County officials, those affected by the storm can register for assistance from the Federal Emergency Management Agency by calling 1-800-621-3362 or visiting www.disasterassistance.gov. Those who have already registered with FEMA do not need to register again.

FEMA inspectors will begin making appointments with residents that applied for assistance after insurance documentation is submitted, according to Michele Meade, Brazos County emergency management coordinator. When an applicant registers with FEMA and becomes eligible for a damaged housing inspection, a FEMA inspector contacts the applicant to set up an appointment and reviews what documentation is required, officials said.

Texas Task Force 1 and the Texas Military Department made 1,444 evacuations statewide, 40 rescues, 520 acts of assistance and victim recovery, 618 welfare checks and hundreds of animal rescues, a press release from State Rep. John Raney's office sent earlier this week stated. In Brazos County, five homes were determined to be destroyed, according to the American Red Cross, and more than 100 suffered major damage.

Texas Gov. Greg Abbott thanked Obama and said the declaration lets Texans "begin the process of rebuilding their lives after experiencing some of the worst flooding in recent history."

Abbott says more counties could be added to the declaration if a threshold requirement is met.

Subdivision Never Flooded, Until It Did, And Residents Want Answers

By Mike Tolson

Houston Chronicle, June 11, 2016

Something was wrong – that was obvious to everyone who looked at the flooded streets around them. For most of the morning, water had steadily flowed toward the creek behind the neighborhood, as it had done after countless other storms. Now it was going the other way. And rising.

Hank Rennar stood on his corner lot in the Stable Gate subdivision in Cypress and knew they were in trouble. Neither Rennar nor his neighbors had seen anything like it. Cars parked at the bottom of driveways were doomed by the suddenly about-face muddy torrent.

A day that had begun with the promise of brighter skies and no more rain was about to turn into a frantic rush to shut off the power, find the family photos, move the antiques, locate the pets. Within the hour, Rennar was standing in water over his ankles. Down the street and across the way, some had it worse, with water rising to several feet. By the time the so-called Tax Day Flood was over, about 90 percent of the community's 250 or so homes had flooded.

Like residents across the western third of the county, those in Stable Gate view their lives – and the place they call home – a bit differently after the events of April 18. Occasional heavy rains may be a given in Greater Houston, flat and bathed in moist Gulf air, but to see widespread flooding in newer precincts, supposedly built to modern drainage standards and with keen awareness of geographic vulnerability, was shocking.

Angry flood victims pointed fingers at the generic "upstream," not buying official explanations of an unforeseeable, extreme rain event. For the first time, people were suspicious of the boomtown growth mania they had long taken for granted. Developers had cut corners, they insisted. And those charged with overseeing them must have just rubber-stamped their plans, they said.

Another twist of the knife came about five weeks later. On the Friday evening leading into Memorial Day weekend, the skies let loose once more. Cypress Creek flooded – again – and Little Cypress as well. A number of Stable Gate residents who were in the middle of repairs saw water return to their homes. So did some of the neighborhoods to the south.

Asking questions

The head of the Stable Gate homeowners association, Greg Bowen, summarized the fear that now pervades communities that previously had been preoccupied with traffic congestion and school taxes.

"You know something is wrong when sewage is coming out of your shower drain," Bowen said. "This is an ongoing condition. Unless the county does something, this will keep happening."

But what something?

"I have no idea," he said. "Until somebody steps up, all I can think of doing is to keep asking questions."

The answers, of course, likely will not satisfy him, his neighbors, or much of Harris County for that matter. They complain that phone calls to elected representatives and relevant agencies may yield expressions of sympathy but little more. If there is anything like a consensus among flood victims, it's that government at every level does not consider their problems a priority once the waters recede.

Built 15 years ago, Stable Gate is a relatively small, modestly aspirational upper-middle-class neighborhood off Telge Road, home to a healthy contingent of baby boomers for whom the large, two-story homes represent a lifetime of hard work. For many of them, such as travel business owner Tina Hearn, it figured to be the last house they would own. Now they say they couldn't sell if they wanted to, certainly not for the appraised values, which typically exceed $400,000.

"Everything I worked for in my whole life is in this house," said Hearn, whose home flooded a second time last month. "We moved here from Baytown because we were concerned about hurricanes. We never dreamed a rainstorm could come in and take it all away."

All it took was a single night of rain, pounding and relentless, for the entire Little Cypress Creek watershed to be overwhelmed. Massive rainfall upstream slowly made its way down the narrow floodway to the southeast, where the creek eventually connects with its bigger brother, Cypress Creek. As it did, water flowing into it from a variety of sources, including Stable Gate's pipes and ditch, had no outlet. Seeking equilibrium, it spread out and in some cases pushed back in the direction from which it had come.

It's as simple as that, says the Harris County Flood Control District: too much rain. More, in fact, than the agency had ever recorded at any of its rain gauges in the Little Cypress watershed back to 1989, when it started keeping track.

"I know that's not what the residents want to hear," said Matt Zeve, chief operations officer for the agency and a drainage engineer by trade. "But our design criteria is the 100-year flood."

The record rainfall, which exceeded 15 inches in some places, was felt through much of west and northwest Harris County and surpassed even once-a-century expectations. The result was more than 7,000 flooded homes and plenty of stunned residents who never figured they had a water problem, only to spend the next few days ripping out waterlogged carpet and tearing out saturated drywall. Some of them were in so-called 100-year floodplains, some in 500.

Not all of the flood victims are ready to accept Zeve's simple explanation. Instead, they see the crazy quilt of the county's western development – booming for more than two decades – as the likelier culprit. In Stable Gate, the second storm convinced them that the combined effect of runoff from newer construction, including new highways, may not be fully understood.

"It is the freaking flood that keeps happening in Cypress," said Hearn, who said rising water got close to her home on two earlier occasions. "There is not enough retention and detention ponds around this area, and they keep building more and more concrete. Telge Road gets completely flooded when it rains hard. It never used to be."

'No rise' policy

Unlike Tax Day, the May deluge was not off the charts. According to a report compiled by the flood control district, rainfall amounts in the Little Cypress watershed, while far above normal, for the most part were well under 10 inches. That provided ammunition to Stable Gate residents who claim that something has changed over the years, whether because of the completion of a section of the Grand Parkway immediately to the north, or from the construction of newer subdivisions around them.

Zeve, however, insists development in the watershed should not make a difference. The district has a strict "no rise" policy, meaning developers cannot build in a way that pushes more water into creeks and bayous than went there when the land was undeveloped. All construction plans are reviewed to make sure drainage elements are adequate to ensure that, he said.

While sympathetic to calls for new detention basins that could protect downstream residents, Zeve said there is nothing that can be done along the lower stretches of Little Cypress Creek because all the property adjacent to it is fully developed. Instead, he said, the flood control district is concentrating on the creek's upper reaches, where its "frontier program" calls for regional detention facilities to be built to keep storm runoff from rapidly entering the creek.

"We have no plans to modify or make changes to Little Cypress Creek," he said, pointing out that adjacent communities would vigorously fight any attempt to remove trees or deepen the channel even if the district wanted to.

As for Stable Gate, if water is intruding into the neighborhood because of inadequate drainage ditches along Telge Road or because of some feature belonging to a nearby subdivision, that is not the flood control district's responsibility, Zeve said. Its concern is limited to the water in the creeks and bayous and how development may affect that. His review of the neighborhood's original construction plans found nothing irregular, he said.

The head of the flood control district, Mike Talbott, has said that problems in some areas reflect engineering strategies made many decades ago. A comprehensive solution to ongoing flooding woes would require major building and widening projects as well as buyout programs, he said.

The current flood control system was not designed to handle the infrequent "monster" storm, he said. The consequence of not building in excess capacity, especially as growth intensified and density increased, was ever-more-expensive and damaging floods.

"A lot of engineering was done before people understood the risks," Talbott said, pointing to the countless residencies that sit uncomfortably close to floodways.

Re-engineering it to a higher standard might cost $26 billion, he said.

Devising own solutions

In other words, nothing is going to change anytime soon. After the April floods, Houston Mayor Sylvester Turner appointed Steve Costello, a former city council member, as his flooding "czar." Costello acknowledged straightaway he had no idea what the job entailed or what authority, if any, he would have. With a background in residential development, the engineer by trade has said that a reflexive desire to blame new, upstream development, while understandable, fails to appreciate the complicated nature of storm runoff in a relatively flat environment.

As neighborhoods in Houston and surrounding areas are learning, it may be for the residents themselves to devise solutions. Stable Gate, for example, could deepen its drainage ditch, install gates to prevent water from flowing back through the storm drains, or build its own detention pond on 26 wooded acres it owns at the back of the neighborhood.

Environmental lawyer Charles Irvine, who frequently consults with neighborhoods on flooding matters, senses rising frustration across the area and foresees a likely increase of improvised solutions such as "decorative" garden walls that may serve as mini-levees when waters rise. He faults those in leadership, including the flood control district, for not embracing the need for a more assertive approach to dealing with apparent weaknesses in the system, especially in those areas that recently have begun to flood but don't have a history of doing so.

"When you have 6 or 8 inches of rain, you cannot always use the excuse of excessive rain amounts," Irvine said. "What people want is honesty and transparency, not silence and willful blindness."

Irvine said the regulations imposed on new development need to be enhanced in light of more – and more intense – storm systems. Likewise the mandatory review of construction plans should be much more rigorous, he said. He said his own reviews of such plans have revealed shoddy data, dubious hydrological modeling, and countless simple and "horrific" mistakes that somehow never were corrected.

What Irvine argues for most vigorously is a change in attitude. He believes local residents are willing to pass bond projects and endorse stricter controls if the payoff is a significantly more robust system of flood control.

"Why is it unreasonable to spend $10 billion on a flood control project when one flood alone causes $5 billion in damage?" he said.

Ever fearful

In Stable Gate, homeowners are confused and ticked off. They sense that something has changed with respect to local drainage patterns, but unless they hire an engineering firm to analyze their problems, they are not likely to get answers beyond what they already know: Houston is flat; it can rain a lot; the watersheds cannot handle all the runoff.

Rennar and his wife, like most of his neighbors, are dealing with contractors on a daily basis as they try to get about $50,000 worth of repairs completed. If they were confident it was a unique event, unlikely to be rivaled anytime soon, the unpleasantness would be easier to tolerate. But every time the skies get cloudy and it looks like rain, they wonder whether the repairs will have been made in vain.

Tucked away in the trees, close to trails that run along a creek that they believed rarely flooded in a serious way, Stable Gate residents had exactly what they wanted – reasonable solitude in an urban environment and a small community that actually felt like one, where neighbors were friendly and looked after each other.

Hearn, who had left her longtime Baytown home in search of security, said Stable Gate "just looked like home" as soon as she passed through the front gates. Rennar seconds her opinion, saying he thought it was a "perfect place" that offered an antidote to road congestion and urban hurly-burly.

"We thought we had discovered a little paradise," he said. "I guess not."

Impact Of Flood Still Being Assessed After 'Five Lake Granbury's' Of Rain, Deemed 'Extremely Dangerous' By BRA

By Kelsey Poynor

Glen Rose (TX) Reporter, June 9, 2016

GLEN ROSE- Approximately 205 billion gallons is enough to fill Lake Granbury five times.

It is also the estimated amount of rainfall that fell during last week's historic flooding around Somervell, Hood and Erath counties, according to officials with the Brazos River Authority.

A spokesperson for the BRA estimated that enough rain fell to fill the lake – which according to Waterdatafortexas.org has a maximum capacity of 125,756 acre-feet – just north of Somervell County five times. A simple conversion with the help of a conversion table brings the estimated total rainfall to a mind-boggling 204,888,860,269.06003 gallons of water.

Because of last week's historic flooding, homes, businesses and families are now facing a time of trouble – both big and small.

Outside of Gov. Greg Abbott's declaration of 46 counties to be in a state of emergency – up 15 from the original June 1 declaration and now includes Somervell County, representatives of the BRA, Somervell County Fire Marshal and Emergency Management Coordination Dwayne Griffin, and county residents recently gave their re-cap of the week-long rain.

US Senator Ted Cruz also endorsed Abbott's efforts earlier this week during a speech while on the US Senate floor.

Brazos River Authority, 'It is extremely dangerous'

Judy Pierce from the Brazos River Authority reported the De Cordova Bend Dam of Lake Granbury would still need to release water at a higher-than-usual rate over the next several days, but the release during last week's rain was jaw dropping

"The most the dam let out was at one point was 69,900 CFS," Pierce said. "It stayed there for about a two hour time period and then it came back down pretty quickly. It was the fourth largest amount of water we've released at one time."

"From May 27 to June 7 the total volume of water released was about 650,000 acre-feet," Pierce noted. "Releases are expected to continue the next couple of days where we currently are at. For every day we're releasing about 40,000 acre-feet a day."

According to Price, the gauge located in the Somervell County portion of the Brazos River crested on the morning of Friday, June 3, and it was then that the river entered into the category of a major flood stage.

"After cresting, it immediately moved down. On average, the gauge is 7 feet deep and at the peak of the flooding on June 3 the depth of the water was 35.3 feet," Price explained. "It was about 28 feet deeper than it normally would be."

On June 4 around noon the gauge hit it's lowest part of the action stage and on June 7 at 1PM it measured in at 20.5 feet, which is below the action stage, according to the BRA.

"The action stage is a period designated at what appears to be approximately 25 feet," Pierce added. "What it is made for is to give people time going into a flood situation to have time to move cattle and equipment that might be in the floodplain zone around the river. It is out of that stage now and is predicted to stay at this stage now through the weekend."

Pierce advises for those who may want to brave the cool waters this weekend to stay off the Brazos, and other rivers and lakes, until the water has time to return to normal levels.

"It is going at about 23,000 [cubic feet per second] right now and I know that most tube rental places in Glen Rose cut [rentals] off at about 3,000 CFS," Pierce said. "It is extremely dangerous."

Griffin updates conditions of Somervell County

Somervell County Fire Marshal and Emergency Management Coordinator Dwayne Griffin reported that there were indeed a few areas of the county that sustained major flood damage over the five-day period from June 3-7.

"County Road 1008 was damaged quite severely out on the 5000 block, it got scoured down to the road base," Griffin said. "County Road 1007 had a couple of areas that got tore up also. CR 413 had road damage that occurred down the sides of the road."

According to one county official, roughly 98% of all roads in Somervell County are paved. While this is normally a benefit a vast majority of the time, conditions such as those experienced last week can leave those roads in dire need of repair.

Not only were there roads damaged, but also there was also confirmed damage to a bridge at Squaw Valley Golf Course and the river walk along the Paluxy River a few blocks off the downtown Glen Rose square.

"The golf course lost a bridge and the city had a major loss with the river walk," Griffin said. "It got tore up a lot. As far as I know, those are the only ones that have sustained major damage. However, there are other roads here and there that are beginning to show signs of water damage."

According to Griffin, once a full report is created for the flood damage it will be sent to the Federal Emergency Management Agency (FEMA). Since the county was under a state of emergency, FEMA should cover up-to-75 percent of the total damage costs, Griffin noted.

"Right now we're just discussing what we're going to do with the golf course bridge, Griffin said. "The bridge itself is used for utility for moving their equipment back and forth. If we get some FEMA money, we may be moving it to higher ground to where it won't get washed out again."

A full report of personal property loss was not available as of press time.

20 years and it's 'never been this high'

Roughly three miles from the historic Glen Rose downtown square, Cedars on the Brazos Bed and Breakfast is located quite a bit closer to the bank of the Brazos River than it was last week.

The owner, Janice Lewis, who also lives in the bed and breakfast with her husband, has yet to see anything like this flood while residing on the property.

"We bought the land in 1997, it's been almost 20 years, and I have never seen the water as high as it is right now," Lewis said

The bed and breakfast opened 16 years ago. The cabin the bed and breakfast is in has no damage, but an area on the bank of the river that many baptisms and other events have taken place is now underwater.

According to Lewis some of the picnic tables, benches and chairs were washed away and whatever items were left are now submerged in water.

"Most of the old-timers here in Glen Rose know this property 'the garden spot,'" Lewis said. "It's a lower area that we call 'the meadow.' It has never had water in it and now it is flooding."

Sen. Cruz backs flood recovery efforts

The reach of pleas for assistance has gone beyond those immediately affected. U.S. Sen. Ted Cruz delivered a speech Tuesday, June 7 on the Senate floor, where he pledged to work closely with state and local government officials to ensure a speedy recovery, backed Gov. Greg Abbott's for federal assistance to help those affected, and asked for condolences to be sent to the 16 families who lost a loved one – which included nine soldiers stationed at Fort Hood – during the historic flooding.

"Mr. President, my home state of Texas is strong and resilient. Texans aren't people who tire easily, and we certainly don't give up when the going gets tough," Cruz said. "But that doesn't mean that the State of Texas hasn't faced its share of adversity. Over the last few weeks, the resolve of our great state has been tested with historic flooding that has taken at least 16 lives across Texas.

"[...] Heidi and I right now, along with millions of Americans, are lifting up in prayer those Texans who have lost their lives, who have lost their homes, the families that are suffering due to this flooding," Cruz added.

"And we're also lifting up the first responders who so bravely risk everything to keep us safe. In particular, I want to take a moment to praise the Red Cross," the former GOP presidential candidate continued. "I had the privilege yesterday of speaking with the CEO of the Red Cross to thank them directly for their efforts on the ground – helping people who are suffering, helping people who have lost their home, who are struggling. And you know, she and I shared what we've seen in tragedy after tragedy after tragedy, which is in the face of disaster, in the face of adversity, Texans and Americans come together.

"[...] As the water continues to recede and the wreckage is being cleared, my office will continue to work very closely with local and state government officials, along with the entire Texas delegation, to help ensure a smooth recovery process, including offering, as I already have, my full support and assistance when Gov. Abbott requests federal aid for those afflicted by this disaster," Cruz concluded. "And while Texas continues to rebound from these torrential floods, our nation is also flooded with circumstances that require the very same strength and resolve that we face in the face of tragedy."

Cruz took time during his speech to individually thank and pay remembrance to the nine Fort Hood soldiers who tragically lost their lives when their truck overturned into a flooded creek. Those nine included Spc. Yingming Sun, Staff Sgt. Miguel Angel Colonvazquez, Spc. Christine Faith Armstrong, Pfc. Brandon Austin Banner, Pfc. Zachery Nathaniel Fuller, Pvt. Isaac Lee Deleon, Pvt. Eddy Raelaurin Gates, Pvt. Tysheena Lynette James, and Cadet Mitchell Alexander Winey.

Fort Bend Officials Implementing Long-term Recovery Efforts

Houston Community Newspapers, June 11, 2016

Fort Bend County officials are planning long-term flood recovery efforts and have begun coordinating with the county departments and voluntary agencies involved In recovery. Personnel are currently conducting flood damage assessments and evaluating closed roads as water levels recede. Numerous previously closed roadways have reopened.

Contractors will be picking up debris starting Monday, June 13 through Friday, June 24.

Residents are encouraged to separate debris by kind and pile as close to the road as possible without impeding traffic or blocking fire hydrants and meters.

Please do not relocate deceased animals to roadways, they will not be retrieved. Fort Bend County has a strategic plan in place to address environmental hazards during the recovery process. For further information about the handling of debris, including deceased animals, please call the Emergency Operations Center at 281-342-6185.

Household trash service has resumed in most areas however residents are encouraged to contact their provider to ensure service has resumed.

Residents may apply for FEMA assistance at www.disasterassistance.gov or by calling 1-800-621-3362. Residents requiring immediate assistance with disaster clean-up should call the Clean Up Assistance hotline at 1-800-451-1954. Residents unaffected by the floods and wishing to volunteer may visit the Brazos River Flood Multi-Agency Recovery Center located at BF Terry High School in Rosenberg.

Donation receiving and distribution sites have been established throughout the county and monetary donations are currently being managed by the American Red Cross. Residents and businesses wishing to donate manpower, money, or materials should reference the "How can I help?" page on the Fort Bend County Office of Emergency Management's website or by calling the Emergency Operations Center at 281-342-6185.

For more information about what to do next, how to get help, or how to offer help, plus the most accurate and up to date flood and recovery information, please visit fbcoem.org website or call 281-342-6185.

The Next Step: Recovery

Fort Bend (TX) Herald, June 10, 2016

The Memorial Day flood devastated West Fort Bend County.

Water engulfed homes, parks, roadways, and farm land.

It destroyed property, killed animals and forever changed lives.

The river has finally fallen below flood stage and the cities of Richmond and Rosenberg are attempting to get back to normal.

The community is doing its part. The American Red Cross is set up at B.F. Terry High School. Numerous groups have sprung up to help those in need and those helping with recovery: Fort Bend Strong, Rosenberg-Richmond Helping and Hands, Inc.

The next step for residents who were affected by the flood is debris pickup and Federal Emergency Management Agency assistant pre-registration.

The Fort Bend County Office of Emergency Management has outlined the guidelines for collecting flood debris into specific categories: normal household waste, vegetative, construction/demolition, appliances, electronics, and hazardous waste debris.

Construction and demolition materials include building materials, carpet, drywall, furniture, lumber, mattresses and plumbing.

Household hazardous waste debris includes cleaning supplies, batteries, lawn chemicals, oils, oil-based paints and stains and pesticides.

Make sure to put debris as close to the curb as possible without blocking the sidewalk or lean on trees, poles or other structures including fire hydrants and meters.

OEM announced that debris pick-up will begin on Monday and run through June 24. Normal household trash pickup has already started for most areas.

FEMA per-registration will help speed the process for federal assistance when the federal government stops dragging its feet on the disaster declaration.

Residents can pre-register at with FEMA at www.disasterassistance.gov or call 800-621-3362. Fill out the residential report form at www.fbcoem.org.

FEMA was quick to step in for the Tax Day Floods in April, but for some reason has taken over two weeks to help with the even more destructive Memorial Day flooding.

But there's no need to sulk about it. Instead, take the next step to getting back to normal.

Texans Have Only A Few Days Left To Register For Disaster Assistance For April Storms

Eastex (TX) Advocate, June 10, 2016

Texans who suffered damage or loss from the April storms and flooding in 12 counties have only until Friday, June 24, to register for FEMA disaster assistance.

Assistance can include money for rental assistance, essential home repairs, personal property loss and other serious disaster-related needs not covered by insurance.

Texans with disaster-related damage or loss from the April 17-24 storms may be eligible for assistance if they live or work in the following 12 counties: Austin, Colorado, Fayette, Fort Bend, Grimes, Harris, Liberty, Montgomery, Parker, San Jacinto, Waller and Wharton.

Texans can register the following ways:

- online at DisasterAssistance.gov
- by phone at 800-621-3362 (FEMA). Persons who are deaf, hard of hearing or have a speech disability and use a TTY may call 800-462-7585. Applicants who use 711 or Video Relay Service may also call 800-621-3362. The toll-free numbers are open from 7 a.m. to 10 p.m., seven days a week. Multilingual operators are available.

FEMA grants do not have to be repaid. FEMA assistance is nontaxable and will not affect eligibility for Social Security, Medicaid or other federal benefits.

Survivors should register even if they have insurance. FEMA cannot duplicate insurance payments, but underinsured applicants may receive help after their claims have been settled.

Tax Resources For Disaster Victims; Special Webinar June 30

Gilmer (TX) Mirror, June 10, 2016

DALLAS – The tax law may help you recover financially from a disaster, especially if you are located in a presidentially declared major disaster area. Depending on the circumstances, the IRS may give you additional time to file your return and pay taxes. Also, individuals and businesses in a presidentially declared disaster area can get a faster refund by claiming losses related to the disaster on the previous year's tax return, usually by filing an amended return.

A federally declared disaster is a disaster that took place in an area declared by the President to be eligible for federal assistance under the Robert T. Stafford Disaster Relief and Emergency Assistance Act. A list of areas warranting public or individual assistance (or both) is available at the Federal Emergency Management Agency (FEMA) web site at www.fema.gov.

"Reconstructing records after they were lost or destroyed in a disaster may be vital for tax purposes, getting federal assistance or insurance reimbursement," said Clay Sanford, an IRS spokesman in Dallas. "You may need to reconstruct your records to prove you have a casualty loss and the amount of the loss."

You can file IRS Form 4506, "Request for Copy of Tax Return," to request copies of the previous four years of income tax returns. If you need additional federal tax forms or publications, there are several ways you can obtain them. You can download forms fromwww.irs.gov. You can also order forms or publications at no cost by calling 1-800-829-3676. If you need additional tax assistance, please call 1-800-829-1040. Assistors are available Monday through Friday to provide explanations on filing and payment relief that may have been provided by IRS due to a disaster. You may call the Disaster Assistance Hotline at 1-866-562-5227, between 7:00 am and 7:00 p.m., local time. IRS personnel may be able to provide face-to-face assistance on disaster related issues at your local IRS office. Access http://www.irs.gov/localcontacts/index.html to find a Taxpayer Assistance Center in your area. For more information, see IRS Publication 2194, "Disaster Resource Guide for Individuals and Businesses," available on IRS.gov.

The IRS will host a webinar on June 30 at 1:00 p. m. (Central Time) for those dealing with disasters such as floods, tornadoes, hurricanes and more. This webinar will give information on what to do if you are involved in a disaster and the tax implications. To register visit the Internal Revenue Service Webinar Registration. If you are unable to connect by computer, send an email to sl.southwest@irs.gov. Enter "Disaster Webinar" in the subject line. Information on how to attend will be forwarded to you.

Several Residents Still In Need From March Flooding

By Robert Magobet

Delta (MS) Democrat Times, June 12, 2016

GREENVILLE — Although most folks' lives are back to normal after March's high water event, there are still several residents who are trying to recover from the flooding.

The slow, low-pressure weather system that dumped more than a foot of rain in some areas from March 10-12 destroyed 14 homes, caused major damage to 241 structures and minor damage to another 245 structures, affected 48 and left 13 inaccessible, according to reports conducted by the Federal Emergency Management Agency, Mississippi Emergency Management Agency, Small Business Administration and local officials.

Monday Is Deadline To Seek FEMA Help

By John Walton

KTAL-TV Shreveport (LA), June 12, 2016

Monday is the deadline for Louisiana residents impacted by the March flooding to register for disaster relief.

To register for FEMA assistance, call the helpline at 800-621-3362. Lines are open 7 a.m. to 10 p.m.

Residents are asked to have the following information ready:

Your Social Security number
Your current and pre-disaster address
A telephone number where you can be contacted
Insurance information
Total household annual income
A description of your losses caused by the disaster.

Or you can register online at www.DisasterAssistance.gov or www.fema.gov/disaster/4263.

Registering by phone or online are the only ways you can register for disaster relief.

All the Disaster Recovery Centers in Louisiana have closed.

Deadline Is Monday To Seek FEMA Flood Relief

Monroe (LA) News Star, June 12, 2016

Louisiana residents who suffered losses to the flooding that ravaged the region face a Monday deadline to register for disaster relief.

Maria Padron, media relations specialist with the Federal Emergency Management Agency, is urging those who think they might qualify for help from FEMA for losses suffered from March 8 to April 8 to register before the deadline expires Monday.

So far, 39,740 people throughout Louisiana have filed for FEMA assistance, and FEMA has approved the allocation of $175,588,240, Padron said.

Of those, about 25 percent were applicants from Ouachita Parish. In the parish, 10,484 have registered for aid, and FEMA so far has approved $51,888,367.

To register for FEMA assistance, call the helpline at 800-621-3362 or (TTY) 800-462-7585. Lines are open 7 a.m. to 10 p.m.The phone conversation will take about 20 minutes if you have the following information available:

Your Social Security number
Your current and pre-disaster address
A telephone number where you can be contacted
Insurance information
Total household annual income
A description of your losses caused by the disaster.

Or you can register online at www.DisasterAssistance.gov or www.fema.gov/disaster/4263.

All FEMA disaster recovery centers in the state closed as of Friday.

Those with losses have until Dec. 13 to apply for a low-interest disaster SBA loan for economic injury.

Call SBA's Disaster Assistance Customer Service Center at 800-659-2955, email disastercustomerservice@sba.gov, or visit SBA's website at SBA.gov/disaster. If you are deaf or hard-of-hearing you can call 800-877-8339.

Louisiana Disaster Survivors Are Reminded To Register For FEMA By June 13 Deadline

KALB-TV Alexandria (LA), June 10, 2016

BATON ROUGE, La.(FEMA) – The people of Louisiana have had a rough time. Almost everyone knows someone who is still getting their life back on track after the March 8 through April 8 floods. You may be one yourself.

You owe it to yourself to see if you qualify for help from the Federal Emergency Management Agency before the deadline to register expires Monday, June 13.

Don't miss out. If you live in one of the 36 designated parishes and had disaster related damage or loss, here's how you can find out what may be available. Be sure to do it by June 13:

- Call the FEMA helpline at 800-621-3362 or (TTY) 800-462-7585. Lines are open 7 a.m. to 10 p.m. seven days a week. The phone conversation will take about 20 minutes if you have the following information available:
  - Your Social Security number
  - Your current and pre-disaster address
  - A telephone number where you can be contacted
  - Insurance information
  - Total household annual income
  - A description of your losses caused by the disaster
- Cuando llame al 800-621-3362 marque el 1 y escuche las instrucciones en español. Favor llamar antes del lunes 13 de junio.
- If you use 711/VRS call 800-621-3362.
- Register online at www.DisasterAssistance.gov or www.fema.gov/disaster/4263. You have until June 13 to do so.
- All FEMA disaster recovery centers in the state closed as of Friday, June 10.

If you have questions about how you may qualify for a low-interest disaster SBA loan for property damage, make sure you apply before Monday, June 13. You have until Dec. 13, 2016 to apply for a low-interest disaster SBA loan for economic injury.

- Call SBA's Disaster Assistance Customer Service Center at 800-659-2955, email disastercustomerservice@sba.gov, or visit SBA's website at SBA.gov/disaster. If you are deaf or hard-of-hearing you can call 800-877-8339.

Group To Help With Flood Assessments

By Monte Miller

Missourian, June 11, 2016

Months after devastating winter floods hit Franklin County, the cleanup and recovery process is still in its infancy and may take years to be fully complete.

Next week, the faith-based group World Renew will be in the Pacific area helping residents with flood assessments in an effort to fill voids that haven't already been addressed by other agencies.

Franklin County EMA Deputy Director Stephanie Norton, who also serves on the Long Term Recovery Committee, said the group, which specializes in disaster recovery, will be in Franklin, Jefferson and St. Louis counties June 13 to June 24.

"They will focus mainly on Pacific and perform site assessments with flood victims to see what needs they may still have," Norton said. "Not every home will be assessed due to time constraints. Based on information from FEMA, American Red Cross, Salvation Army, and the local long-term recovery committees, they will visit as many sites as possible. Their assessments will help to prioritize disaster case management."

Norton added the assessments will focus on primary private residences only.

Rental properties and businesses will not be included.

The work done by World Renew volunteers will help residents fill gaps and acquire household items that were not covered by FEMA, private insurance, or other charitable organizations.

"We are all working together on this," Norton said. "There are several charitable groups that have different items to give out.

These site assessments will help us know which group to contact to help fill needs."

Since some residents are not living in their flood-affected homes, there will be a walk-in center available at the First Baptist Church of Gray Summit, 2705 Highway 100, Gray Summit.

Hours for the walk-in center are:

- Thursday, June 16, 10 a.m. to 8 p.m.
- Friday, June 17, 10 a.m. to 5 p.m.
- Saturday, June 18, 10 a.m. to 2 p.m.

Norton added if World Renew stops at a home and no one is there, a note with the walk-in center information will be left at the residence.

They also will include a Red Cross phone number residents can call to schedule a site assessment, or talk with a case specialist. That number is 314-516-2754.

Although it already has been half a year, and the flooding has moved out of the "emergency" phase, the recovery process can drag on for months and years before cases are fully resolved.

"The case management portion doesn't move very quickly," Norton said. "Right now, we are only about two weeks into it. This process could take two to three years for Franklin County residents."

Norton added there are FEMA disaster cases still pending from Hurricane Katrina that have yet to be resolved more than a decade later.

According to their website, this is the opportune time for World Renew to come into the area and assist residents with their claims, because at this point in the process they may have received larger items but are still in need of things like backpacks for their children that weren't a priority right away.

According to FEMA, there were 391 homes affected by the winter flooding in Franklin County and 374 have filed claims with the federal agency.

Group To Assist Residents With Flood Assessments

By Monte Miller

Missourian, June 11, 2016

Months after devastating winter floods hit Franklin County, the cleanup and recovery process is still in its infancy and may take years to be fully complete.

Next week, the faith-based group World Renew will be in the Pacific area helping residents with flood assessments in an effort to fill voids that haven't already been addressed by other agencies.

Franklin County EMA Deputy Director Stephanie Norton, who also serves on the Long Term Recovery Committee, said the group, which specializes in disaster recovery, will be in Franklin, Jefferson and St. Louis counties June 13 to June 24.

According to their website, this is the opportune time for World Renew to come into the area and assist residents with their claims, because at this point in the process they may have received larger items but are still in need of things like backpacks for their children that weren't a priority right away.

According to FEMA, there were 391 homes affected by the winter flooding in Franklin County and 374 have filed claims with the federal agency.

Eight Years After The Flood

Cedar Rapids (IA) Gazette, June 12, 2016

In 2008 the Iowa and Cedar Rivers reached water levels Iowans had never seen before or since.

Across the state, flooding forced 85 of Iowa's 99 counties to be declared as federal disaster areas and total statewide damage ultimately was estimated at $10 billion, according to the National Weather Service.

Three communities among the hardest hit by flooding were Cedar Rapids and the combined metropolitan area of Iowa City and Coralville, according to NWS.

Some areas within these communities battled 500-year flooding — that is, flood levels were so high, they have a .2 percent chance of being equaled or exceeded in a given year or should statistically only occur once every 500 years, according to Federal Emergency Management Agency.

Other areas experienced 100-year flooding, meaning they have a 1 percent chance of reaching or exceeding those heights in a given year.

In the months after the flood, discussions began in all three cities on securing riverfronts to ensure such an event never repeat itself.

Now eight years later, Iowa City is embarking on a massive flood mitigation effort in the Gateway Project, Cedar Rapids officials are about to take on the first piece of a $625 million flood protection system and, in Coralville, the final piece of the city's flood mitigation is nearly underway.

Iowa City

Just as the city of Iowa City embarks on one of its largest flood mitigation projects, the University of Iowa is crossing the finish line with its 2008 recovery.

The Iowa River crested at 31.53 feet on June 15, 2008, with at-times 500-year flood stage levels. Since then, the University of Iowa and the city have been working to rebuild, repair and protect themselves from future flooding.

Iowa City has spent almost $138 million in flood mitigation projects. Ron Knoche, Iowa City's director of public works, said flood recovery and mitigation for Iowa City took the form of two major projects — the wastewater plant relocation and the Gateway Project.

The larger project, relocation of the city's north wastewater plant and consolidation with the south plant, cost about $63.4 million and is complete.

"I would say we're further along than half today, from a project standpoint. From number of projects, we're 90 percent complete," Knoche said of flood-recovery overall. "From a dollar-amount standpoint, we're probably closer to about 75 percent complete."

The city began construction on May 31 on its other major mitigation project, the Gateway Project — an effort to raise Dubuque Street and the Park Road bridge up to a height that would protect against 100-year flood levels.

The city initially planned to raise the roads to protect it against 500-year floods but, Knoche said, the city changed the plan to only protect against 100-year levels after residents expressed concern over the potential height of Dubuque Street.

Construction on the $59.5 million Gateway Project is not scheduled to be complete until 2018.

Knocke said the city still hopes to work on more small mitigation projects, such as flood-proofing City Park, when money becomes available.

The UI saw $230 million in flood damage and cleanup costs. One-sixth of the UI's campus closed while 20 of its major buildings — including Mayflower Residence Hall and the 300,000-square-foot Hancher-Voxman-Clapp music and art building — sustained damage.

The university finished all its flood protection and repair projects. This summer the school is scheduled to complete the last of the replacement projects supported by FEMA, including Hancher Auditorium, a new art studio building and the Voxman Music Building.

More Flood Info: Iowa City

Day river crested: June 15, 2008

High water mark: 31.53 feet

Total cost of damage: $6.5 million (city property) and $230 million (university property)

Total cost of mitigation: $137.8 million (city) and $150 million (university estimate)

Cedar Rapids

Eight years after the 2008 flood, Cedar Rapids is preparing to install the first pieces of a $625 million flood protection system with levees, walls, gates and pump stations to protect property along the east and west banks from the Cedar River.

Two separate projects are slated to begin later this year at roughly the same time the contract process for two 2017 projects gets rolling.

"The reason you will see construction now is because the money is starting to come in," said Rob Davis, Cedar Rapids flood control program manager. "We didn't have a way to pay for it before."

Funding hasn't been fully identified for the entire 7.5-mile flood system, which includes 81 separate projects and may take 17 years to complete — by 2033 — Davis said. In light of funding uncertainty, the city shifted gears from a north-to-south construction plan to taking on what the city can tackle as it can pay for it, while addressing the most vulnerable areas first, he said.

That's not to say Cedar Rapids hasn't protected itself. The city has spent $79 million raising and repairing 45 wells so they don't get inundated with water, which consumed all but one in 2008, making critical levee repairs, designs, moving key facilities out of harm's way, and fortifying the wastewater pollution plant, Davis said. Another $52 million went for buyouts of flooded properties.

Projects this fall will be centered on the NewBo District and Czech Village.

Cedar Rapids signed a contract this spring for the first phase of the Parking Lot 44 pump station at 10th Avenue SE. It is one of four pump stations planned for the east side of the river and 11 total in the flood protection system.

The system with a brick housing, three pumps — one for redundancy — and a backup generator eventually could pump 36,000 gallons of water per minute. The initial $5.9 million project, which is scheduled to begin in October and end by early 2018, would erect the brick housing, install one pump and a backup generator.

Next up, the city plans to hire a contractor this summer to build a half-mile levee 100 feet wide at the base and standing 13-feet tall — in place of the existing six-foot-tall berm, Davis said. The levee, which would have a trail built on top, would separate the old Sinclair meatpacking plant site and the river, and run from the African-American Museum of Iowa to near the Alliant Energy substation. Tree clearing and building removal has already occurred, but additional site preparation is needed, Davis said.

The $11 million project due for construction from November 2016 to November 2017 will protect NewBo from a 40-year flood, Davis said. In a 40-year flood, the river reaches 21 feet, which still would be 10 feet below the record 2008 flood level, Davis said.

This fall, city officials will lay the groundwork for two additional projects.

The city will seek a company for a $4.1 million project to relocate sanitation, stormwater and water main pipes on the west side of the river in Czech Village. Utilities under a levee could compromise the system, Davis said.

A $5 million second phase of the Sinclair site system, which build about half of an eventual 10-acre stormwater detention basin and a second pump station, also is in queue for the fall.

Both projects are scheduled for construction from spring to fall 2017, according to city documents.

"We are starting on the downstream ones first because those projects will offer some interim protection for the east and west side of the river," Davis said.

As part of a five-year plan, a Quaker Oats flood wall and Union Pacific Railroad floodgate, and a Time Check utility relocation project are slated for 2018. Levees for Czech Village and Time Check are scheduled to begin in 2019.

More Flood Info: Cedar Rapids

Day river crested: June 12, 2008

High water mark: 31.18 feet (gauging station near Eighth Avenue Bridge)

Total cost of damage: $2.4 billion

Total cost of mitigation: $131 million spent so far including $52.6 million for buyouts. The first pieces of a $625 million (adjusted for inflation) flood protection system is going up this year

Sources: City of Cedar Rapids, except damage cost comes from U.S. Army Corps of Engineers

Coralville

As with so many other communities along the Iowa River, Coralville was slammed by record level flooding in 2008.

On June 15 of that year, the Iowa River in nearby Iowa City crested at a record 31.53 feet. Major flood stage is 25 feet.

Ellen Habel, Coralville's assistant city administrator, recalled the frustration felt by community members after efforts to sandbag went in vain.

"It was a strange time, we became so focused on trying to protect everything we could," Habel said.

The flood caused $21 million in damage to more than 200 businesses and another $4.5 million to 400 households. City infrastructure took on another $7 million in damage.

As floodwater receded, Coralville officials decided to not let such an event happen again.

"We decided, 'We're going to build back better and we're going to put in permanent flood protection,'" Habel said.

Since then, Coralville has embarked on close to $63 million in flood mitigation work, excluding flood buyout or FEMA public-assistance dollars.

Work has involved a number of efforts, including reconstructing and raising First Avenue Bridge over Clear Creek, reconstructing and elevating Fifth Street across Biscuit Creek and constructing flood protection along the Iowa River from Rocky Shore Drive to the north end of the Iowa River Power Company Restaurant. A number of earthen berms and flood stations also have been built.

Later this summer, Coralville officials plan to begin the final piece — an $8.6 million flood wall along the south side of Clear Creek from First Avenue to Highway 6 — which will close the city's eight-year effort.

When the Clear Creek wall is finished, Coralville will be protected to one foot above a 100-year flood level. With the ability to add temporary walls in some places, the city easily will reach one foot above the 500-year level.

Habel said the city's aggressive approach to flood protection has resonated with businesses and residents, who have returned to and reinvested in the area that sat underwater eight years ago.

"It's something that really impacts the community as a whole, just our economy, our continued vibrancy," she said. "You had to give people reassurance that they could reinvest or could go into those properties and not flood."

TORNADOES

Woman Sentenced For Filing False Disaster Claim

By Emily Caussulo

WCBI-TV Columbus (MS), June 10, 2016

WINSTON COUNTY, Miss. (WCBI) — A year and a day is how much time a Winston County woman will spend in federal prison for filing a false disaster claim.

Judge Sharon Aycock handed that sentence to 35-year-old Kourtnee Triplett, Friday.

Triplett admitted she lied when she told FEMA her apartment was damaged in the April 2014 tornado.

A FEMA investigation discovered the Beal Avenue home was not Triplett's primary residence.

Triplett must also pay back more than $10,000, and serve five years probation.

Relief Crews Working To Help Baker After Tornado

KRTV-TV Great Falls (MT), June 12, 2016

Relief agencies and personnel are headed to Baker after a tornado tore through the town in southeastern Montana on Saturday evening.

The tornado hit at about 7 p.m. in the small town of less than 2,000 people.

There were no fatalities, and no life-threatening injuries. One man was sent to a hospital in Billings for a broken hip; other injuries were relatively minor, such as cuts and bruises.

The National Weather Service in Billings still has a team assessing the full extent of the damage, but what they have found so far indicates that an EF-3 tornado lasted for about 10 minutes. An EF-3 tornado translates to wind speeds of between 135 and 165 miles per hour.

The tornado started on Baker Lake and moved into a nearby subdivision where six homes were destroyed. In addition, at least 30 homes were severely damaged.

Officials estimate the storm has caused more than one million dollars in damages, and expect that figure to rise.

Responding agencies include the American Red Cross and the Federal Emergency Management Agency.

"Whenever there is a disaster in Montana, we have about 400 volunteers across the state, they will get up in the middle of the night to make sure that anybody who has been impacted by the disaster does not have to face it alone," said Anna Fernandez-Gevaert of the Montana Red Cross.

Four volunteers with the American Red Cross are currently in Baker to help provide shelter for those without family or friends in the area.

"They housed two families, arranged for hotel rooms for two families, and then generally they met with every single family to asses their needs, and they will be checking in again with these families as they recover," said Fernandez-Gevaert.

A shelter is not set up right now, however if there are more people that need assistance and lodging, the Red Cross will be setting up a shelter in one of the schools or churches.

"Anyone who needs the Red Cross can call 1-800-272-6668, that's anywhere in the state, they should ask for the duty officer on call who is a volunteer, and that volunteer is going to make sure that they alert the local team that there are needs in the community and they will deploy or they will come to somebody's house, they will do this in the middle of the night," said Fernandez-Gevaert

Financial donations can be made to the Red Cross to provide assistance for those in Baker and also future disasters in Montana.

Montana typically sees several tornadoes every year at this time, particularly in the eastern part of the state.

Unlike those in "Tornado Alley" in the central part of the country, most Montana tornadoes are relatively small and usually touch down in sparsely-populated areas – but not always.

Last year, a small tornado hit near Sidney in Richland County in eastern Montana, injuring one person and causing damage; click here for details.

In June 2010, a tornado hit Billings, causing significant damage to the MetraPark facility; click here to see video.

Just several weeks later, two people were killed when a tornado struck a family ranch near Reserve in northeastern Montana.

WILDFIRES

UPDATE: Evacuation Orders Lifted In Tenderfoot Fire; Fire Now 30 Percent Contained

By Jennifer Thomas

KPHO-TV Phoenix, June 11, 2016

YARNELL, AZ (KPHO/KTVK) –

All evacuation orders have been lifted in the Tenderfoot Fire burning near Yarnell.

The fire has burned more than 4,000 acres, but is now 30 percent contained.

On Saturday at 5 p.m., the Yavapai County Sheriff's Office announced that home and business access has now opened on the east side of Highway 89. YCSO also says there are no further evacuation restrictions or road closures in Yarnell.

The Red Cross shelter at the Yavapai college campus has now been closed.

More than 350 fire personnel are battling the wildfire, which started Wednesday afternoon.

Fire officials said the fire was human-caused and is under investigation. As of Saturday morning, the fire had scorched 4,040 acres.

Authorities remain confident the fire will not grow out of control and containment could still happen by sometime early next week.

"I am very happy with the progress crews are making in the field," said Alan Sinclair, incident commander. "Weather conditions and good planning allowed firefighters to put together a good strategy to fight this fire while ensuring the safety of our crews."

At 4 p.m. Friday, authorities reopened a 7-mile stretch of Highway 89 that had been shut down since the blaze began.

APS restored power to the town of Yarnell and some residents who had to evacuate were allowed to go back home.

About 250 Yarnell residents were evacuated Wednesday night and 30 residents of nearby Peeples Valley were evacuated Thursday afternoon after winds fanned the flames.

Federal authorities have authorized the use of federal funds to assist the Arizona Department of Forestry fighting the wildfire.

The U.S. Department of Homeland Security's Federal Emergency Management Agency will provide funding for up to 75 percent of eligible firefighting costs.

No homes have been damaged or destroyed but three "outbuildings" were damaged, according to the Arizona Bureau of Land Management.

[Photos: Tenderfoot Fire near Yarnell]

The Arizona State Forestry said the Tenderfoot Fire started near the south side of Yarnell. The wildfire is burning on the east side of the town. The 2013 Yarnell Hill Fire burned on the west side of Yarnell.

Officials said brush clearing and other preventative work done in the community since the 2013 fire helped firefighters keep the latest fire out of the town by connecting areas already cleared of brush with new fire lines and burnout areas.

Air crews dropped water and retardant to slow fire growth to the northeast.

Fire crews from multiple agencies are battling the fire, including those from the U.S. Forest Service, Arizona Bureau of Land Management, the Yarnell Fire Department and the Congress Fire Department.

Resources include nine hot shot crews, 22 engines, five helicopters, two air attack fixed-wing aircraft platforms, two bulldozers, and various overhead and support personnel.

No injuries have been reported.

Yavapai County has a phone bank open for residents to call, 928-442-5103.

The brush fire comes nearly three years since the Yarnell Hill Fire took the lives of the 19 Granite Mountain hotshots. The men died on June 30, 2013, trying to protect the community from fast-moving and erratic flames that trapped them with nowhere to go. It was the largest loss of life for U.S. firefighters since the Sept. 11 terrorist attacks. The fire burned 127 homes.

Tenderfoot Fire Near Yarnell Estimated At 3,300 Acres; Fire Was Human-caused

By David Baker, Jennifer Thomas

KPHO-TV Phoenix, June 8, 2016

YARNELL, AZ (KPHO/KTVK) –

The Tenderfoot Fire burning near Yarnell is now at 3,300 acres after aerial mapping, according to officials. The wildfire is still about 10 percent contained.

The fire had been reported to be about 5,000 acres Thursday night, but that number was adjusted around 6 a.m. Friday after the fire was mapped by infrared flight. It will be mapped again later in the morning and acreage could change at that time.

Fire officials now say the fire was human-caused and is under investigation.

Authorities remain confident the fire will not grow out of control and containment could still happen by sometime early next week.

"It's still a situation where we want to err on the side of safety for residents," said Mike Reichling, a state fire official. "We want to make sure that they are out of there just in case."

Around 250 firefighters are battling the fire that started at about 3:15 p.m. Wednesday. Two more hot shot crews and 12 engines were brought in on Thursday.

"We're one of the highest priorities in the United States right now," said Mike Reichling with the Arizona State Forestry.

At 4 p.m. Friday, authorities reopened a 7-mile stretch of Highway 89 that has been shut down since Wednesday when the blaze began.

Some residents who had to evacuate are being allowed to go back home.

About 250 Yarnell residents were evacuated Wednesday night and 30 residents of nearby Peeples Valley were evacuated Thursday afternoon after winds fanned the flames.

Fire officials say residents on the west side of Yarnell are being allowed to return home Friday night.

Homes on the east side of town closest to the fire remain under mandatory evacuation, but authorities say that order could be lifted sometime Saturday.

APS crews worked throughout the night and power has been restored to half of the community. Once the area is safe for personnel to enter, APS will work on the damaged poles.

Federal authorities have authorized the use of federal funds to assist the Arizona Department of Forestry fighting the wildfire.

The U.S. Department of Homeland Security's Federal Emergency Management Agency will provide funding for up to 75 percent of eligible firefighting costs.

Light winds of 5-10 mph Thursday were blowing flames away from Yarnell, said Dolores Garcia, a Bureau of Land Management spokeswoman.

The weather forecast calls for favorable conditions over the next several days, said RobRoy Williams, the incident commander. “We’re looking very good,” he said.

Helicopters were dipping in small ponds in the area Thursday, filling up with water and dumping it on the flames along the ridge tops.

No homes have been damaged or destroyed but three “outbuildings” were damaged, according to the Arizona Bureau of Land Management.

[Photos: Tenderfoot Fire near Yarnell]

The Red Cross opened an evacuation center at Yavapai College at 1100 E. Sheldon St. in Prescott for those who evacuated due to the Tenderfoot Fire.

“We’re prepared to shelter them for as long as it takes,” said Diana Rodriguez with the Red Cross.

“We’re praying our houses don’t go again,” said Yarnell resident Jane Sanderson, who was packing up and preparing to evacuate. “We just want everybody to be safe and have our homes safe and trust that our firefighters will be safe also.”

[Raw video: Aerial view of Tenderfoot Fire near Yarnell]

The Arizona State Forestry said the Tenderfoot Fire started near the south side of Yarnell. The wildfire is burning on the east side of the town. The 2013 Yarnell Hill Fire burned on the west side of Yarnell.

Officials said brush clearing and other preventative work done in the community since the 2013 fire helped firefighters keep the latest fire out of the town by connecting areas already cleared of brush with new fire lines and burnout areas.

Sanderson said she is always prepared for something like this to happen.

“We keep defensible space,” she said. “We always have the ability to pack and be ready to leave within a few minutes. We have medicines, we have important papers; we have clothing. That’s about all you can do.”

You can see a map of the area by clicking/tapping here.

Yarnell resident Shannon Smith, who lost her home in the 2013 fire, was one of the few on her street who decided not to follow mandatory evacuations this time around after seeing the fire was at least a mile away. Her car is packed just in case.

She said neighbors have been in constant contact and offered to help each other pack, ensure doors are locked and deliver food and water.

“That is just a beautiful aspect of tragedy, how close we as a community have grown and healed through what we all went through,” she said. “And this, I’m sure, is stirring it up for a lot of people.”

Fire crews from multiple agencies are battling the fire, including those from the U.S. Forest Service, Arizona Bureau of Land Management, the Yarnell Fire Department and the Congress Fire Department. Several aircraft, including a helicopter and a large jet, are dropping water on the flames.

Resources include:

1– Air Attack
2 – Helicopters
4 – Type 1 Hotshot Crews
2 – Type 2 Hand Crews
20 – Engines
4 – Water Tenders

There are no injuries reported.

Yavapai County has a phone bank open for residents to call, 928-442-5103.

The brush fire comes nearly three years since the Yarnell Hill Fire took the lives of the 19 Granite Mountain hotshots. The men died on June 30, 2013, trying to protect the community from fast-moving and erratic flames that trapped them with nowhere to go. It was the largest loss of life for U.S. firefighters since the Sept. 11 terrorist attacks. The fire burned 127 homes.

Tenderfoot Fire Updates

KNAU-FM Flagstaff (AZ), June 11, 2016

UPDATE, 6/11/16, 8 a.m.:

Yarnell residents east of State Route 89 are still under mandatory evacuation due to the Tenderfoot Fire. Residents of Peeples Valley on the west side of SR 89 are still under a precautionary alert. The highway has also been reopened by the Arizona Department of Transportation. The Tenderfoot Fire is at 4,040 acres and remains at 10 percent. The incident commander says crews are making progress fighting the blaze.

http://inciweb.nwcg.gov/incident/4774

UPDATE 6/10/16, 9 a.m.:

The evacuation orders for more than 250 people in Yarnell and the residents of 30 homes in Peeples Valley are still in effect Friday morning as a result of the Tenderfoot Fire. The blaze was mapped by a morning infrared overflight and its current size is 3,300 acres. It was downgraded from an earlier estimate of 5,000 acres. The fire is still at 10 percent containment.

A type 2 incident command team assumed control of the firefighting operations this morning. Officials say the Tenderfoot Fire was human-caused and the blaze remains under investigation. State Route 89 also remains closed between mileposts 275 and 282.

UPDATE, 6/9/16, 3 p.m.:

Officials have ordered the mandatory evacuation of 30 additional homes in Peeples Valley near Yarnell because of the Tenderfoot Fire. It affects the eastside of State Route 89. They say the order is for precautionary reasons and not because of any imminent threat. Officials also report increased activity on the north side of the fire.

In addition, the Federal Emergency Management Agency has authorized federal funds for fighting the Tenderfoot Fire. It'll assist the Arizona Department of Forestry and Fire Management and cover up to 75 percent of firefighting costs for field camps, equipment repair, materials, and supplies. FEMA officials determined the fire has the potential cause significant destruction and could represent a major disaster. The Tenderfoot Fire is currently burning on private and state land.

UPDATE, 2 p.m.:

The evacuation of 250-300 people in Yarnell remains in effect Thursday afternoon as a result of the Tenderfoot Fire. Officials say personnel on scene have made progress fighting the fire.

Fire officials surveyed the blaze from the air earlier today, and say it's now 1,237 acres in size and 10 percent contained. No homes have been burned, but three small structures were destroyed by the flames. In addition, State Route 89 remains closed between mileposts 275 and 282.

For the latest information, see. http://inciweb.nwcg.gov/incident/4774/

–

The Tenderfoot Fire prompted Yavapai County Sheriff's officials Wednesday to evacuate between 250 and 300 residents from the town of Yarnell. The American Red Cross established an evacuation center at Yavapai College in Prescott, and Yavapai County has set up a phone bank open for public phone calls at (928) 442-5103.

Fire managers are hopeful, however, that the evacuation order could be lifted by noon Thursday. In addition, the Arizona Department of Transportation has closed State Route 89 between mileposts 275 and 282. ADOT says there is no estimated time yet for the the highway to reopen.

The fire began Wednesday afternoon and has burned more than 600 acres and three structures, though no homes have been lost. Fire managers say crews have made progress fighting the Tenderfoot Fire, and now have it 10 percent contained. Crews are conducting burnout operations and utilizing helicopters and planes to douse the flames. They say the it could be fully contained by next week.

The Tenderfoot Fire is burning on the east side of Yarnell. The June 2013 Yarnell Hill Fire that claimed the lives of 19 Granite Mountain Hotshots took place on the west side of the town.

Animal Disaster Services is on site to take small pets, and larger animals can be taken to the Prescott Rodeo Grounds. The fire is under investigation and no cause has yet been identified. For more information on the Tenderfoot Fire, see http://inciweb.nwcg.gov/incident/4774/.

WINTER STORMS

Newtown Ambulance Squad Updates Township On Emergency Calls; Township Supervisors Accept Bids To Repave Roads

By D.E. Schlatter

Bucks Local News (PA), June 12, 2016

NEWTOWN TOWNSHIP >> The Newtown Ambulance Squad (NAS) on May 11 updated the Newtown Township Board of Supervisors on its emergency calls for the first few months of 2016.

According to the squad's chief of operations Evan Resnikoff, the squad had about the same number of emergency responses as it did for the same period last year.

"About 70 percent of our calls are in Newtown Township," explained Resnikoff, noting that the average age of those needing medical assistance is 69, with about 30 percent being over 85.

He also explained that the three top medical emergencies are: respiratory complaints, falls and cardiac incidents.

"We've seen a huge increase in cardiac complaints with people between 40 and 60 years old," Resnikoff told the board.

Opioid overdoses also increased from five to 15 compared to this same last year, according to the ambulance squad chief.

Resniknoff also said that because of the high call volume on Sundays, the rescue squad is going to add another ambulance during that 24-hour period.

In addition, he said that the NAS just retired a 2005 ambulance with 169,000 miles on the odometer, and purchased a used 2015 Mercedes-Benz Sprinter with about 8,500 miles.

"The vehicle is expected to have a seven to ten-year live span," Resnikoff pointed out. "It has good fuel mileage and low maintenance costs."

He also said that the ambulance squad is replacing four cardiac monitors with new ones at a cost between $92,000 and $108,000.

Because of the high cost, the squad is considering leasing the devices.

Newtown Township helps fund the NAS.

For the current fiscal year beginning Jan. 1, it was allocated $110,000, which is $7,000 less than for the 2015 budget year ending Dec. 31.

However, funding is dependent on Local Service Tax (LST) receipts which may be more or less than actual budgets.

In other news, the supervisors in a 5-0 vote accepted $536,228 in low bids from Harris Blacktopping, Inc. in Yardley for repaving about 1.2 miles of the 71 miles of township-owned roads.

Liberty and Justice Drives will be completely repaved, as will portions of Linton Hill and Upper Silver Lake Roads.

The supervisors also agreed to resurface three of the four alternate roads outlined on the township's 2016 road improvement list: Richboro Road, Walnut Avenue and Swamp Road.

Those three added projects will cost a combined $38,313 with Harris Blacktopping also doing the work.

According to the township manager, about $509,000 of the total cost will come from the state's liquid fuels fund, with the township responsible for roughly $64,811.

The supervisors also unanimously approved designating township manager Kurt Ferguson as the point man to seek as much as $100,000 in reimbursement from the Federal Emergency Management Agency (FEMA) for the heavy snowstorm that hit the area January 23 and 24.

The township had declared a state of emergency, and according to Ferguson, FEMA will offset Newtown's added costs for employee overtime, equipment and materials needed to plow and salt the roads.

With the resolution, Ferguson now can prepare the required documents to submit to the agency within the next few weeks.

The board also designated the Pottstown-based Cedarville Engineering Group, LLC to handle building inspections for the township. Boucher & James, Inc, of Doylestown will still be in charge of code and zoning enforcement.

And the supervisors have scheduled a work session for Monday, May 16 at 8:00 p.m. during which several proposed developments will be discussed.

The meeting's focus includes the renovation of a good portion of the Village at Newtown Shopping Center.

The Brixmor Property Group, which owns most of the center, is scheduled to be at the work session to answer questions.

Acme Plans Frosted Mug Cafe At Newtown Store; Township Supervisors Approve Liquor License Transfer To Allow Beer, Wine Sales At Store

By D.E. Schlatter

Bucks Local News (PA), June 11, 2016

NEWTOWN TOWNSHIP >> Sales of beer, and possibly bottles of wine, will soon be coming to the Acme Market in the Newtown Shopping Center off of Route 413.

At the June 8 supervisors' meeting, the board voted 4-1 to approve the transfer of a liquor license from a restaurant at 727 Second Street Pike in Upper Southampton Township to the Newtown Acme store.

Voting for the resolution were: Chairman Kyle Davis and Vice Chairman Ryan Gallagher, along with Supervisors Jennifer Dix and Phil Calabro.

Supervisor Mike Gallagher opposed the liquor license transfer.

"We're on the cusp of the past and the future," said Supervisor Ryan Gallagher who supported the transfer. "Pennsylvania is an antiquated system ... I hear it from a lot of people around town that they want more convenience in terms of alcohol sales."

Unless a local government can show that transferring a liquor license raises serious health, safety and welfare issues for the municipality, it must be approved, according to township solicitor Jeffrey Garton.

With the township's go-ahead, the supermarket will now be able to formally ask the Pennsylvania Liquor Control Board (PLCB) to approve the transfer of the restaurant liquor license, which could take between 90 to 120 days.

After the license is in place, Acme will build a 2,500 square foot dedicated section inside the store which will have tables and 30 seats, the minimum required under state law to sell beer for in-store consumption and take out, as well as wine by the glass.

In keeping with the other seven Acme locations in Pennsylvania currently selling beer, the new area will be called The Frosted Mug Café.

The name was chosen because customers can use frosted mugs provided by the supermarket for in-store consumption.

According to Acme's attorney Mark Kozar, the café will offer more than 400 varieties of beer, as well as prepared foods and sandwiches to either eat in or take out.

"This is not where people come to just hang out and drink," he explained. "There is no entertainment or games there."

Kozar, who is with the Pittsburgh-based firm of Flaherty & O'Hara which specializes in beverage alcohol law, said that selling beer at supermarkets and convenience stores has been growing in popularity around the country in recent years.

Acme shoppers will be able to purchase up to two six-packs of beer totaling 192 ounces for takeout at any one time. Several varieties of beer can be mixed and matched in a six pack.

There is no limit on the number of six packs a person can buy, according to Kozar, as long as sales are limited to two at a time.

Purchases will be paid for at a dedicated cash register in the café where IDs will also be checked to ensure that customers are over 21 years old.

The same day that Acme asked the supervisors to approve the liquor license transfer, Gov. Tom Wolf (D) signed into law a measure permitting establishments holding a restaurant liquor license to apply for a new enhanced permit allowing them to sell up to four bottles of wine at any one time for takeout.

The new law takes effect in 60 days.

"Acme will also be pursuing this," said Kozar about applying for the new enhanced liquor license.

Supervisor Mike Gallagher, who opposed the license transfer at this time, said that he first wanted to know more about the new wine-sale law before he would vote to allow it in Newtown.

"I'm still not comfortable with it," he said, also questioning whether there are enough safeguards in place to keep alcohol out of the hands of minors.

Acme, which operates 176 stores in six states, has more than 19,000 employees, 158 of them at the Newtown township location.

"Of the 159 stores in Pennsylvania, seven already have beer sales," according to Dan Croce, president of the Malvern-based Acme Markets. "It's another opportunity for our customers to get what they want at Acme, they've been asking for this.

"We're also putting in a Starbucks," he added.

The supermarket chain already has beer sales at its South Philadelphia location, as well as in Doylestown, Flourtown, Devon, Granite Run, Concordville and Paoli.

There is no hard liquor or mixed drinks sold at Acme, according to Croce.

When asked whether the Newtown café will need more parking spaces, the Acme president told the supervisors that other stores with beer sales have not seen an increase in the number of space needed and that many of the customers using the beer area are already shopping for other items in the store.

The café at the Newtown store will be open from 7 a.m. until 10 p.m. Monday through Saturday, and from 9 a.m. to 10 p.m. on Sunday.

Under state law, beer can be sold until 2 a.m. seven days a week, but the supermarket does not plan to extend its hours past 10 p.m.

All servers at The Frosted Mug Café will be 21 years or older, as will the area manager, even though that is not required under PLCB regulations.

As far as any liquor code violations, including illegal sales to minors, Croce said, "We've been checked and audited at our other stores and we haven't had any problems."

If all goes well, the Newtown Acme plans to start beer sales this year.

The Minnesota-based SuperValu, Inc. sold Acme Markets and four other supermarket chains in 2013 for $3.3 billion to a consortium called AB Acquisition LLC.

Last year, that company merged with Safeway Inc. to form the nation's second-largest grocery store chain.

The parent company plans to remodel more than 115 locations throughout the country and invest more than $1 billion to improve its stores, manufacturing facilities and distribution centers.

In other news, township manager Kurt Ferguson said that the Federal Emergency Management Agency (FEMA) approved giving the township $92,000 of the estimated $124,000 that Newtown requested in reimbursement for overtime and other costs associated with the late-January blizzard.

Going into the storm, the township already spent all of the money allocated for this winter's snow removal and other storm-related costs, according to Ferguson.

"This [FEMA] money will go a long way in restoring the budget," he pointed out.

On another matter, Ferguson said that renovations of the township-owned house at the Clarke Nature Center is complete and the building ready to rent.

He explained that the Clarke House has been painted, as well as a new natural-gas heater and cabinets installed.

"It's quite a unique house," the township manager maintained, noting that the 1,450 square-foot structure will be ready to rent this summer, and will soon be advertised.

Ferguson said that the township will be seeking about $2,000 a month in rent and has already had several interested inquiries.

“It will be nice to get that money back into the township budget,” he said.

OTHER NATURAL DISASTERS

Despite Quakes, Most California Homeowners Don’t Have Earthquake Insurance

By Daniel Goldstein

MarketWatch, June 10, 2016

On Oct. 17, 1989, Arthur Reyes was in his dorm room at Stevenson College, on the picturesque hilltop campus of the University of California at Santa Cruz, when his bed started to shake violently.

“I looked across my dorm room to see books flying off the shelf, the door swung open and the light fixture fell from the ceiling,” he recalled.

It was 5:04 p.m. From its epicenter just 10 miles north of Reyes, near the Loma Prieta Peak, the 7.1 magnitude quake roared along a 22-mile stretch of the San Andreas fault through the Bay Area, collapsing a portion of the Bay Bridge and the Cypress Freeway in Oakland, and crushing homes in the Marina District in San Francisco and the Pacific Garden Mall in Santa Cruz.

When it was over, 63 people were dead, more than 11,000 homes destroyed and $6 billion in damage done.

See Photos: Loma Prieta earthquake, 25 years later.

Today Reyes is a biologist married with three children, but he’s still struggling with the Loma Prieta quake, in a different way.

For many of Reyes’ generation, who are now entering their peak earning years and looking to purchase bigger homes to accommodate families, the aftershocks of the Loma Prieta quake, as well as the 1994 Northridge quake in Southern California, are financial. He paid $1,200 in 2014 on top of his homeowner insurance for an earthquake rider on his Palo Alto house, and the price increases every year. The average premium in Santa Clara County was $1,447 in 2014, according to the California Earthquake Authority (CEA), which writes about 76% of earthquake insurance policies in the state. Still, of the close to 7 million single-family homes in California, there are only 879,000 CEA earthquake policies in force.

“As a homeowner, it’s frustrating dealing with these insurance premiums,” he said. “We might get priced out of our home if our premiums keep increasing.”

The likelihood of a severe quake for Californians is never far away either, a major quake with a magnitude of 7.0 or more strikes ever ten years, according to the CEA and a moderate earthquake of 5.5 or more strikes about four times a year. All told, there are more than 2,000 earthquake faults in California, the CEA said.

Early Friday a 5.2 magnitude quake rocked the Southern California desert in San Diego County, about 14 miles northwest of Borrego Springs. Monica Reichl, a drama teacher at Tahquitz High School in the town of Hemet, about 60 miles away from the epicenter said the 1:05 a.m. temblor, which was about 150 miles southeast of Los Angeles, was still strong enough to wake her and her dogs. “It was a noisy quake. Long but not too bad,” she said. Still, like a veteran of the London Blitz in World War II, she was unfazed. “My Labs woke up but we didn’t want to get out of bed for it,” she said.

Even though Californians like Reichl and Reyes live with quakes as a near daily occurrence, earthquake insurance often isn’t a priority. The expensive deductible related to earthquake insurance are sometimes as high as 15% of the value of the home, which has many homeowners giving the insurance a second thought.

Premiums are determined by a combination of a home’s replacement value and its proximity to a high-risk fault. And for homeowners in Northern California, where some of the most valuable real estate in the country lies in an earthquake hot zone, that makes for an expensive financial double whammy. An expensive one-two punch

The CEA was set up in the aftermath of the 1989 and 1994 quakes to help provide low-cost insurance, after many property and casualty insurance companies pulled out following the quakes. According to the CEA, average earthquake insurance premiums statewide rose from about $540 a year in 1998 to $830 in 2005. The CEA instituted a decrease in premiums later that year, but they have been rising ever since, averaging about $800 a year in 2014.

But the average figures don’t really illustrate the cost in some of the highest-risk and most populous areas. The average premium in 2014 on earthquake insurance in San Francisco County was $2,156; it was

$1,800 in Alameda County (along the Hayward Fault) and nearly $1,000 in Los Angeles County, according to the CEA. The areas of greatest earthquake risk in the San Francisco Bay Area. (Map by Risk Management Solutions.)

In contrast to Florida, where hurricane insurance is often mandatory, earthquake insurance is entirely optional in California. And as premiums have gone up, more homeowners have opted out. The number of earthquake insurance policies in California has dropped to just 10% of homes statewide, down from 34% in 1994, according to Risk Management Solutions, a Hayward, Calif.-based company.

Newcomers to the Bay Area who haven't experienced a big quake and are put off by the insurance price are partly responsible for the low numbers of home buyers signing up for earthquake insurance, according to Patricia Grossi, senior director of global earthquake modeling at RMS.

"A lot of young people who are here today, just weren't around during the 1989 quake. They also see it as a low probability event. And they see earthquake insurance doubling their premiums. All those things are working together" to reduce insurance purchases, Grossi said.

Andy Doran is one of those Californians considering the cost of insurance coverage. He was a senior at Berkeley High Schoo in Berkeley, Calif. in 1989 when the quake hit. "I remember turning on the TV after riding it out in the doorway and finding static on all the channels except one," he recalls. "'The Cosby Show' was somehow happily humming along so I knew everything would be all right."

Now a scientist at Lawrence Berkeley National Laboratory, in the East Bay hills, Doran bought a house in Berkeley in 2011 (where the median home value today is more than $1 million and up 12% in the past year) and is looking to add earthquake insurance, but premium payments in the realm of $4,000 a year and a $70,000 deductible are putting him off.

"The fact that it is a separate policy and so expensive with such a huge deductible, it's difficult to impossible to accurately assess," he said. "I've been convinced we should get it, but figuring out how to afford it is hard." Another 'big one' is inevitable

The most recent major quake in the Bay Area occurred on Aug. 24, 2014 quake in Napa, just north of San Francisco, and was a 6.0 magnitude quake, causing more than $250 million in damage while killing one person and injuring more than 100.

The reticence of California homeowners to buy earthquake insurance has many state and federal officials worried. The U.S. Geological Survey predicts that there is a 68% chance of a 7.0 magnitude earthquake in the Bay Area in the next 30 years, either along the San Andreas fault, which ruptured in 1989 and 1906, or the Hayward or Calaveras fault. The chance of a 6.7 magnitude quake over the next 30 years is now predicted at 99%, the USGS says.

The insurance "gap" in the Bay Area, as the CEA sees it, is more than $600 billion as of 2014, assuming $690 billion in reconstruction costs and having only about $90 billion in earthquake insurance in force as of 2014. The CEA says it has the ability to pay $12 billion worth of claims.

"California is completely uninsured," given the risk of a major quake along the faults, said David Schwartz, a geologist with the U.S. Geological Survey in Menlo Park, southeast of San Francisco. "I can't tell you which (fault) will be the first to go, but we know that these faults have to move. You can run, but you can't hide." Emergency workers prop up a collapsed building in the Marina district.

A 7.9 magnitude quake (The estimated size of the Great San Francisco Earthquake along the San Andreas fault on April 18, 1906) in the Bay Area could potentially cause as much as $200 billion in damage and $25 billion in insurance claims, and have a regional and national impact as bad as Hurricane Katrina's aftermath, according to RMS. The CEA said in April, on the 110th anniversary of the 1906 quake that it would cost about $555,000 to rebuilt a single family home in the nine-county Bay Area if a similarly-sized temblor struck.

In addition to the San Andreas fault, the Hayward Fault runs under much of the East Bay and directly under the University of California at Berkeley's Memorial Stadium (which was upgraded to be more earthquake resistant in 2012 at a cost of more than $300 million and has halves designed to move independently in a quake). Both RMS and the USGS predict that the Hayward fault is most likely to experience an earthquake of a 7.0 magnitude.

A quake of that magnitude could severely disrupt the Port of Oakland, one of the West Coast's biggest ports alongside Seattle and Long Beach, Calif. Oakland handled more 2.3 million containers in ship traffic, or 1,400 vessels a year in 2015, nearly 100% of the Bay Area's containerized import and export traffic.

"Our real concern is the Hayward Fault: It's got the highest population density, and it's heavily industrialized," said Schwartz.

Indeed, the Bay Area has added nearly 8 million new residents since 1989, and seen the value of its residential real estate go up 50%, to $1.2 trillion, in that time. "The good thing about a financial boom is it creates money to do seismic upgrades," says Lewis Knight, regional director of planning and urban design with the architecture and design firm Gensler in San Francisco. "We've made so many advances in the 25 years since Loma Prieta."

Knight noted that dozens of warehouses in the Bay Area—now home to tech companies and dot-coms—that were dangerous in 1989 have been rehabbed. "Any time you do 20% or more floor rehabilitation you must do a seismic upgrade per California code," he said.

The CEA has also tried to convince Californians to buy more earthquake insurance.

CEA chief executive Glenn Pomeroy,has implored residents to buy insurance and not to be put off by premium prices, which on average was $803 a year as of Dec. 31, 2014 and is as little as $100 a year in less vulnerable regions of California, like Sacramento or Fresno. (Of course, one reason earthquake insurance is inexpensive in those areas is that they're far from active faults.)

"The insurance premiums aren't the culprit," he said in an interview. "There's a mis-perception out there that insurance is based on market value and not the reconstruction cost. The problem is that the reconstruction costs keep going up," he said. Pomeroy, a former state insurance commissioner in North Dakota and the former president of the National Association of Insurance Commissioners (NAIC) says he hopes to roll out earthquake insurance products later this year with as little as a 5% deductible. "Some people don't like the high deductible, but if you're uninsured for earthquake damage, you have a 100% deductible."

Ibrahim Almufti, a structural engineer at Arup in San Francisco, says given the sizable deductible for most insurance policies, either offered through the CEA or elsewhere, it makes better sense for homeowners in the most vulnerable areas to spend the money upgrading their home seismically. Search and rescue support workers embrace after rescuing a survivor at Oakland's Cypress Freeway.

"My advice to my clients is not to buy earthquake insurance but invest it in your home yourself," he said.

Hemant Shah, the founder of RMS, who was a student at Stanford University during the 1989 quake, disagrees, but he's not surprised to hear the advice. "It's a classic dilemma for homeowners," he said. "The costs are here and now and the benefits are in the future."

That's just what Melissa Clyde Baylis, who lives in Pleasanton, just east of the Bay Area, is thinking.

A teenager living in Oakland at the time of the quake, she now lives in a home built in 1994, after both the Loma Prieta and Northridge quakes led to stronger building codes. As for earthquake insurance, she and other family members have opted to skip it entirely given the expense.

"We will just take our chances," she said.

'It Will Happen Here': Washington Coast School Builds Nation's First Tsunami Refuge

By Sandi Doughton

Emergency Management Magazine, June 10, 2016

(TNS) – The first students to race up the stairs at Ocosta Elementary School's new gym and tsunami refuge were so excited, it took teachers a while to corral them into orderly lines on the rooftop.

"It's really cool to finally see kids up here," Paula Akerlund said, as the third-graders jostled and joked and tried to peer over the tall parapet on a sunny spring afternoon.

Akerlund is superintendent of the Ocosta School District, headquartered near Westport in Washington state a scant half-mile from the Pacific Ocean. On Saturday, she will preside over a dedication ceremony for what — on the outside — looks pretty much like any modern school complex.

What's unique about this gym is mostly hidden from view: tons of concrete and steel that make it the first structure in the nation designed to withstand a tsunami and provide a safe haven from the rushing waters.

"This is a historic building, in this little town on the coast of Washington," Akerlund said. "All the best science we know today and all the best structural engineering that we have are in that building."

With the junior-senior high school on the same campus, all the district's 700 students and staff can take shelter on the roof.

The structure was designed to accommodate 1,000 people comfortably, and is strong enough to hold at least twice that many.

"It could easily fit 2,000 packed in shoulder to shoulder," said Cale Ash, principal at Degenkolb Engineers in Seattle and lead structural engineer on the project.

The new school and gym are anchored by 169 pilings sunk up to 50 feet deep. Each corner of the flat-roofed gym is dominated by a massive staircase constructed of 14-inch-thick concrete with 50,000 pounds of rebar. Steel beams 3 feet wide crisscross the gym's ceiling for extra strength.

Engineers factored in safety margins to withstand battering by the immense loads of trees, rubble and other debris tsunamis can carry.

The pilings are deep enough to hold firm even if the water scours out the soil and breaks through the lower portion of the building.

Extra-wide stairs

The staircases are extra wide, so people will be able to get to safety quickly, Ash said.

The roof sits 53 feet above sea level. That's well above the 40-foot surges predicted in the vicinity by worst-case tsunami models. The 6-foot parapet provides an additional layer of protection to prevent the water from sweeping people off the roof — as happened in Japan's 2011 earthquake and tsunami.

Akerlund took charge of the district shortly after the Japan disaster. Images of the tsunami tossing cars like toys, pulverizing homes and sweeping ships inland were fresh in everyone's minds.

"You just think: Well, that could happen here," she said. "It will happen here."

The Ocosta school complex sits on a peninsula surrounded by water with no high ground nearby.

A magnitude 9 Cascadia megaquake, which is predicted to hit the area someday, will destroy roads and bridges and cause the ground to drop by 6 feet or more. The tsunami will roll ashore about 20 minutes later.

"You're not going to be able to drive anywhere," Akerlund said.

The district's old evacuation plan was to herd the students to the second floor of the high school. But that building opened in the late 1980s and might not survive the earthquake, let alone the tsunami.

"That's the thing that wakes you up at 3 in the morning," Akerlund said.

So she turned to the community.

It was clear the old elementary school needed to be replaced, she said. Modern building codes require any new school to be earthquake resistant. Reinforcing a portion of the complex — the gym — to also serve as a tsunami-evacuation structure had never been done before.

"Everybody was worried the cost was going to be astronomical," said Chuck Wallace, deputy director of emergency management for Grays Harbor County.

But the premium proved to be only about $2 million, or less than 15 percent of the total project cost of $16 million.

"When you consider that the building is designed to save a thousand people or more, the cost per person is not very high," Ash said.

Despite the region's stagnant economy, residents overwhelmingly approved a levy to pay for the project.

"People made a big sacrifice of their tax dollars to make this happen," Akerlund said.

The refuge is not just for students and staff, she added. It's intended to be accessible by anyone nearby when the quake and tsunami strike.

"We would never, ever turn anyone away," Akerlund said. "It's actually the reverse: Get as many people as you can here, as quickly as you can."

The external stairway doors are normally locked, but several triggers will open them automatically, including a tsunami alert or power outage. School personnel can also open them with the push of a button.

If all else fails, there's a "break-glass-in-emergency" lever mounted outside each entrance, with battery-powered backup and lights.

And teenagers take note: Video cameras are positioned to capture evidence of late-night mischief.

Emergency stash

The district also plans to stash enough emergency supplies on the roof to last for several days.

The Ocosta dedication comes on the heels of this week's four-day exercise organized by the Federal Emergency Management Agency to practice for a Cascadia megaquake and tsunami.

FEMA estimates 10,000 people or more could die in the tsunami, depending on what time of year the quake strikes.

The Ocosta tsunami haven is a good start, but thousands of people remain at risk across the region, Akerlund said.

The city of Long Beach is considering construction of a 30-foot-tall berm, or artificial hill, for tsunami evacuation. And the Quinault Indian Nation plans a four-story parking garage at its Quinault Beach Resort and Casino in Ocean Shores that could also serve as a tsunami refuge.

But according to one analysis, it would take more than 50 tsunami-evacuation structures to provide safe havens for everyone in the highest-risk zones of Grays Harbor and Pacific counties.

ZIKA VIRUS

Officials Preparing For Zika Virus To Spread In The U.S.

By Sabrina Tavernise

New York Times, June 10, 2016

WASHINGTON — The federal government is preparing to release a proposal for responding to the first homegrown cases of the Zika virus, health officials said Friday.

The 60-page document is a blueprint for action when the first cases of locally transmitted Zika occur in the continental United States. Officials at the Centers for Disease Control and Prevention could not say when it would be made public and emphasized that it was a working draft that could change based on input from state officials.

Sylvia Mathews Burwell, the secretary of Health and Human Services, and Dr. Thomas Frieden, the director of the C.D.C., spoke by video conference on Thursday with state governors about the plan. On Friday, experts with the C.D.C. planned to talk with state health departments.

The Zika virus is transmitted by the Aedes aegypti mosquito — a bug that is found in the United States mostly in the South and Southwest, though its range can spread in summer. So far no one has been infected with Zika by a mosquito in the continental United States, but health experts expect it to happen.

The health experts do not expect there to be an explosive Zika virus transmission like the recent one in Brazil because many homes in the United States are air-conditioned and keep their windows closed. Many also have screened windows that keep mosquitoes out. The United States is also much less densely populated than the areas of Brazil where the outbreak of the Zika virus occurred.

Many health experts worry, however, that a Zika virus outbreak could be difficult to fight because 80 percent of the people infected with it experience no symptoms.

"If we have a homegrown case, that's a game changer," said Dr. Thomas E. Dobbs III, Mississippi's epidemiologist, in a telephone interview. "The real challenge," he said, is that "if only 20 percent of people have notable symptoms, what about the 80 percent who don't?"

Zika causes debilitating birth defects, including abnormally small heads and damaged brains from a condition called microcephaly. Health officials are focusing on protecting pregnant women from exposure to mosquitoes or people infected with the Zika virus. The disease can be sexually transmitted, too.

The government's response plan includes helping states define the geographic boundaries where transmission of the virus has occurred and making sure that states reach pregnant women and their doctors in the infected areas to warn them. The C.D.C. will also make sure that any Zika-infected pregnant women are entered into the agency's registry so the cases can be monitored and tracked after the babies are born.

The C.D.C. will also deploy multidisciplinary rapid response teams. Those teams will provide technical and logistical expertise, epidemiology, laboratory services and vector control, which is the term for controlling animals or insects that transmit disease.

The C.D.C. has used rapid response teams for years to track diseases of all sorts, from E. coli outbreaks in fast-food restaurants to hospital infections.

Many states have been actively preparing already. This winter, Florida declared a state of emergency in the counties that had Zika cases in people who had become infected while traveling abroad. In Mississippi, health experts have been gathering mosquito samples in five places in every county since May, Dr. Dobbs said. So far, no Aedes aegypti mosquitoes have turned up, he said.

"This has really jarred people out of any type of complacency they had," said Joseph M. Conlon, a retired Navy entomologist who is a technical adviser to the American Mosquito Control Association, based in Mount Laurel, N.J. "They've gotten into planning mode big time."

In states like Mississippi, where poverty and modest tax bases make mosquito control spotty, contracts with private vector-control companies are being put in place. These companies are commonly used in states that are plagued by hurricanes, Dr. Conlon said.

Dr. Dobbs of Mississippi said the state was currently negotiating with two private vector-control companies.

CDC Director Visits Puerto Rico Amid Zika Outbreak

Associated Press, June 10, 2016

SAN JUAN, Puerto Rico — The director of the U.S. Centers for Disease Control and Prevention is in Puerto Rico to discuss the U.S. territory's response to an outbreak of the Zika virus.

Tom Frieden met with Gov. Alejandro Garcia Padilla behind closed doors Friday. It is his second visit to the island in recent months.

Puerto Rico is reporting 149 new cases of the mosquito-borne virus in the past week. The island has more than 1,500 cases, including 182 in pregnant women. A total of 40 people have been hospitalized.

Zika can cause fetal death and severe brain defects in the children of women infected during pregnancy. The World Health Organization has recommended that women living in areas where Zika is spreading consider delaying pregnancies.

The outbreak has also hurt tourism in Puerto Rico.

CDC: Map Zika In States To Prepare For Outbreaks

By Tom Howell Jr.

Washington Times, June 12, 2016

The Obama administration says it doesn't expect the Zika virus to blanket whole states if and when mosquitoes begin to spread the virus on the U.S. mainland, though it wants state officials to map outbreaks so locals can protect themselves.

The Centers for Disease Control and Prevention recorded nearly 700 travel-related cases in the 50 states and the District of Columbia, including nearly a dozen through sexual transmission. Yet the agency expects Zika to circulate on its own this summer, when Aedes mosquitoes flourish and start biting.

In a conference call, CDC officials said transmission in the continental U.S. should be "geographically limited" to relatively small areas, compared with Latin America and the Caribbean.

The CDC has recorded more than 1,300 locally acquired cases in the U.S. territories, mainly in Puerto Rico, and an outbreak in Brazil has been linked to an uptick in the rate of babies born with abnormally small heads, a condition known as microcephaly.

Local transmission will most likely hit Texas, Florida and other states along the Gulf of Mexico, based on previous outbreaks of dengue and chikungunya, which are ferried by the same type of mosquito as Zika.

But Zika is the first mosquito-borne illness to be linked to birth defects, and it has never hit the U.S. mainland before, officials said.

"There's a lot we still don't know about Zika virus," said Peggy Honein, a CDC epidemiologist.

The agency urged local officials Friday to report positive Zika tests right away and determine whether the infection is related to travel or sexual transmission. If those can be ruled out, local surveillance teams should monitor family members and surrounding households to see if the virus spreads.

The CDC said it is issuing fact sheets in multiple languages to make sure people who don't speak English are aware of Zika and ways to avoid mosquito bites.

The government wants to be prepared for the emerging threat, particularly after the Ebola scare of 2014, when the death of a Liberian man at a Texas hospital exposed gaps in reporting and forced states to scramble to set up quarantine rules.

Dr. Robert Quigley, senior vice president at International SOS, a company that advises clients on global medical and security issues, said the government seems to be ahead of the private sector in its response to Zika.

"I would have to say that typically, on any issue, the government tends to lag behind, just because of the bureaucracy," he said.

He cited a February report in the Military Times that said pregnant family members of Defense Department employees or active-duty personnel stationed in affected areas could relocate voluntarily.

Private-sector clients, meanwhile, are still trying to hammer out policies that protect pregnant women and other employees, while remaining competitive in their respective markets.

"What they all want to know is, 'What is the benchmark, what is everyone else in our sector doing?'" Dr. Quigley said.

While the federal government outlines its policy, lawmakers on Capitol Hill have not agreed on the amount of funding needed to prepare for Zika and implement the administration's plans.

President Obama in February requested nearly $2 billion to combat the virus at home and abroad, yet congressional Republican leaders have forged plans that offer much less.

The Senate approved $1.1 billion in emergency funding that isn't offset with cuts elsewhere in the federal budget, and the House moved to take $622 million from the lingering Ebola response in West Africa and other health accounts to address the emerging threat.

Sen. Marco Rubio, Florida Republican, urged negotiators from both chambers to fund what Mr. Obama requested.

"As you know, I supported fully funding the fight against Zika with emergency funds to the amount of $1.9 billion, which was calculated by experts in federal public health agencies as the appropriate amount of funds to successfully protect the public health of our country against the imposing threat of Zika," Mr. Rubio wrote Thursday in a letter to all 33 conferees. "I urge you to consider these specific requests as you negotiate the final legislation through this conference as quickly as possible."

WHO Clarifies Zika Pregnancy Guidance – Again

By Sandee Lamotte

CNN, June 11, 2016

(CNN)Are you considering getting pregnant and live in an area where Zika is actively circulating? Then the World Health Organization wants you to do the following:

"Seek counseling from your country's health services about the risks of a pregnancy, what your options are, what support services are available, and so on," WHO spokesperson Nyka Alexander told CNN. "Women and their partners should be provided with evidence-based information to enable them to make informed choices about delaying a pregnancy or becoming pregnant."

Contrary to news reports last Friday, including that of CNN, the WHO says it is not advising couples living in Zika hot zones to delay having children.

"Whether and when to become pregnant should be a personal choice, made on the basis of information and access to affordable, quality health services," Alexander said.

Clear as mud?

Corrections are meant to clarify, not confuse. And that's exactly what the World Health Organization says it meant to do last week when it sent media an email updating the previous week's guidance on Zika and sex.

"Men and women of reproductive age living in affected areas should be informed and orientated to consider delaying pregnancy," said the email, with bolding as shown.

"This was the original intention of the guidance," the email continued. "The correction makes this more clear."

Based on that language, CNN, The New York Times and other international news outlets released stories saying the WHO was advising couples living in one of the 50 countries and territories where Zika is active to consider delaying pregnancy.

The World Health Organization is now saying media misunderstood that statement.

"Some have interpreted the language as meaning that WHO is recommending that couples living in areas of Zika should delay pregnancy," said Alexander. "Instead, WHO is advising that they receive counseling from health care providers about risks of sexual transmission of Zika, and risks of Zika for pregnant women."

"Women should be informed about the options to consider before conceiving, including delaying pregnancy," Alexander continued. "The misinterpretations are understandable and we will be clarifying the language in the guidance."

Guidance for travelers

On May 30, the WHO updated its guidance on sex and Zika for travelers. Men or women who visit any country with a current outbreak of Zika should wait a full eight weeks, instead of four, after their return to have unprotected sex or attempt to conceive a baby.

That holds true even if there are no active symptoms of the disease, as only one out of five people with Zika experience symptoms.

Men with known Zika-like symptoms should wait a full six months before attempting to conceive, said the WHO.

Couples Living In Zika Areas Should Delay Pregnancy, WHO Advises

By Steven Reinberg

HealthDay, June 10, 2016

FRIDAY, June 10, 2016 (HealthDay News) – Couples who are trying to have children and live in Zika-affected areas should consider delaying pregnancy to avoid having babies born with birth defects, U.N. health officials now recommend.

The new guideline replaces an earlier one that suggested women planning to become pregnant should wait at least eight weeks before trying to conceive if they or their partner live in – or are returning from Zika-affected regions.

Mosquito bites remain the most common source of infection of the virus that causes the severe birth defect microcephaly, which results in babies with abnormally small heads and brains. But transmission of the virus through sex is more common than previously thought, World Health Organization officials have said.

In the United States, the U.S. Centers for Disease Control and Prevention has refrained from recommending that couples delay pregnancy in Zika-affected areas, although Puerto Rico's Health Secretary has issued advice that is similar to the new WHO guideline, The New York Times reported.

Although the new WHO recommendation doesn't specify how long couples should delay pregnancy, the recommendation "means delaying until we have more answers, more evidence, more science," WHO spokeswoman Nyka Alexander told the Times.

However, she added that WHO is only suggesting, and not telling, couples in Zika-affected areas to delay pregnancy.

The vast majority of Zika infections have occurred in Latin America, with Brazil the hot zone with an estimated 5,000 cases of microcephaly. There have been no reports of Zika-induced microcephaly contracted in the United States, although Zika is now circulating in Puerto Rico, the U.S. Virgin Islands and American Samoa.

And U.S. health officials have said they expect to see Zika infections in Gulf Coast states such as Florida, Louisiana and Texas as mosquito season picks up.

Last month, U.S. health officials reported that the number of pregnant women in the United States infected with the Zika virus had tripled because cases were now being counted in a more comprehensive way.

So far, an estimated 280 infected women are being followed in the United States and its territories, according to two registries that have been created by the U.S. Centers for Disease Control and Prevention.

Previously, only cases of pregnant women who had Zika-related symptoms or pregnancy complications were being tallied, CDC officials said. But recently published reports have found that some pregnant women show no symptoms of Zika infection, yet still give birth to babies with microcephaly.

To limit any potential spread of Zika virus via mosquitoes, health officials on the federal, state and local level are deploying a three-pronged strategy: improving mosquito control; expanding their ability to test for Zika; and urging the public to protect themselves against mosquitoes.

Women of child-bearing age who live in an active Zika region should protect themselves from mosquito bites by wearing long-sleeved shirts and long pants, using mosquito repellent when outside, and staying indoors as much as possible, according to the CDC.

President Barack Obama has asked Congress to allocate $1.9 billion to combat the Zika threat, but lawmakers have yet to agree on a spending package.

White House Rolls Out Zika Crisis Plan

By Sarah Ferris

The Hill, June 10, 2016

The White House is amplifying its efforts to contain the chaos from a nearly inevitable outbreak of Zika virus in the U.S. in upcoming weeks.

Senior health officials outlined the national Zika response plan for the first time Thursday during a video briefing with officials from nine states deemed most vulnerable to an outbreak.

The Centers for Disease Control and Prevention (CDC) is arming the states with a step-by-step emergency plan to respond to the first locally transmitted cases of Zika. The virus, which is spread by mosquitoes, is expected to begin hitting Southern U.S. states later this month.

The document, which the CDC says is still a draft, includes "detailed guidance" about the protocol for federal and state officials when Zika spreads to the U.S. for the first time.

The document has not yet been made public, according to a CDC spokeswoman, though some details were included in a release from the Obama administration late Thursday.

The up-front coordination on Zika is a clear attempt by the administration to avoid the 2014 crisis that stemmed from the first U.S. case of the Ebola virus.

Ebola was an international disaster for more than a year when a U.S. nurse became infected by a patient living in Texas — a situation that exposed massive communication gaps between federal, state and local health officials. For months afterward, government officials on all levels took part in finger-pointing about the outbreak.

States like Florida have already made clear they are anxious about the impending spread of the disease. The National Governors Association recently declared that "the nation is on the threshold of a public health emergency."

Zika has already arrived in droves in the U.S. Many states are dealing with dozens, if not hundreds of Zika cases. U.S. states have reported 691 known cases of Zika, according to CDC data from June 8. Puerto Rico has more than 1,300 cases.

So far, the majority of the White House's communication about Zika has been urging Congress to approve new funding to help speed up testing, vaccine development and mosquito-fighting efforts. Senate and House leadership began talks this week to create a joint funding package.

Health and Human Services Secretary Sylvia Mathews Burwell did make a pitch for Congress to approve funding during the call but focused on what states needed to do to prepare themselves.

Burwell urged states to quickly step up their anti-mosquito efforts while also boosting public outreach, diagnostics and ensuring the safety of the blood supply.

The call included six governors as well as officials from three additional states, all but two of them led by Republicans. The states are Alabama, Arizona, Florida, Louisiana, Mississippi, Texas, Georgia, Hawaii and California.

Senators: Bill Will Give States, Cities Tools To Fight Zika

By Associated Press

Associated Press, June 11, 2016

PORTLAND, Maine — A group of senators, including Maine's Angus King, has introduced a bill they say will give states and municipalities tools to fight the Zika virus.

King, an independent, submitted the bill along with Democrat Bill Nelson of Florida and Republican Richard Burr of North Carolina. The senators say the Strengthening Mosquito Abatement for Safety and Health Act would reauthorize public health tools that help control mosquitoes.

The senators say up to $130 million in grants to support state and local mosquito control work will be authorized every year under the bill.

The federal Centers for Disease Control and Prevention says more than 1,700 cases of the mosquito-borne Zika virus have been reported in the country and its territories. Zika is linked to neurological disorders and the birth defect microcephaly.

Congress Spars As Zika Threat Grows

By Columbus Dispatch Editorial Board

Columbus (OH) Dispatch, June 12, 2016

It's disappointing that congressional Republicans are holding up federal funding needed to stop the spread of the Zika virus. Every day that passes without a full-on assault in the research lab and with education allows a frightening health threat to grow.

Just as federal response to the HIV/AIDS epidemic was slowed by an abdication of leadership, political ideology is trumping public health with Zika funding. With 14 confirmed cases in Ohio, including one woman from central Ohio who tested positive in late May after a trip to the Dominican Republic, there's no time to waste in combating the mosquito-borne virus.

Republicans say they are worried about handing President Barack Obama a "blank check," which he could use for other purposes. This president has acted autocratically when he can't get his way with Congress. But in this case, the president is right: His request to Congress is based on public-health assessments to prevent the virus from spreading extensively in the U.S. A vaccine appears likely within the year.

"We didn't just choose $1.9 billion from the top of our heads," Obama said.

It would cost much more to educate and provide medical care should thousands of babies be born with microcephaly, a birth defect linked to Zika that causes an abnormally small head and brain. For most people, Zika is a mere annoyance. Some people don't even experience symptoms, while others report a mild fever, skin rashes, muscle and joint pain, malaise headaches or conjunctivitis. But for women who are pregnant or hope to be, Zika is terrifying.

The House allocated only $622 million (most transferred from Ebola funds), while the Senate in late May approved $1.1 billion — this after four months of wrangling with the White House. Congressional Republicans said these dollars are sufficient to get efforts started on a rapidly approaching emergency. Senate Majority Leader Mitch McConnell promises House and Senate negotiators will work to reconcile their legislation to provide up to $1.1 billion.

Congress should follow the guidance of public-health experts in allocating the proper amount of money and not allow partisanship and ideological budget differences to let Zika advance. Congress can and should hold Obama accountable for properly spending the money. But if Congress dithers, the public can and should hold its members accountable, too.

Congressman Skimps On Zika Funding, Then Complains About Needing More Money

By Jennifer Bendery, White House And Congressional Reporter, The Huffington Post

Huffington Post, June 10, 2016

WASHINGTON – Rep. Ted Poe (R-Texas) complained this week that his district isn't getting enough federal grant money to combat the Zika virus from the Centers for Disease Control and Prevention – the same agency he's repeatedly voted to underfund as it tries to prevent an outbreak.

"We are vulnerable to the threat of Zika virus for several reasons," Poe said in a statement on Tuesday, referencing a letter he recently sent to the CDC. "Both mosquito vectors that carry Zika virus are present in Harris County. Located on the Gulf Coast, we have experienced high flood waters in recent months. In addition, there are also areas of our community that are poverty stricken. Each of these factors create conditions that are ideal for mosquitoes to breed."

"The CDC must work with our community both now and in the future to address this flawed grant system and help allocate federal dollars for Harris County's public health response," he added.

But Poe was among those who voted last month to give the CDC just one-third of the $1.9 billion it requested to protect the public from a Zika outbreak. The bill he voted for, which came three months after the CDC asked for aid, also provided just one-fifth the amount the agency requested for its overall public health activities.

Beyond that, the Texas congressman has voted six times to block the full $1.9 billion in emergency resources for Zika. Those votes were tied to his support for the GOP's transportation and housing spending bill; a chemical regulation bill; a separate Zika funding bill; a defense spending bill; a scholarship reauthorization bill; and a bill related to privacy for angel investors.

For good measure, Poe also voted against letting Washington D.C. use local funds to combat Zika.

A spokeswoman for Poe did not respond to a request for comment.

Neither the House nor the Senate fully funded the CDC's request. House Republicans passed their bill to give the agency $622 million, while the Senate passed a $1.1 billion bill. They'll be hashing out the differences between their two bills in the coming weeks.

The CDC has activated a Level 1 response to a possible Zika outbreak, the highest response level at the agency. Top public health officials warned in April that the mosquito-borne virus is "scarier than we initially thought," and CDC Director Tom Frieden made an emotional plea to Congress last month to fully fund the prevention efforts.

"Imagine that you're standing by and you see someone drowning, and you have the ability to stop them from drowning, but you can't," Frieden said at a National Press Club event. "Now, multiply that by 1,000 or 100,000. That's what it feels like to know how to change the course of an epidemic and not be able to do it."

The lifetime cost of care for just one baby with microcephaly, the birth defect caused by the Zika virus, is estimated at as much as $10 million.

House Passes Puerto Rico Rescue Bill; McConnell's Trump Frustrations; Blunt To Push For Full $1.1 Billion In Zika Funding

By Kelsey Snell

Washington Post, June 10, 2016

HOUSE PASSES PUERTO RICO RESCUE PACKAGE: In a rare bipartisan move on Thursday the House voted 297-127 to approve a financial rescue package for Puerto Rico. The legislation allows the troubled island territory to accept new government regulation in exchange for a $72 billion debt restructuring plan. Power Post's Mike DeBonis has more:

Thursday's House vote came ahead of a crucial July 1 deadline, when the territory is poised to default on $2 billion in bond payments. The Senate, however, has yet to act.

Lead sponsor Rep. Sean Duffy (R-Wis.) said that unless the rescue bill becomes law, "the Puerto Rican government is likely to collapse, participants in public pension plans will be terribly damaged, and almost all bondholders could lose their investments.

"Absent this bill," he said, "almost nobody wins and nearly everybody loses."

McCONNELL'S RAW TRUMP ASSESMENT: Senate Majority Leader Mitch McConnell (R-Ky.) has been growing increasingly frustrated when reporters ask him about the latest controversies over the presumptive GOP presidential nominee Donald Trump and he seemed to let loose this week in an interview with Bloomberg Politics. McConnell said that while he's still okay with the nominee, he's got a lot of concerns about Trump's understanding of policy.

"He needs someone highly experienced and very knowledgeable because it's pretty obvious he doesn't know a lot about the issues," McConnell said. "You see that in the debates in which he's participated. It's why I have argued to him publicly and privately that he ought to use a script more often—there is nothing wrong with having prepared texts."

The Kentucky Republican's frustration with Trump has been clear, especially this week after Trump's tarring of Judge Gonzalo Curiel as biased against him because the Indiana-born former prosecutor is "Mexican." Still, McConnell said he remains "comfortable" backing Trump.

"For all of his obvious shortcomings, Donald Trump is certainly a different direction, and I think if he is in the White House he'll have to respond to the right-of-center world which elected him, and the things that we believe in. So I'm comfortable supporting him," McConnell said.

BLUNT TO PUSH FOR FULL $1.1 BILLION IN ZIKA FUNDING: The Senate voted this week to formally begin working out a compromise with the House on how to fund the battle against Zika. Both chambers have already passed funding bills but the House legislation provides $622 million through the end of 2016 while the Senate plan would provide $1.1 billion through Sept. 2017. Sen. Roy Blunt (R-Mo.), one of the top negotiators on the Senate side, told Morning Consult that he plans to make sure the House gets on board with the extra money.

Sen. Roy Blunt (R-Mo.) said Thursday he thought it would be possible to convince House Republicans to agree to the Senate's $1.1 billion legislation, in part because it would settle the question of how to fund the fight against Zika, a topic of discussion on Capitol Hill for the past four months. And the Senate bill comes with the added bonus of funding that fight until September 2017.

"The difference in the two numbers is their number only went through September the 30th of this year, and our number goes through Sept. 30 of next year," Blunt said. "I'm hopeful that everybody will decide it's better to deal with this right now rather than continue to deal with it for the rest of the summer."

Rubio Calls On GOP To Support Obama's Nearly $2 Billion Zika Plan

By Juliegrace Brufke

Daily Caller, June 9, 2016

Florida Sen. Marco Rubio urged 33 of his Republican colleagues in the upper chamber to support President Barack Obama's call for $1.9 billion in funding to fight the Zika virus.

The Senate had approved $1.1 billion in funding while GOP members in the House were calling for $622 million, which reallocates funding left over from the Ebola outbreak.

"As you know, I supported fully funding the fight against Zika with emergency funds to the amount of $1.9 billion, which was calculated by experts in federal public health agencies as the appropriate amount of funds to successfully protect the public health of our country against the imposing threat of Zika," Rubio wrote in the letter sent Thursday. "I urge you to consider these specific requests as you negotiate the final legislation through this conference as quickly as possible."

Rubio argued Florida and Puerto Rico will be hit the hardest, therefore he believes they need the funding as summer mosquito season reaches its full force.

The Senate is slated to vote on a larger spending bill, which includes funding for the virus, in the coming days.

Zika has been linked with serious birth defects and was declared a public health emergency by the World Health Organization earlier this year.

Ted Cruz Didn't Bother To Vote On A Bill To Fight The Zika Virus As Texas Scrambles To Prevent An Outbreak

By Bethania Palma Markus

Raw Story, June 10, 2016

Texas is scrambling to stop a potential Zika emergency after floodwaters left pools of standing water — but when it came time for Texas Sen. Ted Cruz to vote on federal funding to fight the virus, he was no where to be found, according to RealClearPolitics.

Gov. Greg Abbott this week asked President Barack Obama for a disaster declaration because of widespread storm damage and flooding, Bryan College Station Eagle reports. The Republican governor's request comes as local officials worry resulting pools of stagnant water could create a Zika virus outbreak.

KBTX reports that while no declaration has yet been issued, Federal Emergency Management Agency (FEMA) workers were on the ground this week. And while Texas officials are scrambling to deal with the Zika threat, Republicans on Capitol Hill have been blocking a federal bill aimed at fighting the virus.

Cruz was one of three senators who did not vote on a bill to spend $1.1 billion to fight it.

"With all of the flooding, all of the rainfall in our area, this is a state of emergency," Houston Mayor Sylvester Turner said, according to the Houston Press. "What we don't want to do, we don't want to wait like we did with AIDS and HIV, assuming that it impacted people on the other side of the globe, were slow to respond, and then it became a global epidemic. We want to get out in front of this."

Turner is urging Abbott to declare a public health emergency to counter spreading of the virus.

Twenty-three Republicans voted to join Democrats to pass the Zika bill and 29 voted against it. Cruz and two others, including Vermont Sen. Bernie Sanders and Wyoming Republican Mike Enzi did not case votes.

Abbott, in turn, is asking Obama to declare a disaster to release funding to help the state cope with the storm fallout.

"I have determined that this incident is of such severity and magnitude that effective response is beyond the capabilities of the state and affected local governments, and that supplementary federal assistance is necessary to save lives; to protect property, public health and safety; or to lessen or avert the threat of a disaster," Abbott wrote in a letter to Obama.

Severe storms and flooding in Texas have resulted in a large amount stagnant water — which attracts mosquitoes that potentially carry and spread Zika.

Abbott's request comes amid 1,444 evacuations along with hundreds of other rescue and emergency actions statewide, including fatalities.

U.S. Senate Republicans blocked a stand-alone $1.9 billion bill requested by Obama to fight the Zika virus, the Hill reported.

Weeks later, little progress has been made.

"Republicans and Democrats worked together to pass a bill here in the Senate to provide funding and resources," Senate Majority Leader Mitch McConnell said Wednesday, according to the Hill. "The House passed its own version. We're ready to go to conference and complete a final bill. I'll have more to say on that soon."

According to Patch, the state is working with the federal government to secure funding to help communities fight the virus.

"Texas is working with our local and federal partners to ensure Texans are protected from the Zika virus," the governor said in a prepared statement. "With the recent floods, and as we enter the height of mosquito season, I encourage Texans to take precautions to protect themselves from mosquito exposure and heed all warnings and recommendations from health officials."

Meanwhile, on Capitol Hill, Democrats have set a floor of $1.1 billion in funding to fight Zika while Republicans have agreed to $622 million. The Hill reports it remains unclear how the two parties will work out their differences.

Official Map Finds Zika-transmitting Mosquitoes In Much Of U.S.

Florida Health Warriors Deploy In War On Zika

By Leila Macor

AFP, June 11, 2016

Miami (AFP) – Carlos Varas inspects the front yards of Miami homes armed with larvicide, pesticide and what looks like a long-armed eyedropper. His mission: destroy the Aedes aegypti mosquito that spreads the Zika virus.

Varas reaches into a leafy garden and sucks up water from tiny pools drop by drop. He examines the sample and grins: inside, tiny critters wiggle around nervously.

They are the larvae of the feared Aedes aegypti.

"We look for standing water or flying mosquitoes," Varas told AFP.

If they find larvae they spread out grain larvicide with a scoop. "If we find adult mosquitoes in the area we spray, and we try to eliminate the sources where they are breeding," he said.

The mosquito-borne Zika virus has been linked to a surge in cases of the birth defect microcephaly – babies born with abnormally small heads and deformed brains – after their mothers were infected with the virus. There is no vaccine for Zika.

Zika has spread rapidly across Latin America and the Caribbean in the past months, and experts warn that the continental United States will likely see an increase in cases as summer begins in the northern hemisphere.

Florida's hot, wet climate "has all the environmental conditions for an epidemic," said Carlos Espinal, head of the Florida International University Global Health Consortium and an expert in tropical diseases.

– Primed for an epidemic –

The best way to stop the spread of Zika is to kill off Aedes aegypti mosquitos, which breed in even tiny pools of stagnant water – the mammoth task facing Varas and his fellow inspectors.

But given the size of Florida "there will not be enough inspectors to cover the territory," Espinal told AFP.

"This is a job that has to be done not only by the health service, but by the community."

Coordinated work between community leaders and county health officials to destroy the Aedes aegypti larvae is "very important," he said.

Health authorities are especially frustrated by Washington's delay in releasing more federal funds to fight the virus.

Tom Frieden, head of the US Centers for Disease Control and Prevention (CDC), is working feverishly to convince Congress to approve the $1.9 billion to fight Zika that President Barack Obama asked for in February.

"Imagine this: You're standing by a lake and you see someone drowning. You have the ability to save that person, but your hands are tied," Frieden wrote recently on the White House blog.

"The ability to prevent dozens, hundreds, or even thousands of severe birth defects creates a special responsibility – every child protected is a tragedy prevented."

In Brazil, some 1.5 million people have been infected with the virus, and nearly 1,300 babies have been born with microcephaly since the outbreak of Zika began there last year.

The virus, which usually causes only mild, flu-like symptoms, can also trigger adult-onset neurological problems such as Guillain-Barre Syndrome, which can cause paralysis and death. In an added complication, there is limited, but growing evidence that Zika can be transmitted sexually.

As of June 1 the CDC had registered 618 cases of Zika infection in the continental United States – all of them people who contracted the virus abroad.

The Florida Health Department as of June 3 registered more than 170 Zika cases in the state, nearly 40 of them in pregnant women.

Governor Rick Scott said that Florida residents must prepare for a Zika outbreak with the same diligence that they prepare for a hurricane.

"We don't yet know for certain what will happen with this virus, but we owe our citizens a vigorous and thorough preparation effort at the federal level to best protect their health," he said.

"Washington must put politics aside and agree to a comprehensive plan to protect and respond to the spread of Zika in America."

4th Case Of Zika Reported In Delaware; Man Had Been Abroad

Associated Press, June 10, 2016

DOVER, Del. — Public health officials say a fourth case of Zika infection has been confirmed in Delaware resident who had traveled abroad.

The Division of Public Health said in a news release Friday that the Kent County man had traveled abroad in May and acquired the mosquito-borne virus.

International health officials say Zika can cause fetal death and severe brain defects in the children of women infected during pregnancy. Zika can also be spread by men via vaginal, anal, and oral sexual activity.

Health officials recommend condom use for men who have been diagnosed with Zika virus.

EMERGENCY PREPAREDNESS

Quake Simulation Exposes Cracks As City Prepares For The Big One

By Bianca Pahl

Portland (OR) Tribune, June 10, 2016

Fallen bridges, collapsed buildings, downed utility lines and thousands of casualties are just some of the things that will occur when a massive earthquake hits the Cascadia Subduction Zone off the Northwest coast and reduces most of the Willamette Valley to rubble.

Are we ready for that?

"We're really not ready," said Carmen Merlo, director of Portland's Bureau of Emergency Management.

At 9 a.m. Wednesday, June 8, representatives of several city bureaus took part in the Federal Emergency Management Agency's Cascadia Rising quake simulation to help local agencies and officials get ready for The Big One. More than two dozen agencies across Oregon were part of the exercise designed to prepare first-responders and others to deal with the effects of a massive quake.

The simulation took place in PBEM's emergency coordination center, which was built to withstand a 9.0 magnitude quake, making it the most logical place for city officials to gather after a disaster.

Goals for the two-day simulation were to test emergency plans, identify gaps in policies and procedures, better understand where limited resources should be focused, train staff and provide "situational awareness," Merlo said.

Where the city failed to meet Merlo's expected level of preparation was building codes, old infrastructure, training and drills, tracking resources, communication to the public and the lack of "culture preparedness."

"There's always room for improvements," Merlo said. "I'm pleased with what I saw, but clearly the fact that we don't get to do this often for a real emergency, there is a lack of common understanding around protocols and processes."

Merlo said the simulation emphasized the downtown area because she predicts it will be most vulnerable during an earthquake, mostly because of the density of high-rise buildings and because it's the "economic engine of the city." It focused on everything that could go wrong in the city during a major disaster.

"Every part of the city has its own unique challenges," Merlo said.

'Small incremental improvements'

In the coordination center, four long rows of desks with computers and landline phones were ready for staff. Large television monitors with maps and status updates were mounted on each wall. Ten teams of bureau members were assigned to different responsibilities. One of the teams was in charge of planning, another handled finances and another was a liaison to other agencies.

As the simulation began, chaos unfolded. Monitors communicated the amount of the dead and the wounded. The map lit up with colored dots indicating which buildings and bridges had collapsed. Areas were marked as inspected, restricted and unsafe.

The scenario: Within the first hour, the nearly 500,000-square-foot Mall 205 had collapsed in Southeast Portland, 300 people were injured, some hospitals were being evacuated and building damage was estimated at $197.8 million.

Merlo said the exercise also assumed that all Portland-area bridges, except for the new Tilikum Crossing and the rebuilt Sellwood Bridge, would be unusable.

Team members walked the room and hovered over computers, talking with one another. Their faces displayed concentration and focus. Phone calls were made, plans were discussed and communication seemed strong. The room remained calm and productive.

During the exercise, Merlo's agency tested some new technology. A smartphone app "collector," which the agency customized to Portland's Geographic Information System, was used to quickly assess the location of damage throughout the city and help city officials communicate that location.

Merlo said the app became so "noisy with information" it was distracting. Other agencies didn't have the same customized app as PBEM, which produced another complication, said Merlo.

The other piece of technology tested was the Basic Earthquake Emergency Communication Node. Merlo mentioned there weren't enough people in the communications department using the BEECN to relay messages to the public.

It wasn't all bad, though. Merlo was impressed with all of the bureaus capability to work together and be creative in their problem solving. Merlo said, as information came in they were acting, tracking and following up "very quickly." She also said they were comfortable with the technology they used.

"We're making small incremental improvements and making progress, but it will be years, if not decades, before we can say, with a straight face, that we're ready for the kind of earthquake we're expecting," Merlo said.

Banding Together In Quake City

By Steve Duin

Oregonian, June 10, 2016

Almost a year ago, Kathryn Schulz dropped the Really Big One on those of us still napping aside the Cascadia subduction zone.

Her Pulitzer Prize-winning piece in The New Yorker described the jaw-breaking havoc that will ensue when the Earth buckles once again along "the continent's worst fault line."

There was the delicious brunch quote: "Our operating assumption," Kenneth Murphy, of the Federal Emergency Management Agency, told Schulz, "is that everything west of Interstate 5 will be toast."

There was the wrenching image of the Gearhart elementary school, which offers no escape route from the ensuing tsunami for students and teachers.

There was a fresh, and refreshing, sense of urgency regarding the catastrophic earthquake that is, roughly, 70 years overdue.

Carmen Merlo, director of the Portland Bureau of Emergency Management, called the Schulz essay "a game-changer. A watershed moment. She was able to do in 10,000 words what we've been trying to do for 15 years."

Assemble the masses. Apply the cattle prod. FEMA projects the 9.0 earthquake and ensuing tsunami will kill 13,000 along the 700-mile fault line. As many as ten Portland bridges will collapse into the rivers below. It may take three months to restore electricity in the city.

"Even those numbers do not fully reflect the danger," Schulz wrote, "or, more to the point, how unprepared the Pacific Northwest is to face it."

In other words: Our move, bucko.

In the past week, 20,000 emergency responders in the Northwest were out in force for Cascadia Rising, a training exercise in the chaotic triage that will occur after the fall.

But an equally significant seismic event unfolded last Sunday when the Willamette Heights neighborhood celebrated earthquake preparedness at the Friendly House Community Center.

Five hundred 5-gallon water containers disappeared into the night. Newcomers to the party were schooled in retrofits and gas shut-off valves.

Steve Eberlein of the American Red Cross delivered his 90-minute presentation, "Prepare Out Loud."

"Two hundred and fifty people showed up," says Val Aitchison, the chief organizer of the event. "Not bad for a 100-degree day."

Willamette Heights is one of the city's more responsive and organized communities.

Two years ago, residents gathered to stop Google exec Kevin Rose from demolishing an 1892 home to build his Deku Tree Retreat. They sent the neighborhood mailman off with a $10,000 gift when he retired after 25 years.

And they're setting the pace in an arena where neighborhoods matter.

"Social influence is more impactful than media influence," Eberlein argues, and when it comes to earthquake preparedness, your friends and neighbors are the catalytic converters.

You can argue, of course – and several emergency-planning experts quietly do – that public officials could contribute far more to the cause.

Gov. Kate Brown is tweeting about Cascadia Rising, but the state is still approaching building codes and retrofits on the cheap.

Tilikum Crossing and the Sellwood Bridge will survive the quake – "Two years ago, I wouldn't have known how we would ferry people across the river," Merlo says – but the city still has 1,200 people on its waiting list for Neighborhood Emergency Teams training.

And while Portland Public Schools is rebuilding its schools to ensure they will be safely evacuated when the quake hits, Beaverton is holding its seven new schools to a higher seismic standard, making them safe for reoccupation.

Yet most of what people do or don't do to prepare for the Cascadia quake, Eberlein says, will be based on what they see and hear on their daily rounds.

"It's difficult for a government body to influence culture," Eberlein says, "and preparedness is a cultural issue. Seeing our peers change their behavior is a message that we should change ours, especially when we know better."

That's why the Red Cross wants your neighborhood, like Willamette Heights, to "Prepare Out Loud."

Don't be subtle in your stockpiling. Don't go quietly into that Go kit. Make sure you're not the only one on your block with the essential reserve in flashlights, sleeping bags, first-aid kits, water, and ham radios.

Because when the tremors end, you will lean on your neighbors and they will depend on you.

"Driving won't be an option. Phone calls won't be an option," Eberlein says. "Our ability to access the services, utilities and goods we rely on daily will be vanquished."

In the last five years, Aitchison and her friends have organized three earthquake events. Sunday was the finale, she says: "We announced to our neighbors that we're going to stop pestering you."

Willamette Heights is relatively ready for the Really Big One. If you live in Ashcreek or Alameda, Woodlawn or Woodstock, Parkrose or the Pearl, can you say the same?

No Emergency Hubs In Capitol Hill For Cascadia Rising; Organizer Hosting Disaster Preparedness Meeting

Capitol Hill (WA) Times, June 10, 2016

Capitol Hill has been left out of the region's largest regional training exercise simulating a 9.0-magnitude earthquake along the Cascadia Subduction Zone, reportedly due to a lack of volunteers to support an emergency hub in the neighborhood, prompting Charlette LeFevre to quickly put together her own informational event on Saturday.

Led by the Federal Emergency Management Agency, Cascadia Rising is testing the readiness of local, state and federal agencies for a catastrophic earthquake predicted to occur anytime within the next 50 years or so. The 4-day drill will end Saturday, with residents encouraged to go to their respective community hubs 9 a.m. to noon to participate and learn what they will need to do when the big quake occurs.

Capitol Hill, First Hill and the Central District are devoid of community hubs. LeFevre, who is one of the organizers for the Capitol Hill Pride Festival, plans to use the event as a springboard for forming a Seattle Neighborhood's Actively Prepare (SNAP) group in Capitol Hill.

"Currently Capitol Hill has NO SNAP groups although in the past there were Hubs at Cal Anderson Park, Volunteer Park and Miller Playfield," according to a news release from LeFevre.

Since Capitol Hill won't be involved in Cascadia Rising, LeFevre is providing disaster preparedness information 9:30 a.m. to noon Saturday, June 11, at the Cal Anderson Park shelter house, as well as engaging with community members about forming a SNAP group and making the park a hub again.

The Big Quake Is In Our Future

Daily News (WA), June 12, 2016

Editor's note: Today's editorials appeared in The Wenatchee World. Editorial content from other publications is provided to give readers a sampling of regional and national opinion and does not necessarily reflect positions endorsed by the Editorial Board of The Daily News. We naive human beings spend such a short time on earth that we get a twisted concept of time. When we hear something bad happened 300 years ago, we think it ancient. When we hear it might happen again in 200 years, we shrug. When we hear it might happen in 200 years or next week, we assume 200 years is more likely.

In geologic time, that 500 years is a beat faster than a ticking clock. It is a frequent event. Our complacency is all too human and dangerous, yet we seek comfort in ignorance. Geologic disasters like massive earthquakes or volcanic eruptions are not here and now, we think. They are in history books. If they do strike, they hit the unfortunate poor in some distant and exotic land and we will watch on CNN. Even when Mount St. Helens was smoking and bulging we thought volcanic eruptions were someone else's problem. Curious people now no longer with us crept in for a closer look. We knew it could happen. We could see it. Still, we were surprised and unprepared.

The quake geologists are certain is coming will be perhaps a magnitude 9.0, more than 1,000 times stronger than the Nisqually quake of 2001 that nearly knocked down the state Capitol, or the 1872 quake near Lake Chelan that triggered slides so massive they blocked the mighty Columbia. The quake will be followed in minutes by a speeding tsunami 30- to 60-feet high that will devastate coastal communities and rip across the North Pacific. The last Cascadia megathrust hit Jan. 24, 1700, the date determined by civic records in Japan, where the resulting tsunami washed away entire villages. Geologists say such quakes occur here every 300 to 500 years.

So it is slightly comforting that this week the many agencies with responsibility in emergencies are part of an earthquake drill called Cascadia Rising. Headed by the Federal Emergency Management Agency, the event has as many as 20,000 participants, making it perhaps the largest disaster preparedness drill in the nation's history. They are testing command, control and coordination in a world without communication, without passable roads, without water, power, food distribution, functioning hospitals, where tens of thousands are dead or injured or missing, hazardous materials are everywhere spilled, where waves have washed much away and thousands of bridges and buildings are laid waste or sunk in the quake-liquified soil. How many of us will die in the quake?

FEMA is testing community cooperation and coordination in the face of unimaginable catastrophe. The exercise will certainly be helpful. It is a useful to consider what may happen, and what will happen. The catastrophe will bring chaos, and days and weeks when our modern, comfortable life will be forgotten.

Then again, even in relatively small disasters, almost nothing goes as expected. In this coming quake, which may be the largest natural disaster to strike North America in our history, the best of plans will likely disappear. That does not mean planning has no value, or preparing for what we think might happen will do no good.

'Any Type Of Structure Will Be Damaged' After A Mega-quake, Official Says

By Kipp Robertson

KIRO-FM Seattle (WA), June 10, 2016

The most damage done to inland cities during a massive earthquake will be from the shaking itself, and Regional Administrator of FEMA Kenneth Murphy says no structure is safe.

Scientists predict a magnitude-8.7 or higher earthquake — which is what Washington agencies have been training for all week — will shake for about five minutes. There isn't much that will go undamaged from so much shaking, Murphy told KIRO Radio's Dave Ross.

Many houses in the Northwest are woodframed. Murphy says they will have moderate damage. Older homes will have even more damage.

"Really, any type of structure will have damage," Murphy said. "A lot of things don't do well being shook for five minutes."

On the coast, a tsunami will cause even more devastation. Concerned with the safety of people in Seattle, Dave asked Murphy how far up James Street he needs to run to escape a tsunami.

"In all honesty … I don't think the power of a tsunami will reach [Seattle]," Murphy said. "The tsunami will hit the coast and islands and lose its power."

However, Murphy says it might not be a bad idea to go about a half-mile away from the Seattle waterfront, just in case.

Cascadia Tsunami Evacuees Leave All Behind

By Brian Walker

Bonner County (ID) Daily Bee, June 10, 2016

Editor's note: This story is not real.

The earthquake and tsunami didn't happen — not yet, anyway. But experts say it's only a matter of time until Cascadia Fault sets off a disaster of historic proportions on the coast that will also have a dramatic impact throughout the Northwest, including North Idaho.

Numerous agencies are responding to the fictional disaster in region-wide training exercises. The Hagadone News Network is treating these exercises as an actual news event to try to relay the importance of efficient and effective response.

COEUR d'ALENE — Audrey Hammons wept as she recounted evacuating her Seattle assisted living facility due to the earthquake and tsunami that has devastated the West Coast.

Hammons, who is battling Lou Gehrig's disease, was among about 40 seniors who arrived at a medical needs shelter on Thursday afternoon at the Kootenai County Fairgrounds after a six-hour bus ride to Coeur d'Alene.

"I'm so scared and don't have my wheelchair," she said. "I'm in pain."

Hammons said she had to leave all of her belongings behind — including her medications — as she was unexpectedly rushed to a bus.

Hammons said she didn't see any of the destruction because she was whisked from the senior facility so rapidly.

"It all happened so fast," she said. "A lot of us were just put on the bus, and that's all I really remember."

Tuesday's earthquake, which measured 9.0 on the Richter scale, was centered 95 miles east of Eugene, Ore. It caused a tsunami that has crippled the coast from northern California to British Columbia. About 13,000 people have died.

Government officials on Thursday released the latest estimated number of evacuees expected to arrive in Kootenai County at 40,000 and in Idaho 140,000. Bonner County officials estimated 3,000 evacuees would be arriving there by Thursday night, while 750 were estimated for Boundary County.

The influx of people to the area has wreaked havoc on local resources as scattered power and cellphone outages have been reported across the region. A team of ham radio operators is assisting with communication during the crisis due to cellphone problems.

The crisis is also causing heavy traffic on local roads and lines at gas stations and grocery stores as some local residents fear the influx could cause fuel and food shortages.

"Please do not travel unless needed, fuel supplies are limited," an Office of Emergency Management press release states.

Most local hotels are booked up and have increased their rates by 50 percent.

"People are looking for shelter for their pets and sleeping in cars," said Sandy Von Behren, Kootenai County's OEM director.

An estimated one million people on the coast have been displaced.

There are almost no working hospitals west of Interstate 5. It may be months before areas on the coast have power again and it may take up to a week for some residents to have power back here.

About 40 percent of the police and fire stations on the coast have been destroyed, and roughly half of the bridges have either been damaged or knocked out.

No aftershocks or damage have been reported in Idaho.

The catastrophe was caused by the rupturing of the 700-mile Cascadia Subduction Zone.

The zone averages a quake every 300 to 500 years. The last one prior to this occurred 316 years ago.

The emergency operations center (EOC) at the Kootenai County Sheriff's Office was activated on Thursday morning to coordinate relief services.

"Having enough shelter, food and water is our priority," said Jim Lyon, public information chief at the center, adding that the Idaho Army National Guard is assisting in that effort. "We want to direct people to the shelters whenever possible so we don't overwhelm our local hospitals."

Most Idaho counties, along with the states of Washington, Oregon and California, have declared a state of emergency.

Hundreds of local volunteers are staffing relief operations ranging from the EOC to the medical needs shelter organized by the Panhandle Health District and the general population shelter at the fairgrounds organized by the American Red Cross. There is also a section at the fairgrounds dedicated to pet care.

Melanie Collett, public information officer at the shelters, said the medical needs shelter is for people with non-acute medical conditions, but require medical assistance beyond what is available at the adjacent Red Cross shelter.

Hammons said she's thankful for the help.

"Everybody here has been so nice, but I don't know when I'll be able to go home," she said. "I feel lost."

While sitting beside Hammons, Shauna Miller, a volunteer with the Medical Reserve Corps, said she wanted to be a part of the relief efforts due to the magnitude of the crisis. The tsunami was comparable to the one that hit Japan in 2011 when nearly 16,000 people were killed.

"Sometimes people just need comforted," she said. "They're having emotional distress, and it's important that their needs are met."

Cascadia Rising: Days After Quake, Military Aid Would Arrive By Air

By Natalie Johnson

Centralia (WA) Chronicle, June 10, 2016

A day after local emergency responders and community members discussed how they would respond in the first three days after a catastrophic earthquake along the Cascadia Subduction Zone, the Army and Air National Guard on Thursday rehearsed their response in the days after the last rumbles subside.

Specifically, troops roved through Western Washington looking for places to land helicopters and airplanes in order to bring food and water to stranded residents.

"We're looking for farmers' fields," said Command Sgt. Maj. Brian Rikstad, of the Army National Guard. "What they're really using us for is to make our way through the rubble."

In the event of a major disaster, Rikstad's cavalry reconnaissance squad would make its way through heavily damaged areas, reporting what it sees to headquarters.

"With that information, we're able to bring in the big … planes and transports that are going to bring in food and water," he said.

About two dozen members of the Army and Air National Guard gathered Thursday to practice landing a UH-60 helicopter in a field south of the Southwest Washington Fairgrounds. Both exercises were a part of the week-long Cascadia Rising exercise, coordinated by the Federal Emergency Management Agency, which is designed to plan emergency responses to a predicted 9.0 magnitude quake affecting western portions of Washington, Oregon, California and British Columbia.

The Cascadia Subduction Zone stretches 800 miles from California to British Columbia. Earthquakes have historically occurred along the fault every 200 to 500 years, with the last major earthquake occurring about 300 years ago, according to FEMA.

Agencies throughout the region conducted exercises under a scenario of a 9.0 magnitude earthquake with an epicenter off the coast of Oregon.

"Think of it as a pre-planned operation. You plan it and you put in on a shelf," said Staff Sgt. Jimmy Takach, of the Air National Guard.

Sometime down the line, when an actual disaster occurs, leaders can take the plan off the shelf and use it to inform their response, he said. That doesn't mean everything will go according to plan.

"It's going to be a hodgepodge," Takach said.

While the National Guard conducts regular exercises around the country to prepare for natural disasters, Lt. Col. Chris Blanco, of the Army National Guard, said this exercise particularly gives the troops "proof of principle" of their skills.

"Being able to train in an environment like this is really important," he said. " … It's kind of neat the whole state is united in this effort."

In the event of a catastrophic earthquake, National Guard members would be expected to report to their posts in three to five days, Rikstad said, after they've taken care of their own families.

"My job starts in my community," he said.

After that, reconnaissance squads will move through damaged areas sending information back to headquarters, which will be in Spokane, outside the radius of the earthquake's damage.

"They're trying to get out in the community," Rikstad said. "That's how you start calming the community down."

Takach said civilians can expect the scale of damage and aftermath to be similar to that of Hurricane Katrina.

"There's no cellphones, there's no power, there's no running water, there's no running sewage," he said.

He said people should expect looters and general disorder following a large-scale disaster in an urban area.

Officers said people in rural areas will likely be more resilient after a disaster.

Residents should consider stockpiling water and non-perishable food, and rotating their stock to ensure freshness, Takach said. People can also take part in Community Emergency Response Team training to prepare for disaster response of any kind.

Most importantly, Takach said, people need to remember that help will come.

"You're not alone in this thing," he said.

Bonner County Daily Bee – State News, Lessons Are Learned In Cascadia Drill

By Mary Malone

Bonner County (ID) Daily Bee, June 12, 2016

Lessons were learned during the four-day "Cascadia Rising" drill, resulting in a successful exercise for the region's emergency responders, local officials, health and medical staff, private industry and emergency operations center personnel who participated in the drill.

"Events like this are useful in that you can plan for it, but when you actually run it you can see what worked and what didn't work, and what would become critical quickly and what doesn't," said Kootenai County Commissioner Marc Eberlein.

The large-scale exercise drill took place throughout Idaho, Washington, Oregon and British Columbia with the epicenter of the "9.0 earthquake" to have taken place along the Cascadia Subduction Zone off the coast of Oregon and causing a "tsunami." In North Idaho, the efforts focused on the wave of evacuees who would seek shelter away from the coastal areas that would be devastated by the earthquake and subsequent events.

Sandy Von Behren, director for the Kootenai County Office of Emergency Management, said the exercise took a year and a half to plan, and "has been well worth every minute."

"The whole purpose of an exercise is testing plans and procedures, so that's what we did," Von Behren said. "We all had plans that we needed to test and we all had exercises that we were required to do, and we designed one huge exercise and came together to do one to test all of the different plans."

Von Behren said the OEM had their systems and processes in place, but sometimes things don't quite go as planned. She said the county's Emergency Operations Center was set up three days prior to the exercise to make sure everything was up and running, ensuring that all the telephones and computers were working properly. Once the training began, they still had real-life trouble with the equipment and during an emergency, "information sharing is key," Von Behren said.

One test for the agencies involved was finding the best way to share information, the quickest and most efficient way. Von Behren said they utilized WebEOC, an incident management website where they could communicate with states and counties and all the different partners, and found there were "some good things about it and some bad things about it." So one thing they will look at is whether there is a way to improve it.

"That's one of the things that we want to work on is identifying our best means of communication so that it's efficient and effective, and getting to the right people," Von Behren said.

Eberlein said one of the first things they noticed was a shortage of fuel, which is especially needed for emergency services to keep running — fire trucks, ambulance, police — and is something they would need to address more quickly in a real emergency.

Fuel and supplies would quickly run short, and Von Behren said they do not want to wait until they find out the stores and gas stations are running out of fuel and supplies.

"We learned in this exercise we are going to think immediately about getting food and getting fuel in here before it gets to be a problem and being ahead of the game — being proactive instead of reactive," Von Behren said.

If more supplies and fuel are not available locally, she said they would immediately request assistance from the state and the Federal Emergency Management Agency. In a real situation with such a far-reaching effect, the resources would be limited, so the sooner the county orders what it needs, the more likely it would be to receive the fuel and supplies in a timely manner.

The briefings began Tuesday, with a conference call on Wednesday. On Thursday, Panhandle Health District set up a medical needs shelter alongside Red Cross at the Kootenai County Fairgrounds as the "evacuees" began to arrive.

Melanie Collett, spokeswoman for Panhandle Health, said several members of the medical staff from Panhandle Health, Kootenai Health and Heritage Health helped out, as well as about 50 volunteers who acted as evacuees, some in need of medical attention.

She said the Panhandle Health District's official after-action report will be published soon, but said there were a lot of good things shared in their reports. She said nurses felt prepared for the "surge" of patients and various scenarios they practiced.

"It was our first time practicing this in a full-scale, fully functional exercise, and it was very successful," Collett said.

Dean Keck, director of training and exercise for Panhandle Health District, acted as the lead controller and exercise director during the airplane "crash" at the Coeur d'Alene Airport Friday. He said the drill tested the airports response plan and the county mass casualty and mass fatality plans. He described the scenario — a passenger plane carrying about 30 evacuees was diverted from Spokane to Coeur d'Alene. As it landed, the plane struck a small commuter plane carrying two people. The fuselage of the larger plane broke in half and caught fire.

Northern Lakes Fire District was the first to respond to the scene, activating an alarm that brings in more resources, including more EMS and Life Flight as well as several fire departments from throughout the county.

With all of the volunteer "passengers" covered in blood, eight were transported to Kootenai Health, one by Life Flight, Keck said.

Kim Anderson, spokeswoman for Kootenai Health, said the drill went as planned as far as taking in "patients" from the airplane drill, and Kootenai Health did not identify any need for process changes.

"Conducting process drills like this help us ensure that our processes work correctly, and enables us to have good responses in emergency situations," Anderson said.

Keck, as well as Northern Lakes Fire personnel, said they are still working on putting together the after-action report, but Keck said there were areas for improvement and overall the drill went "very well."

"There was really great, participation, cooperation, communication and teamwork amongst all those agencies," Keck said.

Northern Lakes Division Chief, Mike Mather, said they did a quick hotwash, or after-action discussion, Friday to identify some key points regarding protocol and procedure during the "crash."

"Dealing with different response protocols from different agencies, everybody thinks a little different in the different guidelines on how to respond to various incidents," Mather said. "When you put that all together under one command structure it can be difficult."

Being the largest exercise they have ever done and working with agencies they don't work with on a regular basis, Mather said the bottom line is the it went well and was "very beneficial" for the responders and the community.

Jim Lyon, deputy fire marshal and public information officer with Northern Lakes, is also a lead PIO for EOC when needed, so he worked both sides during the exercise. Lyon said he was "inundated with information" on the first day, following news agencies that simulated real footage of the tsunami and social media coverage.

"It was a lot of frustration at first, as incidents usually are, whether they are real or simulated," Lyon said, adding that they had some technology problems, such as the phones. "From that point of view, it was kind of a controlled chaos at the beginning."

He said those involved slowly got into a rhythm and by Thursday things were running "pretty smoothly." During Friday's airplane "crash," Lyon said there was a security breach when a man who was not supposed to be there got inside the perimeter. He also said, in a real-life scenario, the Hagadone News Network would not have been allowed on the scene.

One thing that was noticed by all the personnel involved in the training was the amount of people who volunteered their time to help — a good indication of how the community would come together in a real emergency.

Eberline said the community is "very fortunate" to have so many people willing to participate to make the scenario work.

According to an email to the Hagadone News Network from Idaho Governor C.L. "Butch" Otter, 850 Idaho responders participated in the exercise.

"I was extremely impressed by the level of professionalism and dedication that our civilian and military emergency personnel brought to this training exercise," Otter stated in the email. "We hope it never happens, but if it does, Idahoans should feel some comfort knowing we have very capable men and women trained to deal with such catastrophic events."

Von Behren said volunteers came from Bonneville, Bonner and Spokane counties. Agencies volunteered their time in planning the exercise and conducting the exercise, and Von Behren said the outside agencies coming in to help allowed the local agencies to play a part rather than being the ones running the exercise.

All the agencies involved spread the word of volunteers needed as extras to play the part medical patients and evacuees.

"It's really cool to see how the community has come together and how the partnerships that we work to build really do work," Collett said. "And we have been lucky that we haven't had a disaster like this, but it is important that we practice."

If there is ever a real disaster in the region, whether it is an earthquake or other catastrophic event, it would directly affect North Idaho, Von Behren said.

"We are very fortunate to live here in Kootenai County, because in Coeur d'Alene we have a lot of resources that are right here," Von Behren said.

County Greets Cascadia Rising

By Keith Kinnaird

Bonner County (ID) Daily Bee, June 10, 2016

SANDPOINT — Bonner County's emergency management plans and abilities were put to the test

Thursday as it took part in Cascadia Rising, a massive interstate disaster exercise.

The exercise's name is drawn from the Cascadia subduction zone, which stretches 700 miles from Medocino, Calif., to Vancouver, British Columbia. The exercise contemplated a magnitude-9.0 earthquake and attendant tsunami.

Such an event has the capacity to destroy the Interstate 5 corridor and inundate it with water, potentially pushing a wave of humanity east to escape the devastation.

"It wiped out a lot of the coastal areas," Matt Klingler, a Bonner County Public Works director who served as director of emergency management director during the exercise.

The Federal Emergency Management Agency said such an event could cause as many as 3,000 people to seek refuge in Bonner County, which would place a significant amount of strain on local shelter, food and fuel resources.

"That's one of the priorities for us to figure out," Klingler said of the sudden influx of displaced citizens.

An Emergency Operations Center established at the Bonner County Administration Building, which was staffed with employees from across various departments who have been undergoing EOC training since the start of the year, said Emergency Management Director Bob Howard, who served as an evaluator during the training exercise. Howard said EOC trainees were subjected to increasingly complex scenarios in the training leading up to the massively complex Cascadia Rising exercise.

Logistics and planning sections at the EOC grappled with the demands of sheltering and feeding earthquake refugees.

Throughout the day, mock disaster planners would throw out curve balls the EOC would then have to react to.

"We had food shortage concerns. We had gasoline/fuel shortage concerns and they dealt with those issues, too," said Howard.

There were even scenarios involving rowdy situations at local grocery stores and rolling power outages as the disaster unfolded.

Howard said Bonner General Health conducted its own functional exercise to take part in Cascadia Rising.

"They had volunteers to be patients and so they were triaging those patients," he said.

The Bonner County Amateur Radio Emergency Service also took part in the exercise. The volunteer group served as backup communication.

"Our amateur radio people were fantastic. They were able to communicate with Washington, Oregon and Boise," said Howard.

Bonner County ARES' role in the exercise grew when radio actual radio trouble flared up elsewhere.

"Bonner County picked it up and carried it. They did relay for other states," said Howard.

Howard said he was pleased with Bonner County's performance during the exercise and said he would have no qualms with activating the EOC in an real-life emergency. He also plans to have EOC disaster exercises at least twice a year.

"We're going to continue to train and exercise as often as we can. We want to get better at what we're doing and be ready for when the big one happens," said Howard.

Megaquake Rehearsal Highlights Prominence Of Northwest Command Center

By Andy Hobbs

Stars And Stripes, June 11, 2016

OLYMPIA, Wash. (Tribune News Service) — The largest earthquake and tsunami drill in Northwest history continued Thursday at a critical command post in Shelton that will serve five Washington counties when "the big one" strikes.

The Mason County Fairgrounds will host the main operations for Thurston, Mason, Grays Harbor, Lewis and Pacific counties. The site includes Sanderson Field, which is the five-county area's largest aircraft runway that is near the coast but less likely to suffer tsunami damage.

If the Shelton site is out of commission, the backup airfield would be Bremerton National Airport, said Lt. Col Clay Braun of the Washington National Guard.

"Shelton is a very critical place for us," he said.

Thursday's Cascadia Rising drill in Mason County included a mix of National Guardsmen, Army soldiers and Air Force airmen — and offered a snapshot of the bases that will spring up statewide in the case of a major natural disaster.

Service personnel manned tents for medical care and X-rays. Helicopters dropped supplies via parachute while a handful of paratroopers practiced their landings. These airdrops will be critical when trying to reach isolated pockets of people.

The Shelton operations center will coordinate efforts alongside the state's other bases. Military personnel will check roads and bridges while also assisting local law enforcement and rescue workers.

The base will house a mobile high-frequency radio system that can keep communication alive when cell towers and phone lines are down.

Some of the soldiers at Thursday's drill in Shelton have assisted in past natural disasters such as the 2014 Oso mudslide and 2005's Hurricane Katrina on the Gulf Coast.

Lt. Col. Adam Iwaszuk of the 96th Troop Command said his experience in New Orleans revealed at least one key survival tip for the public in any disaster — whether it's a flood, storm, earthquake or tornado.

"You should know an escape route," he said. "The citizens need to be prepared for what they're likely to be subject to."

Washington National Guard Maj. Gen. Bret Daugherty urges the public to stock up on emergency supplies such as food, water and medicine to help make the military's job easier. He said the Guard will continue to train and ensure a proper disaster response.

"Our intent is to keep revisiting this until an actual earthquake strikes us," he said. "Hopefully, that's not for a long time."

Co-sponsored by FEMA, the Cascadia Rising drill began Tuesday and wraps up Friday. It was designed to allow the area to practice emergency response to a disaster involving the Cascadia Subduction Zone, a faultline that stretches between Northern California and Vancouver Island.

The zone has produced earthquakes with a 9.0 magnitude or higher at intervals of 400 to 600 years — with the last one occurring in January 1700, according to the Pacific Northwest Seismic Network.

And the stakes are high. Washington state alone could face thousands of deaths and injuries. Emergency responders also estimate that at least 1.27 million people could end up without adequate food and water in a worst-case scenario.

Hospitals and nursing homes could see a combined 80,000 medical evacuees. Main roads such as Interstate 5 and U.S. 101 would likely be unnavigable.

"It could happen right now. It could happen 500 years from now," said Lt. Col. Braun about the possible large-scale disaster. "This is our rehearsal."

Megaquake Minded

By Erick Bengel

Daily Astorian (OR), June 10, 2016

Clatsop County isn't as far along in prepping for a Cascadia earthquake and tsunami as Tiffany Brown, the county's emergency manager, would prefer. But that's nothing to be ashamed of, given that the region only realized the full magnitude of the threat within the last decade.

"We've known about it for 20 years or so, but it's really that additional study that has occurred since 2011 that has left us with a greater understanding of how big the threat is, and that's why everybody is really paying attention to: What are we doing, and how ready are we?" she said. "Relative to how long we've understood the enormity of this hazard in our community, we are where I would expect us to be."

Brown took stock of the county's disaster readiness this week during Cascadia Rising, a Tuesday-through-Friday focus on preparing agencies in Oregon and Washington state for the Cascadia Subduction Zone megaquake, a rare but cataclysmic event that could cause a humanitarian crisis in the Pacific Northwest.

At Camp Rilea in Warrenton, the staff at the County Emergency Operations Center practiced communicating and coordinating efforts with local agencies and military personnel.

The team leveraged social media for the first time during an exercise, and conducted successful ham radio operations with everyone they'd intended to — including Arch Cape and a citizen in Lewis & Clark — plus some they hadn't: Federal Emergency Management Agency Region X headquarters in Bothell, Washington, and Pacific County Emergency Management.

In addition, they used the county mass notification system, ClatsopALERTS!, to communicate with other participants in the training exercise, notify community leaders that the EOC had been activated, and advised Arch Cape and Falcon Cove residents that the military would be conducting aerial assessments in their area.

These latest measures follow steps the county has taken to raise awareness of Cascadia, including the installation of signs directing people out of the tsunami zone and local high schools adding Community Emergency Response Team training to the curriculum.

"We only have so many resources to throw at this, and I think we're moving in the right direction in terms of whole community planning," she said.

"There's also no end to the list of things that we need to be looking at, improving upon."

'Cycle of improvement'

How did communication between the county's emergency operations center and military personnel go during Cascadia Rising?

"It went great," Brown told a group of local officials and community leaders touring the military base Thursday. "Did it go like we thought it was going to? Yes and no. We knew there would be problems talking to one another, systems that didn't jive. But that's the nature of exercising."

Most of those problems happened on the first day, before the teams had found their "battle rhythm," she said.

"When it came time to send our requests to the state, the way we had practiced and understood that it would be happening was not the way it ended up happening, and it took us several hours to sort of readjust and get that moving in the right direction," she later elaborated. "And it's no one's fault, it's just the way things played out that morning that weren't anticipated."

Sometimes a communication hiccup boiled down to human error. Other times it was a technical difficulty, like a nonfunctioning fax machine.

"You can have all the systems and the plans and the latest and greatest equipment, but, at the end of the day, you still have human beings running it," she said.

Making mistakes and figuring out how to correct them is precisely the point of training exercises, she said: "Mistakes are good in this world. And it's counterintuitive to a lot of people, but mistakes are what we're looking for."

"We write a plan, we exercise it to identify the gaps and vulnerabilities, we take corrective action, we update our plan, we exercise our plan, and we continue that," she said, "and, in this way, it's a continuous cycle of improvement."

Meanwhile, the agencies build relationships and get used to working together under pressure.

"If you participate in an exercise, you always have the opportunity to improve relationships," she said. "That may be the most important thing that comes from them in many cases."

Disaster relief

During Cascadia Rising, about 800 soldiers comprising a dozen military teams assembled at Camp Rilea and ran through a series of simulated rescue operations, including saving people in a collapsed inner city.

After touring the County Emergency Operations Center, some local leaders — and a few international dignitaries from partner agencies in Vietnam and Bangladesh — headed to the training site to observe the mechanics of a relief effort.

The VIPs witnessed National Guard soldiers moving and breaking up heavy boulders from a rubble pile to reach victims; attending to the wounded or deceased (played by actors in Hollywood-style makeup) at a casualty collection site; checking the area for chemical, biological, radiological, nuclear and explosive materials while decontaminating people suspected of facing exposure; and triaging and treating the survivors.

Maj. Gen. Michael Stencel, the adjutant general of Oregon, told local leaders — including Astoria Mayor Arline LaMear, Gearhart Mayor Dianne Widdop and Cannon Beach Mayor Sam Steidel — that under the worst-case scenario, a 9.0 earthquake, most life-saving efforts in the first 36 to 72 hours will depend on local responders, able-bodied citizens and well-prepared neighbors.

"We expect that the casualty rate's going to be phenomenal, and even a lot of your firemen ... aren't going to be there right away," he said. "We don't know what the condition's going to be for your hospitals and their ability to take patients."

Though outside forces will come, the mobilization may take a while, he said. "They're going to be anxious to get here, but it's going to be a struggle."

Stencel asked the officials to do everything they can to help their citizens prepare for Cascadia.

Compared to Japan — a country that had spent about 50 years preparing for an earthquake and tsunami, yet lost more than 15,000 people during the 2011 disaster — "we're behind the curve," Brown said.

"We just need to do more of this," she said. "And my hope in all of this, despite what anyone did or didn't learn in the exercise, is that it helps them recognize the importance of it, and makes them want to do more of it."

Editorial: Cascadia Rising Offers Chance To Plan For Earthquake

By Corvallis Gazette-Times Editorial Board

Corvallis (OR) Gazette-Times, June 12, 2016

The big one hit the Pacific Northwest this week — the massive 9.0 magnitude earthquake off the coast of Oregon that will trigger a deadly tsunami and widespread devastation far inland.

Well, not really. Not yet. But what did begin on Tuesday is a four-day event called "Cascadia Rising," a three-state drill to rehearse scenarios on how the region would deal with the double-fisted punch of the quake and tsunami. The working assumptions Cascadia Rising organizers are using include these sobering estimates: The quake will kill about 1,100 people. The tsunami will be deadlier, with an estimated toll of 13,000. Some 24,000 people will be injured.

The quake and tsunami will cut off coastal communities and collapse phone and internet service. Roads may be impassable in the wake of the quake, and it could be weeks before emergency services can get to neighborhoods to render aid.

Not to mince words, but that's all bad.

The good news is Cascadia Rising itself, an event of unprecedented scope: This week's exercise will involve about 20,000 people, representing various federal agencies, the U.S. military and state and local emergency response managers from Oregon, Washington and Idaho, Native American tribes and emergency management officials in British Columbia.

The city of Albany will get involved in the exercise on Friday: Officials are planning to test the capabilities of their emergency coordination center as well as disaster management. The city of Corvallis has nothing that elaborate planned, but some employees plan to participate in Cascadia Rising events throughout the state.

At the heart of all of this is the Cascadia subduction zone, a 600-mile-long fault just off the coast that runs from Northern California to British Columbia. Geologists say that the zone on average produces magnitude 9.0 quakes every 500 years, but big quakes have been separated by as few as 200 years and as many as 1,000. The last big quake occurred about 300 years ago. No one knows for sure when the next big quake will occur, but it's a sure bet that it will happen.

So it makes sense to prepare for it now — and to review those preparations from time to time.

Washington Gov. Jay Inslee, standing in front of military and other federal vehicles brought into Washington's Camp Murray for the exercise, put it well when he said that "Cascadia Rising is about making sure we're as prepared as we can be. The hope is to identify those areas where we perform well. But obviously we also want to identify our weaknesses." In fact, identifying those weaknesses — and they will emerge — may be the most important part of the entire exercise.

There's a role for the rest of us to play in this. Cascadia Rising gives us a chance to update our own disaster plans, which likely have grown a little dusty since the flurry of publicity about the subduction zone last summer. Taking steps now to be prepared is a great way to shake off the fatalism that can often take root in the face in such powerful natural forces.

In fact, the one thing we don't like about Cascadia Rising is its name, which sounds like the title of the first book in a young-adult series of novels set in a dystopian future. When the quake comes, though, it'll bring plenty of real-life drama. It's best to get ready now.

North Marion Participates In Cascadia Rising Event With Evacuation, Reunification Drill

By Lindsay Keefer

Woodburn (OR) Independent, June 10, 2016

What would happen if an 8.2 magnitude earthquake hit the Northwest? That's what North Marion School District is trying to find out.

The district expounded on an October emergency preparedness drill on Friday, taking part in the statewide Cascadia Rising event. The four-day exercise June 7-10 is for governments and other entities to train, practice and collaborate on how they would best coordinate and organize in the aftermath of an earthquake, the disaster most likely to strike Oregon.

At North Marion, this not only included a regular earthquake drill, evacuation and reunification process with parents, but also meant assigning roles to staff and high school students and collaborating with local emergency personnel, namely Aurora Fire District, Woodburn Fire District and Marion County Sheriff's Office. Additionally, more than 100 parents arrived to take part in the reunification exercise.

Friday's imagined scenario involved a boiler room fire in the high school (which was contained) and a beam falling down, blocking freshman English teacher LINDSAY KEEFER – Firefighters Morgan Whaley (left) and Blake Julian strap ninth-grader Keila Dubikin to a stretcher as part of Friday's emergency preparedness drill at North Marion School District.

Maureen Davis' classroom door. Davis' students each had an index card taped to their shirts to tell the search and rescue team, made up of staff members who have been getting basic medical training, what injuries they have. Injuries varied from a lacerated forehead to a collapsed lung.

"It's a good thing to have, being prepared," Davis said. "For the most part, my kids have been really good and are taking it seriously."

Not only that, but the day's events really unnerved some "injured" students.

"It was well-run, but they took more time than I thought (to rescue all the students)," said junior Kyia Brooks. "But I thought the fact we did this drill was cool.

"In the time it took to find me, I would probably have died," said sophomore Anna Allison, who suffered multiple pretend injuries, including internal bleeding. "It concerns me because people react slower when they're frantic, when the real thing happens."

That's why practice makes perfect, and why the district will continue working with community partners and on its internal response time, Superintendent Boyd Keyser said.

"We need to be working closely together here in north Marion County, because we're not going to be able to get fully involved services right away," he said. "So over the next six months to a year, you'll see the majority of these entities continuing with this collaboration."

The district is also using funds for a generator, a long range antenna and a ham radio, among other emergency kit items.

"We consider it a long-term investment," Keyser said. "We wish there were funds from the state or elsewhere specifically for this."

He added that the district has applied for a FEMA grant to purchase a diesel generator that would back up a freezer in the middle school, since the North Marion campus is considered a Red Cross shelter site in case of disaster and would need to provide food for several days.

Though, as the students pointed out, there are still issues to work on, Aurora Fire District Lt. Bill Hansen observed that the district's preparedness is continuously improving.

"They've definitely come a long way," he said. "They're reaching out to us a lot more. They realize they need to learn how they can become more self-sufficient because we might take a while to get to them."

Quakes Shake Ring Of Fire After FEMA Launches Doomsday Drills

Trunews, June 10, 2016

(TRUNEWS) In the last 24 hour two major earthquakes struck along the ominous 'Ring of Fire', a week after FEMA started doomsday quake drills.

A 6.1-magnitude hit Nicaragua and a 5.2 -mag. shook Borrego Springs in San Diego County, California.

The U.S. Geological survey said the Nicaraguan earthquake hit Thursday night, with an epicenter 16.1 miles northeast of Chinandega and a depth of 6.2 miles. No casualties were recorded but the newspaper La Presna reported that the walls of a church collapsed in Chinandega.

The quake was felt strongly in Nicaragua's capital, Managua, 84 miles away, and Reuters reports it was also felt strongly as far away as Tegucigalpa, the capital of Honduras, 167.7 miles away.

As for the California earthquake, the USGS said it hit around 1:05 am with its epicenter 13.7 miles northwest of Borrego Springs. About 3,000 people reported feeling the earthquake, with residents feeling the earthquake in northern Los Angeles County, Orange and Ventura counties, and the Inland Empire.

These recent quakes along the Ring of Fire — a string of volcanoes and sites of seismic activity or earthquakes around the edges of the Pacific Ocean — come after FEMA began the "Cascadia Rising" drill on June 7th, a drill to simulate the effects of a magnitude-9.0 earthquake along the Cascadia Subduction Zone and an accompanying west coast tsunami dozens of feet tall.

According to the official public statement for the event, more than "50 counties, plus major cities, tribal nations, state and federal agencies, private sector businesses, and non-governmental organizations across three states—Washington, Oregon and Idaho" participated.

In addition to "Cascadia Rising," U.S. Northern Command held five other exercises simultaneously. According to the final draft of the Cascadia Rising drill plan, those five exercises are entitled "Ardent Sentry 2016,″ "Vigilant Guard," "Special Focus Exercise," "Turbo Challenge" and "Joint Logistics Over-the-Shore." The primary scenario that of all of these participants focused on was one that involves a magnitude 9.0 earthquake along the Cascadia Subduction Zone followed by a giant tsunami that could displace up to a million people from northern California to southern Canada.

Is The US Prepared To Tackle Natural Disasters?

By Caroline Diana

Inquisitr, June 10, 2016

A shallow magnitude 5.2 earthquake woke up the residents of California near Borrego Springs on early Friday morning. According to the U.S. Geological Survey (USGS), the earthquake occurred at 1:04 a.m. Pacific time at a depth of -0.6 miles. The epicenter was 16 miles from La Quinta, 19 miles from Palm Desert, and 20 miles from Rancho Mirage, reported the Los Angeles Times.

Seismologist Lucy Jones on her Twitter feed reported that several aftershocks were felt. Jones said that the earthquake occurred along the San Jacinto Fault, the most active fault in Southern California.

Meanwhile, social media is abuzz with status updates from the residents of San Diego and Los

Angeles, reporting that they felt the tremors of the earthquake.

Amy Vaughan, a USGS geophysicist, pointed out that the earthquake has resulted in a series of aftershocks, according to Fox News. Vaughan said that the earthquake was strong enough to have woken up the sleeping residents.

The Los Angeles County Fire Department said that the earthquake has not caused casualties so far.

The largest of the earthquakes occurred at 1:05 a.m. and was centered 13 miles north of Borrego Springs, according to River Side County News Source.

According to NBC News, the quake was followed by three aftershocks over the next three minutes. These earthquakes measured between magnitude 2.8 and 3.5. Another two aftershocks of the earthquake of similar magnitudes were recorded over the next 40 minutes. The epicenter was around 13 miles north of Borrego Springs, which has a population of around 3,500. The local police department told NBC News there were no reports of damage caused by the earthquake.

Paratroopers prepared for earthquake

Science Alert reported that this week, more than 20,500 personnel from the government and healthcare agencies took part in Cascade Rising, a huge training exercise designed by the U.S. government to prepare the Pacific Northwest for a catastrophic earthquake. Paratroopers also took part in the readiness drill.

Chief Warrant Officer James Pierce said that parachuting may be the only option to get to remote locations that are rendered undrivable.

“It’s a good, effective way to get gear to the ground,” Pierce told U.S. News.

While no evacuations are taking place, Cascadia Rising is using various emergency scenarios to test communication capabilities, medical supply routes, and transportation issues, reported Science Alert.

Chief Warrant Officer James Pierce said that parachuting may be the only option to get to remote locations that are rendered undrivable.

“It’s a good, effective way to get gear to the ground,” Pierce told U.S. News.

While no evacuations are taking place, Cascadia Rising is using various emergency scenarios to test communication capabilities, medical supply routes, and transportation issues, reported Science Alert.

In a press release issued on June 6, Ken Murphy, the regional administrator for FEMA Region 10, said, “A 9.0 Cascadia Subduction Zone earthquake will be a disaster unlike anyone has ever seen. Cascadia Rising will test our own preparedness. It is exercises like this, ahead of a disaster, that foster coordination and help build relationships before a real world event occurs.”

“Oregon is looking forward to strengthening the partnerships with our local, tribal, state and federal partners through the Cascadia Rising exercise,” said Oregon Emergency Management director Andrew Phelps in the news release.

“This exercise gives Oregon, Washington, Idaho and FEMA Region 10 an invaluable opportunity to validate and improve upon the planning initiatives, training and other exercises we’ve undertaken over the past several years to prepare for the threat of a Cascadia Subduction Zone earthquake and tsunami. This exercise should also serve as a reminder to all Oregonians that individual and family emergency preparedness is key to augment an effective response to an earthquake or any disaster and begin the recovery process. Ultimately, the work we do leading up to the exercise and the lessons we learn in a controlled and evaluated environment will translate into lives saved during what could be the country’s biggest disaster,” Phelps said.

“We’ve worked tirelessly in Washington state to work with our partners and develop a response plan so we can immediately coordinate assistance and provide help following a catastrophic disaster,” said Major General Bret Daugherty, the director of the Washington Military Department and commander of the Washington National Guard, in the recently issued press note.

“Every exercise teaches us something and improves our response. I’m pleased so many partners are participating and are eager to collaborate with us so we can effectively carry out our mission to protect lives and property,” Daugherty said.

Earthquake in Canada

Meanwhile, natural Resources Canada, which records earthquakes in Canada, posted on its Earthquakes Canada section of the website Thursday evening that a 3.0 magnitude earthquake took place around 19 km north of Yarmouth, Nova Scotia.

On the Yarmouth Vanguard Facebook page, residents said that they heard a loud rumble. Some even said they felt their house shake or vibrate as a result of the earthquake.

“My husband and I were both sitting at our kitchen table in Amirault’s Hill and heard what sounded like a big truck going by and looked around and seen no trucks headed down the road. My husband said, ‘I bet that was an earthquake,” Alanna Fitzsimmons-Bourque told the Vanguard.

New Photo Exhibit Honors September 11 First Responders

By Thomas Urbain

AFP, June 10, 2016

New York (AFP) – They were among the heroes of the September 11, 2001 attacks, the first responders who rushed to the World Trade Center site to search for survivors.

But they worked mostly in anonymity.

Now, photographer Andrea Booher pays tribute to the men and women who toiled at "the pile," with a showcase of her work in the "Hope at Ground Zero" exhibition opening Friday at the National September 11 Memorial and Museum which now occupies the site in downtown New York. It runs through May 2017.

"In the beginning it was firefighters, volunteers, search and rescue, police. Everybody had sort of a different approach to how they were searching for survivors," she said. "The only goal was trying to find survivors in the pile."

Booher, a photographer for the Federal Emergency Management Agency (FEMA), had arrived at the site the evening of September 11 and was assigned along with colleague Michael Rieger to document the aftermath of the deadliest terror attack on US soil.

She ended up staying two and a half months.

"I really felt that it was an incredible honor but it was a lot of responsibility," she said. "I pushed myself to my limit workwise and in every aspect."

In the early days, the work was frantic as rescuers searched for survivors.

But around September 20, "I showed up at the site. Nobody said anything, but it was just like this very depressing feeling, very heavy feeling at the site," Booher said.

"It was kind of rainy, and it was just... there was no energy. You had just the feeling that it was over, that the hope was gone. We weren't going to bring (out) anyone else. It kind of switched to a recovery mission at that point."

Twenty people were found alive in the rubble, the last one September 12. In all, the attack in New York claimed 2,753 victims.

– "The best in humanity" –

Booher, a veteran of many major disasters, initially had access to the World Trade Center site but not the pile that was the remains of the Twin Towers.

But over time, the firefighters who were running the site began to trust Booher and Rieger after seeing them working "every day, all hours."

The firefighters, who lost hundreds of their comrades in the attack, noticed that the pair always put their cameras down and didn't take photos when bodies were recovered, out of respect.

"So there was a certain trust that was built up. That was why we were able to gain access to the pile. There was this bond," she said.

Her subjects posed amid grotesque tangles of giant steel beams, alone or in groups, with blackened faces like those of coal miners.

"To this day, I have that bond with so many of the people that are in those photographs," Booher said, noting that she and Rieger later sent more than 600 CDs of images to the people they met. "We keep in touch, we check on each other."

"Most people think of disaster as just this traumatic experience, but ... as horrific as it was you also saw this incredibly human side of people come forward," she said. "I think it's when you see the best in humanity."

IBAT Tips: Natural Disaster Preparedness And Insurance

Pasadena (TX) Citizen, June 10, 2016

Independent Bankers Assoc. of Texas

AUSTIN — Texans live in a state with the potential for many types of natural disasters — flash floods, hurricanes, windstorms, tornadoes and wildfires, to name the most common. While we may never know for certain when a natural disaster will strike, you can minimize damage and risk of harm by being prepared. The following tips discuss preparedness for any natural disaster and explore insurance coverage in this unfortunate situation.

Disaster Supply Kit

Every household should have an emergency supply kit ready and easily accessible in case of a disaster. This kit should include a flashlight with extra batteries, a first aid kit, a crank or battery operated radio with NOAA weather radio capabilities, necessary prescription medications, an emergency whistle to signal for help, a gallon of water per person and pet for at least three days, and several days' worth of nonperishable food. Other items to consider including are pet food, a list of emergency phone numbers and a cell phone with a battery powered charger. If possible, it's also helpful to include three to five days' worth of cash in the instance that ATMs are either unavailable or damaged.

Family Emergency Plan

Your family may not be together when disaster strikes, and this can cause increased panic if you haven't prepared for this situation. A family disaster plan that includes how you will contact each other, where you will meet and identifies a safe place to gather as an alternative to your home is extremely important. This plan will ensure your children know what to do, where they can go and who they can stay with in the event of an emergency.

The FEMA website includes a family emergency plan that can be printed to help assist families with developing their individual plans. Experts agree that developing a disaster plan ahead of time reduces fear and anxiety in children, which means they have a better chance of staying safe until help arrives.

Safeguard Documents

Prepare a vital records kit with copies of important documents to store in a waterproof and fireproof container in a safe place in your home. Another option is to scan and store these documents in a cloud-based application so that it will be protected even if your home is destroyed. Yet another good option is a safe deposit box at your local community bank. Documents and items for this kit include copies of insurance policies, identification and bank account records, proof of vaccinations for pets, mortgages, birth and marriage certificates, and irreplaceable photos.

Homeowners Insurance

While it's difficult to think about losing your home due to a natural disaster, it's important to understand what your homeowners insurance policy does and does not cover. Since policies vary by insurance company, you shouldn't make any assumptions as to what may or may not be covered. Most basic homeowners policies cover fire and lightning, explosion, smoke, and damage caused by the weight of ice, snow or sleet. Perils of hail, windstorm, vandalism, theft and water damage may be restricted or even excluded by many policies. In coastal regions or in areas prone to windstorm or hail, it's likely that your policy will have specific conditions, restrictions or full exclusions regarding coverage. Flood is always excluded and must be purchased through the Federal Flood Insurance Program. Other perils that are likely excluded include earthquake, water damage if related to flood or an otherwise excluded peril, sewer back-up and nuclear accidents.

All policies have exclusions, even if you have an "all risk" policy. If your policy contains an exclusion of coverage, ask your insurance agent to provide an option for the coverage through another carrier or specialty policy. Often windstorm coverage for Texas coastal locations must be obtained through TWIA – the Texas Windstorm Insurance Association.

While putting together your disaster kit, family plan and other preparations, it's helpful to know the available resources. The FEMA website (www.ready.gov) and the American Red Cross website (www.redcross.org/prepare) are good resources. Being prepared will help you and your family remain calm and rational when a disaster strikes, which can also save lives. Being educated about your specific homeowners insurance, what is covered and what isn't will help you make an informed decision about any additional coverage to purchase before a disaster hits. The bottom line is that being prepared for a natural disaster, on several fronts, will help ensure your family recovers and gets back to normal life as quickly as possible.

The information above is provided with the understanding that the association is not engaged in rendering specific legal, accounting or other professional services. This information is intended to be a helpful guide. If expert assistance is required, the services of a professional person should be sought.

About the Independent Bankers Association of Texas

Formed in 1974, the Independent Bankers Association of Texas (IBAT) represents Texas community banks. The Austin-based group is the largest state community banking organization in the nation, with membership comprised of more than 2,000 banks and branches in 700 Texas communities. Providing safe and responsible financial services to all Texans, IBAT member bank assets range in size from $10 million to more than $20 billion with combined assets statewide of nearly $165 billion. IBAT member banks are committed to supporting and investing in their local communities.

Area Health Departments Will Participate In Statewide Emergency Exercise

Bureau County (IL) Republican, June 10, 2016

Bureau, Putnam and Marshall County Health Departments, joined by area law enforcement agencies, emergency management agencies, the Bureau-Putnam and Marshall County Medical Reserve Corps, Liberty Village in Princeton, St. Margaret's Hospital and the Marshall County Highway Department, will participate in the exercise to test the ability of the state public health system to receive and distribute medicine and medical supplies during a public health emergency.

As part of the exercise, Bureau, Putnam and Marshall County Health Departments will receive shipments of medical supplies and simulated medications, sort them and redistribute them to points of distribution where they will practice dispensing the simulated medication to volunteers.

Volunteers are needed to participate in the exercise in the role of citizens needing to receive the medication. They will be asked to arrive at a point of distribution and go through the process of filling out a short form then receiving a package of simulated medication. Depending on the number of volunteers at each site, they may be asked to repeat the process a few times in order to give the health departments sufficient numbers to measure the time needed and ability to dispense to large numbers of people.

The public points of distribution will be at Henry-Senachwine High School in Henry beginning at 9 a.m. Wednesday, June 15, and at Putnam County High School in Granville beginning at 1 p.m. Wednesday, June 15. Volunteers may be needed for up to 90 minutes.

It is not necessary to pre-register as a volunteer. For more information, or to let the health departments know you are interested in volunteering to help this important exercise, contact Terry Madsen or Kurt Kuche at 815-872-5091 or Kaylee Halberg at 309-525-1833.

Bretagne, Last Living Ground Zero Rescue Dog, Passes At 16

By Chris Boyle

Long Island (NY), June 10, 2016

Bretagne, last of the 9/11 Search & Rescue Canines who helped find countless victims trapped in the rubble of Ground Zero, died peacefully in Cypress, Texas on Monday, June 6 at the age of 16.

The Golden Retriever, who was suffering badly in recent months due to the effects of old age, was euthanized at Fairfield Animal Hospital in Cypress, Texas. Over a dozen emotional firefighters lined up outside of the Hospital, all standing at full attention, and respectfully saluted Bretagne as she was brought inside; they remained as such when she left, motionless and covered with an American Flag, an honored and courageous hero to one and all.

Bretagne (pronounced “Brittney”), along with her handler, Denise Corliss, was a member of Texas Task Force 1 (TX-TF1), one of the 28 teams under the Federal Emergency Management Agency (FEMA) who worked at the site of the World Trade Center for 10 days in 2001, searching for survivors and, later, remains of those less fortunate. Ground Zero was the 2 year-old Bretagne’s her first-ever assignment as a Search & Rescue Canine after having been certified as such by FEMA, and was truly a trial by fire if there ever was one.

Bretagne and Corliss first met when the pup was but a mere 8 weeks old; a Cy-Fair Fire Department volunteer, Corliss had been on the lookout for the right dog to train for Search & Rescue work, and noted that Bretagne’s determination, drive, and personality made her the idea candidate for the tough assignment. The two quickly became best friends.

After spending ten days assisting in the search & rescue efforts at Ground Zero after 9/11, Bretagne continued to distinguish herself over the years with Texas Task Force 1, bravely responding to nearly a dozen other disasters, including Hurricanes Katrina, Rita and Ivan, and was responsible for saving many lives during that time.

Despite the harrowing assignments that she would regularly have to contend with, Bretagne nonetheless is remembered as a warm and affectionate dog whose special ability to seek out those who needed emotional support made her as much a helpful therapy animal as it did a courageous First Reponder, according to a statement released by Texas Task Force 1.

“If you ask anybody whoever knew or trained with Bretagne, they would tell you ‘Oh she just loves me!’ That’s the kind of dog she is, affectionate to everybody, and fiercely devoted, never takes her eyes off her handler,” they said. “She has always taken her job as a search dog seriously, but herself not so much. Always ready for a belly rub, or a treat. In remembering her first deployment at the World Trade Center, there are images of her going to where she was directed to search, the unknown, the chaotic environment. But even then, she knew who needed the comfort of a dog, which firefighter needed to hold her close and stroke her fur.”

Bretagne eventually retired from Search & Rescue at the age 9, but don’t think she slowed down during her Golden Years; she continued to serve as a goodwill ambassador for the Cy-Fair Volunteer Fire Department in Harris County, Texas, as well as a reading assistance dog.

“Bretagne’s calm demeanor and warm heart helped the young and old through their own difficult moments,” said the Cy-Fair Fire Department in a statement.

"Each week she would visit a first grade classroom and listen to young readers, providing a non-judgmental ear and soft paw. She also visited students with special needs, such as autism. Her calm demeanor and warm heart helped the young and old through their own difficult moments."

Bretagne was also featured in a non-fiction book about senior dogs and has held audiences with Texas First Lady Cecilia Abbott and former President George H.W. Bush. Later, at the age of 15, Bretagne, and her longtime handler Denise Corliss, returned to the site of her very first assignment – New York City – to visit the 9/11 Memorial Museum, and was later "interviewed" by Tom Brokaw of NBC News.

In 2014, the American Humane Association nominated Bretagne for their illustrious "Hero Dog Award," and last year she made headlines as she celebrated her "Sweet 16" birthday in New York City .

Bretagne – just shy of her 17th birthday – had begun to experience a host of health problems, a lack of energy, kidney failure, and a loss of appetite; it was then that Denise Corliss noted that it was time for her beloved partner to finally rest after a lifetime of hard, dedicated work for others.

Clinton CERT Inc. To Hold Second Mass Casualty Exercise

By Bobby Jones

DC Military, June 10, 2016

"People don't think about preparedness until it's too late," Paula M. Hughes, president of Community Emergency Response Team (CERT) of Clinton, said. "So we prepare ahead of the incident, then we're ready."

Hughes is referring to the upcoming Functional Exercise, CERTEX PGC 2016 FE being held June 18 at Clinton Baptist Church in Clinton. Sponsoring the event for the second year, the training also ensures that CERT team members refresh their skills during the mass casualty exercise. Hughes noted the hope is to eventually provide the community-based training quarterly.

The training provided is between 16 to 20 hours long. The CERT program is a national program because the protocol taught is standardized. Participants learn about basic first aid, psychological first aid, terrorism, how to shut off the utilities at home, the three basic killers, airway obstruction, excessive bleeding and how to treat for shock.

Nationally, CERT has been around for the last 15 years, but CERT of Clinton, a 501c3 non-profit organization, was established in 2014.

Hughes said Clinton CERT is unique because it is incorporated, unlike other CERTs' located in townships and cities like Berwyn Heights, College Park and Laurel – all organizations that work under their local municipal governments.

"We don't have a mayor or town council to answer to," Hughes said.

Operating off a limited budget, Clinton CERT solicits private donations, but the county supports the exercises by providing food.

"The Prince George's County Police Department is donating their time and we hope to get participation from the fire department as well," Hughes said.

However, Clinton CERT funding is paid through FEMA grants and Prince George's County Office of Homeland Security is the overarching sponsor of CERT in the county.

With terrorism always being a constant threat to the nation, Hughes stressed there's a greater need for this particular training – especially when lives are on the line.

"And the thing is, if there is a real big disaster, the police and the fire department cannot rescue everyone," Hughes said. "So, we need to be prepared to do the best we can to help ourselves. The training is valuable, and once people go through it they think 'oh my goodness.' There's other training they can benefit from like CPR, AED, shelter management and hand radio classes which are all free."

Hughes mentioned Maryland's Emergency Management Agency's slogan – "A resilient Marylander makes a resilient citizen." She explained that the community has been receptive to the training as she has reached out to AARP, who participated last year as victim-actors, the NAACP and Clinton Baptist Church with inclusion of their Spanish congregation who meet there on Saturdays.

"This is training for the local community. It's like neighbors helping neighbors. Clinton CERT is taking the lead and hopefully other CERT teams will follow suit," Hughes said. "The importance of this training is that it's the basic start for getting prepared. When you take the training you get a backpack, which includes a hat, a safety vest, some tools, some gloves; and from that moment on when you receive that backpack you can fill it with what you need for you."

Additionally, Clinton CERT is looking for victim-actors to play injured people at the mass casualty exercise during the training event. The actors are not required to be CERT-trained. All participants must sign a waiver. The exercise will be held rain or shine.

Those interested in participating in the exercise please register on Eventbrite at: http://www.eventbrite.com/e/certex-pgc-2016-fe-exercise. A continental breakfast and a light lunch will be provided. Community service hours are available for high school students accompanied by an adult. For more information on the national FEMA CERT program visit: https://www.fema.gov/community-emergency-response-teams.

For additional information on CERTEX 2016, contact Hughes at pgcert.pmhughes@gmail.com or at (443) 474-3239.

Last-minute Budget Tweaks, Not Dog Parks, Spark Debate In Warrenton Work Session

By Michael Melkonian

Fauquier (VA) Times, June 10, 2016

Last-minute budget tweaks and a final review of dog park plans highlighted a Warrenton Town Council work session Thursday night, June 9 – just days before a meeting to approve the measures on Tuesday.

Ironically, the dog park provoked little discussion.

But the Council voiced split opinions on a $20,000 budget placeholder for an emergency planning grant from the Federal Emergency Management Agency. The grant application is due at the end of the month, and Town Manager Brannon Godfrey expects another 60 to 90 days to find out if they will get the funds.

While Fauquier County has similar groundwork in place, the grant would help pay for developing an emergency operations plan to cover Warrenton specifically.

Yakir Lubowsky, Ward 3 councilperson, said emergency planning is an essential function of government and funding needs to be approved now.

"(Emergency planning) is ultimately the thing that citizens expect us to do: to prepare for emergencies and be prepared to recover from disasters," Lubowsky said.

Sunny Reynolds, at-large councilperson and Warrenton vice-mayor, said although she agreed it was "extremely important," she also wondered if we need to budget the money now before talking to the county government.

"We need to have this meeting with the county and sit down with them, which we have not done, and find out what they suggest the town's role is in this," Reynolds said.

Once we have that discussion, we can amend the budget later, Reynold suggested.

"The county seems to have abdicated its responsibility frankly, until they get their house in order," Lubowsky said, referencing the search for a new fire chief. "This is a fairly token amount (of money)."

The $20,000 line item represents less than .001 percent of the $20 million dollar fiscal year budget (embedded below).

Manager Godfrey pushed to amend the budget before the vote on Tuesday.

"It would be a more affirmative commitment to change the numbers now," Godfrey said. "It's still contingent on funding from FEMA, but it would then be adopted as part of the budget and we wouldn't have to go back."

Robert H. Kravetz, Ward four councilperson, agreed with Reynolds about conferring with the county first, but Lubowsky pressed on.

"If this is not important, what is important?" Lubowsky said.

At-large councilperson Sean Polster, a firefighter and paramedic by day, had another question: If town hall catches fire tonight or if Warrenton loses their water supply, what's the plan?

"How do we maintain our essential functions?" Polster said. "I think we have a great opportunity in front of us to take a small step forward. I'd like to build that roadmap before anything happens downtown."

Chief Louis Battle of the Warrenton Police Department said an emergency plan is a "living, breathing document, consistently and continuously under review and testing." And if we go down that road, we're responsible for (the plan) and anything that happens.

"That means we have to have the manpower, the resources and the assets to implement that plan," Battle said.

Lubowsky stood his ground again.

"But it starts with an inquiry," Lubowsky replied "You can always decide. At the moment, there's nothing."

And Battle's concerns about creating a new infrastructure with evergreen obligations depends on council action in the future, not this budget item, Lubowsky said.

"If it becomes a big bureaucracy, shame on the folks sitting up here," Lubowsky said.

We've been talking about this for a while now, but this is the first time we've really heard about money, Ward 1 councilperson, Jerry Wood, said. And he's not in favor of the surprise spending this close to approving the budget.

"I don't see any reason to not do it and I see many reasons to do it," Lubowsky said. "I mean, this is the group that had seven or eight meetings about a dog park, but we still haven't had a meeting about how to prepare the town for a disaster."

Godfrey said he will apply for the grant either way and as Kravetz noted, "it's not a commitment to spend" the money.

After 30 minutes of discussion, Godfrey said the best choice was to include it in the budget now.

"Please tell me you're not going to defeat the budget on Tuesday over this item," Godfrey said Wood as the group chuckled.

Wood had earlier voiced concerns with excess spending and tax increases in the proposed budget.

"To start off, I do plan to vote for this budget, there is nothing that would stop me from doing it," he said from the outset. "Still, I would like to see the property tax raised to 3 cents instead of 5 cents."

Though the $300,000 gained by the extra 2-cent increase will be needed to balance the budget, he added.

"I think we need to keep taxes as low as possible, services as good as possible and spending in check," Wood said. "I also think we need to separate our needs from our wants."

This $20,000 budget item seemed to straddle that line for Council members Thursday.

"Sounds like we're close enough," Mayor Powell Duggan said.

The item will be included in the budget to be approved by a Council vote at the next meeting on Tuesday night, June 14. The Council will also vote to approve a proffer-funded dog park on a vacant lot off of 5th Street in Old Town, near the Warrenton Branch Greenway trailhead.

At that meeting, the Council will also hold a public hearing on town code amendments about unsightly weed growth on undeveloped properties and to add hotels, inns and bed and breakfasts to permitted uses and remove motels.

The Beckoning Beauty Of The Waffle House

By Lisa Frame

WFAE-FM Charlotte (NC), June 10, 2016

There is something intrinsically beautiful about the Waffle House. Every building is identical, the decor and layout don't change, and the meal tastes the same every single time.

Called by many a "Southern Cultural Phenomenon," the Waffle House is where you go to hear yourself called "Darlin'" and "Sugar." Where regular customers aren't allowed to leave without hugging all of the waitresses goodbye. If you're road tripping, it's always just off an exit, inviting you in for a warm meal, no matter the time of day.

It's been this way since Labor Day 1955, when the first Waffle House restaurant opened its doors in Avondale Estates, an Atlanta suburb, with no plans to build another unit. Seventeen-hundred plus restaurants later, customer loyalty, friendly service, and menu favorites including Bert's Chili and Alice's Iced Tea, keep a steady stream of regular and new customers looking for that friendly, yellow Scrabble-tile sign.

The mission of the Waffle House is "...to deliver a unique experience to our customers through delivering great food, friendly, attentive service, excellent price and a welcoming presence." That's part of the beauty. It's a modern day corner pub where folks go to sober up after a night of revelry. People from all walks of life go to the Waffle House looking to feed bellies, but more often or not, their spirit is filled. I don't know if it's the smell of the coffee brewing, the glistening syrup floating in the crevices of the pecan waffles, or the sizzle of the hash browns as they are scattered, covered, smothered, and chunked on the grill.

Maybe it's the waitresses lining up to hug their regulars, cajoling them to stay and have one more pot of coffee. Everyone talks and laughs, yet the people at Waffle House also recognize that sometimes you need to be alone with your cup of coffee and think. No matter what you need today, the Waffle House is there for you, comforting you in the way that only a hot meal and people who have joined together in the common act of eating can offer. It's a temporary family, always changing, but when you're sitting in your booth, you realize this is exactly what you needed.

But Waffle House isn't just for everyday folks. One of the Carolina Panthers reportedly called Waffle House an "advantage" for his team. James Beard Award winner Sean Brock took Anthony Bourdain to visit while the TV personality was covering Charleston for his show Parts Unknown. In fact, on their Pinterest board, the Waffle House maintains a list of celebrities who have dined in the restaurants.

Every day of the year, 24 hours a day, the lights stay on at the Waffle House. That's something the company prepares for when Mother Nature comes knocking at their door. FEMA even relies on the Waffle House as an indicator of damaging storms. The "Waffle House Index" isn't scientific, but if the Waffle House is closed it's an indicator of how things are in different areas. When the Waffle House is fully operational, that's a green condition; when it's operating with a limited menu, that's yellow. Red means the restaurant's closed.

Now that it's hurricane season, my local Waffle House is green, but prepared for yellow – that would mean no bacon (takes up too much grill space) and no waffles (uses too much energy when operating on a backup power source). But no matter what, the friendly faces at the Waffle House will be there cooking meals, keeping the community fed, and giving everyone who walks in the door service with a smile.

Waffle House is a brightly-lit beacon of all things cooked on a well-seasoned griddle. It doesn't matter what your socioeconomic status is, nor the color of your skin, or how inebriated you are, or aren't; the Waffle House is where you go to find more than griddle cooked food and a bottomless coffee cup, it's where you go to find what makes the South and Waffle House beautiful – the people inside.

Emergency Kits For Sale

eCatalina (CA), June 11, 2016

AVALON, CATALINA ISLAND – In a "worst case scenario" such as a natural disaster or large scale emergency (earthquake, flood, fire, biological attack) Catalina with its geographical location could be cut off from the mainland for days. Emergency services from overtown may be unable to assist Catalina residents because of concentrating resources in their own population centers. Catalina and its residents could very well be "on their own."

Through Catalina Island Medical Center's Disaster Preparathon last November over 100 households were provided with their own home kit of emergency supplies.

Now CIMC is offering a new chance for islanders to purchase these premium preparedness kits at a great discount. The backpacks available for sale have a 3-day supply of emergency provisions for a family of four. They are valued at over $100 and CIMC is offering them for only $40.

These "go bags" contain 16 lbs of items in a backpack easy to grab in case of evacuation. Contents include: emergency food rations, emergency water, a First Aid Kit, LED Flashlight, 12-hour glowsticks, Ponchos for severe weather, 24-hour Body Warmer blankets, a temporary shelter tent, an emergency whistle with compass, a 4 in 1 Dynamo Radio Flashlight, medical grade face masks for dust and more---Everything you need for 72 hour emergency survival is in this one complete, portable backpack.

FEMA, the Red Cross, and the State of California recommend you have these supplies on hand for personal needs, shelter, warmth and much more. This survival kit has a 5 year shelf life and is packaged in a durable backpack that is easy to carry and store. It is ideal for smaller living spaces.

A batch of Disaster Kits were sold at the April 28 Community Health Fair and now there are only 15 left. The purchase of these additional emergency bags was made possible by the generous support of CIMC's community partners: Southern California Edison who provided a $5000 grant. The CIMC Foundation donated $1500, the Catalina Island Women's Forum gave $1000, as did the Lions Club and Rotary.

Supplies won't last, so those interested should leave a message with Judy Hibbs (310) 510-1264 or pick up their emergency kit at the hospital reception area soon. Get a backpack and be safer and more prepared for an emergency or disaster.

Catalina Island Medical Center is committed to provide quality health care to each individual and improve the overall health of our community. For more information about medical services or disaster preparedness please call (310) 510-0700.

Heat Can Strike Down The Unwary

By Jessica Imbimbo

Columbia (SC) State, June 10, 2016

FLORENCE, SC

Coward resident Lisa Shaw was enjoying the summer sun with her daughter two years ago. Hours later, she had to be rushed to the hospital.

Heat exhaustion had set in after less than three hours in the 100-plus degree weather.

"When it got too hot we came inside and tried to cool off, but I could not get cooled off," Shaw said. "I was nauseated, couldn't catch my breath, felt almost like my whole body was on fire."

After a few bags of fluid from an area emergency room, Shaw made a full recovery.

According to the Federal Emergency Management Agency, heat disorders occur when people have been overexposed to high temperatures or have overexerted themselves for their age or physical condition. As temperatures and humidity levels rise, evaporation slows and the body is forced to work harder to maintain a normal temperature.

Extreme heat is most likely to affect young children, older adults and those who are overweight.

Shaw said her weight may have been a factor in her susceptibility to the heat.

"I believe I suffered more than she (her daughter) did because I am overweight," Shaw said. "I am 5 feet 10 and at the time I weighed about 305 pounds."

Elderly individuals are also vulnerable when it comes to heat-related health issues. On June 9, Chief Danny Watson of the Darlington Police Department initiated a challenge to other Darlington organizations to collect small box fans for older people.

Watson's challenge will run through the end of the month. Donated box fans can be taken to either the Darlington Police Department or the Darlington Fire Department at 400 Pearl St.

Watson said something as simple as a small fan can prevent heat-related ailments during the summer.

"As a person advances in age, the ability to regulate their body temperature as well as they did when they were younger degrades significantly," Watson said. "This is why it is especially important for seniors to have access to fans and air conditioning."

People living in more urban areas are also at greater risk, due to poor air quality and stagnant atmospheric conditions. Areas covered with concrete and asphalt will stay hot longer and release heat during nighttime hours, which produces higher temperatures throughout the day.

Michael Miller, the S.C. Department of Transportation district safety coordinator, said the asphalt can reach temperatures upwards of 150 degrees when employees are working. The department provides coolers full of water and ventilated clothing to prevent heat-related health problems.

"We tell everybody to please be careful," Miller said. "If the guys work as a team, trade off and take breaks, it's not as bad as it could be."

Miller said department employees are encouraged to drink at least a quart of water per hour and take breaks from the heat every 45 minutes or so.

"I don't think we've had any significant heat-related issues for the past couple of years and that's primarily because our folks know what the symptoms are," Miller said. "We make sure everybody knows the differences."

There are different levels of heat-related illness: heat cramps, heat exhaustion and heat stroke. Heat cramps are often the first sign that the body is struggling with hot temperatures. Heavy exertion in hot conditions can cause muscular pains and spasms.

Heat exhaustion is the next phase. It typically occurs when body fluids are lost through sweating heavily. Blood flow becomes concentrated in the skin, and by doing so, decreases blood flow to vital organs. Symptoms of heat exhaustion include fatigue, rapid pulse, shallow breathing, dizziness and nausea. If not treated, the person's body temperature will continue to rise and heat stroke may occur.

Heat stroke, or sun stroke, is a life-threatening condition. A person's temperature control system stops functioning, causing the victim to stop perspiring. A person suffering from heat stroke will have skin that feels hot, but will not be sweaty. Other warning signs include confusion, headaches, trouble breathing, vomiting and loss of consciousness. A heat stroke victim's body temperature can rise so high that brain damage or death may occur.

"Heat kills by pushing the human body beyond its limits," according to a media advisory from the Florence Fire Department. "These conditions can be hazardous for people who do not take the proper precautions."

Dr. Iris D. Ignacio, a family medicine physician with Pee Dee Family Physicians, said that although certain groups of people may be more susceptible to heat-related illness, heat stroke can affect people of any age or fitness level.

"Don't underestimate the danger," Ignacio said. "Be extra careful when the heat index is 90 degrees or above and always drink plenty of water or fluids with electrolytes when the heat index is high."

"Virtually all heat-related illnesses are preventable," he said.

To prepare for extreme heat, the Florence Fire Department recommends checking air-conditioning ducts for insulation problems and making sure window air-conditioning units are installed properly. To keep the cool air inside the home, weather-strip doors and window sills.

Windows that receive morning or afternoon sun should be covered with drapes or shades. Outdoor awnings or louvers can reduce heat from entering the home by up to 80 percent, according to the Florence Fire Department.

In extreme heat, people are advised to stay inside and limit their sun exposure. If a person must go outside, the Florence Fire Department recommends wearing loose-fitting, light-colored clothing, avoid working during the warmest parts of the day and drinking plenty of water.

For more resources about extreme heat safety, visit ready.gov/heat.

Commission Discussed Grant, PDA

By Chance Hoener

Pittsburg (KS) Morning Sun, June 10, 2016

GIRARD — The Crawford County Commission discussed animal control, fairgrounds maintenance and emergency planning at its regular meeting Friday.

The commission agreed to renew a $2,500 grant to Pawprints on the Heartland after much discussion. The original grant was given in November of last year and helped Pawprints on the Heartland to maintain a Trap, Neuter and Release program for feral cats in the county.

Pawprints provides spaying and neutering services at a more affordable price, but uses donations and grants like this one to control feral cats in the area. Pawprints President Mary Kay Caldwell said that since the grant was issued in November, Pawprints has spayed or neutered 62 stray cats in Crawford County.

"If we look at just those 62 cats with four litters and four kittens to a litter," Caldwell said. "Then we have prevented over 15,000 homeless cats being born in Crawford County."

According to City Clerk Don Pyle, the first grant came from the county's miscellaneous fund. Caldwell reported that they had asked the City of Pittsburg for funding as well, but were denied. She said they would be returning to Pittsburg and requested that the county bump the grant up to $4,000.

The County Commission settled on just renewing the grant for $2,500.

"I know you guys do good work," Commission Chairman Tom Moody said. "We want to help you out."

Emergency Manager Eldon Bedene also addressed the commission to make them aware of changes to emergency management and disaster assessment policies on the state level. Bedene said that Kansas is the first state in its region that will follow a new Preliminary Damage Assessment manual.

The new assessment process will require photos of damaged properties as well as maps and addresses of damaged locations before being assessed by FEMA. Bedene said there are also new Emergency Management Performance Grant changes that are being talked about.

"Whoever you pick is going to have a lot to do, and I'll have a lot to do to train them," Bedene said.

Bedene plans to retire when a new Emergency Manager is found. Applications for the position close June 17.

The commissioners also discussed mowing the fairgrounds and fixing power lines and poles that are down in that area. They also discussed mowing tractor maintenance.

Exercise Set For Cooper Station

St. Joseph (MO) News-Press, June 10, 2016

KANSAS CITY — The U.S. Department of Homeland Security's Federal Emergency Management Agency has announced plans for a one-day preparedness exercise next week at the Cooper Nuclear Station in southeast Nebraska.

Missouri and Nebraska officials will participate on Tuesday, joining with agencies in Atchison, Richardson and Nemaha counties.

Officials said the exercise is a biennial requirement aimed at protecting the health and safety of those living and working in the station's vicinity.

The exercise will measure the adequacy of state and local radiological emergency readiness and response plans, and will require the activation of emergency facilities.

A public meeting to describe and explain the exercise will be held at 10 a.m. Thursday at the Nebraska Public Power District's emergency operations facility in Auburn, Nebraska. The utility owns and operates the plant.

Weathering The Storm: What's Your Emergency Action Plan?

By Elliott Falcione

Bradenton (FL) Herald, June 12, 2016

It's that time of year where we need to prepare our community and ourselves for Hurricane Season, a season that if not prepared, can cause devastation and loss of life if a major storm impacts our area.

Although our community has not experienced catastrophic devastation from a major storm, we must find the time to prepare ourselves, our families and our businesses now. A complacent mindset will, no doubt, be detrimental to our area, so let's take Hurricane Season seriously.

If we take the time to develop and implement an emergency preparedness plan, then our businesses can survive when any kind of disaster strikes.

American businesses form the backbone of the nation's economy. Small business alone employs half of all private sector workers and provides nearly 45 percent of the nation's payroll. According to the Federal Emergency Management Agency, 40 percent of businesses do not reopen after a disaster and another 25 percent fail within one year. The U.S. Small Business Administration statistics suggest that over 90 percent of businesses fail within two years following the impact of a disaster.

These odds are not very comforting and are extremely eye-opening. But these statistics can be shifted.

How quickly your business can get back after a terrorist attack, fire, flood, tornado or hurricane often depends on emergency planning done today. Though each situation is unique, your business can be better prepared if you plan carefully, put emergency procedures in place and practice for all kinds of disasters.

To survive, business owners must take steps to minimize and weather the effects of a disaster. The first step is understanding your business's vulnerabilities. Disasters such as wide area flooding or a hurricane certainly make the top list. However, smaller events such as burglary or water damage due to a faulty roof or plumbing can have the same catastrophic result. The second step is to determine the varying impacts to your business. This will support your third step of developing a plan.

I urge you to take the time to conduct your own research for information that supports your unique business safety and security. At the start of every Hurricane Season, various businesses including grocery stores, building supply or home improvement centers, pharmacies, and insurance carriers produce volumes of literature to assist your personal and home preparations.

Unfortunately, complacency is common in today's society, so let's not allow complacency to cost us our lives and businesses. Please, dedicate time now to prepare for the next six months.

For more information, please visit: www.mymanatee.org/emergency, www.floridadisaster.org, www.ready.gov and www.tbrpc.org.

One Month At A Time: Preparing To Survive Stress-free In An Emergency

By Bill Lynch

Charleston (WV) Gazette-Mail, June 12, 2016

The tent stayed up in the yard for the rest of the week, while I nursed a cold indoors and slept in my own bed.

Keeping with living unplugged for the month, I avoided using power. I continued to eat cold food, mostly fresh fruit and bagels with peanut butter. I didn't open my refrigerator, didn't use my stove or microwave.

The television stayed off. The only time I heard the radio was in the car.

At home, I showered by candlelight and read books using a gadget I could clip to the back cover that provided just the barest amount of illumination.

"What are you going to do when you run out of clothes?" one of my editors asked. "You need to get a washboard."

That sounded like a pretty good idea. I told him I'd check the local flea market, but if worse comes to worst, I guess I'll be in the creek down the road beating my boxer shorts on rocks.

In the meantime, I worried about caffeine withdrawal. My supply of Neuro Fuel energy drinks from Smith's Food Fair (a bargain at $1.19 each) was running low. Because I wasn't using electricity, I hadn't been able to brew coffee.

I was also not brewing coffee at my desk or buying it elsewhere. My logic is if the power was down, I wouldn't be able to get coffee.

So no coffee, except for a tiny, glass jar of instant I got at Wal-Mart for $2.

This was always my backup in case nothing else worked.

Finally, five days in, I broke out the small burner and propane tank, carefully assembled the thing (which was really easy), turned the knob, lit a match and did not set myself on fire.

Almost five days since I'd pitched the tent, I made coffee and had a hot breakfast on my front porch. I had oatmeal with raisins. It tasted much better than it deserved to.

Clearly, I needed some advice on how to do this. So I went to Keller's Survival in Cross Lanes.

Bob Keller has been in business since 2012. Before he opened his store, he was an engineer and an engineering teacher.

He opened the store because there really wasn't anything like it around.

"It was just something I saw as a need here," he said

So, just over four years ago, Bob opened a tiny place in North Charleston selling a mix of camping equipment, hunting apparel and paramilitary gear.

That summer, the derecho blew through, knocking some people in the area off the grid for over two weeks.

"Then we had the Halloween snowstorm and the chemical leak from Freedom Industries," he said.

People come looking for him now, and Keller's Survival has expanded.

He and his wife moved to a larger building, and the space he had set aside for classes has been turned into more retail floor space with shelves of merchandise for help living off the grid. That includes everything from portable water purification systems and tiny, alcohol-fueled stoves to bulk dried foods and solar panels.

"I'm not really a big fan of whole house solar," Bob said. "But I do like it for a backup generator. They're silent. If the power goes out and you fire up your generator, what you have there is a beacon.

He added, "If the power stays off, you could end up with some company."

Keller's Survival can be a starting point for someone interested in prepping for a disaster, but most of what he has on the shelves is designed for relatively short-term interruptions — at maximum, a few months.

He is glad to talk about what is necessary for the long haul, for what you might need to do if the lights go off and they don't come back on.

Bob described "prepping" as a kind of journey. No one is required to go the whole distance, whatever that might be, but instead, people can choose where they want to stop.

At the minimum, he thought, people need to be able to get through three days of interruption. This is not his number, Bob pointed out, but the government's.

"[The Federal Emergency Management Agency] wants you to have a bug out bag and three days supplies," he said.

Bob said he meets people all the time who don't even have three days worth of non-perishable food in their home, let alone three days worth of drinkable water.

"And what if the government can't get here in three days?" Bob asked and then added, "You think of it in the rule of threes. What can you not have? Three minutes without air, three days without water, three weeks without food."

That's what everyone should think about at the very beginning of the journey, he said, but it's only the beginning.

"You start off with trying to replace things or an activity," Bob said.

"You keep spare food and water. You make sure you have candles, flashlights and firewood.

"Then you move on to the self-reliance phase," he said. "That's when we get into urban agriculture and self-sustaining."

Some of this is as simple as just doing what our grandparents did. They kept gardens, raised chickens and dug wells.

From there, prepping moves on to being in a state of preparedness, working to be ready for whatever comes.

Bob acknowledged being ready for anything is probably impossible, but you could be absolutely ready for what is likely (power outage caused by storms or water contamination caused by industry), and try to prepare for what seems possible somehow, but is probably unlikely (zombie uprising or full scale invasion by Luxembourg).

Being prepared is not incredibly expensive, though it can be, if you really want to put out the money.

"You'll find a lot of slick guys selling garbage online," he said. "The thing about prepping is you spend 50 bucks or $5,000 or more. That's all up to you."

Good prepping is about managing stress and maintaining balance. Preparing for trouble in and of itself helps to reduce anxiety.

Stress is a killer.

Bob said, "When the water crisis happened, my wife called me and asked me, 'What should we do?'"

Bob said he told her, "Nothing."

They were already ready.

Where people go wrong with prepping is when they don't think through what they've done. They'll lay up a couple of weeks worth of non-perishable canned goods.

"The good news," Bob said, "is if the cans aren't dented or rusted, they'll last practically forever."

The bad news is you get what you pay for, literally.

"You can probably get a case of green beans for about six bucks," he said. "But what if your wife isn't a big fan of green beans? That's going to raise her stress level, which I assure you will raise yours, too."

I told him that I'd only been going without power at home for about a week, but already missed leafy green vegetables. I'd tried keeping them in a cooler, but without regularly replacing the ice, my salad had quickly turned to mulch.

He shook his head.

"Maybe you could do that in winter," he said. "Look where you are. You'll have to adjust your diet."

A longer-term solution might be to have a garden, which could provide fresh vegetables, but that probably wouldn't be year-round.

Without getting into specifics, Bob acknowledged that some of the people who come into his store have some unusual ideas.

"I've heard some really interesting things over the years," he said.

Some of these ideas lead people to obsessively hoard guns.

Bob said he supports the right to bear arms, believes having adequate protection is a core part of survival preparation and thinks if you have guns, you ought to know how to use them.

But … some people put a lot more resources into their guns than into the rest of their survival plan.

"If my plan is survival, and your plan is to have enough weapons to take from me," he said, "the only thing you're prepping for is to be a criminal."

The key, he said, to getting through a crisis might sound a little corny, but it's faith.

"There's definitely a spiritual side to this," he said, but then added, "But I also think it's more than just religion. You have to have a reason bigger than yourself to keep going. It could be your family, but you have to have something to latch onto."

Bob didn't think that was profound, just common sense, but then again, a lot of prepping, to him, was about rigidly applying logic and common sense.

I told him he'd given me a lot to think about, but that I was doing better than I expected. At least, I was doing better than I did in 2012. I told him about my little burner, which I'd used to make coffee and oatmeal.

Keller said he had one, too.

"They're pretty handy," he agreed. "But what are you going to do when the gas runs out?"

I wasn't sure. Also, while I'd successfully made coffee and oatmeal, I'd had less success with making plain old white rice, a major staple in my house.

The rice had come out gritty and undercooked.

I tried eating it anyway, but then tossed it out and had another bagel with peanut butter.

'Full Measure': Coming To Cleveland

KUTV-TV Salt Lake City, June 12, 2016

WASHINGTON (SBG) — Republicans and Democrats finally have presumptive presidential nominees and are headed toward their summer conventions.

For Democrats, with Bernie Sanders still in the race, there could still be fireworks inside the convention center in Philadelphia.

For the GOP, the action may be outside the convention in Cleveland, where the Republican National Convention is being held next month. Some violent protests have followed Donald Trump on the campaign trail. "Full Measure" correspondent Lisa Fletcher went to Cleveland to see if the city is ready for the political rumble.

Two years ago when the City of Cleveland bid, and won, the right to host the RNC Convention, it had no way of knowing that some of today's GOP rallies would be so violent.

Next month, the LeBron James posters will come down and the GOP banners rise, as the Quicken Loans Arena will be transformed. Donald Trump and thousands of GOP luminaries and delegates will flood into the highly secured zone.

Fletcher: "We are at Quicken Loans Arena, where the RNC is going to be. What's it going to be like with 50,000 people here?"

Steve Loomis: "It's going to be crazy busy, crazy busy."

The area inside and surrounding the arena will be closely guarded by Secret Service. It's the area outside the zone that keeps Loomis, the president of the Police Patrolmen's Association, up at night.

Loomis: "You know, I would love to be able to tell you guys that we're in a good place right now, and that we're ready for this. And I can't, I can't."

Loomis' union represents 1,400 Cleveland "rank-and-file" officers, 600 of whom will be on convention duty manning checkpoints, monitoring traffic, and trying to keep a lid on violence.

Fletcher: "Are you afraid your guys are going to get hurt?"

Loomis: "Yeah, there's definitely going to be guys that are going to get hurt. But the city has a responsibility and a duty to make us as safe as possible by providing us the gear that we need to do the job, the training we need to do the job, and the numbers we need to do the job."

Loomis says with just five weeks to go, "rank-and-file" officers feel unprepared. He says the city has failed to communicate logistics, and has provided very little specialized training.

Loomis: "We have 600 police officers, 500 of them haven't been through one minute of training after the three-day FEMA course they went through last year. Not one day."

FEMA is the Federal Emergency Management Agency. It provides on-site training to cities hosting national security events.

Loomis: "I'm concerned when I have FEMA instructors telling me personally that they have never been to a city that has been so non-responsive to their recommendations as the City of Cleveland."

Both the Cleveland mayor and chief of police declined "Full Measure's" request for an interview. At a recent press conference, Police Chief Calvin Williams insisted the city is in good shape.

Williams: "So, we are prepared, we are ready. And our partners are out there prepared and ready.

There are going to be officers and individuals and things that you will never see, but they'll be here making sure this city is safe."

Matt Zone is a city councilman who has been overseeing the preparations.

Zone: "Some of the stuff that is happening behind the scenes, the rank-and-file officers, they're not even aware of."

Fletcher: "Enlighten me a little bit on what's going on behind the scenes, because I think these officers would, too, like to be enlightened, because they feel like, 'We are not prepared yet, we haven't seen the gear, we haven't had the training.'"

Zone: "FEMA, which is an elite entity of the federal government that does massive training around issues, they've been in our city for over nine months. So, there's been extensive training that's been happening with not only certain leadership of the Cleveland Police Department, but our county sheriffs, the National Guard, our state troopers, and many jurisdictions throughout northeast Ohio."

Fletcher: "Now, Cleveland P.D. tells us they've had three days of training with FEMA, and that's it."

Zone: "So, did you hear that from FEMA, or did you hear that from the police union?"

Fletcher: "The Union."

Zone: "See, of course. Now you're only getting one perspective."

We contacted FEMA, and it confirmed it had provided a three-day course for the Cleveland Police Department, and a one-day executive course for the city managers. Hardly the "nine months" the councilman claimed.

FEMA declined to comment on the preparedness of the city, stating, "We are in no position to offer official recommendations or guidance to the City of Cleveland or Cleveland Police Department, and have not done so."

Loomis: "You know, police departments from all over the country are backing out of this thing right now in large scale."

Milwaukee, Denver, Cincinnati, and Greensboro, North Carolina all had originally pledged manpower, but are now pulling out.

Fletcher: "Why are these police agencies that had been committed, in some cases for months, Greensboro had been committed since October, why are they now pulling out?"

Zone: "You know, I've heard stories that they are concerned about depleting their rank and file in their hometowns. I'm not privy to the Greensboro situation."

It wasn't a privileged conversation.

In fact, in a widely publicized letter, the Greensboro Deputy Police Chief cites conversations with other police administrators, "Who expressed a lack of confidence in the City of Cleveland and their preparedness for the RNC," and noted that, "We have a responsibility to ensure that we are sending our officers to an event that is well planned."

Chicago in 1968 was a historical example of how things can go wrong when police, protesters, and political turbulence come together.

Across the country this year, protests at Trump rallies are a clear prediction of what Cleveland is likely to face.

Zone: "Let's face it, most of these police officers, they're gonna be just shepherding and ushering crowds in."

Fletcher: "True, but you don't know which officers are going to be confronted by violent protesters in any part of the city."

Zone: "Sure, but we're going to have such mobility throughout our city, where our police officers are going to be able to move not only on bike, and foot, and horse but also be enabled to set up motorcades that will just roll through the city."

While most of the city's 300 mountain bikes have arrived for the Cleveland Police Cycle Squads, as well as upper-body protection, officers we talked to say much of the other equipment they're expecting, like ballistic helmets, vests, and emergency transport vehicles, are yet to be seen.

Fletcher: "But why the photo finish? The city has known for two years that the RNC is coming here, why wait until the last two or three months to really get the ball rolling?"

Zone: "I mean, that is certain people's opinions. What is happening here in Cleveland is happening in Philly as well. There are different --"

Fletcher: " – Philly's had their equipment for seven months."

Zone: "No, no, no, no, no, not all their equipment."

"Full Measure" contacted the Philadelphia Police Department, and with the exception of sophisticated radio equipment that is still on order, its union president told us they are flush with gear, and have been training on it daily in preparation for the DNC.

Civil rights attorney Jacqueline Greene has been critical of Cleveland Police and says more training is exactly what they need.

Greene: "We have a police department that has been found to have previously engaged in a pattern and practice of unconstitutionally use of excessive force."

Force so excessive the city is currently under federal oversight.

According to a 2014 Department of Justice report, the Cleveland Police “Use unnecessary and unreasonable force, at a significant rate, and in a manner that is extremely dangerous to officers, victims of crimes, and innocent bystanders.

The review also found inappropriate use of Tasers and pepper spray.

Fletcher: “Are you concerned that the previous lack of restraint that has been demonstrated is going to show itself during the protest of the RNC?”

Greene: “Yes, we are concerned about that. We’re concerned not only because of the reputation of Cleveland Division Police themselves, but also because there are other law enforcement agencies that are brought in to assist.”

Fletcher: “Are you concerned about the reputation that’s been laid on the Cleveland Police Department going into something as potentially volatile as the RNC?”

Loomis: “Sure. We’re always concerned about reputation, but we’d ask people to look at the facts.”

As for the protesters, Loomis says their actions will dictate how this convention plays out.

Loomis: “Speak your mind, do whatever it is that you’re going to do for protesting, don’t throw a rock at my guys. Don’t break a window. Don’t burn a car. That just brings a negative light to whatever you’re trying to sell, and everything will be fine.”

Zone: “We have a very good police department and I’m proud of them. They work very hard every single day, and so I know that they’re going to be up for the task. This convention is going to come and go, and people are going to look back and say, you know Cleveland? Job well done.”

To complicate things even more, because the Cleveland Cavaliers are in the NBA Finals, and game six is in the same arena as the convention, they are going to lose about two weeks out of the six weeks’ prep time that the RNC usually has.

Cumberland Matters: Public Hearing Planned On County Budget

By Jon Soles

Fayetteville (NC) Observer, June 11, 2016

The Board of Commissioners will hold a public hearing on the Cumberland County Fiscal Year 2017 recommended annual budget Monday at 7 p.m. in Room 118 of the Courthouse. The recommended budget has $430 million in total expenditures and maintains the property tax rate at 74 cents per $100 valuation.

Anyone interested in signing up to speak should contact the clerk’s office at 678-7771 or cwhite@co.cumberland.nc.us. Residents can watch the meeting live through the County’s website at co.cumberland.nc.us or on Time Warner Channel 5 (Fayetteville/Cumberland County Educational TV).

Care Center donation

The Department of Social Services received a donation on May 25 to help the Care Center. The Daughters of Penelope of Saints Constantine and Helen Greek Orthodox Church, Chapter 416, presented a $1,500 check and hygiene kits for the Care Center, which provides holistic domestic violence-related services to victims, children and abusers.

The Care Center’s most sought-after services are counseling and shelter for women and children in imminent danger. The Care Center 24-hour crisis telephone line is 677-2532.

Emergency training

Cumberland County Emergency Management Coordinator Gene Booth recently graduated from the Federal Emergency Management Agency’s National Emergency Management Advanced Academy, which provides strategic-level training, education and essential skills needed to manage dynamic and resilient emergency management programs.

Earlier this week, Booth and the county’s Emergency Services Department were carefully monitoring Tropical Storm Colin and reminding residents to be ready for severe weather by creating disaster-preparedness kits in their homes. A kit should contain enough nonperishable food and a gallon of water per person, per day, to last three to seven days. Other essential items include a first-aid kit, a weather radio and batteries, hygiene items and changes of clothes. Learn more about emergency preparedness by visiting readync.org. To sign up for the free emergency and severe weather notification service CodeRED, visit co.cumberland.nc.us or call 910-678-7641 or 910-321-6676.

Canning class

You can save on your grocery budget by growing and preserving your own fruits and vegetables. The Cooperative Extension offers the workshop “Basic Water Bath Canning” June 23 from 9 a.m. to noon. The workshop, from the Extension’s Better Living Series, will teach the basics of canning produce from the garden. Participants will learn hands-on techniques for preserving high-acid foods. Class size is limited, so apply early. The $10 workshop fee is due by June 20. To register, call Susan Johnson at 321-6405.

Health Center Celebrating National Men's Health Week

Farmington (MO) Daily Journal, June 11, 2016

St. Francois County Health Center in Park Hills is celebrating National Men's Health Week this year with free walk-in screenings from 8-11 a.m. June 17.

Located at 1025 W. Main St., the health center is offering cholesterol, A1C, weight, and blood pressure checks at no charge — as well as PSA, a blood test used primarily to screen for prostate cancer for $10. No physician order or appointments are required for any of the tests.

National Men's Health Week is celebrated June 13-19, which is the week leading up to Father's Day. During this week, individuals, families, communities and others work to promote healthy living among men and boys.

The health center received the 2015-2016 Medical Reserve Corps Challenge Award from the National Association of County and City Health Officials (NACCHO) to work on chronic disease prevention and health promotion. The funding from this grant is helping to provide the cholesterol and A1C tests for free on Men's Health Day.

"When it comes to prevention and early detection, men's health often takes a back seat to women's health," said Jessica McKnight, SFCHC assistant director. "Research, however, shows that, compared to women, men are more likely to smoke and drink alcohol and generally lead less healthy lifestyles. In addition, men are more likely to put off routine checkups and also delay seeing a healthcare provider for symptoms of a health problem.

"There are several health conditions that only affect men, such as prostate cancer and low testosterone. Many of the major health risks that men face — like colon cancer or heart disease — can be prevented and treated with early diagnosis. It is recommended for men to visit their medical provider for checkups, even if they are not sick. Certain diseases and conditions may not have symptoms, so checkups and preventive screenings help identify issues early or before they can become a problem."

According to the Center for Disease Control and Prevention, chronic diseases are responsible for 7 of 10 deaths each year and treating people with chronic diseases accounts for 86 percent of the nation's health care costs.

For more information on the steps men can take to improve health visit the Center for Disease Control and Prevention's National Men's Health Day website www.cdc.gov/men/nmhw/ or call SFCHC at 573-431-1947.

Much Work Went Into Planning Walkway Marathon

By Dr. Henry M. Kurban, Commissioner of the Dutchess County Department of Behavioral & Community Health

Poughkeepsie (NY) Journal, June 10, 2016

The months of preparation are over, and today is race day. Runners from around the county and around the globe have descended on Dutchess County to take part in the second annual Walkway Marathon race series.

The Walkway Marathon event is a great example of the activities that are helping Dutchess County reach its goal of becoming New York's healthiest county over the next decade. It's also a chance for visitors to come to our county and discover what makes us unique.

More than just several hours on the course, the Walkway Marathon race series is the culmination of months of preparation from the Walkway Over the Hudson organization, New York State Office of Parks, Recreation and Historic Preservation and various county departments, all with participants' health, safety and enjoyment in mind – responsibilities we all take seriously.

Most of the miles covered – be they part of the 5K race, half-marathon or full marathon – will traverse the Dutchess Rail Trail, showcasing the work the Dutchess County Department of Public Works' Parks Division performs to keep the linear park pristine.

This weekend's event, though, is an example of several county departments working together, all with the benefit of keeping both competitors and spectators as safe and healthy as possible. Seemingly as soon as last June's race weekend concluded, Dutchess County and its partners began working to make today as successful – both from a running standpoint and in terms of health and safety – as the inaugural race series.

Our Department of Behavioral & Community Health (DBCH) has played several key roles in helping plan the weekend, and you'll see our staff throughout the day at various locations, there to aid runners should a medical emergency occur. Between first-aid stations and medical tents set up along the race route, the department will support everyone from athletic trainers and podiatrists to nurses, paramedics and physician assistants.

Behind the scenes, DBCH officials have met regularly with their colleagues in the Dutchess County Department of Emergency Response, working on a comprehensive plan for today which offers quality medical care, as needed for those involved in the races – runners, spectators and volunteers. If an unforeseen situation arises, DBCH and Emergency Response representatives have formulated guidelines to keep everyone informed. Officials with DBCH will use the Walkway Marathon as a drill and will be evaluated on several objectives to gauge our strengths.

Alongside with local volunteer groups, the Medical Reserve Corps (MRC) of Dutchess County will line the race route at all eight medical tents and the Marist Medical Tent, providing healthcare assistance and logistical support such as documentation and communications. Supporting both DBCH and Emergency Response when responding to various incidents, MRC of Dutchess County is a partner of a national network of volunteers dedicated to supporting public health infrastructure and disaster preparedness and response in local communities.

Just like last year, officials from Emergency Response will man both the central command center and a mobile command vehicle, all to stay abreast of up-to-the-minute conditions on the course and in the surrounding areas in real time, providing warnings of potential predicaments.

Dutchess County's Division of Public Transit will again shuttle runners, utilizing hybrid buses to cut down on carbon emission, which affects air quality. The Division of Solid Waste helped the inaugural Walkway Marathon become New York's first certified "green race" ever and will likewise support organizers' pledge of sustainability, providing recycling bins and supporting the Walkway Green Team.

Having worked and planned with their counterparts in Ulster County, as well as local police agencies, representatives from the Dutchess County Sheriff's Office will provide safety, security and law enforcement throughout the day. You'll see a visible presence – on foot, bikes and ATVs, and in patrol cars and boats – to protect runners, volunteers and spectators.

This collaboration among several Dutchess County departments and divisions has been critical in developing plans to make the Walkway Marathon as safe, healthy and successful as possible for all involved.

Whether you're running in a race, volunteering or watching the excitement from the sidelines, we hope you enjoy the Walkway Marathon and the fruit of our months of preparation. You likely won't see many of the measures we've undertaken, but rest assured our department and several others have worked tirelessly to keep you healthy and safe.

Be sure to like Dutchess County Government's Facebook page and follow Dutchess County Government on Twitter (@dutchesscogov) for updated photos throughout the day, as well as from Saturday's first-ever Think Differently Dash.

MCPHD Opens Substance Abuse Treatment Program

Macoupin County (IL) Enquirer Democrat, June 9, 2016

Though it has only been operating for about three weeks, Macoupin County Public Health Department's new outpatient, medicine-assisted opioid drug treatment program, operating out of Maple Street Clinic in Gillespie, already has 18 participants.

At a press conference held Tuesday morning in the county board room at Macoupin County Jail, MCPHD Administrator Kent Tarro announced that the organization is partnering with Addiction Treatment Strategies out of Edwardsville to provide the program, which is funded for the first two years through a $325,000 federal grant. After that, if the program is successful, MCPHD will receive funding for it along with the rest of its federal funding, which is awarded on a competitive basis every three years.

Also speaking at the press conference were ATS Director John Crum, Macoupin County Sheriff Shawn Kahl, Macoupin County State's Attorney Jennifer Watson and moderator Angela Weidner, RN and chief operating officer at Maple Street Clinic.

Tarro said there are three priorities for the program: helping people who are addicted to heroin and other opiates stop using, saving the lives of people who are currently addicted, and supporting and working with people who are currently addicted to change their lives to lead happier, healthier, more productive and more fulfilling lives.

"The problems of heroin and other opiates has continued to grow in Macoupin County and the surrounding areas," Tarro said. When the funding proposal for the proposal was being put together, MCPHD researched drug statistics in Macoupin, Madison, Jersey, Montgomery and Sangamon counties. For the five-year period from 2010 to 2014, those counties had a total of 501 opioid overdose deaths, increasing year-to-year to a high of 165 in 2014, and a total of 4,843 opioid-related arrests, also gradually increasing until 2014, which had 1,581.

Crum noted that in the United States, about 120 people per day die of heroin overdoses, which amounts to about 44,000 people per year — the population of Macoupin County. In Macoupin County, Kahl said, there are typically three to five opiate overdose fatalities each year.

Watson pointed out that 43 percent of the felonies that were filed in her office in 2015 were drug-related, and that number doesn't include other crimes that were committed due to addiction, such as larceny. "With this program, we're hopeful that this will reduce the number of felonies that are being committed in Macoupin County and that these people will be able to get the treatment that they need," she said, noting that for users, prosecution tends to lean more toward probation and treatment rather than incarceration, which is more of a priority for dealers.

Kahl pointed out that his department typically tries to hit 30-60 homes per month where drugs are suspected, in order to get the drugs out; homes are targeted based on information received from the general public. "The biggest issue now is that they're spread out, they're everywhere," said Kahl. "They're in your neighborhoods, they're around your children. There's needles laying all over the streets anymore. It's getting out of hand. With this kind of treatment, it's going to help us tremendously. At least we have a resource now to direct these people to, to try to get help if they truly want it — which most of them we talk to do want it, but there was really no resource to do it."

Locally, Kahl said users are typically in their late teens to earliy 20s, but heroin has been prevalent long enough that people who started using it 5-10 years ago are now in their 30s. "The sad thing is, it's family members, it's moms and dads and they've got young children in these houses," he said. "We don't have a lot of big-time drug dealers here. There are a lot of users." Kahl noted that locals typically go to the North City/St. Louis area or Springfield and bring the drugs back to the county. "It would probably shock you to know how many people take a trip to Springfield or St. Louis from this county on a daily basis to bring the drug back," he said.

"We see everyone," said Weidner. "We see moms, we see dads, we see teenagers, we have some people that are in their 60s. Addiction does not discriminate. It's a disease, and it does not discriminate."

"Some of the statistics are absolutely alarming," said Tarro, noting that the United States consumes 99 percent of the world's supply of Oxycontin and 80 percent of the world's supply of prescription opiates overall. In addition, 85 percent of people who use heroin began with prescription opiates. "Right now it is so much easier and [there's] such less bureaucracy to prescribe opiates than it is to get Suboxone," said Tarro; Suboxone is the prescription used to treat opioid addiction. "That is absolutely insane when you think about where this problem came from."

Tarro said Crum will be working with health care providers throughout the counties to let them know the current guidelines for opiate prescriptions. "The hard line from the Centers for Disease Control is that, yes, it needs to be used during cancer therapy and end-of-life hospice care," said Tarro. "Then there's debate about post-surgery, acute injury, etc., but the hard line is just cancer treatment and end-of-life hospice care. We need to reduce the supply."

According to Tarro, about 20 years ago hospitals started making pain a vital statistic, similar to temperature and blood pressure, which he believes is part of the problem. "We need to teach both children and adults that your goal should not be to live a pain-free life," he said. "Pain is a part of living, it's a part of healing, and it's a part of growing."

Tarro noted that Macoupin County communities have been working on solutions to the growing drug problem, such as by having town meetings regarding heroin and other opiates and their "addictive, destructive and fatal consequences". In addition, MCPHD is working to expand the Macoupin County Medical Reserve Corps and has recently received funding to recruit and train additional volunteers to provide outreach in the communities, including education and awareness to help people prevent their loved ones from becoming addicted and making sure people know where to seek treatment for addiction.

The program is based on the idea that addiction is a disease. "It is not a choice, it is not poor willpower," said Tarro. "It is very comparable to diabetes, heart disease, and cancer." He also noted that there is a large genetic component to addiction, as much as 50-60 percent. “That is a fair warning for people who have had that in their families in a big way.”

Tarro said there are four “pillars of community action” for dealing with the problem of addiction: prevention, education, treatment and enforcement. “We intend to attack all four at the same time,” he said. “A public health department’s supposed to address the biggest health problems in their community and work with everyone else to make that problem either disappear or at least reduce it as much as possible and help people live a healthy, self-actualized life.”

For now, the program is limited to 30 participants due to federal regulations concerning the number of patients a health care provider can prescribe Suboxone. After Maple Street Clinic’s psychiatrist has had her Suboxone license for one year, which will be in November, they will be able to apply to expand to 100 patients. Until that time, if there is more demand than the clinic can meet, the additional patients will be referred to the ATS program, which has open spots.

Crum said that long-term outpatient programs such as this one are far more successful than 30-day inpatient programs. “The outcome of 30-day treatment is zero, but that’s the current model,” he said. “They’re usually high on the plane ride home.” However, insurance companies will typically pay for at least two hospitalizations or two residential treatment programs — which can cost $25,000 to upward of $90,000 per 30-day stay — per year, but are not as willing to fund outpatient programs such as ATS, which Crum said has a much higher success rate as most patients are involved in it for a minimum of two years. “At the end of the two-year period of time, about 63 percent of our patients are no longer using anything and haven’t used anything for over a year,” he said. “Most of my patients aren’t ever going to use again, but it takes an extended period of time to get to that point. Thirty days of treatment is a myth; treatment on a residential basis is a myth. It has to be in the environment in which the addiction occurs.”

“You go away for 30 days, you’re isolated, you’re not having to deal with your kids, your family, your parents, work, legal problems. You get out of inpatient and all those problems hit you. In outpatient, you’re dealing with all of those problems, and we’re helping you deal with them step-by-step,” said Weidener, who pointed out that even if inpatient programs worked, there aren’t any available in this area due to the state budget crisis. “I had a patient come to us in tears last week. She was told by two inpatient places just to keep using for three months until a bed became available.”

Medicaid pays for Suboxone, but that is not the case with most insurance companies. “We currently have to fight with every insurance company for them to pay for it,” said Weidner. “We are billing insurance for what we can bill for, but, again, the rate of what they pay for outpatient services isn’t near enough. That’s why we needed the grant.” Like all of the clinic’s services, the substance abuse program fees are offered on a sliding scale based on income. No patients will be denied based on their inability to pay.

The program also will treat underlying problems of addiction, such as depression, anxiety, bipolar disorder and Attention Deficit Hyperactivity Disorder. “First we do an extremely careful assessment, then we go to the medical system, which impacts on the cravings for the drug,” Crum said. “Then we look at the psychological component of the cravings. Why do people continue to use? We can treat that on a psychological basis that supports the medical component.” Patients will be required to attend group and individual therapy sessions every week, as well as keep a journal and stay in regular contact with the therapist.

“Success is in small steps,” Crum said. “We have had patients who had been using 140 milligrams of Vicodin on a daily basis that are down to four milligrams a month. That’s extremely significant change. What that means is the neurobiology of the brain is changing back and the patients are gaining control of their lives. For the most part, our patients are using to stay alive. They don’t use to get high; that’s a myth. They use to be functional.” He added, “It’s not necessarily the cravings that get them, which we can address with medication. It’s the compulsion to do something. It’s not atypical for our patients to shift one compulsion to another; they may shift from heroin to gambling. Gambling’s not a drug, but it works exactly the same way.”

Farmington Hills Teen Picked For FEMA Youth Council

By Brad Kadrich

Hometown Life (MI), June 11, 2016

Preston Buszka thinks young people need to become more aware of safety and emergency preparedness.

Now the 15-year-old, just completing his sophomore year at Farmington High School, is going to be in an even better position to help make that happen.

Buszka, already a member of the Mayor’s Youth Council and one of two youth representatives to Farmington Hills’ Emergency Preparedness Council, has been named to the Federal Emergency Management Agency's 2016-2018 Youth Preparedness Council.

"I'm very excited," Buszka said. "I'm really looking forward to making our region, and the country, safer."

Created in 2012, the council brings together youth leaders from across the country who are interested in advocating on behalf of preparedness and making a difference in their communities by completing preparedness projects.

The council supports FEMA's commitment to involve youth in preparedness-related activities. It also provides an avenue to engage youth by taking into account their perspectives, feedback, and opinions.

Buszka, the son of Shelly and Dan Buszka of Farmington Hills, has already been involved in safety measures. As a freshman, he became the safety captain for the school's robotics team, a position he's continued.

He was honored at recent competitions in Traverse City and at the world competition for his work setting up the team's safety program.

"I enjoyed doing that job," Buszka said. "Our safety program really improved, and I really enjoy it."

Tim Tutak, the vice-chair of the Farmington Hills Emergency Preparedness Council, said Buszka will provide a great deal of insight to FEMA.

"Over the years we have had a number of youths from our communities provide input to the EPC," Tutak said. "They have provided us with insight from the youth in our communities. Preston has a sense for safety and preparedness that provides us with insight from that his group that most of his peers do not."

Farmington Hills Mayor Ken Massey said Buszka's selection for the FEMA honor is "very impressive."

"Yet again, Farmington Hills stands out and leads the way, and this time it's one of our youth doing it," Massey said. "Preston is a very outgoing young man. He's bright, he's motivated and I think he's got a very bright future ahead of him."

County Launches Volunteer Database Website

By Brendan Denison

Danville (IL) Commercial News, June 12, 2016

DANVILLE — The Vermilion County Board recently launched a website its chairman calls a "one-stop shop" where organizations can easily link up with volunteers.

County Board Chairman Mike Marron said board members gathered a lot of grassroots input from people across the county, asking residents about the local strengths, weaknesses, opportunities and threats of the county.

Marron said that one recurring strength the county has is its people, who always want to get involved and donate time and money.

"We tried to come up with a plan to harness those assets and make it more effective," Marron said.

So far, the following organizations have signed up with the website: CRIS Senior Services, Big Brother Big Sisters of Vermilion County, Vermilion County Emergency Management Agency, Vermilion County Health Department and Danville Public Library foundation.

The website can be accessed at the following address: www.vcvolunteer.net.

Marron also said another part of the plan is about trying to coordinate efforts.

"We need to try to get everybody to work together to the greatest extent possible," Marron said.

Melody Ehrlich, director of the Danville Public Library foundation, commended the county for getting the website launched, and said it will be a valuable tool for various non-profit organizations.

"We have a book sale three times a year and we rely heavily on volunteers," Ehrlich said. "We have a group of volunteers that have been supportive and steadfast for many years, but we are always looking for new volunteers to help with the book sale."

She also mentioned the foundation sponsors an annual fundraiser, From Page to Stage, where volunteers are needed as well. Other volunteer opportunities with the foundation include office duties, help with mailings and data entry.

Ehrlich said individuals interested in volunteering for the foundation can call 477-5220.

Melissa Rome, emergency preparedness coordinator with the Vermilion County Health Department, said the department doesn't have as much staff as it used to, and it has to heavily rely on volunteers if there's a public health emergency.

According to Rome, the Vermilion County Medical Reserve Corps would respond to events such as a large pandemic or bioterrorism incident, or help with dispensing medicine or vaccinations to large numbers of people. Rome said the Medical Reserve Corps is part of a nationwide organization, and there are quite a few throughout Illinois.

She also said they have had few volunteers signed up, and they try not to take on spontaneous volunteers who show up during a major event. Rome said they need to make sure volunteers are trained and know how to give shots, and normally need nursing staff, pharmacists and doctors.

Rome also said they need individuals who aren't medical professionals to help with registration, traffic control and helping greet people.

"We need people from all different areas to help," Rome said.

According to Rome, interested volunteers would need to fill out an application through the health department, which also goes through the Illinois Health program. The volunteers also would also be asked to take a few online courses.

"Because we are so limited, really the only reason we would use our volunteers is for drills, exercises and a real event," Rome said.

Volunteers

Lowell (MA) Sun, June 12, 2016

Email information for this listing 10 days in advance to jdeegan@lowellsun.com.

DISASTER VOLUNTEERS: The Upper Merrimack Valley Medical Reserve Corps. seeks both medical and non-medical members to be trained for public health initiatives and emergency service in their community. See www.UMVMRC.org for examples of activities. Call Nancy at 978-399-2549 for information.

STRAIGHT AHEAD MINISTRIES: Christian non-profit looking for men and women of faith interested in visiting incarcerated teens in detention facilities, including Merrimack Revocation in Lowell, to build relationships, bring hope and share their faith. Trainings are scheduled according the each volunteer's location and schedule; commitment is one hour, once a week. For information, visit www.straightahead.org or email marc@straightahead.org.

TUTORS NEEDED: Seeking volunteer tutors in Math, English, Arts/Comprehension for high school seniors to prepare for MCAS tests. Those eligible are: current/retired teachers, teachers' assistants, education students, experienced tutors. Call Lauri Murphy, 781-932-5520.

UPPER MERRIMACK VALLEY MEDICAL RESERVE CORPS: Medical and non-medical volunteers who would like to join the local MRC unit are invited to call Nancy Burns, Coordinator, at 978-399-2549 or Sandy Collins, Director, at 978-399-2908; or e-mail

POLITICAL COMMENTARY, COLUMNS AND EDITORIALS

OPINION: Time To Flip The Federal Disaster Equation

By Garret Graves, US Rep. from Louisiana's 6th district

Gonzales (LA) Weekly Citizen, June 11, 2016

June is upon us, bringing with it the things we love about summer in South Louisiana: longer days, snowballs, cicadas buzzing in the background and maybe a family trip to the beach. It's also the time of year to keep a watchful eye on the Gulf of Mexico as we're making plans to beat the heat – June 1 is the official start of the Atlantic Hurricane Season. Despite the unusual, 9 year drought of Category 3 storms making US landfall, Louisiana natives know that the run of luck can't hold forever.

The Congressional Budget Office recently released a report predicting that federal costs associated with hurricane damage could rise 39% in coming decades, attributing the increase to climate conditions and development trends along our nation's coast. Regardless what the exact figures turn out to be, we know it won't get cheaper – that's why I've been outspoken about shifting the federal paradigm on disaster management and community resilience.

We've spent hundreds of billions of dollars on disaster response as a country, but a fraction of that could have been spent to prevent damages. Multiple government and independent reports show that every one dollar invested in prevention and resiliency saves as much as four dollars in disaster response costs. But our government is stuck on stupid: instead of making these investments on the frontend, it's dead-set on this broken process of coming in after a disaster and spending exponentially more dollars. We have to break this cycle and redesign policies around resiliency to stop hemorrhaging billions of dollars after the fact – that approach is wasteful and leaves our communities, economies and ecosystems just as susceptible as they were before the event.

Earlier this year, I supported House passage of a bill reauthorizing the programs and activities of the Federal Emergency Management Agency (FEMA), and we worked hard to ensure that it included language to lay the groundwork for a paradigm shift. The bill commissions an assessment of trends in disaster losses—their causes and amounts—and requires the agency to submit recommendations to Congress on how to reduce losses and produce savings for taxpayers. Last month, we advanced legislation authorizing US Army Corps of Engineers programs and included provisions to accelerate completion timelines for water resources development projects critical to the structural resiliency of our communities. The bill also empowers local entities and cuts costly bureaucratic barriers that impede the progress of these projects – like the 44-year study of the West Shore Lake Pontchartrain Project, which is now finally set to be authorized.

Despite advancements in the world around them, agencies like FEMA and the Corps of Engineers largely operate today the same way they have since their inception. For example, FEMA was established at the end of the 1970's to coordinate response efforts in the wake of disasters and mostly applies the same, decades-old mentality in 2016. But static solutions will never fix dynamic problems – like the rapidly changing conditions along Louisiana's coast. Coordinating relief efforts is absolutely important, but it's only one component of how we ought to be thinking about disaster management and should not be the core mission of our federal disaster agency. Its core mission should be prevention, i.e., "how can we best invest today to prepare for and reduce the severity and expense of inevitable natural occurrences?"

Why is changing the approach so difficult? You know the answer: government is change averse. Self-preservation and bureaucratic complacency have a vice grip on the status quo. But the status quo is preventing better service for taxpayers who want and should demand better – and it's putting people in harm's way.

Unlike what's brewing in the Gulf, a disturbance in Washington is exactly what we need, and being an agent of that change gets me out of bed in the morning. We're going to untangle this bureaucracy and make government work – one agency at a time.

How Hillary Clinton And Chuck Schumer Are Teaming Up With The NYPD To Push Police Militarization

By Sarah Lazare

AlterNet, June 9, 2016

Chuck Schumer and Hillary Clinton are teaming up with the NYPD to request high levels of funding for a federal "counter-terror" program that is directly bankrolling the militarization of police forces nationwide. To secure the funds, they are invoking the threat of terrorism and exploiting the climate of fear and incitement that has come to define the 2016 election cycle.

At issue is the the Urban Areas Security Initiative (UASI), which was created in 2003 as a Department of Homeland Security grant program aimed at assisting "high-threat, high-density Urban Areas in efforts to build and sustain the capabilities necessary to prevent, protect against, mitigate, respond to, and recover from acts of terrorism." From 2003 through 2015, at least $8.9 billion from taxpayers have been distributed in the form of UASI grants.

In reality, the program funds initiatives that contribute to blatant law enforcement overreach, including a police militarization and weapons expo known as Urban Shield and the training of SWAT teams across the country. According to the War Resisters League, which contributed research to this report, UASI effectively "strengthens and unifies state repression."

In his proposal for next year's federal budget, President Obama requested cuts to DHS's funding of UASI from $600 million in fiscal year 2016 to $330 million in 2017, arguing that counter-terror funds are sufficiently provided elsewhere. A broad coalition of human rights organizations called this move a "step in the right direction."

The Obama administration's call for reductions provoked a fierce backlash, with the mayor of New York, Bill de Blasio, joining with NYPD police commissioner Bill Bratton to demand high levels of funding by casting the city as a "top terror target."

Buoyed by support from Clinton, Schumer announced in a press statement in late May that he has successfully restored the UASI funds to the proposed Homeland Security budget. Schumer declared, "UASI is the cornerstone of effective preparedness and prevention against terror attacks and in an era of rising terror threats, our support for anti-terror programs should not be falling."

The tussle over funding comes amid mounting concerns over police impunity. At a time when Black Lives Matter protests have forced public scrutiny of police militarization and killings of African Americans, politicians and police leaders are using the supposedly imminent threat of terror to bulk up their budgets and subvert a national conversation about the proper allocation of public resources.

"Ticking Time Bomb Mentality"

UASI grants do not exclusively fund police; they also finance first responders like firefighters when they can show that a "nexus to terrorism exists." A FEMA spokesperson told AlterNet that the agency is unable to immediately provide a breakdown of what percentage of the recipients are law enforcement agencies.

Lara Kiswani, executive director of the Arab Resource and Organizing Center, explained in an interview with AlterNet: “If you want to fund emergency response, fund emergency response. We do not believe UASI is intended for that at all.”

Kiswani’s suspicion is understandable. A 2011 report from the National UASI Association, which describes itself as a “nonprofit composed of UASI Programs,” notes that, “From 2003 to 2010, Urban Areas spent approximately $623 million to support terrorism prevention capabilities. Much of this funding has focused on enhancing intelligence collection, analysis and sharing with fusion centers playing a key role in the process.”

Such centers, which operate as ill-defined counter-terrorism spying and intelligence gathering hubs, have conducted warrantless surveillance on Occupy activists and Muslim-American communities. “Fusion centers have long been an issue that Congress keeps pouring money into without comprehensive oversight or accountability,” Michael German, a fellow for the Brennan Center for Justice at NYU Law School, told AlterNet. “Because their focus is on intelligence, their threat to civil liberties is enormous and the ability to check abuse is almost nonexistent.”

But it gets worse. Craig Dziedzic, general manager for the Bay Area Urban Areas Security Initiative, noted this year that the funds continue to bankroll Urban Shield, which he described as “an annual full-scale exercise, which is conducted throughout the Bay Area UASI region for 48 hours.” Urban Shield brings together international SWAT teams, weapons manufacturers and police agencies to Alameda County, Calif. for a war games and arms sales extravaganza human rights campaigners say illustrates the epitome of state violence. The event has met such stiff resistance from local residents and activists that in 2014 its weapons expo was kicked out of Oakland.

UASI is also funneling money into SWAT teams across the country, from Macomb, Michigan to Boston, Massachusetts. According to a 2012 report from Sen. Tom Coburn (R-Okla.), “Keene, New Hampshire, with a population just over 23,000 and a police force of 40, set aside UASI funds to buy a BearCat armored vehicle.” Coburn pointed out that UASI funds bankrolled first responders’ $1,000-per-person attendance at a training that included a workshop where actors dressed as zombies were gunned down “to simulate a real-life terrorism event.”

FEMA says that, in fiscal year 2016, 29 urban areas were deemed eligible for funds according to “an analysis of relative risk of terrorism.” The New York City area is by far the largest recipient of UASI funds, which finance the NYPD’s 500-officer Critical Response Command, a permanent counter-terror unit whose cars are “fitted to hold Colt M4 semiautomatic assault rifles,” according to New York Times reporter David Goodman.

UASI is helping expand and arm “counter-terror” policing in a city whose top police officer, Bratton, used public fear over terrorism in the wake of the Paris, Brussels and San Bernardino attacks to press for the expansion of police powers, including access to phone data. Some complain that his department has treated Black Lives Matter protesters like a terrorist threat. According to Josmar Trujillo, a writer and organizer with New Yorkers Against Bratton, “They are using this ticking time bomb mentality, where the mysterious threat of terrorism is always there and at any moment we could all die, so you have to rush to make decisions and bypass civil rights and human rights.”

AlterNet reached out to DHS but was unable to locate an official willing to speak on the record. The NYPD did not immediately respond to a request for comment.

“Nexus to Terror”

What is the system-wide impact of financially incentivizing disaster response rooted in counter-terror measures, in a country that has been fighting a nebulous war on terror for nearly 15 years?

In a letter to U.S. senators, 35 grassroots groups, including the American Friends Service Committee, Malcolm X Grassroots Movement and Center for Constitutional Rights, argued that “by requiring training supported by these federal funds to contain a ‘nexus to terrorism,’ UASI serves to fuel the dangerous culture of aggression so rampant in U.S. police departments. UASI also creates a structural bond between militarized law enforcement and vital emergency response resources and workers.”

Notably, the congressional fight over UASI funding comes at a time when social movements are demanding accountability for police violence and racism and calling for alternatives to mass incarceration. Even Clinton claims to be disavowing her track record of supporting “tough on crime” and “war on drugs” policies, yet she is invoking the threat of terror to back high levels of UASI funding. “We need it, we need it, I want it,” Clinton said of UASI funding in an April interview with reporters for the

New York Daily News. “I don’t agree with the Obama administration on that.”

Kiswani claimed that “politicians are exploiting the climate of fear of Muslims and racism against Arabs in order to further programs like UASI so that they can use them to further exploit other communities of color. I think the war on terror has consistently been used to further the already-existing oppressive structures in the United States. This is no different than the way that the war on drugs has been used.”

Data shows that there is already tremendous overlap between the war on terror and the war on drugs. Of the wiretaps granted by state and federal courts in 2013, nearly 90 percent were used for drug investigations, with drug wiretaps almost tripling between 2003 and 2013.

UASI is just one piece of a much larger patchwork of federal initiatives that militarize police departments, including the 1033 program, which allows the Department of Defense to transfer weapons of war to state and local law enforcement agencies.

“Time after time we’ve seen how programs like UASI feed on cultures of fear to further militarization around the country and the world,” Tara Tabassi, national organizer for the War Resisters League, told AlterNet. “But we’ve also learned how being SWAT raided or teargassed by law enforcement, compels us to build movements across communities—working together to build a demilitarized world.”

MAIN FEMA NEWS

NATIONAL NEWS

ABC: Severe Weather. ABC World News Tonight (6/23, lead story, 2:50, Muir, 14.63M) reported, "And we begin tonight with the urgent water rescues now under way. Families trapped in rising waters. An entire community under water. And now fears that a toddler, a little boy, was swept away. These pictures coming in near Richwood, West Virginia. You can see the shopping center there. Water several feet high. Cars nearly disappearing. Also tonight, the new number just in. At least 10 confirmed tornadoes. This one touching down in Illinois. Chief Meteorologist Ginger Zee with the track as this system now moves into the East. But first, ABC's Alex Perez with the rescue efforts and the state of emergency just declared." ABC (**Perez**) added, "Tonight, torrential rains sending a muddy wall of water down a Richwood, West Virginia, street. Evacuations under way. The entire town engulfed. Officials declaring a state of emergency. Worries that a nearby dam could breech." **Leslie Rubin**, WCHS-TV: "They are looking for a four-year-old boy. He was washed away." **Perez**: "Reports of a four-year-old child swept away by floodwaters. All part of the same powerful storm that brought hours of fear to the Heartland." **Unidentified speaker**: "Just a thin snake coming out of the sky." **Perez**: "Truckers forced to pull over in Buckley, Illinois." **Unidentified speaker**: "We've got to get off the highway. Big tornado." **Perez**: "A storm chaser in the thick of it, pummeled with debris. Multiple confirmed tornadoes, including this EF2, with winds up to 125 miles per hour, tearing an 11-mile path through Pontiac, Illinois. Mary Johnson says this mobile home flipped over three times. Luckily, everyone safe." **Unidentified speaker**: "It could have been so much worse." **Perez**: "At Chicago's Soldier Field, 50,000 fans at the Chile versus Columbia soccer match, scrambling for cover. And back here in Pontiac, even though the tornado crushed this gas station building, officials say several people who were seeking shelter here were lucky enough to walk away without any serious injuries. David?" **David Muir**: "All right, well, that's good news, but we are thinking about that family and that toddler tonight. Alex, thank you. Let's get right to Ginger, because unfortunately these next few hours could be very dangerous." **Ginger Zee**, ABC News Chief Meteorologist: "Every time I refresh the storm reports, I'm coming up with something up with something new. So a landslide now on Interstate 79, just out of Charleston, is the very latest. You can see the tornado watch and severe thunderstorm watches that stretch from parts of Kentucky to North Carolina. The flash flooding is the imminent threat, for sure, along with those damaging winds. And of course, the isolated tornado that could come out of this. You see the flash flood watch because this area has already had upwards of eight inches of rain. These trailing thunderstorms, the ones that keep coming, line after line, David, is what we're concerned about tonight. West Virginia finally starts clearing out after midnight. But that's not good for Knoxville, all the way to parts of North Carolina. And look, tomorrow, the low does the same thing. Another severe weather day." **Muir**: "All right, watching it again tomorrow. Ginger, thank you."

NBC: Severe Weather. NBC Nightly News (6/23, story 4, 0:20, Holt, 16.61M) reported, "A state of emergency has just been declared in two West Virginia counties, where heavy rains are causing devastating floods, rock slides, and mudslides. Much of Richwood, a city about two hours east of Charleston, is under water. The storms also took down trees and power lines, knocking out service to tens of thousands."

CBS: Severe Weather. The CBS Evening News (6/23, story 3, 0:20, Pelley, 11.17M) reported, "Well, severe storms pounded the middle Atlantic states today. In Ravenswood, West Virginia, a toddler was swept away by flood waters. The governor declared a flood emergency. 40,000 homes and businesses lost power. In Allegheny County, Virginia, streets turned into rivers. Police were warning people to stay off the roads."

At Least 6 Tornado Touchdowns Confirmed In Northern Illinois

Associated Press, June 23, 2016

CHICAGO — Illinois officials and residents began assessing damage Thursday after eight tornadoes damaged rural communities in the northern part of the state amid powerful storms that swept across the Upper Midwest.

The National Weather Service said an EF2 tornado with estimated top wind speeds of 115-125 mph cut a path more than 11 miles long and about four football fields wide into the city of Pontiac on Wednesday night. Officials said at least seven people were injured in that tornado.

An EF2 tornado with top wind speeds of 116 mph cut an 8-mile path from Marseilles to Seneca. Weaker tornadoes struck Cissna Park, Ottawa, Troy Grove, West Brooklyn, Mazon and a rural area 5 miles northwest of Ottawa. No injuries resulted from those storms.

"We are fortunate things are not worse and are thankful there were no fatalities," Illinois Gov. Bruce Rauner said in a Thursday morning statement.

In the Pontiac area, about two dozen homes — 10 to 15 outside of the city and 13 within the city limits — and nine commercial businesses were damaged, according to Pontiac Fire Chief Scott Runyon.

"Most of the residential reports ranged from minor shingle damage and tree damage, to pretty extensive window repair and holes, but trees did most of the damage to the residential homes," Runyon said during a news conference, The Daily Leader newspaper in Pontiac reported.

"Some of the commercial buildings were reporting relatively minor damage, but the majority of the reports are fairly severe. It's going to take a great deal of money to get these repaired," Runyon said.

The storm system produced dime-sized hail in some areas, and its high winds snapped trees, blew roofs off buildings and downed power lines. The weather service reported winds from 80 mph to 100 mph in some parts of northern Indiana.

The northwestern Indiana town of Brookston, among those buffeted by the high winds, declared a state of emergency Thursday after the entire town lost power. WLFI-TV reported two state highways in the town were blocked by storm debris, and authorities were warning people to avoid the area.

"The wind was so ferocious you couldn't have stood out in it at all," Brookston resident Steve Hall told WLFI. "This tulip (poplar) tree behind me was a healthy young tree and (the wind) just twisted it and laid it over like a pretzel."

A 100 mph wind gust was recorded in the nearby town of Battle Ground, the weather service said.

Firefighters responded to reports of people trapped in a house in Seneca, Illinois, after a tornado moved through the village about 70 miles southwest of Chicago. No injuries were reported.

Jeff Maierhofer said he huddled in a basement with his wife, two children and seven neighbors when the storm arrived. He said his farm was badly hit.

"Nobody's hurt. Everybody's fine. All the neighbors are fine. Everybody checked in with everybody. But there's a lot of damage," Maierhofer told WLS-TV.

In nearby Serena, Nate Hermann said he drove his pickup truck around 10 square miles and found farmland "wiped out everywhere."

"Lines are down, trees are down, corn is flat everywhere," he told the Chicago Tribune.

A strong band of thunderstorms forced a two-hour delay in Chile's 2-0 victory over Colombia in the Copa America semifinal at Soldier Field, the home of the Chicago Bears football team. Fans sheltered beneath the stands until the danger passed. Fans also were told to take shelter at Target Field, home of the Minnesota Twins, before their game against the Philadelphia Phillies resumed after a 70-minute delay.

Heavy Rains, Severe Storms Damage Some North Dakota Crops

Associated Press, June 23, 2016

FARGO, N.D. (AP) – Another week of heavy rainfall has drowned out some crops in northeastern North Dakota, while the southwestern part of the state received some much-needed moisture.

The Agriculture Department says in its weekly crop report that up to 4 inches of rain was reported in the northeast. The impact of the flooding won't be known until later.

The report also says that while the southwest got needed rain, storms also brought strong winds and hail, damaging some crops.

The condition of the state's staple spring wheat crop is still rated 82 percent good to excellent.

Pasture and range conditions statewide are rated 66 percent good to excellent. Stock water supplies are 87 percent adequate to surplus.

Flash Flooding Damaged Woodbury County Spans, Engineer Says

Associated Press, June 23, 2016

SIOUX CITY, Iowa (AP) – Authorities say flash flooding has damaged one Woodbury County bridge beyond repair and heavily damaged another.

County engineer Mark Nahra told county supervisors Tuesday that creek flooding moved the Haskel Avenue bridge three feet off its abutments, according to the Sioux City Journal (http://bit.ly/28QGjWf).

"Even though it didn't go anywhere, it's a total loss. It cannot be repaired," Nahra said.

He estimated the replacement cost will be between $600,000 and $650,000 for that bridge and between $650,000 and $700,000 to repair the heavily damaged 170th Street bridge.

Some area farmers reported up to a foot of rain from Friday's storms, which swelled McElhaney and Wolf creeks.

Nahra estimated the county sustained between $1.5 million and $1.6 million in storm damage and cleanup and restoration costs.

"I would say it's going to take us two weeks to get the road tops completely restored," he said.

Emergency management coordinator Michelle Skaff said she's asked all 15 county cities about damage to public property so she can determine whether the county would qualify for a presidential disaster declaration and funding from the Federal Emergency Management Agency.

For such aid, Skaff said, two thresholds must be met: The county must have sustained at least $365,000 in damage, and the state must have sustained at least $4.3 million in damage.

Floodwatch Underway At Metro's Cleveland Park Stop After Earlier Rushing Water Problem

By Dana Hedgpeth

Washington Post, June 23, 2016

With heavy rains hitting Washington Thursday morning, there was a flood watch of sorts underway at the Cleveland Park Metro stop after the station experienced heavy flooding from another storm earlier this week.

On Twitter, Michael Marriott was tracking the morning commute at the stop, as crews were seen trying to unclog a drain and a worker used a squeegee to keep the water back. The Cleveland Park stop's flooding issue has its own hashtag — #ClevelandParkFloodWatch.

On Tuesday, the station had what many riders described as a 'Noah's Ark'-like experience when water gushed into an escalator and stairwell at the station during a heavy rain storm.

The stop closed for nearly two hours Tuesday until the water was drained and cleared. Metro officials had said the station was "prone to flooding because it is at the bottom of a hill."

"In these extreme weather conditions, we get flash flooding," according to Metro spokeswoman Sherri Ly.

On Thursday morning, Marriott joked on Twitter that crews were on hand to "handout life vests as needed" at the stop.

After Station Flood, D.C. Moves To Improve Drainage Near Cleveland Park Metro

By Faiz Siddiqui

Washington Post, June 23, 2016

The District will make efforts to improve drainage near the Cleveland Park Metro station, after storms Tuesday swept a cascade of rain inside, flooding the upper level, city officials said Thursday.

D.C. Council member Mary M. Cheh (D-Ward 3), who represents Cleveland Park, outlined plans Thursday for the District to examine drainage and recommend ways to reduce runoff in the Connecticut Avenue corridor where the Metro station is located. Puddling and minor flooding has long been a problem in the area, which is replete with concrete surfaces that are impermeable to rainwater, but Tuesday's unprecedented flash flood prompted officials to act, Cheh said.

"This is something that I've been working on for some time, but the challenges of coordinating between three entities—DDOT, DC Water, and (Metro)– frustrated the process," Cheh said. "But, at long last, I think we're going to see some significant movement to address the problem."

The first phase of a design process for improvements, led by the District Department of Transportation, is set to begin within two months. The plans, which are expected to be devised over the next year, are expected to result in a better drainage system, rebuilt drainage structures and improved stormwater retention, according to Cheh, who chairs the council's Committee on Transportation and the Environment.

DDOT spokesman Terry Owens said the design phase of the project is estimated to cost about $600,000. The project is not new; DDOT has already met with the community and conducted a study of the area, Owens said, and the nine-month phase is part of a larger streetscape plan.

Cheh said the project also would involve raising Metro's vent shafts to levels less susceptible to flooding, adding that DDOT would work with Metro to assess any other design improvements that can be made.

Metro said Wednesday that it had federal grant money to raise the vent shaft at Cleveland Park, but the project is in the midst of an approval process involving regional planning commissions, and no timeline has been set.

This post has been updated.

100-acre Wildfire Contained In North Central Nevada

Associated Press, June 23, 2016

GABBS, Nev. (AP) — Fire crews in north-central Nevada have fully contained a 100-acre wildfire burning in a remote area north of Gabbs about 120 miles east of Carson City.

The Sierra Front Interagency Dispatch Center said Thursday a fire line has been drawn completely around the blaze that was burning in grass and brush near Lodi Valley.

The fire was reported shortly after 4 p.m. Wednesday.

Crews halted the advance of the flames overnight and remained on the scene Thursday mopping up and putting out hotspots.

No homes or structures were threatened. But fire officials cautioned that a "red flag warning" remains in effect until 9 p.m. Thursday due to gusty winds and low relative humidity.

Central California Fire Burns Structures, Spurs Evacuation

Associated Press, June 23, 2016

LAKE ISABELLA, Calif. (AP) — A wildfire broke out Thursday and exploded in size, consuming at least 50 to 60 homes as it tore through several rural communities in Central California northeast of Bakersfield, authorities said.

The blaze broke out near Lake Isabella in late afternoon amid heat in the 90s and single-digit humidity, climbing over at least three ridges into hillside neighborhoods, Kern County fire Capt. Tyler Townsend said.

The fire has burned nearly four square miles, and about 1,000 homes are under threat.

Live video from fire officials at the scene showed hillside homes along dirt roads consumed by heavy flames in Squirrel Mountain Valley, a community of about 500 people. Some houses were already little more than embers on the ground, while others were deep in flames.

Smoky haze could be seen for miles around, and orange flames lit the evening air as planes and helicopters made drops on the blaze.

"I've never been in a wildland fire where I've seen so many homes burn," said Townsend, who has been in the area for nearly a decade. "It's one of the most devastating I've ever seen."

Many of the houses in the area have propane tanks, adding to the danger, he said.

The small rural communities of South Fork, Weldon, Onyx, Lakeland Estates, Yankee Canyon and Mountain Mesa were also under evacuation orders.

Some residents were refusing to evacuate, Townsend said.

There are also power and cellphone outages in the area.

Elsewhere in the state, cooler weather helped crews fighting two fires that burned more than 8 square miles of chaparral and brush in the Angeles National Forest and foothill communities northeast of Los Angeles. The fires were 15 percent contained.

More than 1,300 homes were evacuated during the 4-day-old blaze, but around half have been allowed back.

On Thursday, authorities let hundreds of evacuated residents return briefly to homes in Azusa and Duarte to gather belongings. Residents might not be allowed back permanently for several more days, officials said.

One of the fires broke out Monday when a car ran off a highway. No homes have burned.

Near the San Diego County border with Mexico, an 11-square-mile fire was 35 percent contained after burning five homes. A majority of evacuees were cleared to return at 6 p.m. Thursday.

A heat wave coupled with nightly wind gusts drove the fires earlier in the week before slightly cooler weather took hold. But National Weather Service forecasts warned red-flag conditions of extreme fire danger could return by evening.

Red Flag Conditions Ahead For Southern California Amid Several Wildfires

By Joseph Serna And Nina Agrawal

Los Angeles Times, June 23, 2016

A short respite from triple-digit heat allowed crews battling several wildfires in Southern California to block the flames from destroying homes this week, but dangerous red flag fire conditions have returned, the National Weather Service said Thursday.

Temperatures in the Los Angeles, Ventura and Santa Barbara county mountains and valleys were expected to hover in the 90s Thursday, but they could climb into the 100s by the weekend while coinciding with a drop in humidity and strong wind gusts, NWS meteorologist Todd Hall said.

A red flag warning — meaning weather conditions are prime for a fast-moving, destructive wildfire — was in effect for the those three counties, while a heat advisory was expected in Orange, San Diego and Riverside counties, the weather service said. It will get worse through the weekend, Hall said.

Several wildfires have broken out across Southern California since a heat wave settled over the region late last week.

The San Gabriel Complex fire, a pair of wildfires burning in the San Gabriel Mountains above Duarte, began Monday and forced hundreds of evacuations.

"When we drove away, I thought we had a 50-50 chance of seeing our house again," said Roger Bosch, a Duarte resident.

On Wednesday, relief washed over the 73-year-old: He got to go home. Evacuations were lifted as conditions improved and firefighters increased containment of the two fires.

Of the 858 homes evacuated in the foothills areas, 534 households were allowed to return, Los Angeles County Sheriff's Capt. David Halm said. Mandatory evacuations remained in place for other parts of Duarte and Azusa, authorities said.

The fires have burned 5,235 acres and were 15% contained, officials said Thursday.

The battle against the flames was aided by cooler temperatures and higher humidity in the days following Monday's record-breaking heat, authorities said. Steep, challenging terrain presented a problem, said Mike Wakowski, the commander for the multiagency wildfire effort.

"We're trying to secure as much as possible before the next heat wave comes," Los Angeles County Fire Department Deputy Chief Vince Peña said Wednesday.

Conditions improved enough this week in Santa Barbara County that crews began leaving the Sherpa fire burning in the Santa Ynez Mountains and Los Padres National Forest. That fire has burned 7,486 acres and was 93% contained, the U.S. Forest Service said.

Three hot shot crews dropped onto the mountain earlier this week to help build defenses at the fire's most isolated points deep in the forest, the Forest Service said.

In San Diego County, firefighters have increased containment of the Border fire just north of the U.S.-Mexico border that prompted mandatory evacuations for the entire east county community of Potrero. The Border fire was about 20% contained and has burned 6,840 acres, according to the California Department of Forestry and Fire Protection.

The Border fire has destroyed four outbuildings and left three firefighters with minor injuries. The cause is under investigation.

How Aerial Mapping Has Helped Contain San Gabriel Complex Fire

By Lucy Schouten

Christian Science Monitor, June 22, 2016

Reports called it "firenado" and a "heat wave blitzkrieg," but by Tuesday evening, firefighters had the information they needed to start containing the San Gabriel Complex Fire.

The weather helped, as firefighters took advantage of clear skies on Tuesday to employ aerial mapping and chart the fire's movement in real time, the Associated Press reported.

The Reservoir and Fish fires have been burning through the rugged foothills near Los Angeles since Monday, evolving quickly into a twin fire system that that firefighters are now combatting as a single, 4,900-acre wildfire as they work to keep the blaze away from people and property, the US Forest Service reported.

The wildfire shrank for the first time on Tuesday night, and firefighters ended the day with 10 percent containment on both fires.

Although private drones have been cited as a hazard to firefighting – California's legislature passed a bill punishing drone fliers who interfere with firefighting last year, although the governor vetoed the measure – aerial tools aid the efforts in significant ways. Jets and helicopters are flying hotshots into tough areas such as the California foothills while others pour gallons of red fire retardant on stubborn blazes.

Satellite and drone images are aiding firefighting strategy for the fires blazing throughout California, Arizona, New Mexico, and Utah, providing both information about the fire's current location and the geographical detail to estimate where it could go next.

To this end, NASA developed a Rapid Response system in 2001. The system provides a way to connect satellite images from its Moderate Resolution Imaging Spectroradiometer (MODIS) instrument on board the Terra research satellite with the firefighting work of the National Interagency Fire Center and the US Forest Service.

"By 2007, the Rapid Response System was producing data globally and had incorporated data and imagery from the MODIS instrument on the Aqua satellite," according to a NASA news release. "Users quickly realized that the imagery and data products produced by Rapid Response could be used for other tasks that required low latency products, including imagery for monitoring air quality, floods, dust storms, snow cover, agriculture, and for public education and outreach."

NASA has used MODIS to create satellite images of the San Gabriel Complex, which the forest and fire officials then use when deciding how to employ over 1,000 personnel currently working on the fire.

The aerial mapping strategy gives firefighters an extra edge toward containing the large fires, especially when they burn through steep or even inaccessible terrain.

"They are working so hard, it's excruciating with the heat, and up and down these hills, they're steep," Los Angeles County fire Capt. Mike McCormick told CBS News.

Despite the progress, evacuations will continue for at least one more night while firefighters work toward greater containment.

"We're looking at another night at least," US Forest Service spokesman Nathan Judy told CBS News. "We understand the stress it puts on families if you displace them from their homes, and we want to get them back as soon as we can."

Millions Of Dead Trees Pose Massive Wildfire Risk. What Can Be Done?

By Ben Rosen

Christian Science Monitor, June 23, 2016

Because of a historic five-year drought, warmer temperatures, and beetle infestation, 66 million trees have died in California since 2010, increasing the risk for disastrous wildfires, the US Forest Service said Wednesday.

In its announcement, the Forest Service demanded Congress allocate more money for firefighting so it doesn't have to.

"Unless Congress acts now to address how we pay for firefighting, the Forest Service will not have the resources necessary to address the forest die-off and restore our forests," said Tom Vilsack, secretary of the Department of Agriculture, the parent agency of the Forest Service, in a statement Wednesday.

"Forcing the Forest Service to pay for massive wildfire disasters out of its pre-existing fixed budget instead of from an emergency fund like all other natural disasters means there is not enough money left to do the very work that would help restore these high mortality areas. We must fund wildfire suppression like other natural disasters in the country."

The Forest Service spent 56 percent of its budget last year on fire management, compared to 16 percent in 1995. The Forest Service said 2015 was the most expensive fire season in its history, costing them more than $2.6 billion, according to The Sacramento Bee.

The Forest Service expects the combination of drought and bark-eating beetles to ravage more trees near California's Yosemite National Park and Lake Tahoe in the near future. As natural disaster attributed to climate change intensifies, the Forest Service's plea to Congress underscores a question the federal government has wrestled of late: Who is responsible (and should pay for) forest and wildlife management?

As firefighters contend with several early season wildfires across California, the Forest Service said it has found 26 million dead trees across 760,000 acres in the southern portion of the Eastern Sierra since October 2015. This is in addition to the 40 million trees it estimates died there from 2010 and late 2015. There are an estimated 3.9 billion trees in California.

The prevalent death of trees, in particular the death of pines and fires, is a straightforward story. The five-year drought and warmer temperatures have stressed the trees, even though California experienced historic rains this winter. The needles of drought-stricken pines weakened, leaving them incapable of secreting the sticky resin they need to fight off bark beetle infestations. Mild winters don't kill off as many insects. Bugs burrow beneath bark and into the tree's soft innards, which larvae feed on.

Officials expect more trees to die in the near future, and the rampant mortality to reach the northern Sierras.

"Tree dies-offs of this magnitude are unprecedented and increase the risk of catastrophic wildfires that puts property and lives at risk," said Mr. Vilsack, in his statement.

For years, the Forest Service has asked that fire management be funded like other natural disasters. Last year, a bipartisan coalition supported legislation that would have prevented the Forest Service from "cannablizing" its budget to fight wildfires, wrote Ryan Sabalow for The Sacramento Bee. But lawmakers couldn't agree on how much logging should be allowed in national forests.

Fire suppression isn't the only wildlife management service. At Yosemite National Park alone, more than half a billion dollars worth of repairs have been neglected, reports David Iaconangelo for The Christian Science Monitor.

Meanwhile, President Obama has overtaken former President Theodore Roosevelt, protecting 256 million acres of public land and water under the federal Antiquities Act, the Monitor's Josh Kenworthy reported.

However, more national parks, forests, and monuments comes with a price, one the Forest Service has said it pays for, drawing away from its ability to manage forests and plant trees.

Agency Enlists High-tech Help Keeping Drones From Wildfires

By Keith Ridler

Associated Press, June 23, 2016

BOISE, Idaho — When Brian Cresto and his fellow firefighters fly toward a wildfire at just a few hundred feet off the ground, he's scouting for the best spot for them to land when they parachute down.

Lately, he's also been keeping an eye out for hobby drones that could take out their twin-engine propeller craft before it climbs to 1,500 feet, where the eight smokejumpers exit.

"It's dangerous anytime you drop an aircraft down to a certain level," said Cresto, a smokejumper with the U.S. Bureau of Land Management. "Drones are starting to be a part of that conversation."

Hobby drone ownership has spiked in recent years, and more and more of the devices have been spotted flying illegally over active wildfires, where they can endanger the airplanes and helicopters being used to battle the blazes.

It's a high-tech problem, and federal authorities are thinking high-tech to stop it: The U.S. Interior Department is working with drone makers and mapping companies to create a system that uses smartphone apps already on the market to quickly alert drone fliers to temporary flight restrictions at wildfires.

Initial attacks on a wildfire are crucial, but firefighting aircraft can't fly if a drone is in the restricted area because a collision could be catastrophic, officials say.

Retardant bombers and helicopters typically fly even lower than smokejumpers, at just above the trees or rooftops, and have little time to react in an emergency. A drone collision could take out an engine or break a windshield. The devices also can get sucked into a helicopter's intake or hit a rotor.

In just the past week, drone sightings have grounded aerial firefighters on three different days at a Utah blaze that has forced the evacuation of 100 homes. Utah Gov. Gary Herbert governor said those evacuations might have been avoided if not for the drones.

According to Federal Aviation Administration rules, hobby drones are limited to 400 feet above ground level and within sight of the operator. But internet videos show a stream of violators, including at wildfires.

"I've heard sometimes that at a wildfire, there might be 20, 30 guys out there flying their quadcopters," said Patrick Harper of the Meridian-based Idaho Drone Co.

Wildfires tend to attract spectators, including drone pilots who can use their devices to capture stunning aerial footage from a unique perspective.

Authorities across the U.S. recorded 20 incidents in which drones flew too close to wildfires last year, with more than half hindering firefighting efforts. It has happened again at least nine times so far this year.

In Utah, a helicopter pilot refused an assignment after one of the recent near-drone collisions, fire spokeswoman Carissa Silvis said. A $1,000 reward is being offered for information leading to the drone pilot's conviction.

On Thursday, hobby drones grounded flight operations at an Arizona fire where more than 15,000 people are under pre-evacuation notice.

The Interior Department hopes the new smartphone notifications will keep drone fliers at a safe distance. Its plan is to post data online that companies can start using in August to keep the notification apps up-to-date.

"It will be successful if we are able to provide real-time information and have it depicted on those mapping programs," said Brad Koeckeritz, the department's division chief for unmanned aircraft systems.

The next step is asking drone builders to make it possible for drone operators to activate systems that would automatically prevent a drone from entering temporarily restricted airspace, Koeckeritz said.

Idaho drone maker xCraft has a website intended to help drone fliers stay out of permanent no-fly zones, said JD Claridge, company co-founder and CEO. That kind of system likely is also possible for temporary flight restrictions at wildfires, he said.

"For safety concerns, I agree that it would be a good step forward to start creating some shield-fence algorithm inside the drones that would prevent them from flying where there are wildfires," he said.

But it should be an option for the drone flier, as some drones legally fly at wildfires, Claridge noted. Federal agencies are looking at drones for mapping fire perimeters, and are even developing drones to fight wildfires.

There's urgency to the Interior Department's plan because the FAA predicts 1.9 million hobby drones will be sold this year and as many as 4.3 million by 2020. Their popularity is due to falling prices and increasingly sophisticated onboard computer systems that make the devices easier to pilot, Harper said.

The FAA in December required drone operators to register crafts weighing between about half a pound and 55 pounds, meaning recovered drones could potentially be matched with their owners. And on Tuesday, the Obama administration created a new category of rules designed specifically for drones weighing less than 55 pounds, allowing commercial operators such real estate agents, farmers, filmmakers and others to fly them without special permission.

Those are steps in regulating drones, but Claridge and Harper said technology is still advancing faster than oversight.

Harper said hobby drone operators would do well to keep in mind some commonsense rules.

"If you're going to fly someplace that causes somebody danger," he said, "that's not a hobby anymore."

Dar Schmid works for Missoula, Montana-based Leading Edge Aviation and transports smokejumpers as a BLM contract pilot. He said pilots who fly into wildfires at low levels, including retardant bomber and helicopter pilots, often are navigating near mountains and dealing with heat and smoke.

They have too much going on in the cockpit to worry about drones and risk what he called task overload.

"You wouldn't know it was coming," Schmid said. "You'd just hit one, and the damage would be done."

Lack Of Preparation For Massive Earthquake Could Bring Catastrophe, Report Says

By Rong-Gong Lin

Los Angeles Times, June 23, 2016

Southern California's smaller cities and large businesses must take the threat of a crippling earthquake far more seriously than they have been, a committee of business, public policy and utility leaders said Thursday, saying action is needed to "prevent the inevitable disaster from becoming a catastrophe."

Despite strides made by the city of Los Angeles to focus on earthquake safety, Southern California still faces significant threats that haven't been resolved.

One of the most ominous is the looming threat on the edge of Southern California's sprawling metropolis — the Cajon Pass. It's a narrow mountain pass where the San Andreas fault — California's longest and one of its most dangerous — intersects with combustible natural gas and petroleum pipelines, electrical transmission lines,train tracks and Interstate 15 north of San Bernardino.

A huge earthquake on the San Andreas could move one side of the fault as much as 30 feet from the other. Such an earthquake would rupture flammable pipelines and lead to a catastrophic explosion so powerful it leaves behind a crater.

And if utilities aren't able to shut off the flow of petroleum or natural gas, firefighters could be helpless to keep a raging wildfire from spreading across the San Gabriel and San Bernardino mountains, just as the rest of Southern California staggers from the worst earthquake it has seen in more than 150 years.

There are solutions to these problems, said seismologist Lucy Jones, who advised the Southern California Disaster Risk Initiative Committee. But little has been done precisely because many people don't know the extent of the problems, and, if they do, fixing them seems so daunting.

"Don't fall into the trap of, 'It's so impossible, so we can't do anything,' or, 'We have to do everything.' Take a piece. Get it done. You're now better off. Go on to the next one," Jones said. "There's plenty that can be done."

Among those pushing for fixes are executives for Southern California Edison, the Southern California Gas Co., the Walt Disney Company, and Wells Fargo, along with the Los Angeles Economic Development Corporation, USC, the Port of Los Angeles and the Southern California Assn. of Governments.

Their pitch: create a Southern California Disaster Risk Reduction Initiative, intended to highlight the unresolved earthquake risks and convince decision makers to fix them. The group issued a report with recommendations on Thursday.

"It's easier to bury your head in the sand, but that's no longer an acceptable answer," said John Bwarie, the committee's project coordinator.

Here are five major threats Southern California faces that could imperil our ability to recover after a massive earthquake strikes the San Andreas fault, and how they could be fixed:

One way to reduce the risk of catastrophe at the Cajon Pass would be to put shutoff valves on both sides of the San Andreas fault on petroleum and natural gas pipelines. If the pipelines are automatically turned off during the earthquake, it could prevent huge amounts of fuel from being ignited if the pipelines break, Jones said. Officials say a big quake on the San Andreas is overdue.

Small changes can make a big difference. Jones recalled the meltdown of a Japanese nuclear power plant after a 9.0 earthquake and tsunami hit in 2011.

A meltdown might've been avoided had the backup cooling system's diesel fuel was stored at a higher elevation, keeping it functioning even after the tsunami hit, she said.

The reality is disturbing — burst water pipes could leave parts of Southern California without running water for six months. Natural gas pipelines can fuel dangerous city fires.

Some experts point out that it's impractical to retrofit all of Southern California's water pipes with earthquake-resistant, flexible versions in our lifetime. But even some retrofitting would help.

"Not every pipe in the systems needs to be quake-proof, but by targeting key lengths of pipe in the system, enough can be in place to address the firefighting needs of the region," the report said.

Installing more remote-control gas shut-off valves for natural gas transmission and high-pressure distribution pipelines would also help.

Many people don't know how bad the aftermath of a huge earthquake can be: "Water and power delivery systems could be off for weeks, housing for tens of thousands could be damaged," the report said, an event far worse than experienced by veterans of the 1994 Northridge earthquake.

Large businesses need to develop a plan for getting back to work as quickly as possible. The worst-case scenario would be that major industries, such as aerospace, give up and leave Southern California if the region remains dysfunctional for too long.

That means businesses like banks need to know how to get their branches running as quickly as possible, perhaps by installing backup generators and keeping caches of emergency supplies on site.

If it's too hard to have a home improvement chain keep all of its branches open in, say, Granada Hills, Northridge and Chatsworth, perhaps one plan would be to keep just the Northridge store operational, Bwarie said.

A key factor that could determine what neighborhoods survive and which ones are abandoned after an earthquake is how well the neighborhood works together to recover, instead of giving up and leaving town.

Southern California, unfortunately, has a reputation for neighbors not knowing each other.

But things can be done to help establish a sense of community, such as cities encouraging block parties or organizing people to check in on each other after an earthquake.

One idea Jones is working on at her own church is creating a system in which people are assigned to check on each other after an earthquake hits, and complete a drill on that annually.

The city of Los Angeles has moved ahead on requiring apartments and concrete buildings at risk of collapse to be retrofitted, but most of Southern California's vast suburbs have not followed suit.

In fact, there are cities that haven't even done what Los Angeles began in the 1980s: requiring the retrofit of deadly brick buildings, whose bricks turn into projectiles in even slight shaking. The two women who died in the 2003 San Simeon earthquake in Paso Robles died as the facade of an unretrofitted brick building collapsed.

Another problem: The minimum standard for new buildings permits them to be so severely damaged in an earthquake that it might need to be torn down. The only requirement is that people not be killed by that building in an earthquake.

"Cities have to ask themselves: Are you approving buildings that are designed to fail — but won't kill anyone? That doesn't do much for our economy," Bwarie said.

The committee suggests creating a uniform standard that would make it easier for building owners to choose higher levels of minimum safety, such as a building that would remain in operation even after a significant earthquake.

"Southern California's vulnerability to natural disasters demands that we look forward and prepare," Hasan Ikhrata, executive director of the Southern California Assn. of Governments, said in a statement. "It is critical to our economy, and to the 18 million residents in the region."

11:25 a.m. Updated with more information about San Andreas.

N.J. River Town Finds Relief In Completion Of $100M Flood Control Project

By Dave Hutchinson

New Jersey Local News, June 23, 2016

BOUND BROOK — Nearly 17 years after deadly flooding from Hurricane Floyd decimated Bound Brook, a massive $100 million system of levees, flood gates and pumping stations in the small borough has finally been deemed finished.

The completion of the Bound Brook portion of the $330 million Green Brook Flood Damage Reduction Project brings both a sense of security to the town and has financial implications for homeowners, said Mayor Robert Fazen.

"This is a great thing for Bound Brook," Fazen said. "The entire borough is going to benefit. Developers will look at Bound Brook differently."

As of July 18, roughly 500 residences and businesses once located in flood zones will no longer be required to have flood insurance, said Fazen. The annual insurance cost to homeowners was between $4,000 and $5,000 a year, he said.

Fazen said the change in flood zone designation could result in an increase of 15 to 20 percent in property values and spark a renewed interest in development for the 1.7 square-mile borough.

Fazen said plans for 300 new apartments have been approved by the zoning board and another 700 new apartments are in the planning stages. He said expects the population to grow 10 to 20 percent from its approximately 10,000.

"We're going to need new restaurants and stores to serve our new population," he said. "This is an exciting time for Bound Brook."

Flood project keeps Hurricane Irene from becoming another Floyd

The borough is hosting a public meeting on Monday at 7:30 p.m. at Bound Brook High School to review the project with representatives from the U.S. Army Corp of Engineers and the Federal Emergency Management Agency.

The federal officials will release a revised flood map and answer any questions.

The New Jersey Department of Environmental Protection, Somerset County Engineering and Public Works and Bound Brook officials will also attend the meeting.

Columbia City Council Approves 2016–2017 Budget And Receives Update On Flood Recovery

By Josh Cruse

Columbia (SC) Star, June 24, 2016

The Columbia City Council held its monthly meeting Tuesday, June 21.

Council approved the second reading of the 2016/2017 budget, which takes affect July 1. The second reading included a budget without the proposed four percent rate increase to water and sewer.

Council chose at the previous meeting to not include the rate hike. While he voted in favor of the budget, Mayor Steve Benjamin did not agree with council's decision not to include a rate increase.

"It's short sighted; it's misguided. It's a mistake," Benjamin said.

Councilman Moe Baddourah, who voted against the rate increase, commented it was Benjamin's opinion that doing away with the increase was a mistake.

Without the rate increase, the amount of funding for water capital improvement projects was decreased from $60 million to $ 40 million. The sewer capital improvement projects funds remained at $ 80 million. To reduce the amount to $40 million, staff had to cut projects to Chapin, Longtown Road, and Horseshoe BPS improvements. The funds for unforeseen projects were also cut from $1.3 million to $100,000.

Missy Gentry, assistant city manager, said developers on some of the sites cut from the budget may express their concerns to council in the future.

Benjamin said $312,000 has been allocated to Hospitality Tax.

Keely Thibideaux, with Landmark Consulting, provided an update on the historic flood recovery.

Thibideaux said the current funding sources being explored are the FEMA Public Assistance Grant, the FEMA 406 Hazard Mitigation Grant, the CDBG-Disaster Recovery Grant, the 404 Hazard Mitigation Grant Program, the NRCS Waterway Debris Removal Grant, and the Flood Mitigation Assistance Grant Program. The State of South Carolina is also responsible for a 25 percent match for large projects.

Other potential funding sources include the Pre-disaster Mitigation Grant Program and the Five-year Hazard Mitigation Plan. The estimated total for the 404 Mitigation is $165 million.

The city can access a $ 19.89 million HUD grant for repairs. A risk analysis and implementation plan must be submitted by July 22. Council also has to submit a final action plan to HUD by September 15. Approval of the plan takes no longer than 45 days after it has been submitted. All the funds from HUD must be expended within six years of the grant execution.

The estimated total for the NRCS is $1.2 million. The cost is for six sites, including Trenholm Road to Woodlake Road and Smith Creek– upstream of Sunset Drive. A 25 percent funding match is required. A project agreement and a detailed update will be provided to council at the July meeting.

Thibideaux said the Lost Creek Bridge will reopen Wednesday, June 22.

She reported over 200 property owners sent in letters of interest for property acquisition based on repetitive loss. So far, 61 property owners have responded to letters of interest involving acquisition or elevation; 34 acquisition applications have been submitted and 21 elevation applications.

Thibideaux anticipates eight to ten FEMA obligated projects by the end of the month.

The 404 Mitigation application has to be submitted by August 18.

She also anticipates the start of the design process for the canal.

In other news, Hernan Villalba has been appointed to the Climate Protection Action committee.

Council approved a resolution designating the Wheeler Hill Neighborhood as a residential parking permit district. Council also approved the first reading of an ordinance granting a franchise to Keyser Concessions for operation of a stationary sidewalk vending car on the northwest corner of Main and Washington Streets.

The second reading of a zoning map amendment for 1829, 1859, and 1863 West Buchanan Drive was approved by a vote of 4-2. Baddourah and Benjamin voted against the ordinance, while Reverend Ed McDowell Jr., Howard Duvall, Sam Davis, and Tameika Isaac Devine voted for the amendment.

The next Columbia City Council meeting will be Tuesday, July 19 at 1737 Main Street, beginning at 6:00 p.m.

Engineer: Two County Bridges "Total Loss" After Friday's Storm

By Ian Richardson

Sioux City (IA) Journal, June 23, 2016

SIOUX CITY | Flash flooding during Friday's severe storms has damaged two bridges in northern Woodbury County beyond repair, according to county officials.

On Tuesday, County Engineer Mark Nahra told county supervisors that flash flooding in McElhaney and Wolf creeks permanently damaged two county bridges, one on 170th Street between Jewell and Jasper avenues and another on Haskel Avenue.

That area of the county received 7 to 12 inches of rainfall, according to local farmers.

"The Haskel Bridge has been moved about three feet off of its abutments," Nahra said Tuesday. "Even though it didn't go anywhere, it's a total loss. It cannot be repaired."

Nahra said the estimated cost to rebuild the bridges would be between $650,000 and $700,000 for the 170th Street bridge and between $600,000 and $650,000 for the Haskel Avenue bridge. Repairing the bridges would require an amendment to the county's fiscal year 2017 program, he said.

Nahra said he and county supervisor Larry Clausen surveyed the bridge damage Wednesday.

In all, Nahra estimates the county sustained between $1.5 million and $1.6 million in damages from the Friday night storm. Along with the bridges, the estimate includes loss of gravel, debris cleanup and worker overtime hours. Nahra said county crews are continuing their work to clean up.

"I would say it's going to take us two weeks to get the road tops completely restored," he said.

Woodbury and Plymouth counties are continuing to assess the damage to see if they qualify for a presidential disaster declaration and funding from the Federal Emergency Management Agency (FEMA).

For Woodbury County to qualify for funding, Emergency Management Coordinator Michelle Skaff said two thresholds must be met: The county must have sustained at least $365,000 in damage, and the state must have sustained at least $4.3 million in damage.

Skaff said she has asked all 15 cities within the county about any significant damage sustained to public property and is working on collecting the information.

"We're On Our Own": Sutton Residents Take Matanuska River Erosion Into Their Own Hands

By Daniella Rivera

KTVA-TV Anchorage (AK), June 23, 2016

SUTTON –

A neighborhood in Sutton has watched their properties wash away for years, as the Matanuska River inches closer to their homes. It's a decades-old problem they say grows more urgent by the day, and they want help from the Matanuska-Susitna Borough and the state. But changing a natural force like a meandering glacial river is complicated.

"The last two years, previous, it's been terrible," said Donnah-Rae Devernon-Pearson.

She says the Matanuska River used to be at least half a mile away from her home, but over the years it's moved in closer, carrying pieces of her upstream neighbors' lives with it.

Wednesday, an old pickup truck showed up in the river in front of her house. Another piece of debris the river has picked up along the way and carried with it.

"It's just difficult to live with it," said Devernon-Pearson.

And the borough says it's complicated to fix because it's a state-owned river, meaning anyone who wants to clean it up or move debris has to have a special permit.

Any changes made to protect homes like Devernon-Pearson's could hurt someone else downstream.

"So what do you do?" asked Devernon-Pearson. "Come up with something creative. That's what my husband did."

They can't legally touch the river, but the couple decided they could build a makeshift dike — a long wall to prevent flooding — on their private property. Her husband placed four large metal boxes filled with rocks on land upstream. As the water has eroded that land, the boxes have helped redirect the water away from several homes. But even those boxes are moving under the force of the current.

A little farther upstream from the boxes is another reminder of the river's power. Rushing water has eaten away what was once a yard behind a now empty home, carving out the bank and carrying it downstream.

Devernon-Pearson says she never knows what to expect to see in the river.

"There is, two years ago, there was actually a roof that was out down by our house that had floated down."

Hot summer days make glacial rivers rise. The borough says that river has already been at flood levels this summer.

Borough spokesperson Patty Sullivan said the borough emergency manager is constantly watching for dangerous conditions. She also said it's difficult for the borough to get involved because the land is privately-owned, and the river is state-owned.

She says they've been able to use funds from FEMA to buy out residents losing their land in the past but wasn't able to say if that is a current option for residents.

KTVA wasn't able to immediately reach someone with the state for comment.

DHS/FEMA GRANTS

House Panel OKs $41B Homeland Security Discretionary Budget For FY 2017

By Jane Edwards

ExecutiveGov, June 23, 2016

The House Appropriations Committee has passed by a voice vote a bill that would allocate $41.1 billion in discretionary funds to the Department of Homeland Security for fiscal year 2017.

The committee said Wednesday the DHS appropriations bill would authorize $7.3 billion in funds to help the Federal Emergency Management Agency perform emergency response and disaster relief operations.

The proposed legislation shows a $100 million increase from the enacted discretionary budget for FY 2016 and contains five amendments approved by the full panel through a voice vote.

One of the amendments was introduced by Rep. John Carter (R-Texas) and seeks to provide FEMA with $49 million in additional funds to support a local grant program that aims to counter violent extremism and terrorist attacks.

The vote comes two weeks after the House committee introduced the bill.

The proposed legislation would authorize $11.2 billion in funds for the Customs and Border Protection, $10.3 billion for the U.S. Coast Guard, $5.9 billion for the Immigration and Customs Enforcement, and $7.6 billion for the Transportation Security Administration, according to the bill's summary.

The bill also includes $1.8 billion in budget for the National Protection and Programs Directorate's cybersecurity programs, $1.9 billion for the U.S. Secret Service and $119.1 million for the Citizenship and Immigration Services' E-Verify platform.

Public Transportation Safety Challenged By Funding Issues

By Belle Hillenburg

Homeland Security Today, June 23, 2016

Time limits on grant funding have left several organizations within the US public transportation sector unable to continue to increase safety procedures and emergency preparedness across public transit systems.

Panelists spoke Tuesday at a field hearing held in New Jersey by the House Homeland Security Subcommittee on Emergency Preparedness, Response and Communications to address concerns surrounding grant requirements for major surface transportation systems and to discuss the importance of increasing the safety of surface transportation systems, specifically in the New York and New Jersey areas.

US surface transportation systems serve over 28 million riders daily and over 10 billion riders annually. Surface transportation includes mass transit systems, pipelines, passenger and freight railroads, motor carrier operators, highways and maritime facilities.

Training emergency responders to respond to attacks on these systems is increasingly important to counter potential threats posed by terrorists, active shooters and natural disasters.

Richard Sposa, Chief of EMS Operations at Jersey City Medical Center and RWJBarnabas Health, testified that funding from grants has increased the capability of Emergency Medical Services and hospitals to respond to mass casualty events, pandemic events and acts of terrorism.

"We are cognizant of the limited resources available and the difficult decisions that you must make in Congress on how to allocate resources," Sposa said. "However, because of the changing landscape, we are hopeful that the recent trend to reduce homeland security grants, is reversed."

Subcommittee Chairman Dan Donovan (R-NY) cited the March 2016 terrorist attacks in Brussels--which left 32 dead in a metro station and international airport--as an example of the increasing need for public transportation safety procedures and enhanced first responder training in the United States.

"Since 2002, authorities have thwarted six terrorist plots against mass transit systems in the United States," Donovan said. "Alarmingly, five out of those six plots were against systems serving the New York metropolitan region."

Surface transportation system safety protocol is most often the responsibility of system owners and operators, unlike the aviation sector, which is heavily federally regulated.

Thomas Belfiore, Chief Security Officer of the Port Authority of New York and New Jersey, said the timeline for grant funding prohibits the ability to create and implement large scale projects that would increase public transportation safety.

Public awareness campaigns and security equipment such as cameras are often funded by grants. These grants are awarded with timelines for implementation preventing organizations from executing larger scale planning and projects.

Belfiore said the period of performance for grants is currently three years and would be more effective if increased to five years to allow industry officials to create more effective security projects.

“A critical resource is the federal grant funding program. This funding source is essential to help us continue to protect our facilities from evolving threats,” Belfiore said.

Furthermore, Director of the Office of Emergency Management and Homeland Security of Jersey City, New Jersey Sgt. W. Greg Kierce said surface transportation cannot be protected in the same way commercial aviation is protected due to the need to keep costs low and accessibility and convenience high.

“The deployment of metal detectors, X-ray machines, explosive sniffers, and armed guards, which have become features of the landscape at airports, cannot be transferred easily to subway stations or bus stops,” Kierce said. “The delays would be enormous and the costs prohibitive – public transportation would effectively be shut down.”

In order to ensure passenger safety without prohibiting access, many public transportation systems encourage passenger involvement through public awareness campaigns.

Director of the Surface Division of the Transportation Security Administration (TSA) Sonya Proctor said TSA works to analyze funding opportunities from the Federal Emergency Management Administration (FEMA) and the Department of Homeland Security (DHS) to ensure organizations with the greatest need receive grants.

TSA has implemented campaigns supported through DHS funding, such as the If You See Something Say Something campaign. The campaign encourages civilians to reach out to local law enforcement if they encounter suspicious activity.

Similarly, TSA’s Not On My Watch program is an awareness campaign designed to make employees of surface transportation systems more cognizant of threats targeting the transportation community.

“TSA also works with industry to identify emerging security training needs, develop new training modules, and refresh existing training,” Proctor explained.

FIRE GRANTS

Hamilton Firefighters Get $140K Grant For New Gear

By Cristina Rojas

New Jersey Local News, June 23, 2016

HAMILTON — One of Hamilton’s nine fire districts has been awarded a $140,908 federal grant that will allow it invest in new respirators and other gear.

U.S. Rep. Chris Smith (R-4th Dist.) made the announcement Thursday.

Fire District 4 will use the money to buy 22 self-contained breathing apparatus and a thermal imaging camera that can be used to help find downed firefighters and bring them to safety.

“This grant will help protect those who are willing to put their lives on the line every day and to run into burning buildings to save lives,” Smith said. “This federal support will help them obtain more substantial equipment to keep them as safe as possible.”

The new SCBA gear, which will have face pieces and air cylinders, will replace its inventory of obsolete or damaged equipment.

Smith, in his letter of support, referenced a recent risk analysis that found the department’s current SCBAs are either approaching or have exceeded their recommended replacement dates.

District 4, which is led by Chief Thomas Gribbin, has 16 career staff and 20 volunteer firefighters. It provides mutual support to the township’s eight other fire districts as well as to neighboring Trenton.

The grant was awarded through the Federal Emergency Management Agency’s Assistance to Firefighters program.

FLOODS

County Still Waits Word From FEMA; Red Cross Shelters Begin Closing

By Roy Reynolds

Liberty County (TX) Vindicator, June 23, 2016

Liberty County officials were still in limbo Wednesday morning, waiting for word from the Federal Emergency Management Agency that the county would – for the fourth time in a year – qualify for federal disaster assistance from the last round of rain and floods in May.

"I expect to hear from them today," said Tom Branch, emergency management coordinator for the county said on Tuesday, but he was still without word the next morning.

Liberty County officials fully expect to be added to the rolls with FEMA for federal funding, something that has become fairly routine with floodwaters inundating the county numerous times in the past year.

As of Wednesday morning, the Trinity River in Liberty County stood at 27.39 feet, still above the 26-foot flood stage, but down considerable over the past couple of weeks. Officials announced Wednesday that the discharge from the dam in Livingston would increase to 42,700 cubic feet per second from 39,400 cubic feet per second, which will increase levels downstream in Liberty.

In past disaster declarations, Liberty County has been one of initial round of announced areas for help. This time, officials hope to be one of the "add-on" counties, even if they have to wait a while.

"Hey, someone has to be last," joked Branch.

Signs that Liberty County and other areas of the state are getting close to full recovery from the earlier April flooding are appearing with regularity. FEMA announced Tuesday that it will close three Disaster Recovery Centers in Houston and Cypress Saturday, while many of the Red Cross shelters installed for the Tax Day Floods are also shifting their focus.

The Disaster Recovery Center for Liberty County, in Cleveland, will close Friday.

Disaster Recovery Centers are facilities or mobile office where survivors may go for information about our programs or other disaster assistance programs, and to ask questions related to their case.

The Red Cross, on the other hand, provides immediate assistance for disaster victims, including shelter for those displaced from their homes.

According to Betsy Moore, a public affairs volunteer with the Red Cross' Texas flood efforts, the Liberty facility, in the Hartell Building near downtown, housed 12 people after the Tax Day Floods.

Five remained in the shelter last week, when word came down that it would shutter those operations on Friday.

"They started to close on Monday, but they hadn't yet coordinated with us," Branch said. Red Cross officials delayed the closure to allow for two more days notice, rather than the 36-hour advance notice originally given.

The Red Cross worked with local and regional charities such as Catholic Charities of Houston for housing appraisals and referred clients to the United Way of Greater Houston's 211 service.

"They addressed the needs of the folks who were there," Branch said.

According to Moore, during the sheltering period, the agency had mental health workers at the shelter multiple times, had caseworkers meet with each individual/head of family and worked with a humane officer in Dayton to offer kennels for dogs and guidance for caring for animals and accessing resource, among other efforts.

"One caseworker, who also is a social worker when not with the Red Cross, went repeatedly to the shelter to try to interest clients in services such as women's programming services for transitional housing," Moore said in an e-mail.

Overall, in three shelters across Liberty, San Jacinto and Polk counties, the Red Cross served more than 7,000 meals to residents who spent a total of 375 nights in the shelters.

"For the Trinity River flooding, 37 shelters were opened by the Red Cross and partner agencies," Eric Jones, Assistant Director of External Relations, Red Cross Texas Spring Floods Response, said. "While sheltering is an important interim step for many people, it is only the first step in rebuilding lives after a disaster.

"The goal is to make sure people have been offered the resources they need to plan and manage their own recoveries and return to conditions which are similar to their pre-disaster lives."

Recent Heat Among Factors Causing County Roads To "Disintegrate"

By Josh Kellams

KOLN-TV Lincoln (NE), June 23, 2016

LINCOLN, Neb.-- The recent extreme heat in Lancaster County is among the factors that caused county roads to "disintegrate" this week, according to county engineers.

Local officials are also trying to find a way to keep costs down while maintaining, and fixing, the roads.

A stretch of 40th St. near Rokeby Rd. is one of the county roads concerning Pam Dingman, the Lancaster

County Engineer. N. 14th St. has had similar problems, too.

Dingman said the heat and heavy construction-related traffic over-burdened the roadway on 40th.

"We've really seen the edge of it just completely disintegrate," Dingman said.

"So, it did reach the point [Wednesday] where I did have to shut the road down."

Dingman said this part of 40th St. has an estimated lifespan of 20 years and is currently on year 28. She also said it is a candidate to be overlaid in the 2016-2017 budget, but right now, the road is too dangerous for motorists.

Crews are supposed to put new asphalt down Friday and reopen the road by the evening, but these patchwork solutions are one of several issues currently facing county engineers.

For example, Dingman is responsible for monitoring 270 miles worth of county roads. But, many of the roads need to be fixed.

"Of that 270," Dingman said, "we have about 90 miles that need to be overlaid right now."

Essentially, the top layer of asphalt needs to be removed and have new asphalt put down.

However, Dingman said the Lancaster County Board of Commissioners informed her Thursday that the county needs to trim roughly $700,000 from their budget, and they've asked her to make some cuts. Realistically speaking, she said they may only be able to overlay 20 miles of road in the next year.

She said she's also still waiting for the Federal Emergency Management Agency to reimburse the county for the cost of repairing flooded roads during the last two years.

"I had to fix all the damage from the [recent] flooding," Dingman said.

"So, Lancaster County has spent, in this year's budget, oh, probably $3.2 to $3.7 million in flood repair."

Dingman said she'll have to do the best she can while they wait for reimbursement.

The new county budget is supposed to start in July.

"I'm going to have to really aggressively maintain these [roads] in the years to come because of how far behind we are," Dingman said.

WILDFIRES

Officials: Drones In Arizona, Utah Hamper Firefighters Battling Wildfires

By Graig Graziosi

Arizona Republic, June 23, 2016

Firefighters battling the Arizona wildfires have a new threat to worry about: drones.

A pair of drones were heard Wednesday in airborne crews' operating area at the southern end of the Cedar Fire, which is burning about 10 miles south of Pinetop-Lakeside and Show Low, officials said.

Anyone determined by law enforcement to have endangered manned aircraft with their drone or interrupted a firefighting operation can be fined and even jailed, officials said.

Despite their size, drones, sometimes known as Unmanned Aerial Vehicles or Unmanned Aerial Systems, can substantially damage a helicopter or airplane in a collision. As a result, firefighters cannot operate in airspace where drones are flying.

Jennifer Jones, public affairs spokeswoman for the U.S. Forest Service, said she has seen a substantial rise in the number of reported cases of drone flights over firefighting operations.

"There's no centralized method for tracking incidents, but we started to notice the trend of seeing UAVs over fire suppression operations in 2014," Jones said.

In 2015, there were 21 reported cases of public drones flying in air zones where firefighters were operating," she said. "In nine of those instances, the firefighters had to suspend their work due to the presence of the drone."

In 2016, there have been nine reported cases, at least three of which forced fire managers to ground their air crew, Jones said.

According to firefighting officials in Utah, a drone came within feet of a firefighting helicopter there. Drone appearances have been so frequent in Utah this week that fire crews fighting the Saddle Fire have been forced to ground their aircraft three days in a row. Utah Gov. Gary Herbert visited nearby Pine Valley on Wednesday, saying that some evacuations may not have been necessary had the drones not stymied the efforts of the firefighters.

The Washington County Sheriff in Utah was offering a $1,000 reward for information leading to the arrest of the individual or individuals flying the drones.

Firefighters in California are also contending with the problem. The Federal Aviation Administration has issued a temporary flight restriction over the San

Gabriel Complex fire to ensure drones do not interfere with the fire suppression efforts.

Small aircraft and drones caught violating the temporary flight restriction will face serious criminal charges.

No data were available to explain why people fly their drones over wildfires, but Jones believes the drone pilots likely just are trying to get photos and video of the fire.

"That's what's dangerous and unfortunate about this. You have people who probably just want to have some fun with their drone and get neat images of the fire unknowingly putting firefighters' lives in danger and interfering with their ability to put out these destructive fires," Jones said.

In an attempt to prevent future incidents with drones, the U.S. Forest Service and partner agencies have launched a publicity campaign with the slogan "If you fly, we can't."

The campaign aims to educate the public about the dangers of flying drones near wildfire suppression operations.

Jones expects as the prevalence of drones in society continues to grow, the need for public education campaigns about their safe use will continue to grow. Likening the campaign to the Smokey Bear wildfire prevention campaigns, she anticipates the drone safety campaign likely will be necessary for decades.

The Cedar Fire is now 24 percent contained according to a report from fire officials Thursday morning, although winds were expected to increase in the area. According to officials, the pre-evacuation notice for the communities of McNary, Hon-dah, Pinetop-Lakeside, Show Low and Cedar Creek was still in effect.

Southbound I-17 Open After Brush Fire

By Ryan Santistevan

Arizona Republic, June 23, 2016

A brush fire that consumed six acres forced authorities to close a portion of southbound Interstate 17 early Thursday afternoon.

The Arizona Department of Transportation reported that the southbound lanes of I-17 were closed about 1 p.m. Thursday. At least one lane had reopened by 2:40 p.m., according to an ADOT representative.

Drivers were being asked to use caution as traffic resumed, as firefighters remained in the area.

The closure was reported near milepost 255, eight miles south of Cordes Junction, according to ADOT.

Northbound lanes of I-17 remained open throughout.

A Bureau of Land Management Arizona fire representative said resources, including a trio of engines and a type-2 crew, were working to tame the wildfire. Fire retardant was also being dropped by air.

A BLM representative said the agency was working with ADOT to evaluate when I-17 could reopen completely.

35-acre Fire Contained In Lee County

Fort Myers (FL) News-Press, June 23, 2016

A 35-acre brush fire south of FGCU has been contained.

The fire burned for at least two hours Thursday.

According to tweets posted by the Florida Forest Service, the fire grew from 5 acres to 35 acres.

The fire was located off of Ben Hill Griffin Parkway, just south of the university.

No structures were threatened, said Samantha Quinn, spokeswoman for the Florida Forest Service.

"Wildfires are a year-round occurrence for Florida, a couple days of no rain can quickly dry out dry, dead vegetation," Quinn said. "This allows for a wildfire to quickly ignite."

Quinn said it's important for people to remove any dry vegetation surrounding homes.

"This will increase the safety of your home during a wildfire," she said.

Mandatory Evacuations Lifted For Pine Valley Residents

By DJ Bolerjack

KUTV-TV Salt Lake City, June 23, 2016

Washington County public safety officials and fire managers lifted the mandatory evacuation for Pine Valley residents in the Lloyd Canyon area Thursday.

Affected campsites, roads and recreation areas will remain closed.

Acreage burned in the Pine Valley Saddle Fire has stayed at a steady 823 acres, according to Mike Ferris with the National Interagency Fire Center.

Ferris said the aerial attack started early Thursday morning and due to the low wind speeds, only reaching 18 mph, the attack has been successful so far.

The Saddle Fire is said to be moving up the mountain still keeping distance from evacuated homes in Lloyd Canyon the area.

More than 400 firefighters are currently out fighting the fire and setting a perimeter around the evacuated community.

Christian Venhuizen, media spokesman, said so far with all the personnel in Pine Valley fighting the fire they're estimating a cost of $1.2 million coming from the state FEMA budget.

OTHER NATURAL DISASTERS

2015 Landslides Caused $7 Million In Damage To Colorado Springs, Assessor Reports

By Maria St. Louis-Sanchez

Colorado Springs (CO) Gazette, June 23, 2016

Damage to homes from 2015 landslides in Colorado Springs is totaled at a little more than $7 million, according to the El Paso County Assessor.

Assessor Steve Schleiker announced the total at a Tuesday Board of El Paso County Commissioners meeting. He said his office has assessed 53 properties for landslide damage and, of those, 34 have had adjusted property values.

Of those 34 homes:

– Three properties reduced in value by 100 percent

– 11 properties reduced in value by 75 percent

– Four properties reduced in value by 50 percent

– 15 properties reduced in value by 15 percent

– One property reduced in value by 10 percent

The homes damaged by landslides are within Broadmoor Bluffs, Broadmoor Hills, Broadmoor Resort and Skyway neighborhoods. Schleiker said the damaged homes amount to a small percentage of the total homes in those neighborhoods.

The city has applied for grants to help 26 homeowners buy out their damaged properties. The victims initially were only eligible for a Federal Emergency Management Agency grant worth about $3 million. The Colorado Division of Homeland Security and Emergency Management announced recently that other grants, totaling between $6 million and $9 million, may be available as well. Homes that are bought out will be torn down and building will no longer be allowed on those sites.

This is the third time the city has applied for federal grants to aid landslide victims since the 90s. A Gazette investigative report found that Colorado Springs has allowed continued building in landslide-susceptible areas despite decades of warnings from geologists.

The total property loss from these recent landslides could change, Schleiker said.

"This is a moving target," Schleiker said. "My staff members have been out there every time we have a rain. We visit with property owners and see if there is any new damage. We have not added any new properties to our list for quite some time."

Property owners who believe their homes were damaged by the landslides but have not contacted the assessor's office may call 520-6600 or email asrweb@elpasoco.com to set up an appointment to have the property inspected.

ZIKA VIRUS

Zika Spending Bill Faces Likely Senate Rejection, Certain Veto

By Ryan McCrimmon, Paul Krawzak And Kellie Mejdrich

Congressional Quarterly, June 23, 2016

The Zika response package and fiscal 2017 Military Construction-VA appropriations bill passed by the House early Thursday appears to lack the votes to make it through the Senate amid strong Democratic opposition.

Even if the Republican-crafted product somehow reaches the 60 votes needed to avoid procedural hurdles in the Senate, it faces rejection from the Obama administration. A White House aide told CQ that President Barack Obama would veto the measure over objections to its offsets, restrictions on contraceptive services and rolling back of certain clean water protections.

It's unlikely the conference report will get to that point.

The measure is likely to receive a procedural vote early next week. Majority Leader Mitch McConnell, R-Ky., filed cloture Thursday, setting up a vote to limit debate as early as Monday, though no timeline has been announced. A GOP leadership aide said McConnell needed to file cloture due to Democratic opposition to the conference report.

Majority Whip John Cornyn, R-Texas, estimated the cloture vote on the appropriations package will be next week. "I think it's certainly ripe for action," he said. "We need to get that done pronto, but my guess is it will be next week."

As soon as the proposal was announced Wednesday night, Senate Democrats unleashed a flurry of statements denouncing it. They stepped up their criticism Thursday and predicted Senate Republicans will face a steep climb to reach the 60 votes needed to proceed.

"I think it's going to have an extremely difficult time being positively considered or finding 60 votes," Senate Democratic Whip Richard J. Durbin of Illinois said.

In a statement released by her office, Patty Murray, D-Wash., slammed House Republicans for choosing "partisanship and tea party pandering over working together on a comprehensive response to the Zika virus." She urged House Republicans to "come back and work with us to pass the Senate proposal that received overwhelming bipartisan support."

The conference report for the appropriations package (HR 2577) was filed by House Republicans late Wednesday night and passed by the House early Thursday on a 239-171 vote, mostly along party lines.

Contraception Criticism

Much of the criticism from Democrats centered around language that they say would roll back women's access to health care services.

The conference report provides $95 million in Social Services Block Grants for areas with active Zika transmission, like Puerto Rico. But Republicans specified that the funds must be used for public health departments, hospitals and Medicaid managed care clinics — and not for family planning clinics that focus on contraception.

Democrats claim that omission is problematic given that the Zika virus can be transmitted sexually.

Minority Leader Harry Reid, D-Nev., accused Republicans of "trying to turn an attempt to protect women's health into an attack on women's health."

Murray said Republicans were "using women's health as a political football by restricting access to women's health care, like contraception, which is especially critical to preventing the spread of this virus."

Democrats also objected to the absence of $50 million requested by the administration for maternal and child health programs.

Debate Dispute

House Democrats on Thursday also complained that no debate on the conference report was allowed under the rule adopted for floor consideration.

Rep. Louise M. Slaughter of New York, the top Democrat on the House Rules Committee, told CQ she was not pleased with the decision by House Republicans to move the Zika conference report without the customary hour of debate.

"I hope that doesn't catch on," she said. "I was equally distressed that the bill itself had no debate as well."

When a bill comes to the House floor via the Rules Committee, there is typically an hour of debate on the rule, evenly divided between the two parties, and an hour of general debate on the bill itself, also evenly divided.

But none of the four Democrats on the panel showed up to the late-night Rules meeting to draft the rule for the Zika conference report, allowing the nine Republicans on the committee to craft a closed rule without any debate.

House Speaker Paul D. Ryan defended the closed process, pointing to House Democrats' sit-in demanding action on gun legislation as a clear sign they weren't willing to have a legitimate debate on Zika.

"To the point of last night, do you think we were going to have a civilized debate about the Zika virus? Do you think they were interested in coming to the mike and debating Zika? Of course not. They were screaming and shouting over each other. So we were going to get our job done," the Wisconsin Republican said at his weekly news conference.

He urged senators to adopt the plan, noting the $1.1 billion funding level was the same as what was agreed to in the Senate: "This is a good compromise, it meets an urgent need," he said.

The conference report was the result of an agreement between House and Senate Republicans that left out Democrats. The White House has issued a very negative statement about it, though stopping short of a veto threat.

Durbin confirmed to reporters he expects a strong veto message from the White House on the package.

But Cornyn cast doubt on Democrats' ability to maintain opposition to the package, which provides $1.1 billion in partly offset funding for Zika, the same amount Democrats voted for when the Senate passed its measure on May 19.

"I don't think that's a sustainable position," Cornyn said. He said he hopes there are enough votes for cloture, adding, "Everybody wants to deal with this before it becomes an even more serious problem."

In comments on the floor Thursday, McConnell urged Democrats to support the conference report. "Senators debated that $1.1 billion compromise on the floor and voted to pass it," the Kentucky Republican said. "Every single Democrat voted for it."

The Senate passed its version of the legislation with $1.1 billion for Zika on an 89-8 vote. Forty-three Democrats voted for it and none voted against it. The funds were not offset.

Earlier, the Senate voted 68-30 for the amendment offered by Roy Blunt, R-Mo., to provide $1.1 billion for Zika. All 44 Democrats voted for the amendment.

Durbin said this deal is not acceptable, though. “It’s almost as if the House was daring us by putting together a proposal that is so outrageously one-sided,” Durbin said.

First posted June 23, 2016 12:35 p.m.

Topics

Zika

State of Play

At the end of May, appropriators and congressional leaders in the House and Senate were poised to confront discrepancies in the Zika virus response packages each chamber had recently passed.

The House passed a supplemental appropriations package (HR 5243) crafted by GOP appropriators that provided $622 million in new resources to confront the virus. The funds were set to expire on Sept. 30, the end of fiscal 2016, and the Zika spending was fully offset by rescinding previously appropriated dollars for the 2014 Ebola response and other administrative purposes.

The Senate’s $1.1 billion emergency spending package, passed as an amendment to a broader appropriations package (HR 2577), provided fresh funding without any offsets or expiration date. The compromise measure was reached by top Republicans and Democrats on the Senate Appropriations Committee.

Democrats have said neither option is adequate. The administration has maintained it still needs the full $1.9 billion it requested earlier this year.

The administration’s request would provide $828 million to the Centers for Disease Control and Prevention to enhance mosquito control programs. Officials say eradicating mosquitos is one immediate action that can be taken in the absence of a vaccine but emphasize how difficult it can be to control indoor mosquitoes.

Another challenge is diagnostic testing. Though there are ample tests to detect an active infection, tests to detect a prior infection are more limited. Public health officials say it takes more steps to diagnose a prior Zika infection because of the condition’s similarities to other viruses. Obama’s request includes money to boost the supply of diagnostics, as well as develop more accurate testing methods.

Prospects for a funding package also hinge on the politically sensitive issue of contraception policy. Congressional Democrats are pressing for additional contraception and family planning services for women in affected countries — a request that is meeting resistance from key Republicans. The House-passed legislation would subject Zika funding to the same restrictions included in the most recent omnibus package (PL 114-113), which includes a prohibition on the use of funds to pay for abortions.

The request contains $250 million to assist pregnant women in Puerto Rico, who are being encouraged to wear long sleeves, use bug repellent and stay in air conditioned or screened-in areas.

Reid: House-passed Zika Deal A “Disgrace”

By Jordain Carney

The Hill, June 23, 2016

Senate Minority Leader Harry Reid (D-Nev.) ripped a GOP deal to provide $1.1 billion to fight the Zika virus hours after it passed the House.

“It’s a disgrace. It’s a mockery of how Congress should treat an emergency,” he said from the Senate floor. “This is something that I’m sorry to say is part of the McConnell-Trump tactics we’ve found lately.”

Reid’s comments come after House Republicans approved the plan in an early morning vote over the protest of Democrats.

The Zika deal — which is attached to a larger military and veterans spending bill — would be partially paid for by using money from other health department proprieties, including the Ebola virus fund.

Senate Majority Leader Mitch McConnell (R-Ky.) tried to temper Democratic opposition, saying the House-passed deal “represents our only chance to put Zika control money to work right now.”

“The House did its part. Now the Senate needs to do its part,” he added.

The Senate also approved $1.1 billion in Zika funding earlier this year, but Democrats quickly dismissed the deal from the conference committee because of how it is paid for.

Sen. Patty Murray (D-Wash.) who helped spearhead the Senate’s Zika proposal, ripped the conference committee report as “hyper-partisan” and “more about throwing red meat to the Tea Party than actually tackling the crisis.”

Senate Democrats have pushed for Congress to pass the Obama administration’s full $1.9 billion request, a move that has found little support among Republicans.

Senate Sets Up Zika Vote

By Jordain Carney

The Hill, June 23, 2016

Senate Majority Leader Mitch McConnell (R-Ky.)

is turning the Senate toward a fight over funding to combat the Zika virus.

McConnell on Thursday filed cloture on the House-Senate deal on a military and veterans funding bill, which includes the Zika money. The move sets up a procedural vote for next week.

The House passed the $1.1 billion for Zika funding early Thursday morning over the protest of Democrats, who were waging a sit-in to demand votes on gun control.

But Senate Democrats argue the House-Senate agreement is all but doomed to fail in the upper chamber, where it will need support from Democrats to be sent to President Obama's desk.

Senate Minority Leader Harry Reid (D-Nev.) called the GOP-backed deal a "disgrace."

"It's a mockery of how Congress should treat an emergency," he said from the Senate floor Wednesday. "This is something that I'm sorry to say is part of the McConnell-Trump tactics we've found lately."

The Senate previously passed $1.1 billion in funding to combat the Zika virus, but Senate Democrats have denounced how the House-Senate compromise pays for the bill.

In addition to taking money currently earmarked to fight the Ebola virus, the GOP bill would also likely restart a fight over Planned Parenthood because it includes language that prevents funding from going to it and other family planning groups.

Democratic opposition is throwing the Zika funding package into flux, making it increasingly likely Congress won't be able to get an agreement to Obama's desk by the July 4 recess.

McConnell tried to temper Democratic criticism earlier Thursday, arguing the current deal "represents our only chance to put Zika control money to work right now."

"The House did its part. Now the Senate needs to do its part," he added.

Congress Headed For Recess Without Zika Funding Deal

By Sarah Ferris

The Hill, June 23, 2016

The fate of a $1.1 billion package to fight the Zika virus has been thrown into flux after the abrupt collapse of bipartisan talks Wednesday.

The breakdown between Republicans and Democrats in both chambers has delayed any action on Zika until after the Fourth of July recess.

GOP leaders announced late Wednesday they had reached a deal on Zika, but without the support of the dozen or so Democrats who had previously been involved. The GOP's bill passed the House in a hurried vote around 3 a.m. Thursday amid a dramatic Democratic gun control protest.

The sharply partisan proposal bill is now headed to the Senate, where Democrats say it is doomed in its current form. The bill is expected to prompt a formal veto threat from the White House later Thursday.

The House is out of session until after the Fourth of July. The Senate's holiday recess begins next Thursday.

Among the biggest concerns with the Republican bill is that it injects specific language to prevent funding from going to Planned Parenthood and other family planning groups — a move that one women's health group called "a slap in the face."

While the House-passed bill includes the same amount of total funding as the Senate's initial bipartisan bill, most comes from existing funds in the administration's health department.

It takes about $500 million from an existing ObamaCare fund for state health exchanges and redirects it for the Zika effort. About $100 million in the administration's Ebola fund would also be repurposed for Zika — a move strongly opposed by federal health officials.

The failure to pass a Zika funding bill before the holiday — a self-appointed goal for GOP leaders — could be politically troubling for both parties.

Public health experts as well as state and local leaders have been intensifying their warnings about a disease outbreak in the U.S. The virus is known to cause severe birth defects, and about 400 pregnant women in the U.S. states and territories have already tested positive.

The Centers for Disease Control and Prevention (CDC), which would receive the most funding under any Zika bill in Congress, has declined to specifically comment on the latest House-passed bill other than to apply pressure for swift action.

"CDC remains hopeful that Congress will quickly finalize and pass a comprehensive bill that meets critical needs without exposing Americans to other dangerous health threats," the CDC wrote in a statement Thursday.

Democrats say one of their biggest concerns about the bill — and one that would be expected to prompt a White House veto — is that Republicans are targeting women's health groups.

"Preventing funding from going to Planned Parenthood? That's a poison pill," Sen. Chuck Schumer (D-N.Y.) told reporters Thursday.

Schumer, the No. 2 Senate Democrat, said the GOP's plan had become "a hard-right wish list" that had no chance of landing on the president's desk.

The bill appears doomed to fail in the Senate. Even with support from all 54 Senate Republicans, the bill would fall short of the 60 votes needed to proceed.

When asked about the next step for the bill, Schumer said: "Don't know, we'll have to see."

But he left the door open to a move by Senate Republicans to tweak the language of the House-passed Zika bill before it reaches the upper chamber: He said the final bill hasn't been released yet.

"It hasn't come out yet, but it has all the things that they put in it, all these external poison pills, I don't see how it would pass," Schumer said. "We have to see the bill first."

It's unclear whether the House's bill — which was a conference committee report — could still be amended before reaching the Senate.

The Zika bill's primary source of funding for healthcare is allowed only to go to health departments, hospitals or other providers that are "reimbursed through public health plans," according to the House-passed bill's text.

"Family planning clinics are excluded, which is simply nuts," said Donna Crane, vice president of policy at NARAL Pro-Choice America.

"[The Republican bill] significantly hampers America's ability to respond to the Zika virus by cutting off the very clinics in the neighborhoods that are going to need these services."

White House Threatens Veto Of GOP's Zika Bill

By Sarah Ferris

The Hill, June 23, 2016

The White House on Thursday officially rejected a $1.1 billion Zika funding package from Republicans that would have forced the administration to pull most of the money from existing healthcare programs.

"The president would veto it if it ever got to his desk," White House spokesman Eric Schultz told reporters, though he said the bill "doesn't look like it could even pass the United States Senate."

The GOP bill passed the House along party lines early Thursday, and faces an uncertain fate as it heads to the Senate next week.

Senate Democrats say the bill is all but doomed in the upper chamber, where it will need support from members of their party to pass. Lawmakers and aides say that would be extremely unlikely after Democratic lawmakers were dropped from the previously bipartisan talks.

The Senate had agreed to $1.1 billion in funding to combat the Zika virus — a bill that earned support from Democrats because it created new funding, rather than looking to existing accounts.

The House bill takes about $500 million from an existing ObamaCare fund for state health exchanges and redirects it to the Zika effort. About $100 million of the administration's Ebola fund would also be repurposed for Zika.

The GOP's bill passed the House in a hurried vote around 3 a.m. Thursday, amid a dramatic Democratic gun control protest.

Senate Majority Leader Mitch McConnell tried to temper Democratic criticism earlier Thursday, arguing the current deal "represents our only chance to put Zika control money to work right now."

"The House did its part. Now the Senate needs to do its part," he said.

Obama Would Veto Republican-backed Zika Funding Bill: White House

Obama Threatens To Veto GOP-backed Bill On Zika Virus Aid

By Andrew Taylor

Associated Press, June 23, 2016

WASHINGTON (AP) – The White House Thursday promised that President Barack Obama would veto the long-delayed response of the Republican-controlled Congress to the president's request for fighting the Zika virus, saying it provided too little money and contained too many partisan provisions.

The $1.1 billion measure had already appeared sure to die in the Senate next at the hands of filibustering Democrats backing Obama's $1.9 billion request and opposing spending cuts that House Republicans added to the measure.

White House spokesman Eric Schultz says if the measure does pass the Senate, Obama will veto it.

"One party doesn't just huddle in the corner, come up with an ideological bill and then throw up their hands," Schultz said.

The bleak fate of the compromise worked out by House and Senate Republicans seemed certain, and it was unclear what alternative might emerge, given the hard feelings surrounding the issue and the short timetable ahead.

The Zika plan came out late Wednesday and won approval in the House hours later. That vote came amid a Democratic floor protest of GOP inaction on gun legislation. Republican leaders called the Zika vote abruptly, permitted no debate and immediately adjourned through July 4.

The result was more of the partisanship that has dogged the Zika proposal from the start and raised questions about whether lawmakers will manage to approve any assistance in the short time left before they leave Washington in mid-July for the political conventions.

The measure matches a bipartisan $1.1 billion figure adopted by the Senate last month to fight the virus, which can cause grave defects and can be transmitted by mosquitoes and sexual contact.

The House was largely satisfied in their demand to pair Zika aid with about $750 million in offsetting cuts to spending, including $543 million in unused funds from implementation of Obama's health care law and $107 million in cuts to leftover Ebola money.

Democrats objected. They made inflated claims about restrictions the measure would place on Planned Parenthood and they complained about a watered-down version of a provision backed by the House that would ease rules on pesticide applications to battle the mosquitoes that can spread Zika.

Obama requested $1.9 billion four months ago to fight the virus. Republicans initially displayed little urgency to respond to the request and forced the administration to devote more than $500 million of unspent Ebola money on Zika.

Democrats also said it was wrong to require spending cuts to pay for a response to a public health crisis while not requiring them for past emergencies such as wildfires, floods and Ebola.

Republicans said the cuts were relatively innocuous. For instance, the $543 million cut to Obama's health law was to a pot of money aimed at helping territories set up health insurance exchanges under the law. None did so, and the Congressional Budget Office estimates that cutting the program won't actually save any money. Also, Democrats privately indicated they could live with the additional $100 million-plus cut to overseas Ebola aid.

While some Democrats on the Senate Appropriations Committee believed any deal with Republicans would have to have some cuts, party leaders such as Sen. Harry Reid, D-Nev., took a harder line that ultimately prevailed.

The Zika money was added to an $82 billion measure covering the Department of Veterans Affairs and military construction projects. That measure is among the most popular of the 12 annual appropriations bills, and Republicans held out hope that its popularity might break free enough Democrats to squeak through the Senate.

More than 2,200 cases of Zika infection have been reported in the U.S. and its territories. In Puerto Rico, more than 400 pregnant women were at risk of having babies with major deformities such as microcephaly, a condition in which newborns have smaller brains that might not have developed properly.

The virus is spread mainly through the bite of a tropical mosquito called Aedes aegypti. It can be found in the southern United States, but there's no evidence that they've been spreading the virus in the mainland U.S. yet.

The Price Of Congressional Inaction On Local Response To Zika

Huffington Post, June 23, 2016

Congress is finally answering the call to address the alarming infectious disease threat of the Zika Virus. However, the level of funding included in their recent votes is not close to enough. The effect will be particularly disastrous for local governments across the country.

By refusing to fully support President Obama's request for $1.9 billion to fight the Zika virus, Congress is forcing the Centers for Disease Control and Prevention (CDC) to shift nearly $45 million from state and local public health emergency preparedness (PHEP) funds to pay for Zika preparedness at the federal level. In turn, cities and counties are now facing substantial cuts to essential emergency preparedness funds--a deep irony, because these are the very funds that allow local health departments to prepare and respond to disease outbreaks and other emergencies.

The implications for cutting emergency preparedness funding go far beyond Zika. When Baltimore was shaken by unrest last April, PHEP funds allowed us to take a lead role in coordinating the public health response for our city. Because of our emergency planning and response capabilities, the Health Department worked with city and state partners to create a security plan for Baltimore hospitals. When over 13 pharmacies were burned down or closed, we set up a prescription delivery program for older adults and vulnerable citizens. Our staff mobilized volunteers to canvas dozens of senior buildings and over 150 churches, and served more than 3,000 emergency meals to those affected in the community. With partners across the city, we developed and implemented a Mental Health/Recovery Plan that included an around-the-clock mental health crisis line along with teams of licensed mental health professionals who were deployed in affected neighborhoods for group counseling and debriefing.

More recently, when our region was crippled by nearly three feet of snow in a historic storm this past January, it was again emergency preparedness funds that enabled Baltimore City to be the only jurisdiction in Maryland to ensure transportation to life-sustaining dialysis and chemotherapy treatment for critical patients by knowing how to triage available resources. Like last April, we were again able to deploy frontline workers to go to where our residents were, quickly direct a multi-sectoral response in the face of a unique emergency situation, and act swiftly to protect our most vulnerable. Without these federal funds we could not have provided these critical emergency services to our residents during times of extreme need.

This is the necessary role of local public health: to implement effective, agile strategies to address emerging threats to public welfare. Health departments across the country serve on the frontlines of public health emergencies. It was local public health that coordinated immediate trauma-based mental health services for a city reeling from the September 11th terrorist attacks. Local public health organized a drop-in center following the Boston marathon bombings to provide support to thousands of stranded runners and coordinated with area hospitals to connect patients with family members. And when Hurricane Katrina devastated the Mississippi Gulf Coast, including health facilities, local health departments provided direct health services to the region out of mobile vans and tents.

Though my counterparts and I are proud to take a lead role in coordinating these efforts and providing direct services during emergencies, sustained federal funding is critical to ensuring that local health departments remain prepared to respond to evolving public health threats. The Baltimore City Health Department employs a small team to coordinate our public health emergency response and engage the community and health care sector in preparedness planning. Under these anticipated cuts, we will have to reduce that team by a third--from six to four people. This will severely limit our ability to serve a population of over 620,000 residents, in a time of increased threat of Zika and other emerging infections. When it comes to protecting the health and safety of our citizens, this is an untenable ratio.

The World Health Organization and the CDC have declared Zika virus to be a public health emergency. We support full supplemental funding to prepare for this disease. It is particularly important to ensure capacity for our urban centers. The Aedes mosquito that carries Zika is a “container breeder” that proliferates in densely-populated urban areas. Cities like Baltimore with high rates of vacant housing and concentrated poverty will be the hardest hit, and generations of our children will suffer the consequences.

Public health services need to be there when we need them most. Congress must strengthen, not limit, local capacity to respond to this emerging public health threat.

It’s Us Against Zika — Whose Side Is Congress On?

Washington Post, June 23, 2016

IN THE very early morning hours Thursday, Republicans who control the House pushed through a bill to combat the Zika virus that is a totem to their favored causes and a poke in the eye of Democrats. More than four months after President Obama requested nearly $1.9 billion in emergency funding to deal with a public-health emergency, the House voted for $1.1 billion but saddled it with unnecessary partisan baubles. This may further delay action against the mosquito-borne virus that can cause severe fetal birth defects.

House Appropriations Committee Chairman Harold Rogers (R-Ky.) declared that the bill, approved along party lines 239 to 171, was the product of “careful and thorough deliberations.” But in fact, the Republicans compromised only with themselves and took to the House floor a bill that lacked bipartisan support.

The legislation would limit payments for birth-control services, an indirect way of defunding Planned Parenthood, long a GOP talisman. At this moment, it seems terribly punitive, coming as the nation faces a virus that puts pregnant women at risk and is spread through sexual contact as well as by mosquitoes. Republicans must have known this controversial provision would provoke howls of protest from Democrats. As Sen. Patty Murray (D-Wash.) noted, House Republicans were playing to a very narrow segment — the tea party wing of the GOP — with "a hyperpartisan proposal that doubles down on using women's health as a political football." The cost of this will probably be more wrangling. Are these the same Republicans who took control of Congress promising to break the partisan gridlock?

There is no known cure or effective therapy for the Zika virus, which has already hit Latin America and the Caribbean hard in places, including Puerto Rico. If it begins to spread on these shores — so far it has not, but the probability is high that transmission will begin — then pregnant women across the South and Southwest will be at risk of giving birth to children with abnormally small heads and brain damage, a condition known as microcephaly, while other people may face Guillain-Barré syndrome, which can lead to paralysis.

The House, which had earlier approved $622 million for the Zika response, has now agreed to the $1.1 billion approved earlier by the Senate. That is promising because it would provide money for fighting mosquitoes, for carrying out vaccine research, for finding new diagnostics and for public education. But the downside is that the House bill funds the Zika battle by cutting $750 million from other programs, including Obamacare and the Ebola virus response effort. There is probably insufficient support in the Republican-controlled Senate to pass the House version, which means back to the drawing board, more delay and more of a chance that Zika will lead to birth defects in the United States.

To both parties in Congress, we say: The tiny Zika organism doesn't care one whit about your acrimony, your blame-throwing, your delays. All Zika knows is how to infect and cause human suffering when it can. Who is going to win this battle: the virus, or us?

No Help From DC? Florida To Spend Millions On Zika Fight

Associated Press, June 23, 2016

TALLAHASSEE, Fla. (AP) – Saying he was "profoundly disappointed" with the ongoing federal stalemate over the Zika virus, Florida Gov. Rick Scott on Thursday ordered the state to spend millions in an effort to stop its potential spread.

Scott used his emergency powers to authorize spending up to $26.2 million on everything from killing mosquitoes, training mosquito technicians and purchasing Zika prevention kits.

The Republican governor has been calling on the federal government for weeks to approve money to fight the Zika virus, which can cause grave birth defects and can be transmitted by mosquitoes and sexual contact. The U.S. House this week approved a $1.1 billion measure. But President Barack Obama is threatening to veto the legislation, saying it provides too little money and contains too many partisan provisions.

"We are in the middle of hot, rainy weather which is when mosquitoes are most prevalent," Scott said in a statement. "It is clear that allocating this funding is necessary if we are going to stay ahead of the spread of this virus. I am profoundly disappointed that Washington does not share in our commitment and has continued to play politics with the health and safety of our families."

Florida currently has more than 200 cases of Zika virus, including 40 pregnant women. All of the cases involve residents infected outside the country, but Scott has predicted that it would be a "disaster" if mosquitoes in the state started transmitting the disease.

The Scott administration says that so far the federal government has only allocated $153,844 for epidemiology and lab support, $500,000 for seven counties for mosquito control and $40,856 in lab supplies and personnel.

Scott said that more than 40 counties, cities and mosquito control districts have asked for $19 million in assistance. He has declared a state of emergency in 23 counties because of the virus, a move that allows Scott to bypass the Florida Legislature and take money from the state's main bank account.

Zika Virus: Florida Gov. Rick Scott Says State Can Spend $26.2 Million On Prevention

By Michael Auslen

Miami Herald, June 23, 2016

Gov. Rick Scott declared Thursday he would use his executive powers under a public health emergency to spend up to $26.2 million in state money to fight the Zika virus.

The money will be used for mosquito control, lab equipment and to purchase "Zika prevention kits" from the U.S. Centers for Disease Control and Prevention. According to the CDC website, the kits include a bed net, insect repellant, standing water treatment tabs and condoms.

It will be released as needed, the governor's office said. Scott has given state Surgeon General Dr. Celeste Philip the authority to spend the money.

"We are in the middle of hot, rainy weather, which is when mosquitoes are most prevalent," Scott said in a statement. "It is clear that allocating this funding is necessary if we are going to stay ahead of the spread of this virus."

Until Thursday, Scott had resisted expanding an emergency declaration he signed in February to give himself the authority to spend state money. Instead, he has called on the federal government to fund Zika prevention programs.

In a statement Thursday, he again called out "Washington's inaction."

Asked earlier this month about why he hasn't tapped into state reserves, he told Fox News that Florida has been spending money to fight the disease but that it would "rely on our federal partners."

"This is a national issue," he said. "This is not just affecting Florida."

There are 213 documented cases of Zika in Florida, according to the Department of Health, and they are all travel-related. There are no known cases of people being infected with the virus after being bitten by a mosquito in Florida.

Rick Scott Gives State Power To Spend $26.2 Million On Zika

By Michael Auslen

Tampa Bay (FL) Times, June 23, 2016

Gov. Rick Scott declared Thursday he would use his executive powers under a public health emergency to spend up to $26.2 million in state money to fight Zika virus.

The money will be used for mosquito control, lab equipment and to purchase "Zika prevention kits" from the U.S. Centers for Disease Control and Prevention. According to the CDC website, the kits include a bed net, insect repellant, standing water treatment tabs and condoms.

It will be released as needed, the governor's office said. Scott has given state Surgeon General Dr. Celeste Philip the authority to spend the money.

"We are in the middle of hot, rainy weather which is when mosquitoes are most prevalent," Scott said in a statement. "It is clear that allocating this funding is necessary if we are going to stay ahead of the spread of this virus."

Until Thursday, Scott had resisted expanding an emergency declaration he signed in February to give himself the authority to spend state money. Instead, he has called on the federal government to fund Zika prevention programs.

In a statement Thursday, he again called out "Washington's inaction."

Asked earlier this month about why he hasn't tapped into state reserves, he told Fox News that Florida has been spending money to fight the disease but that it would "rely on our federal partners."

"This is a national issue," he said. "This is not just affecting Florida."

There are 213 documented cases of Zika in Florida, according to the Department of Health, and they are all travel-related. There are no known cases of people being infected with the virus after being bitten by a mosquito in Florida.

People Previously Infected With Dengue May Be More Vulnerable To Zika Virus

By Liz Szabo

USA Today, June 23, 2016

New research points the way toward a potential vaccine against Zika, and may explain why the formerly mild virus exploded with such fury when it arrived in Brazil.

A pair of studies published Thursday focus on Zika's complex relationship with a related virus called dengue, a common illness in Latin America and the Caribbean that causes flu-like symptoms. Dengue is spread by the same mosquito species as Zika, and the two viruses are so similar that blood tests sometimes can't tell the two apart.

When people are infected with dengue, or any virus, the immune system releases key proteins called antibodies to neutralize the invaders. Authors of a study published Thursday in Nature found that two of the antibodies the body makes to fight dengue also prevent Zika infections.

That finding could help scientists develop vaccines against Zika and dengue, said study coauthor Juthathip Mongkolsapaya, a researcher at Imperial College London. Scientists also might be able to use these antibodies to treat Zika, she said.

Several groups are already working on Zika vaccines.

Inovio Pharmaceuticals announced this week that it has received Food and Drug Administration permission for a small, early clinical trial of a Zika vaccine it's developing with GeneOne Life Science. The National Institute of Allergy and Infectious Diseases is pursuing four types of Zika vaccines; officials there say they expect to begin clinical trials in August.

Yet the close relationship between dengue and Zika has a dark side.

In a second paper, published in Nature Immunology, researchers found that the vast majority of dengue antibodies do nothing to stop Zika infection. In fact, a lab experiment showed that most dengue antibodies actually helped Zika viruses proliferate and invade cells. That suggests that people previously infected with dengue, whose antibodies against dengue remain in their blood, might have a more severe reaction to Zika, said Gavin Screaton, chair of medicine at Imperial College London.

These results lend support to similar findings from Florida Gulf Coast University and the University of Pittsburgh Center for Vaccine Research.

Mother Jusikelly da Silva holds her 7-month-old daughter Luhandra, who was born with microcephaly, as she wears her new glasses while waiting for a bus on June 2, 2016 in Recife, Brazil. (Photo: Mario Tama, Getty Images)

There are four varieties of dengue virus. People infected with the virus one time may develop relatively mild symptoms. But people who get a second round of dengue, caused by a different variety of the virus, can develop severe, life-threatening complications, said Amesh Adalja, a senior associate at the Center for Health Security at the University of Pittsburgh Medical Center.

Although scientists first discovered Zika in 1947, it was never known to cause birth defects until Brazil experienced an alarming increase last year in microcephaly, a condition in which babies are born with abnormally small heads and incomplete brain development.

Brazil has reported 1,660 cases of microcephaly, about 10 times more than usual, according to the World Health Organization. Microcephaly linked to Zika has been reported in 11 other countries or territories, including Puerto Rico, Panama, El Salvador, Colombia, Martinique, the Marshall Islands, French Polynesia and Cape Verde.

These locations have different varieties of dengue viruses, Adalja said. It's possible that some varieties of the virus are more likely to be associated with Zika complications than others.

Researchers have looked at a number of possible explanations for Zika's explosive growth, said Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine in Houston. It's possible Zika's spread has been aided by environmental factors, such as climate change, poverty and urbanization. It's also possible the virus has mutated.

To really understand Zika's relationship with microcephaly, researchers will need to study pregnant women, said Ernesto Marques, scientific director of Cura Zika, an international alliance between the University of Pittsburgh and Brazil's Oswaldo Cruz Foundation, known as Fiocruz.

The National Institutes of Health announced this week that it will partner with Fiocruz in a study of up to 10,000 pregnant women in areas with Zika outbreaks, beginning with Puerto Rico and expanding to Brazil and Colombia.

Leaders of the new study will study whether a past dengue infection increases the risk of complications on pregnant women and their babies. Researchers also will compare the health of babies born to mothers infected with Zika virus and those who were not, recording rates of miscarriage, premature birth, microcephaly, malformations of the nervous system and other complications.

Researchers will study whether these problems are more common in women who had symptoms of Zika compared to those with no symptoms. Only about 20% of Zika patients develop symptoms, which include rash, fever, joint pain and pink eye. Researchers also will study whether complications are more common in women infected early in pregnancy compared to those infected later. Doctors will follow women throughout pregnancy and for six weeks after delivery.

A New Must For Your Medicine Cabinet: Bug Spray

Washington Post, June 23, 2016

If the makers of bugs pray and U.S. health officials get their way, insect repellents will take up permanent space alongside toothpaste in America's medicine cabinets.

Drugstores and local health agencies are doing their part in the marketing push by issuing warnings about Zika, a virus that causes devastating birth defects in babies infected in the womb. The Centers for Disease Control and Prevention says the species of mosquito that carries Zika has been found across most of the nation.

"If you are going outside, wear mosquito repellent," said Michael Beach, deputy incident manager for the CDC's Zika response team. "It needs to be the same as putting on sunscreen or brushing your teeth."

Game change

The goal of health experts isn't to overwhelm or scare people but to prepare the public for the likelihood that Zika infections may start to transmit locally, Beach said. Several hundred pregnant women in the United States who contracted Zika contracted through travel or infected partner are being monitored. There is already widespread local transmission in Puerto Rico, a U.S. territory, and officials expect that about 20 percent of the island's 3.5 million residents could become infected with Zika.

"This virus is a game-changer from a reproductive-health standpoint because the birth defects are horrendous in nature," Beach said.

New York City launched a three-year Zika-control program in April that expands testing, monitoring and eradication. The city is tapping its experience from previous bouts with West Nile, a virus transmitted by a mosquito different from the one that carries Zika.

West Nile doesn't produce symptoms in most people, but it can cause serious symptoms such as paralysis and vision loss in about 1 in 150 infected people. The virus appeared in the Western Hemisphere in and around New York in 1999, causing dozens of serious illnesses and seven deaths that year. The city employed large-scale pesticide spraying, including by air.

Subway advisories

Today, it's Zika that's getting the attention in New York. "Reduce your risk of Zika virus," says a sign accompanying an Off Deep Woods bug-spray display near the checkout of a Manhattan drugstore. Signs in the city's subway system and elsewhere urge New Yorkers to "Fight Back" against Zika by using repellent and dumping standing water.

It's not enough for people to be vigilant only from dusk to dawn, when most mosquitoes bite, the CDC says. Aedes mosquitoes, the species that transmits Zika, are active in the daytime. They can live inside homes and often bite each member of a family, taking sips of blood from each.

Manufacturers are working to ensure they have enough insect repellent to meet a spike in demand. Spectrum Brands Holdings, which makes Cutter products, has seen a 19 percent surge in sales of personal bug sprays over the past six months compared with the same period last year, said John Pailthorp, a spokesman for the Middleton, Wis.-based company.

Spectrum expects to increase capacity of its spray repellents by almost 60 percent when a new production line debuts this year. The company, which is updating its packaging, displays and websites to include Zika information, is working with federal officials to get language approved in record time, Pailthorp said.

SC Johnson & Son, maker of Off sprays, boosted production in Latin America starting in November as reports of local cases started to trickle in, said spokesman Jeff McCollum. It started ramping up U.S. production early this year, running its largest facility — near the company's headquarters in Racine, Wis. — around the clock. Peak demand in the United States has been about 50 percent higher than last year, he said.

"We're working with a real sense of urgency," said McCollum said.

Other viruses

Several other infections carried by mosquitoes strike thousands of Americans each year. While they don't create the same fear as Zika, which is still poorly understood and impossible to treat, they can produce devastating symptoms.

Dengue, which can cause a high fever, severe pain, rash and mild bleeding, has already been reported this year in the Florida Keys. The virus can also cause dengue hemorrhagic fever, which can kill if not recognized early. Chikungunya can cause fever, joint pain and muscle aches. There's no prevention or cure for either, with patients getting supportive care to help their bodies fight the infection.

"We have multiple viruses that are spread by mosquitoes," Beach said. "It's not just about avoiding nuisance mosquitoes any more. It's about disease."

Best Bug Sprays For Fighting Zika

By Mary Brophy Marcus

CBS News, June 23, 2016

Mosquito season is here, and as the threat of Zika virus rises in the U.S., people in affected areas need to arm themselves, health officials say. The illness is spread by mosquitoes and some bug sprays can help.

According to Consumer Reports, a number of insect repellents on the market can stop the mosquitoes that transmit the dangerous virus, as well as another mosquito-borne illness, West Nile virus. They put 16 insect repellents to the test to see which ones are the most effective.

"In a laboratory, very brave volunteers put their arms into a cage full of 200 disease-free mosquitoes and we use two types of mosquitoes," Trisha Calvo of Consumer Reports told CBS New York. "One is the Culex mosquito that carries West Nile and the other is the Aedes mosquito that carries Zika."

The results? "We found three ingredients that are safe for everyone to use, even pregnant women, and are very effective. And those are Deet, oil of lemon eucalyptus, and Picaridin," Calvo said.

Sawyer's Fisherman's Formula Picaridin got top results in Consumer Reports testing, keeping mosquitoes away for up to eight hours.

Other top performing repellents on the list include:

Ben's 30% DEET Tick & Insect Wilderness Formula

Natrapel 8 Hour, with 20 percent picaridin

Off! Deepwoods VIII, with 25 percent DEET

Repel Lemon Eucalyptus, with 30 percent lemon eucalyptus

Repel Scented Family, with 15 percent DEET

Consumer Reports advises skipping most repellents made with natural plant oils such as lemongrass or citronella, which were not very effective in their testing.

Zika risk in the U.S.

As of June 15, a total of 756 cases of Zika have been reported across the U.S. – all in people who contracted it abroad or through sexual contact with someone who traveled abroad. Forty-seven states have reported cases.

So far there have not been any cases in the U.S. of mosquitoes transmitting Zika from one person to another, but experts say there's a risk of local outbreaks, especially in some southern areas like Florida and Texas, as the season progresses.

In states that are home to the type of mosquitoes known to transmit Zika, the virus can be spread if an infected person is bitten and then that mosquito then goes on to bite other people. That's the way the disease spread from Brazil throughout Latin America and the Caribbean over the past year.

It's especially important for pregnant women to protect themselves because Zika has been linked to severe birth defects called microcephaly, where babies are born with abnormally small heads.

More mosquito-fighting tips

If you use bug sprays proven to deter them, or purchase clothing with insect repellent already built in, the critters may still try to bite. But bug sprays can kill or incapacitate the bugs when they land. "And hopefully that happens before the mosquitoes bite you," Calvo said.

Experts recommend applying sunscreen first, then bug spray, not the other way around. And even if you wear bug repellent clothing, Consumer Reports recommends also using bug spray for greater protection.

In addition, the Centers for Disease Control and Prevention recommends wearing long-sleeve shirts and long pants, and staying in places with air conditioning and window and door screens to keep mosquitoes outside.

An experimental vaccine for the Zika virus is due to begin human testing soon, after getting the green light from U.S. health officials.

EMERGENCY PREPAREDNESS

DHS CIO Touts Tech Transformation

By Mark Rockwell

Federal Computer Week, June 23, 2016

An increased focus on agile development and contracting is helping the Department of Homeland Security move ahead on a host of technical fronts, DHS CIO Luke McCormack said.

"We're transforming, using modern techniques to modernize" the department, he said during a panel discussion at AFCEA's Homeland Security Conference on June 22.

He added that the increasingly close collaboration with DHS Chief Procurement Officer Soraya Correa though programs such as the Procurement Innovation Lab, which lets contracting officers try out new ideas, is helping to shift the agency's culture toward "taking risk to eliminate risk."

Michael Palmer, a member of the DHS Digital Service team, said the department is working on an agile procurement vehicle that will enhance its digital capabilities. A request for information was released in May.

Palmer declined to comment on how the Flexible Agile Support for the Homeland (FLASH) contract would interact with other digital services such as those offered by the General Services Administration's 18F. But he did say contractors should be familiar the

Digital Services Playbook and incorporate its concepts into their work.

McCormack said FLASH could be a significant building block for the agency's acquisition efforts. Although no date has been set for a formal request for proposals, DHS plans to hold an industry day on June 29 to explain the project in more detail.

DHS is conducting five IT pilot projects designed to showcase the pivot to agile: U.S. Citizenship and Immigration Services' verification system, the Federal Emergency Management Agency's flood insurance and grants management programs, Immigration and Customs Enforcement's Student and Exchange Visitor Information System and the Transportation Security Administration's Technology Infrastructure Modernization Program.

McCormack said the projects are using modern development techniques in real-world applications with the goal of modernizing aging, ineffective systems more quickly and efficiently than traditional acquisition techniques allow.

Local Family Still Living In A Tent 10 Months After Soudelor

By Bryan Manabat

Marianas Variety, June 24, 2016

ALMOST a year after Typhoon Soudelor devastated the island and destroyed their home, Marilyn Ada Taitano and her family still live in a tent.

She said the construction of their new house in Dandan remains unfinished due to a lack of workers and high labor costs. She said they are having difficulty finding skilled individuals and those who can be hired charge $9 to $10 per hour which they can't afford.

Federal Emergency Management Agency assistance, she said, did not include funds for building the house because they are staying on land that doesn't belong to them. The property belongs to an aunt who lives nearby.

"The FEMA assistance was actually only for our family belongings that were destroyed or damaged by the typhoon," Taitano said.

But she said she asked FEMA if she could use the monetary assistance to buy construction materials to rebuild their home. "They told me, yes."

She said she is hoping that three months from now, their home will finally be built.

In the meantime, she said they depend on "happy labor" — those constructing their house do so if they have time.

"Two people are helping us right now, one actually said not to worry about paying him, but I can't do that," she added.

As for the tent that her family uses, she said it came from AmeriCorps.

"They came in and gave us this tent, and also helped us with the temporary shelter."

Taitano is a full-time housewife, and her husband Jessie works for the Department of Public Works. They have two children — 21 and 14 years old — and two grandchildren.

What worries her is the coming typhoon season.

"That's my concern now — if there's another typhoon," Taitano said.

"I was really scared when Soudelor came, and I feel hopeless because our house is gone. I don't want to go through that again."

Needy Fund Launches Disaster Response Arm

By Ethan Genter

Cape Cod (MA) Times, June 23, 2016

HYANNIS — The Cape Cod Times Needy Fund has launched a disaster response organization "to provide humanitarian aid to local individuals and families," according to a statement from the organization.

The Cape Cod and Islands Major Crisis Relief Fund has been in the works for a few years, and the process was sped up after the devastation from Hurricane Sandy, said Judy Scarafile, the managing director of the relief fund and former president of the Cape Cod Baseball League.

"On the Cape and Islands we have experienced fierce hurricanes, epic winter storms, and significant beach erosion," Scarafile said.

The fund's goal is to raise $1 million, and it plans to work with other agencies who do similar work, like the Federal Emergency Management Agency, the Salvation Army and the American Red Cross.

"We will continue to collaborate with our many colleagues as part of an integrated approach to crises," Scarafile said. "At the same time, we realize that significant needs of many local individuals and families are now unmet by traditional forms of public and private disaster aid and that's where we step in."

A committee formed to create the fund has been meeting for nearly three years, Scarafile said. During those meetings, Hilary Greene, the executive director of the Cape, Islands and Southeast Massachusetts chapter of the Red Cross, and other agencies went over what is already done for disaster relief so the Major Crisis Relief Fund could learn their roles.

"The Red Cross is the first people there," Greene said about disaster response.

After the initial efforts, the Red Cross could send people in need to organizations like the new fund, she said.

"They're really trying to fill a gap," he said.

The fund plans to provide assistance in the form of financial aid for food, transportation, housing, medical services, child care and other needs. That could mean helping someone pay for a rental car get to and from work if, for example, a flood washed theirs away, Scarafile said.

The organization's board of directors includes Needy Fund board members, local emergency response professionals and an advisory committee, according to Peter Meyer, president and publisher of the Cape Cod Times.

The use of the fund will be considered when 50 or more families or 100 or more individuals are affected by a crisis, according to the statement. The crises need to either have been declared a local, state, or federal disaster; require multiple hospitalizations; or trigger the opening of all Cape Cod evacuation shelters.

"This is just in case, or when, the big one hits," Greene said. "Here's a local funding arm."

Movement Detected On Both Sides Of San Andreas Fault

By Max Gelman

New York Daily News, June 23, 2016

Large sections of southern California are slowly rising or sinking, a groundbreaking new study shows.

Researchers have observed for the first time that, along portions of the San Andreas fault, land on both sides is moving vertically by a few millimeters each year. Such motion had been theorized but never proven.

Vertical movement of tectonic plates is difficult to track compared with horizontal movement, which is much easier to predict and the cause of most earthquakes in California. GPS sensors helped the scientists study large, southern areas of the state that included the Los Angeles Basin, San Diego County and Santa Barbara, Calif.

"Using this technique, we were able to break down the noisy signals to isolate a simple vertical motion pattern that curiously straddled the San Andreas fault," Samuel Howell, lead author of the study, said in a statement.

Previously, vertical movement had been difficult to detect because of groundwater levels, Howell told the Los Angeles Times. As California's large agriculture industry flushes out groundwater for irrigation, parts of the state sink.

However, the study won't help predict when the next big earthquake will take place. Rather, it is supposed to help researchers understand more about the San Andreas fault itself and how its behavior will affect the adjacent areas.

Howell said quakes along the southern San Andreas happen once every 150 years on average. The last major earthquake along the southern San Andreas fault occurred in 1857 — a 7.9 magnitude quake, according to the study.

The San Andreas fault forms the boundary between the tectonic plates for most of North America and the Pacific Ocean and sits on the infamous "Ring of Fire," where a large number of earthquakes and volcanic eruptions occur. It is also classified as a "strike-slip" fault, meaning the plates move alongside each other horizontally.

Vertical movement is more common in "subduction zones," where tectonic plates instead press against each other and one side is forced into the Earth's mantle over time. The Cascadia fault, which sits just north of the San Andreas and stretches into Canada, is a known active subduction zone.

Local Canine Team Certified By Urban Search & Rescue Foundation

By Jennifer Rogers

WKRG-TV Mobile (AL), June 23, 2016

Year of training has paid off for a woman from Mobile and her lab. Debra Wright and Chance are civilian team members of Alabama Task Force One: Urban Search and Rescue. The team recently traveled to Tennessee to be recertified by the Urban Search & Rescue Foundation and passed a rigorous Federal Emergency Management Agency test, putting them among some of the most highly trained canine resources in the U.S.

To pass the certification, Wright had to show knowledge in search strategies and tactics, mapping, and other skills.

Chance also had to demonstrate his skills, including command control, agility, and a willingness to search for live victims even with distractions like other animals, food, excessive heat and noise. Chance also had to show his confidence in searching independently, negotiate different surfaces and move through dark spaces.

During their testing last week, Wright and Chance used all of their training and knowledge to find victims in two large rubble piles.

Alabama Task Force 1 is sponsored by Mobile-Fire Rescue, the City of Mobile and the State of Alabama.

Wright and Chance are volunteers and continue to train weekly, to be ready in the event of any emergency. They've also responded to calls to assist Mobile Fire-Rescue, when necessary.

West Virginians Turn To Federal Government For Help After Devastating Floods

By Rebecca Hersher

NPR, June 28, 2016

As the water recedes in West Virginia, residents are taking stock of their losses. At least 23 people died in massive floods that swept across the southeastern part of the state on Friday.

According to state authorities, the water damaged or destroyed more than 1,200 homes, and thousands of people who lost power are just getting it back.

President Obama has declared three counties — Kanawha, Nicholas and Greenbrier — disaster areas, which gives residents there access to emergency funds for housing and medical care.

On Tuesday, Gov. Earl Ray Tomblin requested a federal major disaster declaration for an additional seven counties in the central part of the state. In a statement, Tomblin said, “As cleanup continues in so many communities across West Virginia, we are seeing the overwhelming damage that has been left behind.”

The Federal Emergency Management Agency is already on the ground in the three disaster-designated counties, surveying the damage and meeting with individuals whose homes and businesses were damaged or destroyed.

One of the hardest-hit towns is Rainelle in Greenbrier County. All of the downtown area next to the Meadow River was washed away.

Linda Rhodes has lived there for 55 years. Driving down Main Street, she says she doesn’t know how the town will rebuild.

“There aren’t any jobs here. None at all,” she says. “Now, everything’s gone. God help us.”

The mayor of Rainelle, Andy Pendleton, is hoping the federal government will help. Pendleton says she met Monday with FEMA representatives, and says that all this week she and other local leaders will hand out packets to residents, explaining how to apply for federal money to rebuild homes and businesses and to replace cars and other personal items that were destroyed.

“I worry the most about the people who don’t have anything to go back to,” she says. “All those people who lost their homes, who lost people in their families in the flood. They need help.”

At least a dozen people in Greenbrier County died, according to the West Virginia medical examiner.

The National Guard helped with the search and rescue operation and continued to be on call as more rain fell on areas where the soil was already saturated, prompting the National Weather Service to issue flash flood warnings. Some areas where water had receded were flooded anew, but no further fatalities were reported, according to the state police.

The National Guard says it expects to be on the ground at least until the end of the week, removing debris and assisting the local and state police in cleanup efforts.

WV Governor Adds 7 Counties To Disaster Request

Associated Press, June 28, 2016

LEWISBURG, W.Va. (AP) — Gov. Earl Ray Tomblin has added seven counties to his request for a federal disaster declaration for flood-ravaged West Virginia.

The counties added by Tomblin in a statement Tuesday are Clay, Fayette, Monroe, Pocahontas, Roane, Summers and Webster.

The three hardest-hit counties — Greenbrier, Kanawha and Nicholas — already have received approval for a federal declaration. That allows residents to apply for individual assistance from the Federal Emergency Management Agency.

Those affected can apply for aid online at DisasterAssistance.gov or by phone at 1-800-621-FEMA (3362) or (TTY) 1-800- 462-7585 for the deaf or hard of hearing.

West Virginians needing assistance should contact their local offices of emergency management. Contact information for each county office can be found at www.dhsem.wv.gov/Important%20Contact%20Numbers/Pages/default.aspx.

Flash flooding last week damaged thousands of homes and businesses and killed 23 people. Tomblin previously issued a state of emergency in 44 counties, which authorizes the mobilization of state resources for flood-relief efforts.

As of 8 a.m. Tuesday, 7,077 residents still are without power across the state. More than 400 Red Cross workers are responding across West Virginia, distributing more than 10,000 meals and 2,000 cleanup kits so far.

The Latest: 5 More West Virginia Counties Get Disaster Nod

Associated Press, June 28, 2016

LEWISBURG, W.Va. (AP) — The Latest on flooding that has devastated parts of West Virginia (all times local):

5:40 p.m.

Gov. Earl Ray Tomblin says a federal disaster declaration have been approved for five more flood-ravaged counties in West Virginia.

Tomblin announced on his Twitter feed that the Federal Emergency Management Agency granted the state’s request for Clay, Fayette, Monroe, Roane and Summers counties. It allows residents to apply for individual assistance from FEMA.

Previously, federal disaster declarations were approved for the three hardest-hit counties — Greenbrier, Kanawha and Nicholas.

Tomblin says he's waiting word on disaster requests made earlier Tuesday for Pocahontas and Webster counties.

Flash flooding last week damaged thousands of homes and businesses and killed 23 people. Tomblin previously issued a state of emergency in 44 counties, which authorizes the mobilization of state resources for flood-relief efforts.

___

5:30 p.m.

Police have arrested a man on charges of stealing items from flooded properties in southern West Virginia.

Fayette County Sheriff Steve Kessler says in a news release that 53-year-old Mark Anthony Moore of Russellville was charged Tuesday with burglary, petit larceny and possession of a controlled substance.

Kessler says beer and bottles of liquor were stolen from a home, vehicle registration and state inspection stickers were taken from an abandoned vehicle, and a tire and rim had been removed from a truck. The release says the stickers allegedly were found on Moore's vehicle.

Kessler says the area where the theft occurred had extensive damage in last week's flooding and many residents lost their homes and personal possessions.

Moore was taken to the Southern Regional Jail. Bond was set at $50,000. Jail records didn't list if he had an attorney.

___

2:30 p.m.

Tetanus vaccines are available to West Virginia residents who have been exposed to floodwaters.

The tetanus bacteria can be contracted through an open cut or wound. The state Department of Health and Human Resources recently suggested the vaccines to residents who are have not received tetanus booster shots in the past 10 years.

The Greenbrier resort says free tetanus vaccines are being administered Tuesday at two locations in White Sulphur Springs.

On the other side of the county, Rainelle Medical Center CEO Kristi Atha-Rader says 600 tetanus vaccines were already given to residents and the hospital has received 600 more.

The Clendenin Volunteer Fire Department says tetanus shots are available at two sites in that Kanawha County community, while the Summersville Regional Medical Center is offering the shots at its clinics in Ansted in Fayette County and Summersville in Nicholas County.

___

12:45 p.m.

The Federal Emergency Management Agency has opened disaster centers for residents in two flood-ravaged West Virginia counties.

The centers opened Tuesday in Greenbrier and Kanawha counties. They were part of a federal disaster declaration issued last week that also included aid for Nicholas County after floods killed at least 23 people in the state.

FEMA says Greenbrier County residents can apply for federal assistance at the Emmanuel United Methodist Church in White Sulphur Springs. Kanawha County residents can apply at the Crede Warehouse in Charleston.

___

12:30 p.m.

Procter & Gamble is helping flood-ravaged West Virginia residents wash their clothes.

The company says in a news release that a mobile laundry unit is providing full-service laundry to residents starting Tuesday. The first mobile unit is being set up at Elkview Middle School in Kanawha County.

Residents can bring clothes to the mobile unit to be washed, dried and folded free of charge. Up to 100 loads of laundry per day will be collected from 9 a.m. to 5 p.m. All washable clothing and other items will be accepted with the exception of heavy bedding.

The company says personal care kits will be distributed containing items such as deodorant, toothpaste, shampoo and household cleaning products.

Floods last week killed at least 23 people in West Virginia.

___

11:20 a.m.

Gov. Earl Ray Tomblin has added seven counties to his request for a federal disaster declaration for flood-ravaged West Virginia.

The counties added by Tomblin in a statement Tuesday are Clay, Fayette, Monroe, Pocahontas, Roane, Summers and Webster.

The three hardest-hit counties — Greenbrier, Kanawha and Nicholas — have already received approval for a federal declaration. That allows residents to apply for individual assistance from the Federal Emergency Management Agency.

Those affected can apply for aid online or by phone.

Flash flooding last week damaged thousands of homes and businesses and killed 23 people. Tomblin previously issued a state of emergency in 44 counties, which authorizes the mobilization of state resources for flood-relief efforts.

___

This item has been corrected to show that seven counties were added to a federal disaster declaration request. There are 44 counties included in a separate state of emergency declaration by the governor.

___

10:45 a.m.

Actress Jennifer Garner is urging support for a charity she is involved with that is assisting families following devastating flooding in West Virginia.

Garner grew up in Charleston and is a member of the Save the Children board of trustees. The group offers early education, literacy, activity and nutrition programs for children.

It partners with local schools to help nearly 2,000 children in West Virginia. Three of the counties it serves have been ravaged by flooding: Roane, Calhoun and Nicholas. Garner says her "heart is breaking" for the state.

The group's West Virginia director, Anna Hardway, says it has been unable to make contact with half of the families in its programs due to flood-related power and phone outages.

___

7:15 a.m.

Jim Justice, the Democratic nominee for governor of West Virginia, says he will pause his campaign for at least two weeks so he can concentrate on helping flood victims.

Justice says he has started a relief fund called Neighbors Loving Neighbors to help those who lost their homes or other possessions in last week's devastating floods that killed 23 people.

He says "politicking is the last thing that's on my mind," and though his headquarters will remain open, he won't personally campaign.

Thousands of homes and businesses across the mountainous state were damaged or destroyed when up to 9 inches of rain fell in a short span, causing perhaps the worst flooding West Virginia has seen in three decades. More than 400 people are living in shelters statewide.

___

4 a.m.

Like the other business operators on Main Street in Rainelle, Pamela Wallace Arnold is slowly cleaning up from West Virginia's worst flooding in decades. She's also preparing to help bury the dead.

She runs Wallace and Wallace, one of two funeral chapels in this rain-soaked West Virginia town of 1,500 residents. Wallace is doing double duty drying out her business started by her great-great-grandfather in 1926 while planning the funerals of flood victims in the coming days.

Rainelle is in Greenbrier County, where 15 of the state's 23 deaths from last week's devastating floods have occurred.

Where the visitations will be held, not even Wallace knows. She's also not sure whether she can ever reopen at the same location.

She just understands the community needs her.

Flood Carves A Path Of Destruction At Historic Resort

By Jonathan Mattise

Associated Press, June 28, 2016

WHITE SULPHUR SPRINGS, W.Va. — At West Virginia's usually immaculate Greenbrier resort, the grandstands set up for a PGA tournament that was supposed to start the week of July Fourth now look out on a muddy, gouged-out golf course strewn with trash, tires, refrigerators and severed trees.

The devastating floods that swept through West Virginia last week and killed at least 23 people statewide carved a path of destruction unseen in generations at the historic Greenbrier.

Running through the Old White TPC golf course, Howard's Creek raged over its banks during the pounding storms Thursday. When the worst of it was over, Greenbrier employees came upon two bodies on the resort grounds, and they are draining a lake on the 16th fairway to search for more.

Dating back to 1778, the 700-room resort with an iconic white facade has long been one of the jewels of West Virginia's tourism industry, hosting presidents and royalty and holding a once-secret underground bunker built for Congress in case of nuclear attack during the Cold War.

But on Tuesday, 300 of the neediest victims from the flood-ravaged area occupied the rooms, and the hotel was closed for business while it fed and sheltered the disaster refugees.

"West Virginians are tough, loving, prideful, good people. They'll bond together, and I've said this many times, they'll get through this," said billionaire Greenbrier owner Jim Justice, who threw open the place for use as a shelter.

"We won't forget it, and we're not supposed to forget it. And we'll be scarred with it forever, but we'll survive it, and we'll figure it out."

Fifteen people died in the resort's namesake county, Greenbrier, where many were swept away by swift, mucky floodwaters. A dead 14-year-old boy washed up against a maintenance shed at the resort, and the body of an elderly man was pulled from of a lake on the grounds.

The Old White had been manicured to host some of golf's biggest names at a tournament starting July 7. The event was going to be free for the first time, and about 300,000 fans were expected. But then the rains began, and the water rose and kept rising.

On Thursday evening, pro golfer Bubba Watson, who has a home at the resort, tweeted a video that showed that the course had become a flowing river of brown water.

After the rain stopped, Justice checked out a high-water mark on the 15th hole, a record that was set in 1915. This flood topped it by 5 feet.

The tournament has been canceled.

The Greenbrier's newly built chapel was filled with 4 feet of mud. At the tennis complex, mud coated a few levels of seats around the year-old center court. Water spilled into several areas of the resort's main building, but Justice said it might be able to reopen in a month or two.

The golf course is another story. It might take a full year to bring Old White back into proper shape so the PGA Tour can come back in 2017 as expected, Justice said.

"In all honesty, the course will probably have to be completely redone," he said.

The Greenbrier is also set to host the New Orleans Saints' training camp starting in late July. The NFL team said it is still coming.

Justice, a coal and agriculture magnate who is the Democratic nominee for governor in November, has put the campaign on hold for at least two weeks.

"Honest to Pete, that's the last thing that I need to be doing today," he said.

Instead of campaign checks, money to help the victims is starting to roll in. Justice's flood-relief charity, Neighbors Loving Neighbors, has received $600,000 in commitments in just a few days, include five-figure pledges from former NBA star and West Virginia native Jerry West, Rite Aid and a FirstEnergy executive, he said.

As they grabbed a free lunch Tuesday, flood victims staying at the Greenbrier said they were grateful.

Kenneth Hoke, 45, fled his home Thursday in Monroe County to stay at the Greenbrier with his wife, Melanie. By the time he left, water had crept up to the bottom of the stairs and was rising quickly. He hasn't been home since.

"We were hit pretty hard in the hollow," Hoke said. "We lost everything we had."

Evacuations As Fire Spreads Near Northern California River

Associated Press, June 28, 2016

FORESTHILL, Calif. (AP) — People living in a rural subdivision 50 miles northeast of Sacramento were evacuated Tuesday as firefighters braved triple-digit temperatures to battle a wildfire that climbed out of a steep canyon along the middle fork of the American River.

Placer County Sheriff's spokeswoman Dena Erwin said homes near Todd Valley between the cities of Foresthill and Auburn were evacuated as a 20-acre fire quickly grew to 300 acres.

Erwin did not know how many homes were affected, but said the fire was approaching a subdivision with large lots and a scattered population.

"It's all hands on deck...we have everyone up there working on evacuations," she said.

The fire began Tuesday afternoon in El Dorado County before jumping the river and climbing out of the canyon and into neighboring Placer County.

Firefighters on the ground and in the air were working in 101-degree heat against the fire in a remote, rugged area that is difficult to access, said California Department of Forestry and Fire Protection spokeswoman Lynnette Round.

"It's in some really steep terrain. We have air and ground units out there working really, really aggressively to put this fire out," Round said.

Sacramento television station KCRA-TV reported a drone spotted over a section of the fire grounded aircraft in the area for about an hour as the Placer County Sheriff's Office worked to find the owner. Air attacks resumed Tuesday evening with a D-10 Airtanker making drops over the flames.

No injuries or structure damage had been reported by Tuesday night.

Husband Appeared To Be Shielding His Wife As Wildfire Reached Their Home. Both Died

By Brittny Mejia And Alexia Fernandez

Los Angeles Times, June 28, 2016

Bill Johnson always knew he was getting close to home when he saw the distinctive red barn-style house from across Lake Isabella.

The two-story home belonged to Byron McKaig, 81, an Anglican priest, and his 90-year-old wife, Gladys.

On Friday morning, after the Erskine fire tore through the area, Johnson ventured into a neighbor's yard, and from there, spotted the couple's two cars next to the burning stubs of their home.

"They didn't get out," Johnson thought. Then he spotted the McKaigs lying against a corner of their fence, a tree near their bodies smoldering like their house.

Their clothes did not appear to have been touched by flames. Johnson said Byron looked like he died trying to protect his wife.

"He was like on top of her, and they were together, like he was blocking her from the fire," Johnson said. "It made me sick because immediately I saw and knew exactly what had happened — that they were alive and ran out of this burning inferno and got stuck, and that was where they ended. I thought it was terrible for those people to go like that. Just horrible. They didn't deserve it."

The McKaigs are the two confirmed casualties of the worst wildfire so far this year in California. The blaze has burned more than 46,000 acres and destroyed more than 200 structures. Many residents ran for their lives as the fire raced toward them, but the McKaigs appeared unable to escape.

The fire all but wiped out the community of South Lake, where the majority of residents are retirees living on fixed incomes. Many lived alone.

Officials have long said this population was especially vulnerable when fast-moving fires move in.

Last September, a monster fire in Lake County killed four people, at least three of whom were elderly people who could not escape. Others who did survived arrived at shelters in wheelchairs and using oxygen tanks.

Around Lake Isabella, many wondered whether the elderly victims there could rebuild their lives.

Louis Reyes, 59, moved to South Lake to care for his 95-year-old mother. To him, South Lake always felt more like a retirement community. After the fire broke out, Reyes' brother helped evacuate neighbors who didn't have cars — driving up and down Goat Ranch Road several times until the flames and smoke became too much to bear.

The home Reyes shared with his mother and wife burned down. He said he would like to buy the land from the owner.

"It was a beautiful mobile home with a built-in porch and big yard," he said. "We'll have to rebuild it ourselves. We're not going anywhere."

On Tuesday, an acrid, burning smell hung in the air outside the foundation of the McKaig's home. Ash littered the ground, and the trees on the property were blackened like used-up matches.

In the ruins Johnson could make out a desk, a freezer and a washing machine. Other items were so twisted and warped by the fire that they were difficult to identify.

Johnson said he remembered how Gladys used to drive around in an old pickup, her red hair tucked under a bonnet.

"She was just a sophisticated lady," he said. "She was like a tough country woman."

He recalled that when singer John Denver died in 1997, Byron McKaig played his music loudly and belted out songs like "Take Me Home, Country Roads."

"Gladys' house — I don't know if her daughter will want to rebuild," he said. "It'll probably be an empty lot now, so it'll be a big hole in our community. … You always expect to see Gladys' home sticking out. You'd always see it."

Geralin Montgomery lived across from the McKaigs for nine years. She didn't know them well, though she said "they were very, very, very religious."

Montgomery said Gladys would pass out religious pamphlets and used to often play the organ.

“The whole neighborhood could hear,” Montgomery said.

Ray Conner lives along McCray Road, where the McKaigs also lived.

“They never went anywhere without each other,” Conner said. “And that’s the best way I’m going to describe them. They were just together all the time. Through it all, they were together.”

On Friday morning, Conner and his wife had taken a drive to check on a friend’s home, when his wife wondered aloud if the couple had made it out.

When news came out about bodies being found, they were sure it was the McKaigs.

“We knew right away who it was because we knew the location of the house,” Conner said.

Though he lamented their deaths, he said he was relieved there wasn’t a greater loss, considering how quickly the fire moved.

“It’s a miracle more people didn’t lose their lives,” he said.

“Knowing that a lot of my friends have lost their homes and lost everything, you don’t know where to begin,” he said. “The one thing I can say about the Kern River Valley is that we came together as a community to help everybody we possibly could.”

The couple would visit Nelda’s Diner in Lake Isabella a couple of times a week, choosing a booth on the right side near the windows facing out on Lake Isabella Boulevard.

They would stay for a couple of hours, enjoying cups of coffee and conversation.

“They were really nice people,” said waitress Suz Humphers. “Been coming here for years.”

Humphers said the McKaig’s got around slowly. When Gladys would get her food, and it was arranged to her taste she would exclaim: “Oh this is just lovely,” Humphers recalled with a smile.

Frank Brassell, who co-owns the diner with his wife, called Byron a “sharp guy” and said Gladys was very proud that Byron had studied at a seminary and was an ordained minister.

“He was devoted to her,” Brassell said. He said he wouldn’t have been surprised if Byron had tried to protect Gladys from the fire.

“He would have stayed past the last minute in order to save her,” Brassell said. “I know he would have.”

Deadly California Wildfires Spark Debate About Development

By Scott Smith

Associated Press, June 28, 2016

FRESNO, Calif. — A speeding wildfire in California that turned hundreds of homes near Lake Isabella to piles of twisted rubble has forced a conversation about how to minimize destruction in the most populous state experiencing the effects of climate change.

Wildfires in the last years have killed several people in California, a drought-prone state experiencing a five-year dry spell.

Weather is one factor, but more critical is the state’s exploding population, spawning communities in the once sparsely inhabited ranch and timberland regions long known to burn, experts say.

“We know this is going to happen,” said Kevin Ryan, a former U.S. Forest Service fire scientist, now a consultant with FireTree Wildland Fire Sciences. “We need to manage to take the crisis out of it.”

Judy and Ken Brown were among hundreds who narrowly escaped the firestorm last week that swept down a mountainside and through their community beside Lake Isabella, an hour east of Bakersfield.

They’ve seen wildfires in the past, but none like this one that quickly consumed their mobile home and dozens in the neighborhood largely made up of retirees.

Judy Brown said she and her husband received an automated call telling them to leave. They soon heard exploding propane tanks and neighbors screaming.

With their two dogs loaded in their car, the couple drove to safety through thick smoke as their home burned behind them. Judy Brown said they were lucky to survive.

“It was like a tornado, but it was fire,” she said. “I thought it was the end of the world.”

The fire, driven by strong winds across mountains covered with dry grass and trees, travelled 11 miles in its first 13 hours, which firefighters say is fast. It killed and elderly couple and destroyed more than 200 homes.

California’s wildfire season typically starts in August, raising concerns about the June fire at Lake Isabella sparking so early.

It also follows 2015’s voracious wildfire season marked by six deaths. Four people died in a Lake

County fire north of San Francisco that destroyed 1,300 homes. A fire in Amador and Calaveras counties destroyed more than 800 buildings and killed two people. Both fires rapidly spread.

Climate change will continue to make wildfires more severe throughout the western states, including California, according to a report by the Climate Central, a nonprofit organization of scientists.

An estimated 11 million Californians live in areas with a high risk of wildfire, the report says, and by 2050 California's wildfire season is expected to increase from 120 days to 144 days.

Bill Patzert, a climatologist at NASA's Jet Propulsion Laboratory, says changing weather patterns are one factor. Winter temperatures have risen 2 to 3 degrees in the last century, he said, and California's snowpack is more fleeting. Millions of trees in the Sierra Nevada have died in drought.

The weather, however, is not solely to blame for the highly destructive wildfires, said Patzert, who blames poor planning that allowed communities to be built in risky places.

"Putting it all in the climate change bin is like throwing in the towel," Patzert said. "Let's not forget a lot of it is our misbehavior and our decisions how we zone and where we zone."

The areas throughout California, where cattle grazed and loggers harvested trees, have given way to subdivisions of homes in the last 50 years, said Bill Stewart, co-director of the Center for Fire Research and Outreach at the University of California, Berkeley.

Residents in these places must be aware of the danger, and not rely on the local fire department to tell them when to clear the grass and trees that could easily spread fire to their homes, he said.

"That's the issue — more people living right next to wildland," Stewart said of the wildfire near Lake Isabella. "If no one lived there, this wouldn't have been a big story."

California Land Officials Sign Off On Closing Nuclear Plant

By Alison Noon

Associated Press, June 28, 2016

SACRAMENTO, Calif. — California land officials dropped their longstanding environmental objections to the state's last nuclear power plant and signed off Tuesday on a deal to close the Central Coast facility nearly 20 years ahead of its previously planned termination.

The State Lands Commission approved a lease allowing Pacific Gas and Electric Co. to continue operating the Diablo Canyon twin-reactor plant through August 2025, a date the company and environmental groups agreed to last week. Members turned down a proposed environmental impact assessment, which can take years, in part to meet the earlier termination date.

Lt. Gov. Gavin Newsom said keeping the plant open for nine years allows PG&E to avoid the mistakes of Edison International, which terminated its San Onofre nuclear generator in 2013 after hundreds of abrupt layoffs. The company largely replaced the nuclear power with climate-changing natural gas plants.

"Let's not fail the plant," Newsom said. "Let's have the conversation now about what that means to the workforce, what that means to the community, what that means to our efforts to provide alternative energy sources at a competitive price."

Tom Dalzell, business manager of a union that represents 600 of the plant's employees, said the agreement promises to retrain and transition employees away from Diablo Canyon, avoiding a precipitous change.

Friends of the Earth President Erich Pica, whose organization participated in the negotiation to terminate the plant, said the agreement is fair to workers while eliminating two decades of seismic risks.

"This is the way you do it," Pica said. "You have time, you can bring on the right resources and you can treat people right."

Not all conservationists back the plan, though. Dozens of activists, including some who have been fighting nuclear energy for 40 years, argued Tuesday against the plant's continued operation near major earthquake-causing fault lines.

John Geesman of the Alliance for Nuclear Responsibility said the state should have conducted one of its strict environmental reviews before approving the lease, however short.

Geisha Williams, PG&E president of electric operations, said the nine years are a gift and the company will use the better part of that time to build and prepare an alternative energy facility in California.

Williams said PG&E could pivot to wind, solar, biomass, geothermal or hydropower to replace the energy Diablo Canyon currently provides — about 9 percent of the state's power.

PG&E President Tony Earley told reporters last week the utility will save more money closing Diablo Canyon than running it through 2044 as planned.

The commission's vote is the first of multiple regulatory hurdles facing the agreement to shut down the 31-year-old plant.

Diablo Canyon's twin reactors hug a Pacific Ocean bluff midway on the coast between Los Angeles and San Francisco, in San Luis Obispo County.

Fears about the seismic faults running through the area have dogged the project since its conception in the 1960s, and fostered opposition nationally to nuclear power within the country's then-fledgling environmental movement.

PG&E maintains the plant could withstand the strongest likely earthquakes, but growing scientific knowledge about the seismology has heightened worries.

The state's largest utility and environmental groups agree that California no longer needs the electricity from Diablo Canyon, given increased energy efficiency in the state and the growing availability and affordability of solar and wind power and other renewable energy.

Nationally, the nuclear-power industry is caught in a debate between those who call nuclear power an essential alternative to climate changing fossil fuels, and those who question the growing costs of maintaining the country's decades-old nuclear plants.

Hail, Flooding Cause Delay At Coors Before Jays-Rockies

Associated Press, June 28, 2016

DENVER — Rain and hail came down on Coors Field in a fierce, hour-long downpour that forced officials to delay the start of an interleague game Tuesday night between the Toronto Blue Jays and Colorado Rockies.

Heavy runoff poured into the Rockies' dugout and tunnel leading into the clubhouse, causing some flooding. Grounds crew workers were able to clear the water away by sandbagging the tunnel entrance and clearing debris over the drains, allowing the pooled water to dissipate.

Other members of the crew used shovels, squeegees and large brooms to scrape the water and pea-sized hail from the field.

An air blower also was driven across the field to help dry it out and an absorbent mix was thrown onto the infield to soak up additional moisture.

First pitch was thrown at 9:21 p.m., which was 2 hours, 41 minutes after the scheduled start time.

A Massive Storm Completely Flooded The Rockies' Stadium

By Andrew Joseph

USA Today, June 28, 2016

Let's hope fans attending Tuesday's Rockies game found somewhere comfortable and dry because a massive hailstorm is not ideal baseball conditions.

About an hour before Tuesday's scheduled first pitch, the sky started falling in Denver. The entire stadium had to take cover as outrageous amounts of hail and rain poured down.

It didn't stop.

It got worse.

This is fine. Nothing to see here.

The world might be ending.

Estimated time of first pitch: Never. The world has ended. No more baseball. Melvin Upton Jr. robs home run by reaching over the wall for ridiculous catch

NFIP AND FLOOD MAPS

45 Moorhead Properties Removed From Flood Plain

Forum of Fargo-Moorhead (ND), June 28, 2016

MOORHEAD — Another 45 properties will be removed from the 100-year flood plain in the Moorhead Country Club area, the city of Moorhead announced Tuesday, June 28.

The Federal Emergency Management Agency informed the city that the Flood Insurance Rate Map for the area will be revised to reflect the flood protection measures put into place. The revised map will take effect Nov. 11, the city said in a news release.

The 45 properties are generally from 18th Avenue North to Country Club Parkway between 11th Street North and the Red River. Twelve of the properties had one or more structures touched by the 100-year flood plain (including one structure with eight residential condominium units).

A Letter Of Map Revision will eliminate a FEMA requirement for mandatory flood insurance for those properties with federally insured mortgages.

Property owners will still be able to buy voluntary flood insurance at preferred rates.

Since 2009, the city has removed 240 homes from the flood plain through buyouts and 199 properties through map revisions for accredited flood protection projects in the Horn Park, Woodlawn Park and Moorhead Country Club neighborhoods.

DHS/FEMA GRANTS

FEMA Funds For Roads Approved

By Nicole Bradford

Nacogdoches County (TX) Daily Sentinel, June 28, 2016

Still with a lengthy list of county roads to be oil-coated and otherwise maintained, Nacogdoches County Commissioners accepted the eighth of 10 FEMA grants on Tuesday.

Funds Available For Food, Shelter Program

Muskogee (OK) Phoenix, June 29, 2016

Muskogee County Emergency Food & Shelter Program has been awarded federal funds made available through the Department of Homeland Security/Federal Emergency Management Agency under the Emergency Food & Shelter Program (EFSP). Muskogee County EFSP is slated to receive $26,584 to supplement emergency food and shelter programs in Muskogee County, according to a media release.

Each area's awarded amount is partially based upon unemployment data as it compares to overall unemployment data.

The National Board chaired by the U.S. Department of Homeland Security's Federal Emergency Management Agency consists of representatives from American Red Cross; Catholic Charities, USA; National Council of the Churches of Christ in the USA; The Jewish federations of North America; The Salvation Army; and, United Way Worldwide. The Local Board is charged to distribute funds appropriated by Congress to help expand the capacity of food and shelter programs in high-need areas around the country.

The Local Board comprised of local representatives reflective of those on the National Board and local non-profit organizations of a similar nature will determine how the funds awarded to Muskogee County are to be distributed among the emergency food and shelter programs run by local service agencies in the area. The Local Board is responsible for recommending agencies to receive these funds and any additional funds available under this phase of the program.

Under the terms of the grant from the National Board, local agencies chosen to receive funds must:

- Be private voluntary non-profits or units of government.
- Be eligible to receive Federal funds.
- Have an accounting system.
- Practice nondiscrimination.
- Have demonstrated the capability to deliver emergency food and/or shelter programs.
- If a private voluntary organization, it must have a voluntary board.

Muskogee County Emergency Food & Shelter Program has distributed EFSP funds previously for meals, food and utility distribution, or other related temporary shelter. Public or private voluntary agencies interested in applying for Emergency Food and Shelter Program funds must contact Terry Beutelschies at Lake Area United Way, 311 Court St., (918) 682-1364 for an application. The deadline for applications to be received is July 15.

FEMA Disaster Center, Laundry Facilities Now Open In Kanawha

Charleston (WV) Gazette-Mail, June 28, 2016

More facilities have opened in northern Kanawha County to help those affected by last week's flooding.

Kanawha County officials say a Disaster Recovery Center run by the Federal Emergency Management Agency now is open at the Kanawha County Schools warehouse in Crede, 300 Pennsylvania Ave., by Elk Elementary Center. A center is also open at 65 W. Main St. in White Sulphur Springs through Friday.

People can go to those centers from 7 a.m. to 7 p.m. to apply for disaster assistance. Disaster Recovery Centers are one-stop shops for eligible storm survivors to provide one-on-one, face-to-face help.

The three hardest-hit counties in West Virginia – Kanawha, Greenbrier and Nicholas – have already been declared a federal disaster area by President Obama. On Tuesday, Gov. Earl Ray Tomblin asked that seven additional counties – Clay, Fayette, Monroe, Pocahontas, Roane, Summers and Webster – be added to the disaster declaration.

People do not have to visit a Disaster Recovery Center to register with FEMA. Those who have not yet registered are encouraged to do so as soon as possible by visiting DisasterAssistance.gov. FEMA also accepts registrations through your smartphone at m.fema.gov. For those without access to the internet, FEMA has a toll-free number at 1-800-621-FEMA (3362) or (TTY) 1-800-462-7585 for the deaf or hard of hearing.

"The most important thing for them to remember is that if they're a victim of flooding, they have to register with us to receive FEMA assistance," said Candace Cleveland, the manager for the FEMA center in Crede. "It's very important, and the only way you register — because sometimes people go to town meetings and different things and walk away thinking they've registered for FEMA — is by calling the 1-800 number."

Cleveland said FEMA can provide several forms of support for flood victims, including crisis counseling, unemployment assistance and child care services. The center will also direct victims to local resources available to them, Cleveland said.

Kanawha County residents with significant damage to property as a result of flooding can call the county planning office at 304-357-0570, between 8 a.m. and 5 p.m., to report the damage. The Planning Office will log all property damage, officials said in a news release Tuesday.

Kanawha Metro 911 spokeswoman Brooke Hylbert said in the news release that clothing donations received in recent days have been greatly appreciated, but are no longer needed at this time. Instead, cleaning supplies, such as bleach and also tarps to lay items out on, are especially needed.

The Tide "Loads of Hope" mobile laundry unit will be providing free full-service laundry to residents affected by the flooding.

A news release from the state Division of Homeland Security and Emergency Management says residents from directly affected areas can bring clothes to the mobile unit to be washed, dried and folded free of charge. All washable clothing types can be accepted with the exception of heavy bedding.

In addition, Procter & Gamble will be providing personal care kits containing items such as deodorant, toothpaste and shampoo as well as household cleaning products.

Tide "Loads of Hope" and the P&G product distribution program is planning to visit multiple areas affected by the floods, but initially will be located at Elkview Middle School, at 5090 Elk River Road N., in Elkview.

Shower facilities also are available at Elkview Middle School, and will be open each day from 9 a.m. to 5 p.m.

American Red Cross has opened up the Safe & Well website for concerned friends and family to search for individuals that have registered themselves as Safe & Well with Red Cross. To register on the site, visit https://safeandwell.communityos.org/cms/index.php.

The Kanawha County Emergency Operations Center will remain open throughout today to assist the public with questions. It can be reached at 304-746-8828.

Optum, a health and behavioral health services company, is offering a free emotional-support help line for flood victims. The toll-free number, 866-342-6892, will be open 24 hours a day, seven days a week, for as long as necessary and is free and open to anyone, according to a release.

FEMA Mobile Unit Arrives In Greenbrier County After Floods Wreck The Region

By Annie Moore

WVVA-TV Bluefield (WV), June 28, 2016

White Sulfur Springs (WVVA) A community that took decades to build, washed away by the rain. FEMA's mobile disaster assistance unit arrived in White Sulfur Springs on Tuesday to help those impacted by the floods.

"I was always the person who said, that's never going to happen to me. Right now, I'm in shock," said Laura Bare, one of hundreds who will be able to receive assistance at the new unit located on Tressel Street.

Bare was at work at The Greenbrier; her toddler at daycare, when floodwater ripped through her street. "It was so fast there would have been no getting out, and that's what scares me the most. I just keep thinking, what if we had been in there? It weighs on me."

In the days and weeks ahead, Bare and other families of the flood will be working with FEMA officials in White Sulfur Springs to get back on their feet.

"Candidly, getting FEMA in here this morning was a pretty significant development. We're trying to put the word out over the last 24 hours to get people to call the 1-800-621-FEMA number. If you've been impacted in any way, you need to register," said Rep. Evan Jenkins, who is helping residents sign up for assistant.

FEMA spokesman Peter Herrick said officials are currently working on a more permanent location in White Sulfur Springs to coordinate assistance. In the meantime, he is encouraging residents to call or visit the mobile until at the Emmanuel United Methodist Church between 7 a.m.-7 p.m.

As of Tuesday afternoon, only Greenbrier, Kanawha, and Nicholas counties are FEMA disaster areas, but Herrick is encouraging anyone affected to register as some counties could be added as officials survey the state.

To help Laura Bare and her 3-year-old daughter, visit https://www.gofundme.com/2b8vqpxg

FEMA Opens Mobile Disaster Recovery Center In Greenbrier County

WSLS-TV Roanoke (VA), June 28, 2016

WHITE SULPHUR SPRINGS, W.Va. (WSLS 10) – The Federal Emergency Management Agency now has a Mobile Disaster Recovery Center open to help those affected by the recent West Virginia flooding.

It's located at the Emmanuel United Methodist Church (31 Tressel Street, White Sulphur Springs, WV 24986) in Greenbrier County.

It will be open from 10 a.m. to 7 p.m. on Tuesday, 7 a.m. to 7 p.m. on Wednesday and 7 a.m. to 7 p.m. on Thursday.

People do not have to visit a Disaster Recovery Center to register with FEMA.

FEMA urges those who have not yet registered to do so as soon as possible by visiting DisasterAssistance.gov. For those without access to the internet, FEMA has a toll-free number at 1-800-621-FEMA (3362) or (TTY) 1-800-462-7585 for the deaf or hard of hearing.

Federal disaster assistance for individuals and families can include money for rental assistance, essential home repairs, personal property loss and other serious disaster-related needs not covered by insurance.

Rep. Mooney On Middle East Trip During Floods

By David Gutman

Charleston (WV) Gazette-Mail, June 28, 2016

Most of West Virginia's federal elected officials have been out in force since last week, coordinating, helping out and trying to keep the public informed as southern parts of the state have been hit with the worst flooding in at least a generation.

All except one — Rep. Alex Mooney, who represents Kanawha County and some of the hardest hit areas.

Mooney, R-W.Va., who has made no public appearances during the flooding, is on a previously scheduled congressional trip to the Middle East, his office said.

"The trip has included meetings with American military leadership and troops fighting terrorists in the Sinai Desert region of Egypt," Mooney spokeswoman Meredith Jones said. "He is working with the American military liaisons through the Department of Defense to return as quickly as possible without putting a strain on our service members. He is receiving regular briefings on the flooding in West Virginia and is eager to return home to continue to help his constituents."

Asked repeatedly when Mooney left for the trip — before or after the flooding began — Jones did not respond.

Mooney was in Washington on Wednesday of last week, the night before the flooding began.

Jones noted that Mooney's offices were open and providing services.

Every member of West Virginia's congressional delegation, Mooney included, has signed letters to President Barack Obama asking him to provide federal disaster assistance to the regions hardest hit by the flood.

Obama approved the first request, dated Saturday. The second request was sent and approved (in part) on Tuesday.

Three of eight counties — Kanawha, Roane and Clay — where a federal disaster has been declared are in Mooney's district.

West Virginia's other federal representatives have crisscrossed the state in the days since the flood, providing assistance in any way possible.

Sen. Joe Manchin, Sen. Shelley Moore Capito and Rep. Evan Jenkins all did a fly-over with the Federal Emergency Management Agency, viewing the scale of the damage in Clendenin, Richwood, Rainelle and at the Summersville Dam.

All have also had their staffs fan out across the most affected areas to provide assistance.

Manchin, the lone Democrat, visited Elkview, Clendenin, Richwood, Craigsville, Boggs, Walnut Grove and Birch River.

Capito visited similar locations and also met with people taking shelter at Capital High School.

Jenkins held a news conference at White Sulphur Springs, visited Richwood, Ansted, Charmco, Ronceverte, Cowen, Rupert and Fairlea, among others.

All three were briefed by the West Virginia National Guard, and other emergency officials.

Mooney's political opponents have often made hay of his relatively scant presence in the western portion of his 2nd Congressional District — Mooney lives in the Eastern Panhandle.

He attended his first Kanawha County Commission meeting in May, leaving shortly after it began to attend a Donald Trump rally.

Marc Savitt, Mooney's opponent in the Republican primary, dubbed him "congressman no show," and criticized him for missing the groundbreaking of the new Procter & Gamble facility in Berkeley County and President Barack Obama's visit to Charleston. (Congress was in session during the president's visit.)

"This job isn't about photo ops, it's about putting on your jeans and work boots and getting out in the district to help the people who trusted you to improve their lives," Savitt said in February.

Mooney handily defeated Savitt, winning more than 70 percent of the vote, in the May primary.

Mooney's general election opponent has also been critical of his non-presence.

"Alex Mooney is an absent congressman," Mark Hunt, his Democratic challenger, said in April. "His office is in my building, 405 Capitol St.; I've never seen him."

Hunt spent Monday and Tuesday helping and handing out supplies in Clendenin, Elkview and Clay.

Gov. Tomblin Expands FEMA Assistance Requests To Seven Additional Counties

WOWK-TV Charleston (WV), June 28, 2016

Charleston, W.Va. – On June 28, 2016, Gov. Tomblin expanded his request for a federal Major Disaster Declaration from the Federal Emergency Management Agency (FEMA) to provide assistance for Clay, Fayette, Monroe, Pocahontas, Roane, Summers and Webster counties.

Greenbrier, Kanawha and Nicholas counties have already received federal declaration and FEMA teams are on the ground working with residents and providing individual assistance.

If Gov. Tomblin's request is approved by FEMA, these additional seven counties would also be eligible for federal assistance, which includes individual assistance, Damage-Frequency Assessment (DFA), Emergency Protective Measures and Debris Removal.

"As cleanup continues in so many communities across West Virginia, we are seeing the overwhelming damage that has been left behind," Gov. Tomblin said. "To ensure all those affected by these devastating floods have access to the assistance they need to rebuild their homes, businesses and communities, I have expanded my request for federal aid to include seven additional counties. I appreciate the continued support of our congressional delegation as we work with federal partners to provide critical resources to West Virginians in need as quickly as possible."

West Virginians needing assistance should contact their local offices of emergency management.

Contact information for each county office can be found at:

http://www.dhsem.wv.gov/Important%20Contact%20Numbers/Pages/default.aspx.

Those who need cleanup assistance, are available to volunteer or want to donate should visit https://wvvoad.communityos.org/cms or connect with an agency in their local community.

Individuals and businesses in counties that have been declared federal disaster areas should visit www.disasterassistance.gov or call 1-800-621-FEMA (3362).

5 Counties Added To FEMA Disaster Declaration

WOWK-TV Charleston (WV), June 28, 2016

Earlier today, Gov. Tomblin expanded his request for a federal Major Disaster Declaration from the Federal Emergency Management Agency to provide assistance for Clay, Fayette, Monroe, Pocahontas, Roane, Summers and Webster counties.

According to Governor Tomblin's Twitter Page, FEMA has added five counties to the list of counties able to receive federal disaster aid. The counties FEMA has approved are Clay, Fayette, Monroe, Roane, and Summers.

He also tweeted that declaration status is still pending for Webster and Pocahontas counties. According to his Twitter page, the WV Department of Homeland Security and Emergency Management continues to work with FEMA to provide additional assistance.

It is unknown at this time when residents of these counties can begin applying for aid. However, these are the current links and contact numbers concerning FEMA assistance:

West Virginians needing assistance should contact their local offices of emergency management.

Contact information for each county office can be found at:

http://www.dhsem.wv.gov/Important%20Contact%20Numbers/Pages/default.aspx.

Those who need cleanup assistance, are available to volunteer or want to donate should visit https://wvvoad.communityos.org/cms or connect with an agency in their local community.

Individuals and businesses in counties that have been declared federal disaster areas should visit www.disasterassistance.gov or call 1-800-621-FEMA (3362).

Napa County Ends Earthquake Emergency Status

By Barry Eberling

Napa Valley (CA) Register, June 28, 2016

It took almost two years, but Napa County is officially no longer under a local emergency proclamation linked to the Aug. 24, 2014, South Napa earthquake.

The county Board of Supervisors last week terminated the emergency proclamation initiated on the day of the earthquake. County Executive Officer Nancy Watt called attention to what might have otherwise been a routine item passed along with other routine items.

"It's somewhat anticlimactic," she acknowledged.

But up to 20 seconds of shaking during the earthquake yielded plenty of long-range, bureaucratic chores for the county. The immediate, chaotic signs of a major emergency — sirens, buckled roads, toppled bricks, collapsed buildings — were only the beginning.

A world of flashing red emergency vehicle lights yielded to a world of red tape. Napa County government's slow-motion recovery included securing federal reimbursements to help pay for government building and rural road damage, tasks that required emergency status.

Now Napa County has reached a point in its dealings with the Federal Emergency Management Agency that it felt comfortable terminating its local emergency proclamation.

"We still have a lot of work to do to get back to pre-earthquake life," Napa County Risk and Emergency Services Manager Kerry John Whitney said late last week. "But we're in recovery now, not response."

The county still has building repairs to make. Most notably, the oldest section of its historic courthouse remains closed and braced on the outside by giant metal beams.

FEMA has tentatively agreed to pay more than $500,000 toward the $635,000 earthquake insurance deductible on the building, Whitney said.

Napa County might be as long as two years away from holding a grand reopening for the damaged courthouse, Whitney said. It will reassemble a building shaken to its core by the quake while also paying attention to Victorian Italianate architecture and other historic details.

"That's an absolute priority," Whitney said. "We have a historical expert on our team to make sure that happens."

The need to maintain the building's historic integrity is one reason it took so long for the county to work with FEMA on a repair strategy. Only in late November 2015 did the parties agree on how to shore up the courthouse enough to begin an in-depth damage assessment.

Ultimate repair costs for the 1878 courthouse are still unknown. Much will depend on to what degree the building is strengthened to withstand future earthquakes.

"That building was very, very severely damaged and it has to be done right," Whitney said.

FEMA has also agreed to pay about $1.2 million toward the $1.4 million insurance deductible for the county Hall of Justice on Third Street. Whitney said the county should soon know the cost for repairs that remain to be done there.

Another factor allowing the county to end its earthquake emergency status involves the downtown jail. Because of earthquake damage to the jail, the county signed a contract with Solano County that allowed it to house as many as 125 inmates in the Solano County jail.

The county in early April stopped housing inmates in Solano for earthquake-related reasons. However, it still is housing inmates in Solano because of a remodeling project at the Napa County jail that has closed an inmate housing unit.

Napa County last August announced that total earthquake damage to its government buildings, roads and infrastructure was near $15 million. The county has long expected costs to top $20 million when all the bills are known and tallied. Much of the cost is to be reimbursed by insurance, and federal and state governments.

The city of Napa also declared a state of emergency that the City Council terminated on April 21, 2015. City officials said at the time that they had worked with the federal and state governments on an estimated $12 million in city earthquake-related damage costs.

ZIKA VIRUS

Zika Sets Off Urgent, Complex Communications Effort From CDC

By Bradley Johnson

Advertising Age, June 28, 2016

The Centers for Disease Control and Prevention is pushing hard to spread the word about Zika, the first new cause of birth defects identified by the CDC in 50 years and the first time ever that the cause has been spread by mosquitos.

CDC communications professionals are working side-by-side with scientists and emergency responders as the Zika hazard grows. And even though the agency still has to protect against all other hazards, anyone who can spare time from their normal duties is helping through the CDC's Emergency Operations Center.

The center is running at its highest state of activity, Level 1, under which the CDC says it assigns the most staff possible to work around the clock. It is the fourth Level 1, following the Ebola outbreak in 2014, the H1N1 outbreak in 2009 and Hurrican Katrina in 2005.

The work is complicated by the multiple fronts on which Zika transmission must be fought, apathy among those who don't feel at risk and a still-evolving understanding of the threat.

"This is probably one of the most complex communication responses the CDC has ever faced," said Katherine Lyon Daniel, associate director for communication at the Atlanta-based government agency.

"We know we can't stop every mosquito from coming here, and we know this is a terrible outcome, so we feel we have to do everything we can to be as ready as we can be," she added, calling Zika a "global crisis" that can potentially affect tens of thousands of babies.

There were 820 reported cases of Zika infection in the U.S. as of June 22.

To reach health professionals around the country, the CDC is hosting thousands of clinician calls where doctors and nurses can learn how to answer patient questions substantively and in an understandable manner.

It is sending messages through its Health Alert Network, or HAN, to its priority recipient list, which includes about 1,200 public information officers, health practitioners from the federal to local level, clinicians and public health laboratories. All HAN messages are also distributed through the CDC's Clinician Outreach and Communication Activity listserv of 36,500 subscribers and 155 partner organizations, posted on CDC.gov and Facebook, and distributed via

GovDelivery to HAN professional and media partners and individual subscribers.

But the agency is emphasizing the media as well. That's partly just another route to medical professionals. "We know physicians and clinicians are people too and they also consume the news, so that's one way were trying to get out the correct information," Ms. Lyon Daniel said.

It can also provide a more direct line to people concerned about the virus. The CDC's communication team is reaching out to mommy bloggers with suggested talking points for their audiences.

The organization recently created a Spanish-language PSA about Zika for Puerto Rico, which will run in movie theaters, on the radio and on social media.

On Facebook and Twitter, the CDC has been regularly posting relevant Zika-related infographics, videos and podcasts, focusing on vacation and travel themes as summer got underway. A post last week urged people to protect themselves if they are going to the Summer Olympics in Rio.

And the CDC website separates Zika information into sections for specific audiences, such as pregnant women or healthcare providers.

Because partner organizations are key to getting the word out to both health professionals and the general public, the CDC has also been working with the American Congress of Obstetricians and Gynecologists around Zika.

And the agency has hired Abt Associatates to help with productions, marketing and communcations.

Part of the challenge is "getting people prepared for something they're not really worried about yet," Ms. Lyon Daniel said, citing those who are neither pregnant nor thinking about having children soon, she said.

There's also still plenty of uncertainty about the virus itself. "We're sharing all the information we have as quickly as we can, but things will change and people's personal risk may be uncertain," she said.

And Zika's many facets, including sexual transmission and travel, complicates matters further.

The CDC is trying to get people to act now when possible, which means not leaving sitting water outside that could attract mosquitos and wearing insect repellent for three weeks after returning from countries with Zika to prevent mosquitos from spreading it in the U.S.

"We're trying to drive behavior change in a way we haven't tried to communicate before," said Ms. Lyon Daniel.

Dems-GOP Squabble Stalls Zika Funding

By Ted Barrett

CNN, June 28, 2016

Washington (CNN) Efforts to combat the Zika virus stalled in the Senate Tuesday when Democrats blocked a $1.1 billion House-passed funding bill, escalating the political battle between the parties over how to respond to the looming public health crisis.

The bill – which was put into final form in negotiations between House and Senate Republicans but not Democrats – fell eight votes short of the 60 it needed to advance. Congress now has just a narrow window to find a compromise before departing Washington in mid-July for a lengthy recess.

Senate Majority Leader Mitch McConnell, R-Kentucky, said it was "absurd" Democrats filibustered the bill and said he hoped they would feel pressure as they explained to their constituents this weekend why they voted against the money.

McConnell said he would schedule a vote on the bill again next week.

Democrats said they opposed provisions blocking funds for Planned Parenthood and freezing some environmental regulations to allow for spraying of the mosquitoes that carry the virus. They accused Republicans of inserting those "poison pills" to secure the backing of far-right Republicans in the House at the expense of being able to pass it in the Senate.

Top Democrats sent a letter to GOP leaders seeking fresh negotiations on the bill. While McConnell appeared wary of new talks, others GOP senators, like Roy Blunt of Missouri, who has been heavily involved in the issue, acknowledged they would be necessary.

"We have to deal with this. Everybody understands that this has to be dealt with," Blunt said.

Republicans argued that they had met the funding level acceptable to Senate Democrats and charged that Democrats backed off the bill because of pressure from special interests, like Planned Parenthood.

"This is purely and simply about politics on the part of the Democrats. And worse yet, special interest politics that has gotten in the way of what's in the best interest of the safety and health of the American people," said Sen. John Thune, R-South Dakota.

The rhetorical attacks were surprisingly harsh – even for this divided Congress – as each side blasted the other's handling of the issue as motivated more by base politics than the health care needs of women who if infected with Zika can have children with serious birth defects.

"Republicans decided they'd leverage a national health emergency and a public health crisis to sneak in special interest poison pills," said Sen. Chuck Schumer, D-New York.

"It is completely unacceptable, actually shameful, hypocritical, cynical for the Democrats to block this funding at this time," said Sen. John Cornyn, R-Texas, who earlier gave a lengthy floor speech while standing next to a blown up photo of a baby with a shrunken head due to microcephaly, the birth defect linked to Zika.

"We all realize what a threat this is to the public health and safety of women in the United States," he said.

Democrats Block $1.1 Billion Zika Bill

By Ted Barrett

CNN, June 28, 2016

Washington (CNN) Senate Democrats on Tuesday blocked a Zika funding measure over the objections of Republicans, and both sides are trying to figure out a path forward to find a compromise.

The vote, which needed 60 to advance, failed 52-48. Democrats on Monday vowed to defeat the $1.1 billion package that was agreed to by House and Senate Republican negotiators – and approved in the GOP-controlled House last week – because it contained what Democrats called "poison pills" inserted in the measure.

Democrats opposed a provision easing Environmental Protection Agency regulations but were especially frustrated by a measure that would have prevented funding for Planned Parenthood.

"They restrict funding for birth control provided by Planned Parenthood. Can you believe that?" Senate Minority Leader Harry Reid said Monday. "And the Zika problem, who does it affect? Women and especially pregnant women."

Republicans argued the EPA changes were temporary and designed to make it easier to spray pesticides to kill mosquitoes. They also say that while funds are denied to Planned Parenthood, there are no actual cuts to women's health funding. The money is redirected to community health centers and other organizations.

Republicans cautioned Monday that Democrats will be blamed if children are born with the birth defects caused by the dangerous mosquito-borne virus.

"I think there's going to be a heavy price to pay when this virus hits our shore and women start having babies with terrible birth defects," said Sen. John Cornyn of Texas, the No. 2 Republican leader. "I wouldn't want to be in their position."

Lawmakers have debated how to respond to the public health crisis caused by Zika for months but Republicans made clear if Democrats block the GOP compromise, it could be weeks before the chamber – which will soon break for party conventions and summer recess – can vote again.

A Reid spokeswoman sought to put blame on Republicans if the Senate leaves town before voting on a Zika funding measure.

"It would be a tragic mistake if Republicans give up and skip town for a two month summer recess without forging a bipartisan agreement to protect American mothers, babies and families from the rapidly-rising threat of the Zika virus," Kristen Orthman in a statement Monday.

Tuesday's measure was part of a larger spending bill for veterans' programs and military construction.

Senate Dems Block Zika Funding

CBS News, June 28, 2016

WASHINGTON – Senate Democrats have blocked a GOP-drafted measure to provide $1.1 billion to fight the Zika virus, accusing Republicans of packing the measure with partisan provisions and unfair spending cuts.

The nearly party-line 52-48 vote Tuesday left the Senate short of the 60 votes required to advance the measure. What happens next is unclear since the White House is adamant in dedicating $2 billion to fight the Zika virus, which, scientists say, causes severe birth defects in children if the mother contracts the disease during pregnancy.

Democrats say they also oppose the provision because of offsets attached to the drafted measure, which would take away $95 million in federal grants from vital services such as providing birth control to women in Puerto Rico where the disease is rampant.

"They restrict funding for birth control provided by Planned Parenthood. Can you believe that?" Senate Minority Leader Harry Reid said. "And the Zika problem, who does it affect? Women and especially pregnant women."

On the other side of the aisle, however, Senate Republicans warned their liberal counterparts prior to Tuesday's vote not to block the measure because they will have to bear the responsibility of children born with microcephaly, one of the birth defects caused by the virus in which the a baby's head and brain is smaller than normal.

"Putting politics before a public health crisis is about as irresponsible as it gets," House Speaker Paul Ryan said in a statement following the vote. "So much for all those lectures about doing your job."

The Centers for Disease Control and Prevention confirms more than 2,500 of Zika cases in the United

States and its territories. In February, the CDC issued travel notices in Puerto Rico, the U.S. Virgin Islands, and American Samoa. Just this past April, the first Zika-related death was reported in Puerto Rico.

Though no formal vaccine exists, vaccine trials to prevent the virus are set to begin this September, nearly seven months after the virus hit the U.S. mainland.

Senate Democrats Block GOP's Zika Funding Bill

By Andrew Taylor

Associated Press, June 28, 2016

WASHINGTON (AP) – Senate Democrats on Tuesday blocked a Republican proposal to provide $1.1 billion to fight the Zika virus, faulting the GOP for packing the measure with restrictions on Planned Parenthood money and changes to policies on pesticide spraying.

The nearly party-line 52-48 vote Tuesday left the Senate short of the 60 votes required to advance the measure. What happens next is unclear, though neither side is looking forward to leaving Washington next month for a seven-week vacation without having acted to address the health threat.

Zika is spread mainly by a tropical mosquito and is causing an epidemic in Latin America and the Caribbean. The virus can cause horrible birth defects and is likely to spread further this summer. So far, there's been no transmission by mosquitoes in the continental U.S.

Democrats pressed to resume negotiations while Republicans insisted, for now at least, that the measure negotiated by House and Senate Republicans is the best the Obama administration is going to get. The administration had requested $1.9 billion in emergency funds in February.

"There's not going to be another opportunity to deal with this in the near future," promised No. 2 Senate Republican John Cornyn of Texas.

The White House has threatened to veto the legislation.

The House-Senate measure matches the $1.1 billion measure that passed the Senate last month on a sweeping vote, but Democrats oppose a handful of provisions designed to mollify GOP conservatives in the House and the attachment of companion spending cuts to defray its cost.

Democrats particularly oppose a provision that restricts the use of $95 million worth of federal grants to provide services such as birth control to women in Puerto Rico threatened by the virus. Democrats charged that the restrictions were targeted at Planned Parenthood, a group loathed by many anti-abortion Republicans.

In addition to the limits on Planned Parenthood, the bill would temporarily lift permitting requirements on pesticide spraying.

Even as Democrats pressed for compromise, they crowed that Republicans controlling Congress would soon reconsider.

"They come back with their tail between their legs saying 'Let's pass something,'" said Sen. Charles Schumer, D-N.Y.

Republicans controlling Congress have been slow to act on Obama's request, instead forcing the administration to redirect more than $500 million in unspent Ebola-fighting funds to combat Zika.

In a letter Tuesday morning, top Senate Democrats reiterated their opposition to the partisan provisions, but offered relatively mild objections to the inclusion of spending cuts to finance the Zika package.

"We stand ready to work cooperatively with you," the Democrats' letter said.

The measure is an agreement between House and Senate Republicans who say they drafted it in hopes of finding a compromise that could somehow satisfy both tea party Republicans and Obama's Democratic allies in the Senate. It did nothing of the sort. The House passed the measure along party lines last week.

Minority Leader Harry Reid, D-Nev., reacted with outrage that GOP negotiators dropped a House provision to ban the display of the Confederate flag at federal veterans' cemeteries a day or so each year. Democrats did not seek to address the issue during Senate debate last month.

Each side already has begun the blame game. Cornyn appeared on the Senate floor with a poster of a baby born with microcephaly, a severe deformity in which children are born with poorly developed brains and small skulls.

"I wonder what the senators who voted against this bipartisan Zika funding bill would tell the mother of this child," Cornyn said.

"What a cynical and hypocritical thing to do," Schumer said. "All Democrats have ever asked for on Zika was to give the (Centers for Disease Control) and the other agencies to protect the American people, pregnant mothers, and their babies from this dangerous virus."

Funding To Combat Zika Fails To Advance In Senate

By Susan Cornwell

Reuters, June 28, 2016

Full-text stories from Reuters currently cannot be included in this document. You may, however, click the link above to access the story.

Zika Funds Fail In Senate As Democrats Decry "Poison Pills"

By Steven Dennis

Bloomberg Politics, June 28, 2016

Senate Democrats on Tuesday blocked Republicans' plan to partially fund President Barack Obama's request for funding to tackle the Zika virus and attach it to other items Democrats dismissed as partisan, setting off a bitter round of sniping ahead of the July 4th recess.

Senate Majority Whip John Cornyn of Texas called Democrats "sore losers" and said they, not Republicans, will pay a political price for blocking the $1.1 billion Zika funding package, which was to be attached to a funding bill for veterans and military construction.

"Here we are in an utterly absurd position, playing political games as this public health crisis mounts here in our country," Senate Majority Leader Mitch McConnell of Kentucky said after the vote. "Pregnant women all across America are looking at this with dismay, utter dismay.''

The measure was blocked on a 52-48 vote, short of the 60-vote threshold needed to advance it. Democratic leaders called for a new round of negotiations to produce a bipartisan bill.

Senate Minority Leader Harry Reid said Democrats "have been trying for months" to pass President Barack Obama's request for $1.9 billion to fund Zika control efforts. The Republican measure blocked Tuesday would take away funding from birth control, veterans and combating Ebola, he said.

"It is unbelievable that somebody would have the audacity to come to the floor and say it's Democrats' fault," said Reid of Nevada. "A significant amount of American women, especially young women, go to Planned Parenthood," he said. "The Republicans said you can't do that."First Case

Shortly before the vote, the Florida Department of Health announced the first Zika-linked case in the state of a baby born with microcephaly, to a Haitian woman who contracted the virus abroad.

McConnell said the measure was senators' last chance to provide Zika funding "for weeks" because the chamber will be off next week for the July 4 holiday. But Senator Chuck Schumer of New York, the third-ranking Democrat, said the package was "a bill designed to fail."

Democrats say the package is filled with "poison pills," forcing them to vote against the Republican-written plan.

Among the items Democrats objected to were limits on family-planning services, which Democrats called a "back door" cut to Planned Parenthood; a suspension of Clean Water Act rules on use of some pesticides without EPA approval; funding for veterans that was $500 million below what the Senate passed; and the deletion of a provision sought by Democrats to stop flying the Confederate battle flag at veterans' cemeteries.Veto Threat

The White House has said Obama would veto the measure, H.R. 2577, if it reached his desk.

Reid also said it would set a bad precedent to require funding for emergencies to be offset by cutting federal spending elsewhere. Typically, emergency spending is paid for by borrowing.

Cornyn said Monday that Democrats "want to spend $1.9 billion in emergency spending with no offsets." He added, "Busting the budget caps is more important to them than the public health and women who might suffer from birth defects."

Cornyn didn't sound open to renegotiating the bill.

"This is their shot. I think there is going to be a heavy price to pay when this virus hits our shore and women start having babies with terrible birth defects," Cornyn said. "I wouldn't want to be in their position."

Obama requested $1.9 billion to fight the virus in February, but Republicans didn't act for months and ultimately balked at the price tag. A $1.1 billion emergency plan passed the Senate as an amendment to a spending bill last month on a 68-30 vote, with most Republicans, including Cornyn, voting against it because it would add to the deficit.Florida Focus

Democrats have been pounding Republicans for failing to act for months, particularly in the key battleground state of Florida.

Senator Marco Rubio, who changed his mind and decided to seek re-election this year, has been the most visible Republican pushing for Congress to act. He now faces the unwelcome prospect of going home for another recess and explaining why his party was unable to enact any funding yet again.

"I'm frustrated that we haven't dealt with this, quickly, effectively, weeks ago, before the middle of the summer, middle of mosquito season," Rubio told reporters Monday.

Rubio said he had hoped the measure would be the full $1.9 billion on its own, as the president requested.

"I wish it didn't have all these strings attached, because it would have been easier to pass a long time ago, but not doing anything is no longer an option," he said.

Bill To Provide $1.1 Billion Zika Funding Dies In Senate Vote

By Erin Kelly

USA Today, June 28, 2016

WASHINGTON — The Senate on Tuesday blocked a $1.1 billion bill to combat the Zika virus, giving Congress just two weeks to try to reach a new deal before lawmakers leave for a seven-week recess in the midst of mosquito season and a growing public health crisis.

Senators voted 52-48 to advance the bill, falling eight votes short of the 60 needed. Senate Majority Leader Mitch McConnell, R-Ky., immediately made a motion to reconsider the vote, raising the possibility of another vote on the same bill next week.

"We'll address this matter again (next week) and hopefully respond...to this pending health care crisis," he said.

Sen. John Cornyn of Texas, the No. 2 Republican in the Senate, warned before the vote that there would be no negotiations on a new Zika bill if the legislation failed Tuesday. But Sen. Chuck Schumer, D-N.Y., predicted that Republican leaders would relent and return to the negotiating table at the last minute to seek a compromise rather than go home for the summer with nothing to show their constituents.

"Republicans will come back in a few weeks with their tails between their legs," Schumer said. "Why they don't avoid that embarrassment is beyond me."

McConnell blamed Democrats for playing partisan politics and dooming Zika funding.

"Our friends across the aisle can try to come up with a line of excuses as to why they are blocking funding to address the Zika crisis," McConnell said. "But here's what it all boils down to: partisan politics."

Democrats opposed the bill, which they complained was negotiated between Senate and House Republicans with little input from them and was loaded with "poison pill" riders that cut health programs, restricted funding for birth control services from Planned Parenthood, weakened clean water laws and blocked a ban on displaying the Confederate flag at U.S. military cemeteries.

Democratic leaders sent a letter Tuesday to McConnell and House Speaker Paul Ryan, R-Wis., calling for an immediate round of new talks to try to produce a bipartisan compromise.

Sen. Bill Nelson, D-Fla., whose state has been hit hardest by the Zika virus, warned his colleagues that the public health crisis is poised to become much worse if Congress doesn't act soon.

Florida has 223 Zika cases, including 40 pregnant women. The Florida Department of Health announced Tuesday the first confirmed case of microcephaly in an infant born in Florida. Microcephaly is a condition in which a baby is born with an unusually small head, often due to abnormal brain development.The Florida baby's mother contracted Zika while in Haiti.

"If you don't think the Zika crisis is an emergency, just wait," Nelson said. "These numbers are just going to increase...We need to stop playing these political games."

The bill, passed by the House at about 3 a.m. Thursday with no debate, would have cut $750 million from other health programs to fund anti-Zika efforts. The bill also would have cut $543 million in unused funds from the implementation of Obamacare, $107 million from leftover funds used to fight Ebola, and $100 million in administrative funds from the Health and Human Services Department.

The legislation would have provided $230 million for the National Institutes of Health to develop a vaccine and $476 million for the Centers for Disease Control and Prevention to help pay for mosquito control efforts.

President Obama asked Congress in February to provide $1.9 billion to fight the Zika virus, a mosquito-borne illness that can cause devastating birth defects.

The Senate passed legislation in May to provide $1.1 billion in funding. Unlike the bill that came to the floor Tuesday, it did not require any budget cuts to fund it and did not include controversial provisions. The House passed a bill last month to provide $622 million in funding, drawing a veto threat from the White House, which called it woefully inadequate.

The legislation that the Senate voted on Tuesday was an attempt by House and Senate negotiators to try to find a compromise between those two bills.

Zika Bill Is Blocked By Senate Democrats Upset Over Provisions

By David Herszenhorn

New York Times, June 28, 2016

Senate Democrats on Tuesday blocked a federal spending bill that would have provided $1.1 billion to fight the mosquito-borne Zika virus, saying Republicans had sabotaged the legislation with politically charged provisions. The move raised the possibility that no new money would be available soon to fight the disease as Southern states brace for a summer outbreak.

The stalemate, accompanied by an sharp war of words on the Senate floor, raised the prospect that the fierce partisan divide in Congress was hindering the government's ability to respond effectively to a pressing public health emergency. Democrats blocked the bill because they were upset with cuts to programs and changes in policy they have long supported.

Democrats and the White House have been pushing since February for the Republican majorities in Congress to approve $1.9 billion in emergency financing to fight Zika, which can cause microcephaly and other serious defects in infants born to infected mothers.

The Democrats reacted with disbelief on Tuesday as Republicans tried to turn the tables and blame Democrats for delaying the money because they had blocked the legislation.

"We have a public health crisis descending on our country," Senator Mitch McConnell, Republican of Kentucky and the majority leader, said moments after the vote. "Pregnant women all across America are looking at this with dismay, utter dismay, as we sit here in a partisan gridlock manufactured by the other side."

The Senate Democratic leader, Harry Reid of Nevada, was incensed. "I don't know what universe my friend is living in," Mr. Reid said, referring to Mr. McConnell. "What does he think? Does he think we're all stupid? The American people are dumb?"

The sniping continued as Senator John Cornyn of Texas, the No. 2 Republican declared, "Our Democratic friends block it because they are sore losers."

In May, the Senate approved $1.1 billion in funding after months of partisan brinkmanship, during which the Obama administration ultimately redirected nearly $600 million previously approved to fight the Ebola virus so that federal health agencies could get a start on working against the Zika virus.

House Republicans, in turn, adopted legislation providing $622 million, with most of the money cut and redirected from other federal programs supported by Democrats. Democrats were willing to go along with the Senate version, but in talks controlled strictly by Republicans, House and Senate negotiators agreed last week to provide $1.1 billion, with $750 million in cuts and policy changes.

Democrats charged that Republicans had booby-trapped the legislation by adding provisions that included a ban on any direct government financing for Planned Parenthood, the women's health organization, to provide contraceptive services related to fighting the Zika virus, which is also transmitted sexually.

The Democrats also said Republicans had inserted a provision cutting $500 million in financing for the Affordable Care Act, President Obama's signature health care law, and that they had stripped a House provision that would ban the flying of the Confederate battle flag in federal cemeteries.

Another provision of the bill that Democrats disliked was a further reallocation of money from Ebola programs, totaling $107 million. While Democrats have long maintained that money previously appropriated to fight Ebola is vitally needed, it does indicate that the Obama administration still has some flexibility in reapportioning funds among different health programs — in addition to the nearly $600 million already taken from Ebola programs — while waiting for Congress to act.

The White House has been reluctant to specify how much money it might be able to temporarily redirect to fight Zika — or how long it would be able to make do — because that could ease pressure on Congress to approve the new money.

Whichever side is more to blame, it was clear that no new government funds would be approved to fight the Zika virus until after Congress returned from a recess for the Fourth of July holiday. And even then, the prospects of an agreement are uncertain.

With Southern states expected to be hit hardest by Zika, lawmakers representing Florida have been among those pushing hardest for bipartisan action. But even Senator Bill Nelson, Democrat of Florida, said Republicans had poisoned the chances for moving ahead by blocking money for Planned Parenthood, knowing Democrats would never agree.

"They're just not living in the real world, and they're just not facing the fact that this is an emergency," Mr. Nelson said. He noted that at least five babies had been born with microcephaly in the United States — the most recent one in Florida — but said he expected the disagreements to continue.

"We go until enough of these horrible cases are born that it is finally beginning to penetrate their hard heads," he said.

Democrats on Tuesday morning urged renewed negotiations, but Mr. Cornyn, speaking to reporters off the floor, said matter-of-factly, "There's not going to be another opportunity to deal with this for the near future."

The vote on Tuesday morning was 52 to 48, with Republicans falling short of the 60 votes needed to overcome a Democratic filibuster and advance the bill to a final vote.

Democrats said they had no choice but to block the legislation as it was written.

"If there was ever a bill obviously designed to fail, it was this one," Senator Chuck Schumer, Democrat of New York, said in a statement on Monday evening. "Loading up the bill with poison pills was the only way Republican leadership could pass a bill without Democratic support, and it is a cynical strategy."

But Senate Republicans were unapologetic and said Democrats were now to blame. "Here we are in an utterly absurd position, playing political games," Mr. McConnell, the majority leader said, "as this public health crisis mounts here in our country."

Senate Democrats Block Zika Funding Bill

By Tom Howell

Washington Times, June 28, 2016

Senate Democrats blocked a $1.1 billion deal Tuesday that uses Obamacare and Ebola funds to combat the mosquito-borne Zika virus, throwing negotiations into disarray even as the nation racks up 800-plus cases and insects begin to bite on the U.S. mainland, sparking fears of widespread infection.

All but one Democrat filibustered a military construction bill that contained the money, saying Congress should rewrite the package because GOP drafters included "poison-pill" provisions on women's health and the environment.

"This conference report is the most irresponsible legislation I have ever seen in my 34 years in Congress," Senate Minority Leader Harry Reid, Nevada Democrat, said. "That says a lot. I can't think of anything that's close."

The legislation needed 60 votes to advance but fell short, 52-48, with two Republicans voting "no" because drafters only paid for $750 million of the package by taking funds from elsewhere in the budget.

Furious Senate Republicans accused Democrats of playing election-year games with the bill, which also funds veterans programs, after GOP negotiators agreed to the $1.1 billion spending level that Senate Democrats supported in May.

Senate Majority Leader Mitch McConnell said the filibuster could spoil Congress last shot to fund mosquito control and the pursuit of a vaccine for Zika, which causes birth defects, before a seven-week break for July conventions and the August recess.

"We need to act and we need to act right now," the Kentucky Republican said.

Mr. McConnell changed his vote to "no" after the measure fell short, a parliamentary maneuver so that the chamber could try again after the July 4th holiday.

The standoff comes amid increasing worry over local outbreaks of Zika in the states and D.C.

Mosquitoes are spreading the disease in Puerto Rico and Latin America, where Brazilians first noticed an uptick in both Zika and microcephaly, a condition in which babies are born with abnormally small heads.

Meanwhile the Centers for Disease Control and Prevention has recorded more than 820 travel-related cases of Zika in the states and D.C., a handful of them through sexual transmission, though experts say the virus could puncture the mainland further once summer ramps up and Aedes mosquitoes flourish.

President Obama in February requested $1.9 billion in new spending for the fight, but House GOP leaders balked, saying there was plenty of money in other accounts to combat the disease in the near term.

Four months later, House and Senate negotiators melded competing plans, option to use the Senate's $1.1 billion funding level while paying for part of it with money from the Ebola fight in West Africa, unobligated funds at the Health and Human Services Department and funds earmarked for territories to set up Obamacare exchanges.

It also included measures that would appeal to House Republicans, such as excluding Planned Parenthood from its pipeline of grant funds and temporarily rolling back clean-water rules on pesticides to kill mosquitoes.

Democrats accused Republicans of locking them out of conference negotiations and then crafting a package that was doomed to fail.

"They did everything they could to make sure the result we saw today would happen," said Senate Minority Whip Richard J. Durbin, Illinois Democrat.

Democrats said the GOP must explain why it took four months to land on a plan that falls $800 million short of Mr. Obama's request and takes money from other health accounts.

The administration hadn't bothered to look for funding offsets elsewhere in the massive federal budget, saying it would set a bad precedent in funding emergencies.

Mr. McConnell, in response to the Democrats' complaints, said there are benefits to being in the majority. He also said the conference report cannot be amended at this point, anyway.

House Speaker Paul D. Ryan, Wisconsin Republican, also said he doesn't want the Senate to send the package back to his chamber, after he muscled the bill to passage in predawn votes Thursday. He said he had no choice at the time, because Democrats disrupted the chamber with a sit-in over gun control.

"This is ridiculous. Senate Democrats, after demanding Zika funding for months and supporting this exact funding level for weeks, now block it to create a political issue," Mr. Ryan said Tuesday. "Putting politics before a public health crisis is about as irresponsible as it gets. So much for all those lectures about doing your job."

Zika Funding Bill Defeated In US Senate

By Todd Ackerman

Houston Chronicle, June 28, 2016

Houston politicians and public health leaders have complained about inadequate funding in congressional proposals to fight the Zika virus, but it's beginning to look like no legislation of any amount is going to be passed.

Senate Democrats Tuesday blocked a $1.1 billion Zika package drafted by their Republican colleagues, just two weeks before lawmakers are scheduled to leave for a seven-week recess. Both parties cited partisan politics by the other side for the bill's defeat.

"It's distressing," said Dr. Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine and Texas Children's Hospital. "At some level, Congress doesn't seem to think the Zika threat is real. There's certainly not much urgency to get something through."

Experts fear the Zika threat could become reality in the U.S. in the next two months, the height of mosquito season. The mosquito-borne virus has been linked to a broad array of birth defects and neurological disorders, mostly in Latin America and the Caribbean. There, thousands of babies have already been born with microcephaly, a condition in which an infant is born with an abnormally small head and brain.

There has been no "local transmission" of Zika in the U.S. yet, but more than 800 Americans have acquired the virus traveling to Zika-affected countries. Forty-eight such cases have been reported in Texas.

The bill blocked Tuesday was an attempt to merge a Senate bill that would allocate $1.1 billion toward the Zika fight and a House bill that would have allocated $622 million. The vote to advance the bill was 52-48, eight votes short of the 60 needed.

Democrats complained the Senate bill was loaded with "poison pill" riders, which included cutting health programs, restricting funding for Planned Parenthood birth control services, relaxing clean water laws and blocking a ban on Confederate flag displays at military cemeteries. Republicans responded that the bill opposition was politics as usual for Democrats, more interested in attacking Republicans than passing legislation to provide funding.

The bill's fate is still uncertain. Senate Majority Leader Mitch McConnell said lawmakers would address the matter again after the July 4 holiday next week, but neither side appeared inclined to budge.

Sen. John Cornryn, R-Texas, issued a statement saying he couldn't "imagine a more disgraceful vote than what some of our colleagues across the aisle have cast." Meanwhile, Minority Leader Harry Reid, D-Nev., said he couldn't "remember anything as outrageous, as shameful as this piece of legislation."

Senate Vote On Zika Money Fails, Leaving Funding Future Uncertain

By Dylan Scott

STAT, June 28, 2016

WASHINGTON — The Senate failed Tuesday to advance a Republican-negotiated plan to fund the US response to the Zika virus, leaving no end in sight for the Zika funding fight in Congress that has dragged on for more than four months.

The procedural vote failed 52 to 48, 126 days after President Obama first requested a $1.9 billion package to address the virus. It needed 60 votes to advance.

The failure leaves the Zika funding effort in an increasingly bitter standoff.

GOP leaders do not appear willing to reopen negotiations on the Zika funding proposal, and Democrats showed Tuesday that they would not support the $1.1 billion deal reached by House and Senate Republicans. With mosquito season in full swing, both parties resorted to attacking the other over the impasse.

"This is the one shot we have to resolve this, and it'd be a shame if people refused the opportunity," Senate Majority Whip John Cornyn of Texas told reporters before the vote. "There's not gonna be another opportunity to deal with this in the near future."

Senate Democrats derided the GOP plan as a partisan proposal filled with poison pills because it included spending cuts to the Affordable Care Act and a provision meant to stop funding for Planned Parenthood.

"What we want them to do is negotiate. We're willing to compromise," Senator Chuck Schumer of New York told reporters after the vote. "What they're doing is going to kill any chance of Zika, and anyone who thinks that is not the case, just look at the words Planned Parenthood. That has been a poison pill on every issue."

Republicans, meanwhile, tried to shift the blame to the Democrats, arguing that the final bill has the same funding level that Senate Democrats already endorsed when they voted for the original Senate bill — and that the House has already moved in their direction.

Cornyn called the Democratic minority "a sore loser" on the floor after Tuesday's vote while standing alongside a poster of a baby with microcephaly, the birth defect linked to Zika that causes babies to be born with abnormally small heads.

"Today, Democrats have a choice: continue pushing thinly veiled partisan arguments and block the Zika control funding, or join with us to advance a serious solution and send critical funding to the president's desk right now," Senate Majority Leader Mitch McConnell said in a floor speech shortly before the vote.

Congress has now left itself a narrow window to pass a Zika funding bill before its long August break. Lawmakers will leave Washington in mid-July ahead of their party's presidential conventions and won't return until after Labor Day.

At this point, though, it's not clear what Republicans' next move will be — if there will be one at all. Senator John Thune of South Dakota, a member of the GOP leadership, demurred when asked if the GOP would be willing to undertake talks again.

Senator Bill Nelson of Florida, a Democrat, told STAT that Republicans had given no indication that they would be open to continuing talks on the issue.

"They're just not living in the real world," he said, "and they're not facing the fact that this is a real emergency."

Frustrations were equally high on the other side of the aisle.

"It's not good," said Senator Marco Rubio of Florida. "If you can't come together on an issue of public health and safety, a disease, whose impact we have seen graphically, you start to wonder if you can do it on anything."

The original Senate-passed bill, negotiated by Republican Roy Blunt of Missouri and Democrat Patty Murray of Washington, had provided $1.1 billion for Zika with no accompanying spending cuts. But the House had fully paid for its $622 million plan with spending cuts, and the final deal negotiated by House and Senate Republicans included $750 million in cuts to offset the $1.1 billion in funding. Even if the Senate had approved the new funding plan, the White House has pledged that Obama would veto it.

Shortly after the vote, a coalition of 30 health organizations sent a letter to congressional leadership urging them to scrap the GOP plan and start negotiating a new funding bill. Senate Democrats were urging the same course.

"Hopefully calmer heads will prevail now and we can go back and do a bipartisan bill and do our job," Murray said.

But she declined to comment when asked if there had been any sign from Republicans that they would do so.

Democrats Block Zika Funding Bill, Blame GOP

By Burgess Everett And Jennifer Haberkorn

Politico, June 28, 2016

Congress is poised for an epic failure in its efforts to combat Zika before lawmakers leave Washington for a seven-week vacation — and it could come back to bite Republicans at the ballot box if there's an outbreak of the mosquito-borne virus in the United States this summer.

Senate Democrats rejected the GOP funding measure on Tuesday, 52-48, arguing that it would rob Obamacare of funding, impose new restrictions on Planned Parenthood and provide some $800 million less than the Obama administration is seeking. They're also miffed that the measure, part of legislation to finance the Veterans Affairs Department, would allow the Confederate flag to fly at veterans cemeteries.

The stalemate carries real political risk: In 2014, Republicans blasted the Obama administration and Democrats' response to Ebola, contributing to a public perception in the midterm election of feckless Democratic rule. Republicans gained control of the Senate that year — but now find their playbook is being used against them.

Republicans "taught us with Ebola," said Senate Minority Whip Dick Durbin (D-Ill.). "A public health crisis? Take it seriously. I don't believe they've taken it seriously at all."

The attack ads this time write themselves: Faced with months of dire warnings from health experts, the Republicans who control Congress failed to provide money to stop the spread of Zika to the United States. Bracing for such a message, Republicans began the week spinning the expected defeat of the House-passed bill as politics as usual for Democrats, alleging that the minority party would rather attack Republicans over the issue than pass a funding bill.

Indeed, in the short term, Democrats are more open to criticism: After clamoring for new Zika funding for months, they are set to vote against a bill at funding levels they've already agreed to. They've offered myriad objections: That the bill is paid for irresponsibly, inordinately relaxes clean water regulations and was constructed with no Democratic input. On Tuesday morning, Planned Parenthood wrote all Senate offices opposing the bill, arguing that "a vote against this bill will be seen as a vote for women's health care."

"The first TV picture of an American woman bearing a child with a birth defect caused by this virus will be on [Democrats]," said Senate Majority Whip John Cornyn (R-Texas). "I wouldn't want to be in their position."

Democrats are now calling for the GOP to reopen the Zika negotiations entirely, but Republicans say there will be no do-over: Once the bill fails on Tuesday, the Senate will not revisit Zika funding, Cornyn said. They say Democrats got what they wanted and won't take yes for the answer.

But given the history on legislative impasses, Democrats are betting that the majority party will be held responsible by voters.

"They have to be responsible. It falls on Republicans," said Sen. Patty Murray (D-Wash.), a Senate leader and former top campaign strategist. "We're just supposed to say yes? That's not how we do things responsibly around here."

The stalemate comes in the midst of the summer mosquito season, when the Zika threat is strongest. So far, there has been no local transmission of the Zika virus in the continental United States. But federal health officials warn that it is coming, this summer or in the future. The virus has been scientifically proven to potentially cause microcephaly, a severe brain abnormality, when a woman is infected during pregnancy. The Centers for Disease Control lists eye problems, hearing loss and slow growth as other birth defects caused by the virus.

Health officials don't know exactly how strong the link is between Zika and microcephaly, but studies indicate up to a 13 percent chance that a woman infected with Zika can give birth to a baby with the severe birth defect. Already, there are 265 pregnant women in the continental United States with the virus; all of them got the virus while in other countries or through sex with a man who had it.

Given those dire statistics, the lack of congressional action is alarming, said Cindy Pellegrini, a lobbyist for March of Dimes, which advocates for maternal and fetal health. She said the GOP's bill was "doomed from the start."

"We have a hard time imagining an issue that could be more of an emergency than an infectious disease transmitted by mosquitoes that destroys babies' brains in utero," Pellegrini said. "The package looked like it was not designed to be successful and that was deeply troubling for us."

The impasse began in the House. Democrats held the floor for more than a day last week to advocate for more gun control legislation. Eager to end what he deemed a "publicity stunt," House Speaker Paul Ryan (R-Wis.) moved to pass Zika legislation in the middle of the night last week and recess the House until after July 4, leaving Democrats who had withdrawn from the bicameral negotiations with a bill they say they could not support.

No Democrats signed the bicameral conference report on Zika funding and just six supported the House legislation. But the failure to complete the negotiations with Republicans is on Democrats, GOP leaders say. AshLee Strong, a spokeswoman for Ryan, said Democrats' opposition is "not only irresponsible but dangerous."

"It's really bad politics for them," said Sen. John Thune of South Dakota, the GOP's No. 3 leader. "It's going to be hard to defend."

Still, it was difficult to find a single Democratic supporter on Monday, even among the most moderate members. That suggests the minority party is comfortable with the politics of blocking the Zika bill, particularly since the White House is threatening a veto, anyway. Sen. Joe Manchin (D-W.Va.) said he is "skeptical" of the funding apparatus and Sen. Jon Tester of Montana, who also runs the Democrats' campaign arm, said he probably could not support the legislation.

"I don't know why anyone would vote for it," Senate Minority Leader Harry Reid (D-Nev.) said in a brief interview. "Look at what they gave us. How about the Confederate flag thing? Is that about the clincher."

The failed vote will have special political and practical resonance in Florida, the presidential battleground state and site of a competitive Senate race this fall, as well as home to hundreds of thousands of Puerto Ricans. As Puerto Ricans have fled the island for the sunnier economic outlook in Florida, Sen. Marco Rubio (R-Fla.) went so far as to join Democrats pushing for $1.9 billion requested by Obama to fight the disease.

He'll vote for the compromise Tuesday — but did not hide his irritation with the impasse.

"I wanted it to happen two months ago. I'm not pleased," he said.

Zika Funding Stalls In The Senate Amid Partisan Rift

By Kelsey Snell And Mike Debonis

Washington Post, June 28, 2016

Senate Democrats on Tuesday blocked a $1.1 billion Zika virus funding package drafted by congressional Republicans, citing politically motivated language aimed at Planned Parenthood and environmental regulations.

The partisan clash casts serious doubt on whether Congress will be able to heed increasingly dire warnings from public health officials and provide new funds to combat the virus before lawmakers leave Washington next month for an extended congressional recess.

Top Senate leaders appeared to be sharply at odds after the vote failed on a 52-to-48 vote, with 60 votes needed to advance the legislation. Both sides charged the other would be responsible if money isn't approved and the virus, which causes birth defects, begins to spread in the United States over the summer.

"This is the one shot," Senate Majority Whip John Cornyn (R-Texas) told reporters. "There's not going to be another opportunity to deal with this in the near future."

"I don't remember anything as outrageous, as shameful as this piece of legislation," said Minority Leader Harry M. Reid (D-Nev.) on the Senate floor a few minutes later.

Cornyn then retorted on the floor, standing next to a large photo of an infant with microcephaly, a developmental defect involving abnormally small heads linked to Zika.

"I'll tell you what shameful is," he said. "That's allowing more women of child-bearing age to contract the Zika virus so their babies can end up looking like this."

Cornyn called Democrats "sore losers" and accused them of betraying their previous calls for action, which date back to President Obama's February request for $1.9 billion: "I frankly do not understand how Senate Democrats, having taken this position previously, can come in here and engage in a partisan filibuster to stop funding for this impending public health crisis."

Not all Republicans were willing to abandon the talks completely. Sen. Roy Blunt (R-Mo.) told reporters that he spoke with Sen. Patty Murray (D-Wash.) on Tuesday morning, leaving the door open for further talks.

"We'll see what happens," Blunt said. "I know we have to do something, and someone has to figure out how to do it."

Blunt and Murray co-sponsored a bipartisan funding package that passed the Senate in May. That measure provided the same $1.1 billion funding level without the added restrictions and cuts opposed by Democrats.

The package that failed Tuesday was negotiated between House and Senate Republicans after Democrats left bipartisan talks due to spending cuts included in the legislation and what they viewed as "poison pill" political provisions, according to Democratic aides.

The House passed the bill early Thursday morning without debate, as GOP leaders sought to short-circuit a Democratic floor protest over gun control.

Republicans' decision to try to advance a GOP-only package was a setback after weeks of optimism that Congress would be able to fund measures to combat the spread of Zika before leaving for an extended summer break next month.

Sen. Charles E. Schumer (D-N.Y.) said Tuesday the Republican bill was "filled with poison pills" and a "cynical maneuver" that stood no chance of being accepted by Democrats.

"What we want them to do is negotiate," he said. "We're willing to compromise. We already showed that in the previous bill that the Senate passed… But what they're doing is going to kill any chance of Zika [funding]."

Lawmakers in both parties could face blowback at home for failing to craft a consensus measure. Zika is linked to severe birth defects in babies of pregnant women who are infected with the virus. Three women on the U.S. mainland have given birth to infants with birth defects related to Zika, and the Centers for Disease Control and Prevention is currently monitoring 265 women on the U.S. mainland and another 189 with Zika in Puerto Rico.

The House-passed measure would provide $1.1 billion to fight the mosquito-borne virus through Sept. 2017, including funds to help develop a vaccine. The spending would be offset by $750 million in savings, including $107 million in unused Ebola funds, $100 million in cuts to administrative funding for the Department of Health and Human Services and $534 million from unspent Obamacare money for health care exchanges in U.S. territories.

The package also loosens Environmental Protection Agency restrictions on pesticides and strikes a measure that would have banned display of the Confederate battle flag at cemeteries run by the Department of Veterans Affairs.

On Monday, Reid called the bill “nothing more than a goodie bag for the fringes of the Republican party.” The White House has threatened to veto the legislation and Democrats argue the additions were politically motivated and intended to kill the entire funding package.

“It’s like we’re being dared to oppose this legislation,” Reid said. “We have no choice.”

Senate Majority Leader Mitch McConnell (R-Ky.) charged Democrats on Monday with quibbling over minor provisions and standing in the way of spending that could help avert a public health crisis.

“There is no reason Democrats should reverse course now and block funding for Zika control in the midst of mosquito season,” McConnell said, noting the final legislation contains the same amount of funding as an earlier bipartisan Senate agreement. “There’s no reason they should put partisan politics above the health of pregnant women and babies.”

Reid (D-Nev.) shot back that GOP leaders were catering the extreme wing of their party by including language in the package that would put restrictions on how the funding could be used by Planned Parenthood and by offsetting the cost of the legislation through spending cuts to the Affordable Care Act and to Ebola readiness efforts.

Following the vote, neither McConnell nor Reid gave any public indication that they were ready to begin a new set of negotiations. Senate Democrats made a last-minute attempt to salvage the legislation Tuesday morning by sending a letter to McConnell and House Speaker Paul D. Ryan (R-Wisc.) requesting that they reopen negotiations.

“We stand ready to work cooperatively with you to address this national public health emergency,” they wrote.

Republican leaders have not formally responded, but any chance of new negotiations is slim. The House left town last week and will not return until after the July 4 holiday. Both chambers will be in for two weeks before heading out on a seven-week recess.

Efforts To Fight Zika Fail As Lawmakers Play Politics With Looming Health Crisis

By Katie Zezima

Washington Post, June 28, 2016

Congressional efforts to fight the Zika virus failed Tuesday, as lawmakers accused each other of playing politics with a looming public health crisis while doctors and medical experts warned of the risk of an outbreak on the U.S. mainland.

Senate Democrats blocked a $1.1 billion funding package to fight the mosquito-borne virus because of “poison pill” measures added by Republicans on other issues. The clash raised serious doubts about whether Congress will heed warnings and allocate funds to fight Zika before lawmakers leave for an extended recess next month.

Each side said the other would be responsible if the money isn’t approved and the virus spreads in the country this summer. The issue could also become a factor in the November elections, particularly in states such as Florida and Texas where the mosquitoes that transmit the disease flourish.

The inaction came amid dire warnings from medical experts about Zika, which can cause devastating birth defects in babies whose mothers are infected while pregnant. Public health experts said money is desperately needed to develop a vaccine, educate the public and learn more about the virus, which can be spread through mosquitoes and through sexual activity.

“This is the ultimate playing politics with the public’s health and it’s really shameful and just unfortunate,” said Irwin Redlener, a pediatrician and director of the National Center for Disaster Preparedness at Columbia University.

The package that failed was negotiated between House and Senate Republicans after Democrats left bipartisan talks due to spending cuts included in the legislation and provisions to, among other things, block funding for Planned Parenthood and curb environmental regulations. President Obama originally asked for $1.9 billion to fight Zika in February.

“I don’t remember anything as outrageous, as shameful as this piece of legislation,” said Senate Minority Leader Harry M. Reid (D-Nev.).

Senate Majority Whip John Cornyn (R-Tex.) responded by standing on the Senate floor next to a large photo of an infant with microcephaly, a developmental defect linked to Zika that causes unusually small heads and often incomplete brain development.

"I'll tell you what shameful is," he said. "That's allowing more women of child-bearing age to contract the Zika virus so their babies can end up looking like this."

While Democrats have pushed for new negotiations, Cornyn told reporters this was the only chance to pass a measure to fight Zika. "This is the one shot," Cornyn said. "There's not going to be another opportunity to deal with this in the near future."

Florida Sens. Marco Rubio (R), who is seeking reelection, and Bill Nelson (D) have both pushed for Zika funding, although Nelson voted against Tuesday's package because of the Republican provisions. In a statement, Florida Gov. Rick Scott (R) blasted Congress and said the state allocated more than $26 million in funds last week for preparedness and prevention of the virus.

"It is time for Congress to stop playing politics with the health, safety and well-being of families in Florida and come together to address the serious threat of the Zika virus," Scott said in a statement.

Jason Kander, who is running against Missouri Republican Roy Blunt, said in a statement that "Washington dysfunction has stopped Congress from responding to a public health crisis."

Last month, Blunt helped orchestrate a bipartisan deal to fund Zika response efforts. But on Tuesday, he stood with other GOP leaders and urged Democrats to vote for the Republican deal instead.

Presumptive Democratic presidential nominee Hillary Clinton called on Congress to pass a deal and said funding is needed. She retweeted a message from her senior policy advisor, Ann O'Leary, that read: "Senate Dems are right: Public Health emergencies are not the place to inject harmful partisan policies."

Clinton dispatched O'Leary and political director Amanda Renteria to meet with doctors and officials in Puerto Rico, and directed policy staff to focus on the issue.

The White House also blasted congressional Republicans.

"You would think that at some point the safety and well-being of pregnant women in the United States would be more important than politics to Republicans," said White House Press Secretary Josh Earnest. "But unfortunately it's not."

Presumptive Republican presidential candidate Donald Trump has not talked about Zika and his campaign did not respond to a request for comment.

The virus has infected thousands of people in Puerto Rico and is lapping at the mainland's shores: women in 46 Latin American and Caribbean countries where the virus is circulating have been advised by the World Health Organization to consider delaying pregnancy.

While no localized transmission has yet occurred in the continental United States, three women on the U.S. mainland have given birth to infants with Zika-related birth defects. The Centers for Disease Control is monitoring 265 pregnant women infected with the virus on the U.S. mainland and 189 in Puerto Rico.

"This is a public health emergency," said Benard Dreyer, president of the American Academy of Pediatrics.

He said of Congress: "They just need to get their act together and act in a responsible way, in a bipartisan way, on an issue that is clearly extraordinarily impactful to children and their families, and do it immediately."

Public health officials warned that even if funding were to pass Congress within the next week, much of it wouldn't get to states and municipalities before September at the earliest. In most parts of the country, peak mosquito season is between June and early October.

"We're not happy with it, obviously, because the more resources we can put toward preventing this disease rather than reacting to it . . . the more protected the American public will be," said Joseph Conlon, technical adviser to the American Mosquito Control Association.

A coalition of nearly 40 groups — including the American Academy of Pediatrics, American Congress of Obstetricians and Gynecologists and Easter Seals — sent a letter this week urging Congress to pass a measure that would not place restrictions on Zika funding and that would allow the budget to be expanded in subsequent years.

"The fact that it is already almost July and Congress has failed to act would seem to reflect an appalling indifference to the lives of infants and their families," it read.

The letter cited an April summit where Centers for Disease Control Director Thomas Frieden said caring for a single child with birth defects can cost at least $10 million.

"There's a real aspect here of being penny wise and pound foolish," said Cynthia Pellegrini, senior vice president of public policy at the March of Dimes, which signed the letter.

"We can pay now and do prevention or we can pay later," she said.

Why Congress Is Probably Not Approving Any Zika Funding This Summer

By Amber Phillips

Washington Post, June 28, 2016

Summer is here and so is the threat of the Zika virus in the United States. But Congress will probably not do anything about it after a debate over $1.1 billion to fight it collapsed in the Senate on Tuesday thanks to — you guessed it — partisan bickering.

The Washington Post's Mike DeBonis reports that Senate Democrats blocked a funding package that had already passed the House of Representatives, saying the bill was filled with other political goodies for Republicans that Democrats simply couldn't support.

The end result will probably be that Congress leaves town for most of July and August without approving any funding that government health officials say they badly need to keep Americans safe from the Zika virus — and, by extension, Zika could become a campaign issue this November on both sides.

Here's what happened. First, a debate over money

In May, with summer approaching, we asked what was taking Congress so long to send a check to government agencies to start developing a Zika vaccine and launch prevention measures. The Obama administration wanted $1.9 billion in new funds, and I explained why they were most definitely not going to get it:

The reason is the same it always is with Congress: money. Specifically, different ideas between Republicans and Democrats about what's worth going further into debt for.

Republicans are hesitant to approve more than a billion taxpayer dollars to fight Zika. And they control both chambers of Congress, so any funding increase that's not offset by savings somewhere else in the budget is squarely on them

The House proposal for $620 million that doesn't extend any cash beyond this fall, when the fiscal year we're in comes to a close.

But lawmakers did find a compromise: They settled on $1.1 billion. The Senate passed a version last month, and House lawmakers passed their own version last week that was offset by some $750 million in savings – including cuts to the Affordable Care Act and yet-unused money for the now-passed Ebola scare. Depending who you're talking to, the additions to the House bill would end up derailing the entire thing. Sidetracked by other issues

As the funding package was passing the House of Representatives last week, Senate Democrats actually walked away from the negotiations.

As is often the case in Congress, this funding bill was attached to a larger, unrelated bill — this one funding veterans and the military. And as often the case in Congress, House leaders shaped the bill so that a majority would vote for it; in a conservative House, that meant making the bill more amenable to conservatives.

The end result was a proposal Democrats said was untenable. They accused Republicans of adding on a bunch of unrelated extras that Republicans knew would be red lines for the other side.

DeBonis reports Democrats weren't happy about the idea of voting for a bill that cut President Obama's signature health-care achievement. They also didn't like that the bill proposed loosening government regulations on pesticides.

And they definitely didn't like that the bill restricted $95 million of federal grants to provide services like birth control to women in Puerto Rico. Democrats — and the president of Planned Parenthood — called it a direct attack on the women's health-care organization that's been the target of conservative Republicans' ire for a year now:

The bill also dropped a provision to ban the Confederate flag at federal veterans' cemeteries — a ban that the House, including 84 Republicans, voted in favor of just a month earlier..

"It's like we're being dared to oppose this legislation," Senate Minority Leader Harry Reid (D-Nev.) said on Monday. "We have no choice." A loss for Zika help, a win for partisanship

Senate Democrats tried to reopen negotiations at the last minute, but it didn't work. The bill came to the floor and Democrats voted no, with Reid calling it "outrageous," and "shameful."

It failed Tuesday 52-48. (Even though a majority voted for it, the Senate needed 60 votes to pass it — the bar for pretty much any controversial legislation these days.)

Republicans hit back that Democrats were the ones playing politics.

"This is ridiculous," House Speaker Paul D. Ryan (R-Wis.) said in a statement.

"I'll tell you what shameful is," said Sen. John Cornyn (R-Tex.) after the vote, standing alongside a blown-up picture of a baby with a disease thought to be caused by Zika. "That's allowing more women of child-bearing age to contract the Zika virus so their babies can end up looking like this. That's shameful."

Cornyn also said this was probably the "last shot" to approve Zika funding this summer, and he's probably right: The House is already on a week-long break, and when members return after July 4, both chambers have nine days in session before they're out for seven weeks.

There's still a slim chance Congress will find a last-second compromise. Both sides are loath to go back home to constituents, especially in Southern states that are most at-risk, and try to explain this. The takes are already starting when it comes to which party will fare worse for this Zika fail.

Senate Democrats Block Zika Spending Bill Over Exclusion Of Planned Parenthood

Senate Democrats Block Zika Agreement Ahead Of Recess

By Jordain Carney

The Hill, June 28, 2016

Senate Democrats on Tuesday blocked a deal providing funding for the fight against the Zika virus, virtually guaranteeing that Congress won't get legislation to President Obama's desk this month.

In a 52-48 vote, the Senate fell eight votes short of moving past a procedural hurdle against the House-Senate conference report on a military and veterans spending bill, which includes $1.1 billion to fund the Zika virus research.

Sen. Joe Donnelly (D-Ind.) broke with his party and backed moving forward with the deal. GOP Sens. James Lankford (R-Okla.), Mike Lee (R-Utah) and Majority Leader Mitch McConnell (R-Ky.) voted against the Zika deal. McConnell's "no" vote allows him to bring the measure back up for another vote.

The vote leaves the current fight over the Zika virus at a standstill with days left before the July 4th recess.

Democrats criticized the legislation for including "poison pills" that they said made it difficult for their party to support.

The legislation would take money now earmarked for the fight against the Ebola virus to use against Zika.

It also would restart a fight over Planned Parenthood with language that prevents funding from going to the group, which provides abortion services, and other family planning groups.

Senate Minority Leader Harry Reid (D-Nev.) said the agreement is "the most irresponsible legislation I have ever seen in my 34 years in Congress."

"I don't know what planet my friend the Republican leader is living on," he added. "[The] conference report is nothing more than a goody bag for the fringes of the Republican Party."

Even if the legislation had made it to President Obama's desk, the White House said he would veto it.

McConnell slammed Democrats on Tuesday, saying their current position is "partisan politics."

"They might like to pretend this Zika control measure is woefully inadequate, but Senate Democrats are all on record supporting this level of funding," he said. "It's really puzzling to hear Democrats claim to be advocates for women's health measures when they are the ones trying to block the Zika legislation."

The House approved the legislation last week.

The next steps on the Zika legislation are unclear. Lawmakers in both parties pointed fingers ahead of Tuesday's vote on who is responsible for breaking the current stalemate on funding legislation.

Reid and other Democrats sent a letter to McConnell and Speaker Paul Ryan (R-Wis.) ahead of Tuesday's vote calling for a new round of negotiations.

"We are writing to urge your cooperation in quickly negotiating an agreement that rejects politicizing disaster response with extreme and unnecessary partisan priorities," the Senate's four top Democrats added in the letter.

But the House left Washington last week for the July 4th recess, and GOP leadership have given no indications they are willing to rethink the current agreement.

McConnell said lawmakers would vote again on the Zika deal once senators return from the July 4th recess.

"When we get back after we've had time to think about it all, we'll address this matter again and hopefully respond, as our constituents all across America are asking us to respond, to this pending health care crisis," he said after the vote.

The stalemate comes after a bipartisan Senate agreement — negotiated by Murray and Sen. Roy Blunt (R-Mo.) – began to crack open in late April as Democrats said they were frozen out of the talks.

The deal finally collapsed last week after GOP leaders in the House and Senate agreed to a $1.1 billion deal comprised mostly of healthcare dollars pulled from elsewhere in Obama's health department.

The U.S. has a total of 2,680 Zika cases, including 481 pregnant women, according to the most recent data from CDC.

McConnell Pledges Redo Vote On Zika After Break

By Jordain Carney

The Hill, June 28, 2016

Senate Majority Leader Mitch McConnell (R-Ky.) warned lawmakers Tuesday they would vote again on a $1.1 billion package to fight the Zika virus after their July Fourth recess.

"I'd like to call on my colleagues on the other side of the aisle to think about this, to think about where they have left this issue for the American people," McConnell said from the Senate floor Tuesday. "So when we get back after we've had some time to think about it all, we'll address this matter again."

On Tuesday Senate Democrats blocked the Zika funding — attached to a larger military spending bill — from overcoming a procedural hurdle.

Arguing they weren't consulted on the current House-Senate deal, Democrats balked at how the agreement would offset its costs.

McConnell was one of three Republicans who voted against the deal during Tuesday's vote, allowing him to bring it up again.

GOP senators quickly blasted their colleagues for being unable to find a deal to fight the virus heading into the summer months.

Zika has been shown to cause severe birth defects when contracted by pregnant women, and health officials are expecting more cases in the U.S. as mosquito populations grow.

Sen. Marco Rubio (R-Fla.), who announced last week that he would run for reelection, said "shame on Washington."

"I realize this was not a perfect Zika bill, but getting this plan approved now is absolutely better than nothing," he said.

But Democrats are giving no early indication the holiday recess will be enough to make them reconsider the current House-Senate conference deal on Zika funding.

"What we want them to do is negotiate. We're willing to compromise," Sen. Charles Schumer (D-N.Y.) said after Tuesday's vote. "What they're doing is going to kill any chance" of passing an anti-Zika measure.

Asked about next steps, Schumer said Republicans need "to get rid of this cynical sham bill and start negotiating with us."

Schumer, Minority Leader Harry Reid (Nev.), and Democratic Sens. Dick Durbin (Ill.) and Patty Murray (Wash.) have sent a letter to McConnell and House Speaker Paul Ryan (R-Wis.) asking for a new round of talks.

Blame Game Begins On Zika Funding

By Peter Sullivan

The Hill, June 28, 2016

Senate Democrats on Tuesday blocked a funding bill to fight the Zika virus, infuriating Republicans and raising real doubts about whether Congress will approve an emergency response before the summer recess.

Both parties agree that the virus is a real and growing health crisis; each blames the other for the failure to act.

Republicans slammed Democrats for voting down the $1.1 billion bill, arguing the party is standing in the way of funding it has claimed for months to desperately want.

Democrats countered that the bill was not a serious effort at bipartisan compromise and was loaded with unacceptable riders, including limiting funding to Planned Parenthood and loosening Clean Water Act rules for pesticides. They also objected that the measure was paid for with cuts to Ebola-response funding and ObamaCare.

They called for a new round of negotiations to produce a bipartisan bill, but Republicans rejected that demand, saying that they would instead hold another vote on the same measure after the Fourth of July recess to give Democrats another chance.

At a press conference Tuesday, Senate Majority Leader Mitch McConnell (R-Ky.) repeatedly said no changes would be made to the bill to address Democratic concerns. He said that as a conference report, the product of negotiations between the House and Senate, no amendments could be made.

Asked if he is willing to reconsider the Planned Parenthood provision, given that it is the focus of the Democratic objections, McConnell said: "Well, it's an interesting discussion, but it's irrelevant. This is a conference report. It's not amendable. It's not amendable."

He rejected Democratic calls to go back to the drawing board and produce a new bill with Democratic input. "The negotiations have already occurred," he said.

McConnell called Democrats' actions "inexplicable and unacceptable."

Sen. Charles Schumer (D-N.Y.), the Senate's No. 2 Democrat, dismissed suggestions that Democrats might get the blame for the lack of Zika funding, saying that Republicans knew their bill was doomed to fail but had no choice but to appease hard-line conservatives in the House.

"It's all going to be on the Republican shoulder," he said. "It's obvious what they're doing."

The Senate previously reached a bipartisan Zika deal to provide $1.1 billion in funding that would not be paid for, but House Republicans insisted that the cost of the measure be fully offset.

Sen. Roy Blunt (R-Mo.), the top Senate Republican on health spending, acknowledged the problems bridging the gap with the House.

"The big obstacle here is clearly is that the House appropriately wanted to do everything possible to pay for this, and Democrats in the Senate don't," Blunt said.

"They'd like it not paid for at all," he added. "The House would like it all paid for, so to get a bill that the House would pass and the Senate would pass, some of it needs to be paid for. Democrats don't want to do that, and that becomes a needless obstacle to getting this money available."

Blunt, who has taken the lead in negotiating with Democratic Sen. Patty Murray (Wash.) on Zika funding in the past, took a softer line than McConnell. "We have to get a solution," he said.

Blunt spoke with Murray about Zika on the Senate floor Tuesday, an aide said, though it is unclear what, if anything, came of that conversation. In fact, Blunt pointed to McConnell's stance that negotiations would not be reopened.

"We have to get to a solution on this, and it has to be a solution that both the House and the Senate can pass, and you heard the leader explain what his view of the next step was," Blunt said.

Democrats say House Republicans and Speaker Paul Ryan (R-Wis.) will have to answer to voters if the Zika outbreak worsens.

"People need to look no further than Speaker Ryan's office if Zika develops into the problem that we're all concerned that it might be," said Sen. Claire McCaskill (D-Mo.).

Ryan, meanwhile, called it "ridiculous" that Senate Democrats would block the Zika funding bill after stressing the urgency of the crisis.

Health experts warn that transmission of Zika within the continental United States will begin this summer and that the unpredictable virus carries serious dangers for pregnant women, given that it can cause major birth defects and developmental problems in children.

The virus is generally mild and carries lower risks for people who are not pregnant. Its spread is expected to be contained to small clusters in the Southern United States, though experts emphasize that they cannot be certain and that Puerto Rico will be hit particularly hard.

Athletes are already dropping out of the Olympics in Brazil for fear of contracting Zika. There are already 2,680 cases of Zika in the U.S. states and territories and 481 cases in pregnant women, according to the Centers for Disease Control and Prevention.

A range of health groups, including the March of Dimes and the American Academy of Pediatrics, wrote to congressional leaders on Tuesday urging them to reopen negotiations to find a bipartisan deal.

"If this does not take place, Congress will bear the full responsibility for Zika-related birth defects across the nation in the coming years," the letter states.

Zika Funding Up In The Air After Senate Blocks Moving Ahead

By Ryan McCrimmon

Congressional Quarterly, June 28, 2016

The Senate on Tuesday voted to block a final $1.1 billion Zika virus spending package, scrambling plans to provide much-needed resources for public health agencies to combat the mosquito-borne disease this summer.

The vote occurred just as the Florida Department of Public Health confirmed the first Zika-related case of microcephaly, a birth defect, in a child born in Florida. The mother, a citizen of Haiti, delivered the baby in Florida.

Senators voted 52-48, short of the 60-vote threshold needed to invoke cloture, stymieing progress on the conference report (HR 2577) to the Zika and Military Construction-VA appropriations package. All Democrats except Sen. Joe Donnelly of Indiana voted against cloture, objecting to the levels of spending and offsets in the package as well as policy provisions they deemed "poison pills."

Two Republican senators, James Lankford of Oklahoma and Mike Lee of Utah, voted with Democrats.

Following the vote, Senate Majority Whip John Cornyn, R-Texas, said he did not expect Republicans to reopen negotiations with Democrats on Zika funding.

"No," he said. "We're done."

However, Senate Majority Leader Mitch McConnell entered a motion to reconsider the Zika vote and said lawmakers would take another crack at the conference report following the July Fourth recess.

"When we get back after we've had time to think about it all, we'll address this matter again and hopefully respond, as our constituents all across America are asking us to respond, to this pending health care crisis," McConnell, R-Ky., said.

Conference reports are not amendable, so the vote would be on the exact same materials considered Tuesday.

The House-passed measure also faced a presidential veto if it passed the Senate. Congress adjourns for a seven-week recess on July 15, so little time is left for additional negotiations.

The Obama administration on Tuesday said it would "welcome" renewed talks by lawmakers to find a compromise Zika funding bill. "Congress still has time to act before they leave for their summer recess," a White House official said shortly after Senate Democrats blocked a $1.1 billion House version.

But the official signaled that the White House is sticking to its stance that only a $1.9 billion bill that matches its initial request will get Obama's signature. The official urged lawmakers to pass "a fully funded Zika supplemental request – unlike the irresponsible, underfunded and purely partisan bill currently making its way through Congress."

Ahead of the vote, Republicans warned Democrats that this would be the last chance to approve the anti-Zika legislation ahead of the long summer recess.

"They might like to pretend this Zika control measure is woefully inadequate, but Senate Democrats are all on record supporting this level of funding and the CDC director has testified that this $1.1 billion funding level is sufficient," said McConnell, referring to the bipartisan Senate approval of a different $1.1 billion Zika package in May and testimony from the Centers for Disease Control and Prevention. "Remember, this legislation is the last chance we have to get a Zika-control funding [measure] to the president's desk for weeks."

"Democrats have apparently decided to engage in their favorite game of late — refusing to take yes for an answer," added John Thune of South Dakota, the No. 3 Senate Republican.

"Here's what I see today: I see Republicans ready to pass a Zika bill and send it to the president this minute, right now. And I see Democrats who are more interested in pacifying a Democrat special interest group than actually doing anything about Zika," Thune said.

Democrats were adamant that the GOP-written proposal was not an adequate response to the crisis, and they objected to policy language related to environmental protections and access to contraception. Minority Leader Harry Reid, D-Nev., called the conference report "nothing more than a goody bag for the fringes of the Republican Party."

"This conference report is the most irresponsible legislation I have ever seen in my 34 years in Congress," Reid said. "That says a lot. I can't think of anything that's close."

Sen. Charles E. Schumer, D-N.Y., added, "This bill is not only going to fail, it was designed to fail from the very beginning."

Reid, Schumer and other Democratic leaders sent a letter Tuesday morning to McConnell and House Speaker Paul D. Ryan, R-Wis., calling for another round of conference negotiations. Democrats claimed they were frozen out of the previous round, which led to the GOP-produced conference report the Senate rejected.

Several senators lamented the inability of Congress to perform one of its most basic duties to prevent against a public health threat.

"Why can't we grow up and get to the point where we don't have to play partisan politics?" lamented Florida Democrat Bill Nelson, whose state has recorded the highest number of cases of Zika so far.

A House Republican from Florida also expressed his outrage. "The Senate needs to put aside partisan politics and get the job done," said Rep. Vern Buchanan of Florida, one of the few Republicans in Congress to support the full $1.9 billion request from the Obama administration. "Summer's here, Zika's here, and that means people are at risk. It's beyond frustrating that Washington can't agree on funding to stop this public health crisis."

State of Play

At the end of May, appropriators and congressional leaders in the House and Senate were poised to confront discrepancies in the Zika virus response packages each chamber had recently passed.

The House passed a supplemental appropriations package (HR 5243) crafted by GOP appropriators that provided $622 million in new resources to confront the virus. The funds were set to expire on Sept. 30, the end of fiscal 2016, and the Zika spending was fully offset by rescinding previously appropriated dollars for the 2014 Ebola response and other administrative purposes.

The Senate's $1.1 billion emergency spending package, passed as an amendment to a broader appropriations package (HR 2577), provided fresh funding without any offsets or expiration date. The compromise measure was reached by top Republicans and Democrats on the Senate Appropriations Committee.

Democrats have said neither option is adequate. The administration has maintained it still needs the full $1.9 billion it requested earlier this year.

The administration's request would provide $828 million to the Centers for Disease Control and Prevention to enhance mosquito control programs. Officials say eradicating mosquitos is one immediate action that can be taken in the absence of a vaccine but emphasize how difficult it can be to control indoor mosquitoes.

Another challenge is diagnostic testing. Though there are ample tests to detect an active infection, tests to detect a prior infection are more limited. Public health officials say it takes more steps to diagnose a prior Zika infection because of the condition's similarities to other viruses. Obama's request includes money to boost the supply of diagnostics, as well as develop more accurate testing methods.

Prospects for a funding package also hinge on the politically sensitive issue of contraception policy. Congressional Democrats are pressing for additional contraception and family planning services for women in affected countries — a request that is meeting resistance from key Republicans. The House-passed legislation would subject Zika funding to the same restrictions included in the most recent omnibus package (PL 114-113), which includes a prohibition on the use of funds to pay for abortions.

The request contains $250 million to assist pregnant women in Puerto Rico, who are being encouraged to wear long sleeves, use bug repellent and stay in air conditioned or screened-in areas.

After Senate Stalls, White House Digs In On Zika Funding

Roll Call, June 28, 2016

Shortly after Senate Democrats blocked a $1.1 billion Zika funding measure from advancing, a White House official urged lawmakers to send President Barack Obama "a fully funded Zika supplemental request."

White House aides and Senate Democrats spent much of Tuesday accusing Republicans of "playing politics" with a virus that is spreading throughout the U.S. and its territories — especially Puerto Rico — and can cause major birth defects. GOP members returned the charge in kind.

The procedural vote continued a standoff over how much is needed to counter the virus and what those funds should be used for, and over provisions congressional Republicans inserted into the package limiting funding for birth control and allowing Confederate flag displays on certain days at Veterans Affairs facilities.

The White House continued to signal it is in no mood to compromise, making it difficult to see how lawmakers will strike an accord that satisfies enough of them and Obama.

Underscoring the bad blood, the White House official called the House-passed measure, which the Senate attempted to move toward a final vote, an "irresponsible, underfunded and purely partisan" effort.

That comment came via an email received minutes after Senate Majority Whip John Cornyn of Texas blasted Democrats on the floor in front of a large picture of a child with a misshapen head due to Zika-caused birth defects.

"It should go without saying that now on the front lines of this major public health concern, we need to respond at the federal level," Cornyn said. "That's why it's shocking and shameful to see so many Senate Democrats oppose this bipartisan effort to guard against the virus."

White House Press Secretary Josh Earnest was unable to predict when existing Zika funding would run out. But he did say the proposed new spending is "insufficient."

"Republicans don't take this particularly seriously," Earnest said, adding that he is unsure what a pro-Confederate flag provision "has to do with Zika funding." Later, he said, given the disease's impact on pregnant women and unborn babies, Republican lawmakers seem to "have no shame."

Earlier Tuesday, a source who closely follows budget matters said "there is no Plan B" after the House-passed measure.

Asked if there would be additional Zika floor votes in the Senate, Cornyn told reporters, "We're done." But Maryland Sen. Barbara A. Mikulski , the top Democrat on the Senate Appropriations Committee, said Tuesday of reviving negotiations: "We are looking at how to keep hope and help alive."

"Our backup plan already has been deployed," Earnest said, referring to the administration's initial Zika request. "Why should the president be in a position of twisting arms in Congress ?"

The Senate vote came around the time a Florida hospital reported its first case of a baby born with Zika-related birth defects. The child's mother apparently contracted the virus in Haiti before traveling to Florida.

White House Chides Congress For Failing To Fund Zika

Is "Complete Protection" Against The Zika Virus In The Near Future? Scientists Make Progress On Two Vaccines

By Melissa Healy

Los Angeles Times, June 28, 2016

Just five months after the Zika virus was declared a global public health emergency, a scientific team's feverish efforts to create a vaccine against the viral threat have borne promising fruit: With a single shot of two different types of vaccine, experimental mice gained near-total immunity to Zika for at least two months.

Writing in the journal Nature on Tuesday, a U.S.-Brazilian team of scientists reported that two distinct vaccine candidates conferred powerful protection from Zika infection when they were delivered by intra-muscular injection to mice.

"We were very surprised--and quite impressed--that a single shot of either of these vaccines provided complete protection," said study co-author Dr. Dan H. Barouch, who after years of work on vaccines against the HIV virus pivoted in late January to work on Zika.

"Of course, we need to be cautious about extrapolating" from a study that has so far only shown success in mice, said Barouch, who directs vaccine research at Beth Israel Deaconess Medical Center in Boston.

But several of the study's findings "certainly raise optimism that the development of a safe and effective vaccine against Zika virus for humans may be successful," he added.

The Zika vaccine effort is a race against time. Since its arrival in Brazil in 2013, the Zika virus has marched steadily north. Carried by the Aedis egyptii mosquito, the virus is already spreading vigorously in Puerto Rico and is expected to circulate inside the continental United States this summer.

The Centers for Disease Control and Prevention has concluded that Zika infection in pregnant women is the cause of grievous brain abnormalities in the infants they bear. For those who are not pregnant, Zika infection is generally not dangerous. But it can, in rare cases, cause Guillain-Barre syndrome, a life-threatening condition in which the immune system attacks the peripheral nervous system, causing partial paralysis that is generally temporary.

The Boston-based team also discerned how the tested vaccines worked to provide protection—an important milestone in building a vaccine. Soon after their first shot of either vaccine, the immune systems of lab mice quickly mounted an army of circulating antibodies that recognized and attacked Zika virus as soon as it began replicating.

Such "antibody protection," produced by the immune system's B-cells, is not generally as enduring as the long-term immune memory produced by T-cells. But "it's good: it makes a vaccine that's nice and neat and simple," said Dr. Anthony Fauci, director of the National Institute for Allergies and Infectious Diseases.

Fauci called the vaccine candidates' early success "an important step on the road to getting vaccines into humans." He confirmed that several other Zika vaccine candidates are being tested in animals, and that very early testing in humans could begin as early as late August.

The two vaccine candidates described in Nature represent two very different approaches to training the immune system's killing power on the Zika virus. One takes the whole of a single Zika virus, inactivates it by removing the machinery that makes it replicate, and shows it to the immune system. The other candidate shows the immune system only the distinctive outer sheath of the Zika virus in a bid to prompt attacks on anything enclosed in such an envelope.

Both approaches worked in several different strains of laboratory mice. But while "inactivated virus" vaccines are already in wide use, so-called "DNA vaccines," which show the immune system small pieces of a virus, have never been approved for use in humans in the United States.

"Some call them vaccines of the future," said Barouch of the DNA vaccines. Whether they lend themselves to large-scale production and distribution remains unclear, he said. "But they do have a variety of…technological advantages compared to the traditional approaches"—not least that vaccine designers can make rapid changes in the mix of puzzle-pieces shown to the immune system.

Given the uncertainties of developing vaccines for emergency use, "a diversity of approaches is always beneficial," he added.

In the experiments, the mice cleared Zika virus from their bloodstreams even when their army of antibodies was “relatively modest,” said Barouch. With an additional booster shot or two, he said the experimental vaccines could prompt an immune response a hundred times as strong, if needed.

One other factor should prompt optimism that this early success might lead to a timely vaccine, said Barouch: Immunologists have had success in building vaccines against viruses in the same family as Zika, including those that cause yellow fever, dengue fever and Japanese encephalitis.

In a related development reported Tuesday in the journal Nature Communications, scientists concluded that macaque monkeys, which have become a mainstay of nonhuman primate research with the diminishing use of chimpanzees, respond to Zika virus infection in ways that strongly mimic humans’ reactions.

That finding means scientists will have a highly reliable stand-in for testing the safety and effectiveness of vaccines and other new therapies against Zika before they are administered to humans. The ability to use macaques to approximate a human’s response to the two vaccine candidates already tested, as well as to test other vaccines under development, will be key to speeding the development of such medications.

Still, many hurdles remain.

Among the challenges for a Zika vaccine, says Mayo Clinic immunologist Dr. Gregory Poland, is that it will likely be used to protect diverse populations with very different risks, and must be found acceptably safe in all.

A vaccine that is safe for younger women—who could be pregnant or become pregnant—may not be the same as a vaccine that protects older patients, who are at greatest risk of developing Guillain-Barre syndrome following infection, said Poland. As testing proceeds, he added, researchers and regulators will also have to find a vaccine safe for use in populations that span the spectrum of age, gender, ethnicity and medical history.

“Under the normal course of events, it could take years,” said Poland. “There’s just a whole lot of complexity here.”

Zika Vaccines Prove 100 Percent Protective In Mice; Monkey Study Shows Promise

Two New Zika Vaccines “Show Complete Protection” In Lab Tests

CNBC, June 28, 2016

A group of researchers said Tuesday that vaccines for Zika offered protection against both Puerto Rican and Brazilian strains of the virus in mice.

The scientists working on the research came from Beth Israel Deaconess Medical Center, Walter Reed Army Institute of Research and Harvard University.

“Our data demonstrate that a single dose of a DNA vaccine or a purified inactivated virus vaccine provides complete protection against the ZIKV-challenge in mice,” said study author Dan H. Barouch, director of the Center for Virology and Vaccine Research at Beth Israel Deaconess Medical Center, and a professor of medicine at Harvard Medical School, in a news release. “Importantly, we showed that vaccine-induced antibodies provided protection, similar to existing vaccines for other flaviviruses.”

One of the vaccines was a DNA vaccine — an injection made up of genetically engineered cells based on a Brazilian strain of the virus. The other was a purified inactivated virus vaccine — a vaccine containing a “dead” or inactive virus — from Puerto Rico.

Both vaccines created antibodies in the bodies of mice.

The scientists published the results of their research Tuesday in the peer-reviewed journal Nature.

In a news release, scientists from Walter Reed said they will be ready to begin testing the vaccine on humans by the end of the year.

Flaviviruses are a group of viruses, often carried by mosquitoes and other insects, which are closely related and produce some of the same symptoms. Along with Zika, they include West Nile virus, dengue, yellow fever and others.

The virus has been widespread in several countries, especially in Latin America. Recent reports have confirmed that nearly 2,000 people have been infected with the virus in Puerto Rico, and Brazilian officials have linked 1,400 cases of microcephaly, a condition that stops brain development, in children born to infected mothers.

Other teams have been racing to develop vaccines for the virus.

Earlier in June, another group of researchers from pharmaceutical company Inovio was reportedly the first team to win approval from the Food and Drug Administration to begin testing its vaccine on human subjects.

However, some public health experts have expressed skepticism that a vaccine for the drug will be able to pass regulatory tests in the next several years.

Peter Hotez of the Baylor College of Medicine told CNBC last week that he believes "we are not going to have a vaccine in time for this epidemic."

Correction: This version corrects the day the researchers announced their findings and the spelling of Beth Israel Deaconess Medical Center.

Zika Vaccine Shows Promise In Mice

By Alexandra Sifferlin

TIME, June 28, 2016

A new vaccine for the Zika virus showed "complete protection" against the virus in recent testing in mice, adding support for testing the vaccine in humans in the future.

The vaccine is being developed by The Walter Reed Army Institute of Research (WRAIR) and researchers at the University of São Paulo, Beth Israel Deaconess Medical Center and Harvard Medical School. The researchers tested two versions of a Zika vaccine in mice and found that both were safe and spurred the creation of antibodies, which can offer protection against the virus.

Mouse studies are not directly translational to humans, but they are the first step in confirming that a vaccine has potential to work and not cause health complications. The new findings were published Tuesday in the journal Nature.

The race is on when it comes to developing a vaccine for the Zika virus, which is spreading in the Americas. Other research and pharmaceutical groups are developing their own versions. Earlier in June vaccine developers at Inovio Pharmaceuticals and GeneOne Life Science announced they had received the green light from U.S. health regulators to move forward on an early clinical trial for a Zika vaccine in humans. One of the greatest concerns for researchers is protecting pregnant women, since the virus is known to cause birth defects.

Two New Zika Vaccines Prove Successful In Mice

By Steve Sternberg

US News & World Report, June 28, 2016

The race to create a vaccine that can guard against Zika virus reached a new milestone Tuesday with reports that two experimental Zika vaccines have fully protected mice against infection and may prove similarly effective in humans.

"The protection was striking and very robust," says Dr. Dan Barouch, of Harvard University and Beth Israel Deaconess Medical Center in Boston, a leader of the research team.

Developing an effective Zika vaccine is a global health priority. A vaccine would be the least expensive and most reliable way to protect women of child-bearing age and others against the mosquito-born Zika virus, declared a global emergency after researchers in Brazil linked it to an epidemic of birth defects in fetuses of women infected during pregnancy.

One vaccine was made using a technique on the frontier of vaccine research, using DNA snipped from a virus strain found in Brazil. The virus has been shown to cause birth defects in mice just as it does in humans. The other was made using a more traditional approach, by taking live virus from Puerto Rico, inactivating and purifying it.

Although the new vaccines were formulated in different ways, they appeared to be similarly protective, researchers report Tuesday in the journal Nature. "All of the vaccinated animals showed no virus in their bloodstream, [while] all unvaccinated animals had high levels of virus in their blood, after challenge by virus from Brazil and Puerto Rico." Barouch says,

Both vaccine prototypes are likely to begin Phase I safety tests in humans in a matter of months, says Dr. Anthony Fauci, director of the National Institute of Allergy and Infectious Diseases, which supported the research and is developing its own DNA vaccine.

"The DNA [vaccine] is going into phase I in late August or early September," Fauci says. "The other one a little later."

Any experimental vaccine must first surmount another hurdle: It must be shown to prevent infection in non-human primates, which are more like humans and harder to protect than mice. Those trials are now under way, Fauci says. "The proof of the pudding is nonhuman primates."

Researchers didn't start from scratch. Vaccines have previously been developed to protect against West Nile, dengue and tick-borne encephalitis viruses, all of which are in the same flavivirus family as Zika. "Taken together, our findings provide substantial optimism that the development of a safe and effective Zika vaccine for humans will likely be feasible," the researchers write.

The experiments were carried out in stages. First, Barouch's team demonstrated that the DNA vaccine could provoke an immune response that directly targets the virus.

Next, the researchers injected additional groups of mice with single doses of either the DNA vaccine or the inactivated vaccine, which was developed by Dr.

Stephen J. Thomas and his colleagues at the Walter Reed Army Institute of Research in Silver Spring, Maryland.

Four weeks after the injection, mice given the DNA vaccine were exposed to live Zika virus. In an unvaccinated individual, mouse or human, the virus will multiply. In the vaccinated mice, however, no virus replication was detected. Mice given the inactivated vaccine were also challenged with live virus and remained infection-free, researchers say.

In addition, the mouse antibodies produced by vaccination were potent enough to fight off infection when they were transferred into unvaccinated mice. "That is essentially proof that the vaccine antibodies themselves were able to protect against infection," Barouch says.

DNA vaccines are appealing to researchers, because they would be easier to manufacture than vaccines made from whole virus, which must be cultivated in large quantities. Once researchers know the formula, they can churn out high volumes of vaccine. "DNA can be up scaled much much more easily and more quickly," Fauci says.

But scientists have not yet conquered many of the scientific challenges inherent in using DNA to create vaccines. No DNA vaccine is yet licensed for use in humans, Barouch says. "DNA vaccines have been explored experimentally for HIV, malaria and TB, vaccine targets that have not been [conquered] by traditional vaccines," Barouch says, "I wouldn't call that a failure of DNA vaccines. I still remain optimistic that they will have an important role to play in the future. That's why, in addition to exploring a next-generation vaccine, we also used a tried-and-true approach."

As many as a dozen other Zika vaccine candidates are in the works, experts say. The U.S. biotech firm Inovio announced in February that a prototype Zika vaccine produced a robust immune response in mice.

Fauci noted that the NIH's vaccine candidate, also made of DNA, is slated for its first human safety tests in late summer or early fall, in a trial involving 80 volunteers. That will take three months, likely ending in early 2017, he says. Next come the most critical trials, required to demonstrate that the vaccine is not only safe in humans but effective.

"The more effective a vaccine is, the quicker you can prove it," Fauci says, because fewer people in an at-risk population will become infected. Another determining factor, he says, is the rate of infection in a population. The higher the infection rate, the easier it is to determine whether a vaccine works.

"If you've got a high infection rate, you can get your answer pretty quickly," Fauci says. "If the infection rate begins to tone down, it can take longer."

So far, so good, Barouch says. "One shot and they're all protected."

Success In Mice Shows Zika Vaccine "Feasible"

By Dennis Thompson

HealthDay, June 28, 2016

Studies involving mice support the effectiveness of two vaccine candidates against the Zika virus, scientists say.

This "critical first step" is leading to trials in monkeys and humans, "and gives us early confidence that development of a protective Zika virus vaccine for humans is feasible," said researcher Col. Nelson Michael.

He is co-leader of the Walter Reed Army Institute of Research (WRAIR) in Silver Spring, Md., and one member of a team involved in the search for a vaccine against the mosquito-borne virus.

Zika infection during pregnancy can cause a devastating birth defect known as microcephaly, where an infant is born with an abnormally small head and brain. In Latin America, thousands of babies have already been born with microcephaly, and health officials are scrambling to help prevent cases in the United States as the summer mosquito season arrives.

At least 10 pregnant women in the Dallas area have been infected with Zika, Texas officials confirmed last week. All of the women contracted the mosquito-borne virus while traveling abroad.

A vaccine effective against Zika would be invaluable. Reporting June 28 in the journal Nature, researchers said one of the new shots was developed at Harvard Medical School in Boston and is partly based on a Zika strain isolated in Brazil.

The other vaccine, using a strain isolated in Puerto Rico, has been developed by Michael's team at WRAIR.

Both vaccines shielded mice against Zika infection with just a single shot required, the researchers said.

The two vaccines are similar to other shots already in use against flaviviruses, which include dengue fever, West Nile and others.

"We showed that vaccine-induced antibodies provided protection, similar to existing vaccines for other flaviviruses," said Dr. Dan Barouch. He directs the Center for Virology and Vaccine Research at Beth Israel Deaconess Medical Center in Boston.

"The effectiveness of these vaccines ... provide substantial optimism for a clear path forward for the development of a safe and effective ZIKV vaccine for humans," Barouch said in a Beth Israel Deaconess news release.

Clinical trials in humans are scheduled to begin later in 2016, the scientists said.

In related news, federal funding the United States needs to help fight the Zika threat could be stalled, according to reports.

According to the Associated Press, President Barack Obama requested $1.9 billion for the effort four months ago, and last week a Republican-drafted measure offered $1.1 billion.

But the news agency said Senate Democrats blocked that $1.1 billion proposal Tuesday, arguing there were too many spending cuts and restrictions on which groups could provide health care and contraception to women in Zika-endemic Puerto Rico.

Further action may not occur until Congress returns from a seven-week hiatus that begins in July, the AP said.

The Zika threat to the United States is real, according to Dr. Tom Frieden, who directs the U.S. Centers for Disease Control and Prevention. Speaking earlier in June, he warned, "in coming months it's possible that thousands of pregnant women in Puerto Rico could become infected with Zika. This could lead to dozens or hundreds of infants being born with microcephaly in the coming year."

So far the CDC says there have been no local transmissions of Zika reported in the United States. However, the number of cases of infection among pregnant women keeps climbing.

As of June 16, the U.S. Centers for Disease Control and Prevention reported there are 265 cases of pregnant women on the U.S. mainland who have been infected with Zika, which typically involves relatively mild symptoms in most adults. However, it can cause devastating birth defects in babies that include microcephaly.

In Latin America, thousands of babies have already been born with microcephaly. And researchers reported last Wednesday that fears of Zika-related birth defects may be driving up abortion rates in Latin American countries affected by the virus.

No nation has been more affected than Brazil. As a result of the Zika epidemic, almost 5,000 babies have been born with microcephaly there.

Zika is typically transmitted via the bite of the Aedes aegypti mosquito. But, transmission of the virus through sex is more common than previously thought, World Health Organization officials have said.

Women of child-bearing age who live in an active Zika region should protect themselves from mosquitoes by wearing long-sleeved shirts and long pants, using mosquito repellent when outside, and staying indoors as much as possible, according to the CDC.

U.S. health officials have said they expect to see Zika infections in Gulf Coast states such as Florida, Louisiana and Texas as mosquito season ramps up.

First Baby With Zika-related Microcephaly Is Born In Florida

By Emily Cochrane

Miami Herald, June 28, 2016

A baby with Zika-related microcephaly was born in Florida, Florida Department of Health officials confirmed Tuesday.

The baby is the first child to be born in Florida with the defect, which causes abnormally small heads and incomplete brain development, as a result of the Zika virus. The mother, a Haiti citizen, had a travel-related case of Zika and came to Florida to deliver her baby, officials said. Previous cases, where mothers with travel-related cases of the virus gave birth to babies with microcephaly, were reported in Hawaii and New Jersey.

The announcement comes a day after the health department officials confirmed three new cases of the virus — one in Broward, one in Collier and one in Miami-Dade counties. As of now, all 213 Florida cases are travel-related. Of those cases, 40 involve pregnant women, regardless of whether they exhibit symptoms.

Babies with microcephaly often have a series of developmental problems, including intellectual disability, hearing loss and vision problems and problems with movement and balance. Researchers established a connection between the birth defect and the Zika virus, which is primarily transmitted by the Aedes aegypti mosquito, earlier this year.

Following the announcement, Florida Gov. Rick Scott called on the Centers for Disease Control and Prevention to host a call with Florida medical professionals to discuss precautions for pregnant for new and expecting mothers.

"It is heartbreaking to learn that a baby has been born with Zika-related microcephaly in our state and my thought and prayers are with the mother and child," he said in a statement.

Last week, Scott announced he would use executive powers to spend up to $26.2 million in state money to fight the Zika virus. He had previously called for immediate federal action.

President Barack Obama asked Congress earlier this year for $1.9 billion to combat the spread of the virus; Congress has held up his request.

Department officials said they are working to connect the mother and her child with the department's Early Steps program, which establishes support for families with infants and toddlers who have developmental delays, or a condition that could result in a developmental delay.

First Baby Delivered In Florida With Zika-related Microcephaly

By Kathleen McGrory

Tampa Bay (FL) Times, June 28, 2016

Doctors have delivered the first baby in Florida with Zika-related microcephaly, state health officials said Tuesday.

The child's mother is a Haitian citizen who contracted the mosquito-borne virus while in her home country, the health department said. She came to Florida to give birth.

It was not clear where in the state the baby was born.

As of Monday, 223 people in Florida, including 40 pregnant women, have been diagnosed with Zika. All of the cases are travel related, meaning the person contracted the virus while traveling overseas or had sexual intercourse with someone who had recently traveled abroad.

Most people who contract the Zika virus don't know they have it. If a pregnant woman passes the virus to her developing fetus, however, it can cause the baby to be born with microcephaly, an irreversible condition marked by a small head and underdeveloped brain.

Tuesday's news prompted Republican Gov. Rick Scott to seek additional guidance from the Centers for Disease Control and Prevention in Atlanta.

"I have requested the CDC to immediately host a call with Florida health care professionals to discuss the neurological impacts of Zika and how this virus impacts new and expecting moms," he said in a statement. "The Olympics will begin in less than 40 days and millions of Americans will travel through our state to and from Brazil, a country where the Zika virus is rapidly spreading, and we must be prepared."

Scott also renewed his call for Congress to release additional funding for Zika prevention. Senate Democrats on Tuesday blocked a $1.1 billion Zika virus funding package because they contended it did not provide enough spending and includes politically motivated language aimed at Planned Parenthood and environmental regulations.

The funding package, which was passed by the House last week and attached to a larger bill providing funding for veterans and military construction programs, was negotiated by House and Senate Republicans in recent weeks after Democrats abandoned bipartisan talks due to the spending cuts included in the legislation and what they viewed as "poison pill" political provisions, according to Democratic aides.

"Now that a baby has been born in our state with adverse impacts from Zika, it is clear that every available resource is needed to prevent local transmissions in our state," Scott said.

Last week, the governor signed an executive order dedicating more than $26 million in state funding for mosquito control and abatement and other readiness measures.

Florida's First Zika-related Birth Defect Reported

By Frank Gluck

Fort Myers (FL) News-Press, June 28, 2016

Florida public health officials have confirmed the state's first case of Zika-related microcephaly, a crippling birth defect, affecting an infant born to a woman infected in her home country of Haiti.

Gov. Rick Scott has called on the Centers for Disease Control and Prevention to work with Florida's medical community on the case and further discuss what precautions other new and expecting mothers should take.

"It is heartbreaking to learn that a baby has been born with Zika-related microcephaly in our state and my thoughts and prayers are with the mother and child," Scott said in a written statement Tuesday. "The Olympics will begin in less than 40 days and millions of Americans will travel through our state to and from Brazil, a country where the Zika virus is rapidly spreading, and we must be prepared."

Scott, who calls the Zika threat a "national emergency" has allocated more than $26 million in state funds to combat it. He has also supported the Obama administration's call for $1.9 billion in federal funds to fight the disease.

Congress has so far failed to reach a deal on Zika funding. This confirmed case in Florida is could sharpen criticism of the deadlock and put increasing pressure on lawmakers to reach a deal.

Florida's Department of Health did not immediately identify the county in which the baby had been born. Department spokeswoman Mara Gambineri also would not comment on the severity of the microcephaly affecting the baby.

But she said it is working to connect baby and mother with the state's Early Steps program, which helps infants and toddlers with developmental delays.

Microcephaly is a condition in which a baby is born with an abnormally small head and, as a result, an under-developed brain, according to the CDC.

Problems for such babies can last a lifetime and include: seizures; developmental delays, such as speech problems; intellectual disabilities; problems with movement and balance; feeding problems, such as a difficulty swallowing; hearing loss; and vision problems.

As of Tuesday morning, Florida had confirmed 183 cases of Zika infections. All involved people who were infected while outside the country, according to the Florida Department of Health. Five cases involved people living in Lee County. Another three live in Collier.

At least 40 people statewide contracted Zika while pregnant. State officials have not said where they live currently.

Florida Confirms Birth Defects After Mom Gets Zika Abroad

Associated Press, June 28, 2016

TALLAHASSEE, Fla. (AP) – Florida confirmed its first Zika-related case of microcephaly, in a child whose mother contracted the virus in Haiti, officials said Tuesday.

In a statement, Republican Gov. Rick Scott called the diagnosis "heartbreaking" and asked federal health experts to talk with Florida medical professionals about what precautions pregnant women should take.

The mother is a Haitian citizen who came to Florida to give birth, and the family would be connected with a state program for infants and toddlers with developmental delays, according to a statement from Florida's Department of Health.

The extent of Haiti's Zika outbreak is unknown due to the country's lack of routine data collection systems. Its health ministry hasn't reported any Zika-related microcephaly cases, though it has reported about a dozen suspected cases of the neurological disorder Guillain-Barre, including two definitively linked to Zika by lab tests.

The virus is primarily spread by tropical mosquitoes. It's linked to birth defects, including microcephaly, which causes babies to be born with abnormally small heads and incomplete brain development.

Federal health officials have tracked four babies born in the U.S. with Zika-linked birth defects. The defects were also seen in four other pregnancies that ended in miscarriage, stillbirths and terminations.

All the cases stem from travel primarily Latin America and the Caribbean. There's been no local spread of Zika in the U.S.

Frustrated by an ongoing federal stalemate over Zika funding, Scott used his emergency powers last week to authorize spending up to $26.2 million to try and stop its spread in Florida.

Senate Democrats, including Bill Nelson of Florida, on Tuesday blocked a GOP proposal to provide $1.1 billion to fight the Zika virus, faulting Republicans for including restrictions on Planned Parenthood money and changes to policies on pesticide spraying. Nelson said that bill was an effort to "further extremist political agendas."

Republican Florida Rep. Vern Buchanan said in a statement that Senate Democrats were putting "politics ahead of public health."

Gov. Rick Scott To Congress On Zika: "Do Your Part"

By Ryan Benk

WJCT-FM Jacksonville (FL), June 28, 2016

Florida Governor Rick Scott stopped in Jacksonville Tuesday to warn residents about the Zika virus epidemic and meet with local officials.

Scott also took the opportunity to slam congressional leaders for failing to pass a funding bill to combat the virus.

In West Palm Beach earlier in the day, Scott said it was "heartbreaking" to learn Florida has its first confirmed case of Zika-related microcephaly — the condition causing a newborn's head to not fully form.

In Jacksonville, Scott praised local officials for following his administration's lead and "stepping up" their response where the federal government failed.

He said he was disappointed to learn a billion-dollar Zika funding bill was shot down in the U.S. Senate.

"So the federal government needs to show up and do their part. Congress and the White House need to come together and provide the funding to make sure we don't see the spread of Zika," he said.

Senate Democrats say they would've backed the legislation but last-minute amendment cutting funding for Planned Parenthood made it a poison pill.

As of Tuesday afternoon, there have been 230 confirmed cases of Zika in more than 20 Florida counties.

Factbox: Why The Zika Virus Is Causing Alarm

How An Electric Shock Could One Day Protect You From Zika

By Michaeleen Doucleff

NPR, June 28, 2016

This summer, it's not just athletes that are looking to set world records. Scientists are also trying to break a record — for how quickly they can make a vaccine for a new virus.

It's for Zika. And one team is leading the pack.

The biotech company Inovio just got the first approval from the Food and Drug Administration to test an experimental vaccine in people. They've already shown the virus protects monkeys from Zika, says the company's president, Joseph Kim. And a small study begins in people in a few weeks.

"We'll be testing 40 people at three locations on the East Coast," he says. From that study, they'll be able to see if the vaccine is safe. If so, they'll start a larger a trial in South America or the Caribbean by the end of the year, Kim says.

In many ways, Inovio has done what seemed impossible a few years ago: They've created a promising vaccine in just a few months. And they're not the only ones to do it.

Today researchers at Harvard Medical School report in the journal Nature two experimental vaccines that completely protect mice from Zika.

"The protection was shocking," says Dr. Dan Barouch, who led the study. Usually the Zika virus replicates to high levels in these mice, he says. But when they gave the animals the vaccines, they couldn't detect any virus.

One reason scientists have created these experimental vaccines so quickly is they're using a relatively new technology. It's called DNA vaccines.

"It is really the vaccine trend of the future," says Dr. Anthony Fauci, who leads the National Institute of Allergies and Infectious Diseases.

Traditional vaccines — like for the flu or measles — contain whole viruses. They're crippled or inactivated. But to make the shots, you have to grow up batches of live virus. That can be dangerous and usually requires special permits.

By comparison, a DNA vaccine contains just a tiny piece of a virus's genetic code. It's harmless and easy to work with.

"So it's a simpler, more efficient and ultimately a safer approach," Fauci says.

So far, no DNA vaccines have made it through clinical trials and been approved by the FDA. But in recent years, the vaccines have improved quite a bit, both Kim and Fauci say.

In particular, researchers had to develop a new way of delivering the vaccine. For these vaccines to work, they have to get inside cells — which is much harder for a piece of DNA than a whole virus.

In one delivery system, Fauci says, there's a device that that actually shoots the DNA vaccine in through the skin without necessarily using a needle. "It's kind of like a jet stream that puts the virus the vaccine right through the skin into the tissue," he says.

Inovio has made another system, Kim says. It actually gives the person a low voltage electrical shock to coax the vaccine into cells. "That happens very quickly, like in millisecond or a hundredth of a second," he says, "so the pain level is similar to that of a regular needle."

Researchers at NIH are also working on a DNA vaccine for Zika, Fauci says. They hope to begin clinical trails in a few months.

That means there are at least four Zika vaccines are showing promise. And with a little luck, one of these could make it through approval sometime in early 2018.

"Nobody Is Immune": Bracing For Zika's First Summer In The US

NPR, June 28, 2016

The mosquito-borne Zika epidemic is headed for its first summer in the United States. New York Times reporter Donald G. McNeil Jr. tells Fresh Air's Terry Gross that if the virus is ever going to hit hard in the U.S., 2016 will be the year.

"No one in the population has had the disease before, so nobody is immune to it, nobody has antibodies to it," McNeil says. "After this year, a fair number of people will be immune, and each year immunity will grow."

In his new book, Zika: The Emerging Epidemic, McNeil explores the origins of the Zika virus, as well as how it spreads and the best means of protecting ourselves from it.

When it comes to the virus' transmission in the continental U.S., McNeil notes the Aedes aegypti mosquitoes, which carry the Zika virus, are mostly concentrated in Florida and the Gulf Coast. But, he adds, the fact that the virus can be transmitted sexually means that Zika has the potential to spread more broadly.

"Scientists are just gobsmacked" by the virus' sexual transmission, McNeil says. "Viruses mutate like crazy, but one thing they don't normally change is how they're transmitted. ... You don't expect a mosquito-borne virus to become something that can be transmitted through an act of unprotected sex. But this one is."

Interview Highlights

On where the Aedes aegypti (Zika-carrying) mosquitoes are now, in relation to the U.S.

They're all over Puerto Rico and the U.S. Virgin Islands and American Samoa. The mosquitoes that can transmit Zika are the Aedes aegypti mosquito, the yellow fever mosquito, is strong or numerous all over Florida and the Gulf Coast, and there have been previous small outbreaks of dengue virus and chikungunya virus in Key West and Marin County, Florida, and Texas and in a few places like that.

The mosquitoes in very hot, wet summers can range as far as New York City and a touch north. It's not like they're very numerous up here and it's not like they're here every month, and it's not even like they're here every summer. But they have been found up this far north, so the potential for transmission is there, although it's low outside of the tropical Southeast.

On if mosquitoes can fly long distances

There is no mosquito that typically flies far distances. They're really inefficient fliers, and one of the best ways to keep mosquitoes off you if you're having a barbecue is to keep a fan blowing on everybody, because most mosquitoes are lucky if they make it a mile in their lives. I mean, once in a while they fly onto a jet and they make it from Africa to Paris, and that's why you have occasional cases of airport malaria in Paris, but most of the time mosquitoes only get a few blocks.

On the World Health Organization's recommendation to not cancel the Olympics

The World Health Organization is not paying attention to the polluted bays, and not paying attention to the crime rate or anything like that, they're paying attention only to Zika. And their decision — it's only a recommendation on their part — but what they're saying is they don't think that [the threat of] Zika is so great that anybody ought to avoid going to the Olympics, or that the Olympics ought to be canceled, unless you're a pregnant woman, in which case pregnant women should avoid that, or unless you're somebody who is having sex with a pregnant woman or a woman who wants to get pregnant. ...

The basis for this is that August is winter in Rio and even though winter in Rio means temperatures of 70 to 80 degrees, it is the low mosquito season. If you look at the transmission of dengue or chikungunya in Rio, you see that it's roughly 5 percent of what it is at its height in January and February and March. So they figure the risk is fairly low, and the Brazilians have convinced them that they're going to do everything they can to empty standing water. ... I think fogging is mostly a semi-useless exercise, but they're going to do what they can. The recommendation is that it's OK to go unless you're pregnant or having sex with somebody pregnant.

On how Zika is mostly a mild disease

Zika is a mild disease in 99.9 percent of cases, so it's not as bad as dengue or chikungunya for example. It's not nearly as bad as malaria. It's one that if you're an otherwise healthy person, you shouldn't worry about. There's about 1 in 4,000 to 5,000 chance that somebody will get Guillain-Barre syndrome.

On seeing Zika cases pop up in the U.S. from being sexually transmitted

We don't have to wait for the Olympics for that to happen, it's happening right now. It happened in Texas in January. The virus can be transmitted sexually. That's a game-changer.

It's not clear how often it happens, but it happens often enough so that it's the second most common form of transmission. Right now, in New York City, despite all those subway posters saying "watch out for mosquitoes," frankly, those subway posters ought to have good-looking guys on them, because good-looking guys who have just come back from Puerto Rico or Brazil or the Virgin Islands or any place else are a bigger risk factor for Zika in New York City than mosquitoes are right now. There are no aedes aegypti mosquitoes here, but there are good looking Puerto Rican guys who might, in remote chances, be carrying the virus.

On how Zika can be sexually transmitted

We know it can be transmitted through vaginal sex. We also know it can be transmitted through anal sex. ... There is some suspicion that it can be transmitted through oral sex, because there's one case of a couple in France and it looks like she was infected through oral sex, so that may be a possibility too. So basically any sex involving mucus membranes is dangerous. ...

It's only transmitted from men to women, or from men to other men. There is no known known instance of a woman transmitting the disease to a man or a woman. The assumption is that the virus gets into either the prostate or the testes and sets up an infection there, and it can persist for a long time. We learned this with Ebola, that once a virus breaks into the immunologically privileged parts of the body, which are separate from the rest of the body and have their own sort of fluids — the eyes are immunologically privileged and the testes are immunologically privileged — once a virus gets in there, it's hard for it to break in, but once it gets in, it's hard for the body to get rid of it, because antibodies and white blood cells can't get in there to kill it.

On microcephaly, a birth defect caused by the Zika virus

It means a tiny head and generally a very underdeveloped brain. The babies have tiny, smooth brains and there are varying degrees of microcephaly. In the most severe, the baby dies or the baby is born unable to swallow, may have repeated seizures, and may die from those seizures and may never learn to walk, never learn to talk, never learn to control his or her bowels.

There's a whole range of ills that come out of it, and also along with that comes, since it's a virus that attacks the growing brain, things like the nerves that connect the eyes to the brain or the ears to the brain are often damaged along the way, so the baby will end up blind or deaf, but you may not know that when the baby is born, the eyes will look normal, but you suddenly realize they're not following objects or they're not hearing noises.

On the development of a Zika vaccine

It'll probably two, three, four years until there's a vaccine. Most scientists who know vaccines say this is a disease that will be relatively easy to make a vaccine for because we have one for yellow fever, we have one for Japanese encephalitis, there's a new one for dengue. These are all related viruses. You could literally take the spines of those vaccine viruses and snip out the genes that code for the outside of the yellow fever virus and attach with DNA technology, the genes for the outside of the Zika virus, and make a pretty good vaccine. Some of those vaccines have already been made, but now the testing process begins, and testing takes pretty close to two years at the minimum.

On the Roman Catholic Church's position on contraception because of Zika

The Church isn't speaking with one voice entirely on this issue. ... We have to draw a distinction between abortion and contraception here. No Catholic bishop and the Pope ... are [ever] going to come out in favor of abortion, and their argument would be it's better to suffer from raising a child with severe handicaps than it is to take an innocent life.

On the other hand, there's been a fair amount of disparate statements within the Church about contraception, in this case. The archbishop of Puerto Rico quickly spoke out against contraception when the health secretary of Puerto Rico suggested that women might want to delay pregnancy and say women should practice self-discipline. ...

But the Pope, in a conversation with reporters ... was asked a question about Zika and said that under the doctrine of the lesser of two evils, it might be possible that contraception could be acceptable in a case like this, because it would prevent a great evil, like deformity and suffering of a child. He drew the parallel to Pope Paul VI allowing the use of contraceptives by Belgian nuns in the Belgian Congo, because so many of them were being raped during the liberation struggle of the 1960s. ... It was kind of shocking, but it opened the door to the possibility that contraception might be OK in what would be considered an extreme case like this.

Lethal Buzzers: America's Six Most Dangerous Mosquitoes

By Emily Rueb

New York Times, June 28, 2016

With the spread of the Zika virus, the threat posed by the tiny mosquito has been magnified into shark-sized proportions.

But among the more than 3,000 species of the insect worldwide, only two in the Americas are actually known carriers of the virus: the yellow fever mosquito (Aedes aegypti) and the Asian tiger mosquito (Aedes albopictus).

The potential range of the two species in the United States helps explain where Zika could be a threat. The yellow fever mosquito, for instance, prefers the hot and humid climate in Florida and the southeastern part of the country. But it has colonized states as far west as California and Hawaii, and has the potential to live as far north as Connecticut in warmer weather, according to the Centers for Disease Control and Prevention. The Asian tiger mosquito, meanwhile, also favors tropical and subtropical locales but can withstand cooler temperatures, so it can range farther. In summertime, the insect can sometimes even be found in northern states like Maine and Minnesota.

Maps showing where the species might survive, notably, exempt the Northwest, the Mountain West and northern parts of the Midwest.

But Zika is not the only disease that mosquitoes can carry. Other threats include West Nile virus, dengue fever and various types of encephalitis.

In all, there are about 174 species of mosquitoes in the United States, according to Joseph M. Conlon, a retired Navy entomologist who is a technical adviser to the nonprofit American Mosquito Control Association. Texas has the most species with about 85, and West Virginia has the least, with roughly 24. New York City alone has more than 50 species.

A vast majority of these species in the United States, Mr. Conlon said, actually do not transmit any disease.

Whether or not they do depends, in part, on their physiology. Most viruses (and other microorganisms) are simply digested in the mosquito gut along with the blood. But other viruses have evolved to penetrate the mosquito's body cavity and migrate to the salivary glands, from which they are injected with salivary fluid when the mosquito feeds. Those are the diseases that mosquitoes can transmit. Certain bacteria, like Wolbachia, have also been shown to interfere with transmission. Other factors that affect their disease-spreading potential include feeding habits, where they lay eggs and the density of the infected population compared with the human population.

And only female mosquitoes bite.

Here are six of the most common disease-spreading offenders endemic to the United States.

An intensely black mosquito, distinguishable by its pointed abdomen and two white stripes in the shape of a lyre on its back (the dorsal thorax), and white bands on its legs.

They primarily bite humans, rather than other animals, and they like to feed indoors. The combination makes them particularly dangerous when it comes to spreading disease.

They're also fidgety. They'll eat several partial meals on multiple victims, called sip-feeding. It is one way they pass pathogens.

Females draw blood to nourish their eggs. They prefer to lay them in clean water, including birdbaths, clogged gutters, pet bowls, bottle caps and even shower drains. The eggs stick to the sides of containers and can survive drying out.

Most cases of Zika, which can cause debilitating birth defects including microcephaly, have been transmitted through this aggressive insect. It can also carry the viruses that cause dengue fever, chikungunya and yellow fever.

The species rarely flies more than a block in its lifetime. It is mostly found in the South and the Southwest. But it has been found in New Jersey, southern Connecticut and New York City, though not necessarily in large populations.

Experts theorize that the areas at greatest risk for a Zika outbreak are poor urban areas along the Gulf Coast. But the C.D.C. is focusing its mosquito control efforts more broadly in areas of Texas, Florida, Hawaii, Arizona and Louisiana, California and Los Angeles County, which have high population densities and a high number of travelers coming in from areas with Zika, two factors that increase the likelihood of local transmission.

While no one has yet contracted the Zika virus from a mosquito in the continental United States, experts expect it to happen this summer.

The insect is usually larger and more intensely black than aedes aegypti, but with the same pointed abdomen. It has striking white stripes, including one white stripe down the middle of its back.

They have a nasty habit of feeding on the lower extremities, so they can be difficult to spot. And their bites are barely perceptible.

They are most likely to come out during the day. And they feed on pets and wild animals as well as humans.

"They're ambush predators," said Mr. Conlon. "Whenever you invade their territory, you're on the menu."

They lay eggs in potted plants, buckets, tires, tin cans, or wherever there's a small pool of standing water.

The Asian tiger mosquito is known for spreading dengue and chikungunya viruses. It has also tested positive for Zika, West Nile, Eastern equine encephalitis and Japanese encephalitis. But it is not clear how efficiently it transmits the Zika virus.

The species first hitchhiked to the southern United States in the 1980s, probably as stowaways in shipments of used tires. And since then, it has colonized the entire Eastern Seaboard up to Maine. In all, it has been sighted in about 30 states, including Hawaii.

A nondescript brownish insect, with a rounded abdomen.

This is usually the one you'll hear buzzing in your ear at night. It will overwinter in your attic if it can.

This species feeds on humans, other mammals and many types of birds, which are the main carriers of West Nile virus. The mosquitoes typically lay their eggs in dirty water, in ditches and shallow ruts.

Dozens of species have been known to carry West Nile, but the Culex pipiens is the primary culprit.

Most healthy people don't even know they have been infected. But West Nile can cause flulike symptoms and, in rare cases, permanent neurological damage or death. The virus first arrived in New York City in 1999 and spread slowly west. Three years later, the United States experienced one of the largest outbreaks of a mosquito-borne virus ever recorded. The virus is now endemic in the lower 48 states and has killed more than 1,700 people. The greatest numbers of incidents per capita are in North and South Dakota and Colorado, said Mr. Conlon.

The species is found in urban areas across the country.

Distinguishable by its rounded abdomen and light-colored band around its proboscis.

They breed in "enormous numbers," said Mr. Conlon, typically in agricultural runoff and in ditches.

In western states, this species is the primary carrier in rural areas for West Nile virus. They have also been associated with Western equine encephalitis (W.E.E.), St. Louis encephalitis (S.L.E.) and California encephalitis.

The species is abundant in California, Utah and the western half of North America.

The dark brown insects are recognizable by long palpi, tasting organs, which are almost the same length as its proboscis, or mouthparts. It rests on surfaces diagonally, with its head down and abdomen jutting into the air.

Females feed on humans and other mammals, usually in the evening. They prefer to lay eggs in freshwater ponds, streams and lakes.

Only the Anopheles genus carries malaria. In Africa, Anopheles gambiae is the primary offender. In the eastern United States, it is the Anopheles quadrimaculatus.

Although malaria was eradicated decades ago in the United States, about 1,500 cases are still reported a year, primarily on the East Coast, from travelers who were infected outside the country. Last year, 438,000 people died worldwide from malaria, mostly in Africa and Southeast Asia, according to the World Health Organization.

The common malaria mosquito is found in large numbers in the southeastern states, but it inhabits a wide swath of the east, from Mexico to southern Canada.

These straw-color insects are noted for the way their abdomens lift into the air when they sit. Their wings are dotted with dark spots. The female's clear belly will turn red and swell when full of blood.

Females usually come out at dusk, and fly farther than other species. They'll travel from rural areas into homes or barnyards to feed. They prefer to lay eggs in leafy, sunlit pools and drains, rice fields and ponds.

They were once the primary carriers of malaria in agricultural areas on the West Coast, especially California. While malaria is gone, health officials worry that local mosquitoes could pick it up again from an infected human and trigger anoutbreak.

In New York City, low-flying helicopters have sprayed larvicide over nonresidential areas of Staten Island, Brooklyn, Queens and the Bronx to stop the West Nile virus. But the tactic is not considered particularly effective against the yellow fever mosquito, the primary carrier of Zika, because it breeds in gardens and homes.

There have not been any instances of mosquitoes in New York City transmitting the Zika virus in the area, according to the city's Health Department. But

West Nile virus was detected in the northern house mosquito in Staten Island this month.

Health officials offer some advice: Make sure gutters or any containers that could collect water are emptied or turned upside down. Check for holes or tears in window screens, too.

Mr. Conlon recommends using repellents registered with the Environmental Protection Agency, ones that contain DEET, picaridin, IR3535, and oil of lemon eucalyptus and para-menthane-diol.

"Don't listen to your Aunt Ethel who puts toad pee on her arm," he said.

Wristbands and ultrasonic devices are worthless against mosquitoes, too, he said. And despite all of the testimonials on the internet for repellents made of natural, organic or essential oils, he said the E.P.A. has not deemed them effective.

"It's an important consideration," Mr. Conlon said. "It could be a matter of life and death."

Cuba Reports No Zika Transmission Since March; Dengue All But Eliminated

EMERGENCY PREPAREDNESS

First Day Of FEMA Training Briefs Participants On Emergency Plans, Procedures

By Elizabeth Meyer

Hawk Eye (Burlington, Iowa), June 28, 2016

EMMITSBURG, Md. — Much like the uncertainty and anxiety that consumes people during an emergency, the Integrated Emergency Management Course is designed to test a community's ability to respond effectively when faced with a large-scale disaster.

"Everybody's got a plan until they get punched in the mouth," said Joe Goldsberry, an Integrated Emergency Management training specialist.

Goldsberry's words early Monday morning when Des Moines County began day one of the 4-day training course, foreshadowed the week ahead for business leaders, public officials and safety officers participating in the Federal Emergency Management Agency's training program.

Seventy-seven participants arrived on the Emergency Management Institute's campus Sunday afternoon with little knowledge of what the next few days would bring.

The college campus-turned-federal institute was founded in 1809 as an all girls Catholic school and has been used by FEMA since 1981 to educate civilians through an emergency management curriculum, with over 500 courses available.

After check-in at the front desk and settling into their individual rooms, many participants flocked to the campus Command Post Pub to socialize and unwind after a long day of travel.

But by 8 a.m. Monday morning, everyone was settled into a classroom and ready to learn. Much like days of their youth spent taking notes and listening to an instructor, the first day in Emmitsburg comprised mostly of reviewing course objectives, learning about the Des Moines County Emergency Management Agency and hearing from members of the group about the role various agencies in the county would play in responding to an emergency.

"Every disaster is local," Goldsberry emphasized throughout the day.

In the event of an emergency, communities must be prepared to fend for themselves before outside help from state and federal agencies arrives. With that mentality in mind, Goldsberry stressed the importance of the "whole community" approach to disaster preparedness and relief. One of the benefits of the course is the ability to bring together a wide variety of people from different sectors of the community to better understand how they can work together when disaster strikes and foster working relationships so the line of communication is established well before an emergency occurs.

The Mississippi River flood of 2008 was referenced throughout the day as an example of a large-scale disaster that required local, state and federal agencies to respond. Des Moines County emergency management coordinator Gina Hardin said 2008 was the only time in the last 20 years the county officially activated its Emergency Operating Center (EOC), even though a federal state of emergency has been declared 12 times in the county over that same period. Located in the conference room of the Des Moines County Sheriff's Office in Burlington, Hardin said the EOC is activated only when multiple agencies need to coordinate face-to-face continuously and for an extended period of time during an emergency. It is the job of an EOC to visualize the big picture response to a disaster and prioritize the community's needs accordingly.

In the afternoon, participants were broken up into four groups based on the role their agency would play during an emergency: EOC management and support, public information officials, emergency support functions and policy makers.

As the groups analyzed Des Moines County's comprehensive emergency management plan, though most aspects of the plan were agreed upon and self-explanatory, discussion arose about a community's expectations for long-term recovery in the wake of mass devastation. Is it reasonable to expect a city will be able to fully restore its facilities and services to pre-disaster conditions? Lack of clarity on that point was discussed and tabled for officials to work toward clarifying during the week.

Looking forward to the rest of the week, Greater Burlington Partnership CEO Jason Hutcheson said he was impressed by the wide cross-section of community members brought together for the training.

"I didn't completely know what to expect, and certainly emergency response is not my area of expertise," Hutcheson said. "But I really was impressed with how well most of the people here know each other and have worked with each other already, so that shows good cooperation between community groups. And I think it really speaks to the importance of having so many people out here because it really does take a whole community to respond to a major disaster."

Two men with a wealth of emergency response experience pointed out the responsibility course participants have to their communities when attending training like this, so they can bring what they learned back to their agencies and apply it effectively.

"I think, overall, with the size of the group that you have out here – the diversity of the group – the take back is really going to be something that's going to be advantageous for the county for any future, either plan development or any disasters that might happen," said West Burlington Fire Department chief Shaun Ryan. "I just think the ability to put this many different walks of life, entities into one room – getting the same message – it's going to be a great thing. And the fact that we were able to include private and public sectors ... that helps a lot."

Jesse Logan, assistant police chief in West Burlington, noted the ability of various agencies within Des Moines County to work well together compared with other communities he has observed.

"Going to different conferences throughout the state, you can tell, you just talk to other agencies where there's no cooperation between the city or county organizations," Logan said.

"Unlike Des Moines County where everybody works together," Ryan added. "It's been getting better and better every year."

Mediapolis city councilman Jimmie Spence said the first day was "very informative" and a good introduction to the next three days. The community-wide approach to emergency management was an aspect of the training Spence was glad to see emphasized.

"It takes everybody in a community to take care of these problems, you know. You can't just sit down and say, 'Huh, the city will take care of me.' The citizens have to contribute."

Hardin noted the county's recently launched emergency messaging system – Des Moines County/Alert Iowa! – as a way for residents to easily stay involved and informed in the event of an emergency or severe weather. By signing up for the free service, an alert will be sent to the phone number or email address provided to Des Moines County Emergency Management. County residents can sign up for the alerts by visiting the Emergency Management page on the Des Moines County website, dmcounty.com.

Agencies Conducting Emergency Simulation At Prairie Island Nuclear Plant

Red Wing (MN) Republican Eagle, June 28, 2016

Residents near the Prairie Island nuclear plant may notice extra activity Tuesday June 28 in response to an emergency simulation. The exercise allows the Minnesota Department of Public Safety and other Minnesota and Wisconsin agencies to test their response in the event of an incident at the Red Wing plant.

A variety of field activities involving emergency responder vehicles will take place in proximity to the plant in Dakota and Goodhue counties of Minnesota and Pierce County in Wisconsin, according to a news release.

The exercise and preparedness plans will be reviewed by the Federal Emergency Management Agency.

Xcel Energy operates the two-reactor facility located on the Mississippi River adjacent to the Prairie Island Indian Community.

MAIN FEMA NEWS

NATIONAL NEWS

NBC: Severe Weather. NBC Nightly News (7/14, story 6, 0:25, Holt, 16.61M) reported, "A severe weather alert for millions tonight as fast-moving storms like one here in New York today sweep across the Northeast. And in the Midwest, powerful thunderstorms blew through the region. Wichita, Kansas—strong winds tipped over a semi-truck on the highway. Gusts up to 70 miles per hour also knocked down a number of trees and power lines."

ABC: Severe Weather. ABC World News Tonight (7/14, story 11, 1:30, Muir, 14.63M) reported, "Next here this evening, to severe weather on the move from Texas to Maine, and extreme heat warnings and advisories for much of the East. Some of the most dangerous weather in New York City a short time ago. Take a look at this storm from over Manhattan not long ago. ABC's Gio Benitez on the severe weather and the scorching heat." ABC (**Benitez**) added, "Tonight, severe storms hitting hard in the Northeast. Downing trees, forcing a ground stop at JFK Airport. Here in New York City, we are getting those ferocious winds, that rain, that lightning, that thunder. This is what's been moving all across the country. Blinding rain in Kansas. A semi overturned in Wichita, firefighters struggling to rescue the driver. More than 400 severe weather reports in the past 24 hours. A water rescue in Lancaster, Pennsylvania. Even cows are forced to escape the rushing floodwaters. They got out. Outside St. Louis, a man electrocuted by a downed power line. This, as straight-line winds up to 100 miles an hour hit Cincinnati neighborhoods." **Jason Adams**, Meteorologist, WCPO-TV: "You can see the roofs have been almost completely torn off of two units." **Benitez**: "More than two dozen residents out of their homes." **Unidentified Speaker**: "I heard a big whoosh of wind and the next thing you know it was blowing out our windows." **Benitez**: "And in DC, extreme heat, the heat index reaching 104 degrees. And David, here in New York, those storms have moved through and now here comes the heat. Tomorrow's highs will feel like the mid-90s. David?" **Muir**: "Gio Benitez with us tonight. Gio, thanks."

ABC: Weather Tracking. ABC World News Tonight (7/14, story 12, 0:30, Muir, 14.63M) reported, "Let's get right to Chief Meteorologist Ginger Zee, who is tracking this system on the move tonight." ABC (**Zee**) added, "David, the heat advisories go from North Carolina to New York City. And you can see the excessive heat warnings for Philadelphia, even northern Delaware—well, that's because we're not going to cool down overnight. So cumulative heat—day after day, morning after morning—that's what we're dealing with. It feels like 81 when you wake up in Virginia tomorrow morning. And then the afternoon comes and it feels like it's above 100 in a lot of spots. We'll finally break this heat, David, as we go through the weekend." **Muir**: "All right, relief on the way. Ginger, thank you."

ARRL CEO, Emergency Preparedness Manager Visit FEMA Headquarters

eHam, July 15, 2016

ARRL CEO Tom Gallagher, NY2RF, and Emergency Preparedness Manager Mike Corey, KI1U, recently visited Federal Emergency Management Agency (FEMA http://www.fema.gov/) headquarters in Washington, DC, to further explore areas of cooperation and partnership, in line with the Memorandum of Agreement http://www.arrl.org/files/file/Public%20Service/FEMA/FEMA-ARRL-2014.pdf that ARRL and FEMA signed in 2014.

During the June 29 visit, Gallagher and Corey met with FEMA Administrator Craig Fugate, KK4INZ. FEMA Chief Technology Officer Ted Okada, K4HNL, also attended the meeting.

"Administrator Fugate's detailed knowledge of Amateur Radio is impressive, and his support for the amateur community is very encouraging," Gallagher said afterward. He went on to say that he was most impressed by Fugate's observation that "any mode of RF that will connect across the continent is valuable; we don't have enough backups to the public switched network."

Report: State Does Little To Protect Schools From Quakes

Associated Press, July 14, 2016

SEATTLE — More than 380,000 students in Washington state live in earthquake-prone areas and attend schools built before seismic construction standards were adopted statewide, according to a Seattle Times report.

The newspaper, analyzing state data, also reports (http://bit.ly/29x9MDQ) that more than 31,000 students attend schools that are in or near tsunami danger zones.

However Washington doesn't mandate seismic evaluations or upgrades of school buildings and doesn't keep an inventory of unsafe schools. California, Oregon and British Columbia have all mandated seismic examinations of schools in earthquake-prone areas. And each has spent hundreds of millions of dollars to strengthen vulnerable buildings.

In Washington local school districts must raise their own funds before the state contributes money, creating disparities in school safety between wealthy and poor districts.

"By law, we make kids go into buildings that may not be as safe as they should be," said Jim Mullen, Washington's top emergency-management official from 2004 to 2013. "Safe schools are a moral and legal obligation of the state Legislature, the governor and every other public official."

A magnitude 9 earthquake and tsunami could kill up to 7,600 students and staff and cause $4 billion in damage and losses to schools, according to a 2014 study commissioned by the Office of Superintendent of Public Instruction. The Federal Emergency Management Agency estimates almost 75 percent of coastal schools and one in five schools along the I-5 corridor could suffer extensive damage, including collapse.

A seismic evaluation for every school in the state would cost between $10 million and $13 million, a federally funded study found in 2011.

In a statement, Tara Lee, a spokeswoman for Gov. Jay Inslee said: "Safety in our schools and communities is always a high priority" but that "more work needs to be done."

State Does Little To Protect Schoolkids From Earthquake, Tsunami

By Sandi Doughton And And And Daniel Gilbert

Seattle Times, July 14, 2016

This is part of a continuing series about Washington state's lack of preparation for a major earthquake.

All that separates Long Beach Elementary from the Pacific Ocean is a half-mile expanse of flat, sandy ground dotted with restaurants, hotels and shops catering to tourists. When the next Cascadia megaquake strikes, the 250 students at the school will face a choice Washington officials would rather not think about.

They can try to outrun the inevitable tsunami and reach high ground two miles away. Or they can hunker down in a two-story building that wasn't designed to withstand an unstoppable wall of water. "It's a nightmare I hope I never have to face," said Principal Todd Carper. "Our current plan is a 'go upstairs and hope' situation."

When it comes to protecting Washington schoolchildren from earthquakes and tsunamis, hope often substitutes for dollars and steel, The Seattle Times has found.

No state faces a greater threat from the offshore fault called the Cascadia Subduction Zone than Washington. But none has done less to ensure that kids in school buildings will be safe when the disaster hits.

More than 31,000 students attend schools like Long Beach that are in or near tsunami danger zones, according to a Times analysis of state data. Across Washington, roughly 386,000 pupils — one in every three enrolled — live in earthquake-prone areas and attend schools built before seismic construction standards were adopted statewide.

Yet Washington doesn't mandate seismic evaluations or upgrades of school buildings. It doesn't keep an inventory of unsafe schools. Even earthquake and tsunami drills, routine in many schools, are a suggestion and not a requirement under Washington law.

For decades, the state has shrugged off the recommendations of its top earthquake-safety advisers.

As a result, Washington is an outlier along the seismically active West Coast.

California, Oregon and British Columbia have all mandated seismic examinations of schools in earthquake-prone areas. Each has anted up hundreds of millions of dollars to strengthen vulnerable buildings.

In Washington, by contrast, local school districts must raise their own funds before the state kicks in any cash, creating disparities in school safety between wealthy and poor districts.

"By law, we make kids go into buildings that may not be as safe as they should be," said Jim Mullen, Washington's top emergency-management official from 2004 to 2013. "Safe schools are a moral and legal obligation of the state Legislature, the governor and every other public official."

A magnitude 9 earthquake and tsunami could kill up to 7,600 students and staff and cause $4 billion in damage and losses to schools, according to a 2014 study commissioned by the Office of Superintendent of Public Instruction (OSPI). The Federal Emergency Management Agency estimates almost 75 percent of coastal schools and one in five schools along the I-5 corridor could suffer extensive damage, including collapse.

No single entity in Washington is responsible for ensuring that schools are structurally sound. The state superintendent of schools oversees all public-education matters, but school districts own the buildings. Neither the Legislature nor the governor's office has taken steps to make money available for seismic evaluations or retrofits.

The last legislation focusing on earthquake safety in schools was offered 25 years ago, before today's high-school seniors — and some teachers — were born.

Reluctance to study buildings

A seismic evaluation for every school in the state would cost between $10 million and $13 million, a federally funded study found in 2011. That's about 0.02 percent of Washington's operating budget.

But some lawmakers have been reluctant to sanction a seismic survey of schools, fearing it would uncover deficiencies that would be costly to fix.

"Then the pressure will be there to do something," said state Sen. Dean Takko, whose district includes Long Beach. And if legislators have evidence of structural problems and fail to act, he wondered, "Now are we liable for not doing anything?"

Takko favors such a survey, but believes it has little chance of passing.

Gov. Jay Inslee declined an interview request. In a statement, spokeswoman Tara Lee said, "Safety in our schools and communities is always a high priority" but that "more work needs to be done." She wouldn't elaborate.

Randy Dorn, Washington's schools superintendent, acknowledged that seismic safety is not a high priority.

He has been consumed in recent years with trying to increase state funding for education to comply with the McCleary ruling, a state Supreme Court order. His office requested $500,000 from the Legislature in 2011 to help school districts identify their structural weaknesses, but the money was left out of the budget.

Dorn believes the state's system for doling out school funds puts poorer districts at a disadvantage, because it's harder for them to raise money for upgrades.

"The system is slanted and it's an advantage to the property-rich districts," he said. "It's a civil-rights issue."

Many of Washington's older school buildings have been renovated, but state officials do not collect enough data from districts to know which ones are likely at risk.

OSPI has such data for just 17 districts — of 295 in the state — that participated in a federally funded study. The 2014 study's preliminary results show that more than 100 buildings, 6.4 percent of those surveyed, had high seismic risk.

The peril varies considerably by district — and by wealth. In Everett, where household income is above the state median, less than 3 percent of school buildings were deemed high-risk and many have been retrofitted or replaced. The district has approved nearly $350 million in school bonds over the past decade.

In Port Angeles, which hasn't passed a bond or capital levy since 2001, about 43 percent of school buildings were found to be high-risk, and none have been seismically retrofitted. Median household income is about 20 percent less than the statewide figure of $60,300.

"There's an unfairness here," said Port Angeles schools superintendent Marc Jackson. "I believe students should attend safe schools and that school safety should not be compromised by where a student lives or by their zip codes."

"Enormous and reasonably foreseeable"

Washington schools built before 1949 were designed under the assumption that the state had little or no earthquake hazard — an assumption proved profoundly wrong on April 13 of that year. A magnitude 7.1 quake struck near Olympia, damaging 30 schools and killing two students.

The toll could have been worse had many schools not been closed for spring break.

It wasn't until the mid-1960s that basic seismic building codes were adopted in several parts of the state. The codes weren't implemented statewide until 1975 and have since been strengthened several times.

Mandating a study of seismic vulnerabilities in schools, and a plan to fix them, was one of the first recommendations of Washington's Seismic Safety Council.

"The potential for injury and loss of life among students and school personnel," the council warned the Legislature in a 1986 report, "is enormous and reasonably foreseeable."

Beginning in the early 1980s, more than a dozen bills were proposed to improve seismic safety in schools. None passed the Legislature. The last such legislation offered was in 1991, seeking $49,000 to help schools assess seismic stability.

A legislative report noted the opposition: "The amount of money appropriated will not go very far and there will be intolerable pressure to fix both nonstructural and structural school earthquake hazards."

The bill failed.

By then, the full scope of the Northwest's earthquake dangers was coming into sharper focus. Scientists had uncovered evidence that magnitude 9.0 quakes and tsunamis slammed the coast, on average, every 500 years — but sometimes only 200 years apart. The last such event was in 1700.

A coastal megaquake would be hundreds of times more powerful than any quake in recent state history, roiling the ground for five minutes or more across an area stretching from British Columbia to Northern California. Shallow faults under cities like Seattle, Tacoma and Everett can also trigger locally destructive quakes.

"We like to bury our heads in the sand about the risk of seismic events," said Phil Talmadge, a former lawmaker and state Supreme Court justice who pushed for school earthquake-safety reforms while in the state Senate in the 1980s and 1990s.

… If children die and you have not taken action as public policymakers, the liability is going to be ungodly." – Oregon state Sen. Peter Courtney

In 2012 the seismic safety committee again called on the state to prioritize schools in its Resilient Washington State report — again, with no action.

California took a different lesson from a close call in 1933.

On a Friday evening in March, an earthquake struck Southern California just a few hours after classes were dismissed. More than 230 school buildings were severely damaged, 70 of them flattened. Within 30 days, California's Legislature mandated that new schools be constructed to strict earthquake safety standards. Soon after, it added a requirement that existing schools be upgraded.

In British Columbia, a coalition of parents, students and structural engineers pushed the government to evaluate and upgrade schools in earthquake-prone areas. Since 2004, the province has spent or committed $1.7 billion to retrofit 214 schools.

In Oregon, state Sen. Peter Courtney led the way.

With vivid memories of a 1993 quake near the Capitol that knocked him out of bed, Courtney was receptive when state geologists first briefed him on the Cascadia threat. In 2002, Courtney and his allies won voter approval for the state to issue bonds for school seismic upgrades. The Oregon Legislature ordered a survey that identified more than 1,100 school buildings at high risk of collapse.

Oregon has provided almost $210 million in grants to retrofit 79 school buildings. Courtney, president of the Senate since 2003, is pushing for more.

"Given what we know about this monster, you better hope it doesn't hit in your lifetime," he said, of a Cascadia megaquake. "Because if it does, if children die and you have not taken action as public policymakers, the liability is going to be ungodly."

And it's not just a matter of saving lives, he pointed out. After a major earthquake, schools will be vital as shelters and community centers. Business can't resume until kids are back in school.

In Oregon, "It's the state's responsibility to make sure every school is taken care of," Courtney said. "We're not going to leave it up to the school districts."

Leaving it to districts

Seattle Public Schools owns some of the oldest, most vulnerable school buildings in the state.

But it has the biggest property-tax base of any school district, and it has successfully passed every bond and capital levy it has proposed since 1996 — a haul of at least $2 billion. Since 2010, the district has earmarked $100 million from levies for seismic retrofits at more than 50 schools, while others are getting upgrades as part of larger renovations.

The Highline School District shares a border, and many of the same seismic risks, with Seattle. But it's one of the poorer districts in King County.

While Highline has about a third as many students as Seattle, its property-tax base is less than one-tenth of its wealthier neighbor's. Individual homeowners in Highline would have to pay about 10 times as much as those in Seattle to raise the same amount of money.

Highline's last two attempts to issue a school bond were rejected by voters in 2014 and 2015. Its most recent successful bond election was 10 years ago.

So children continue to spend their days in Des Moines Elementary, one of the district's oldest schools and a priority for replacement. The original building was constructed in 1924, and other than additions in subsequent decades, it has never been modernized.

"We would never put students in a building deemed to be unsafe, but making seismic and other safety improvements in our schools is a top priority," said Catherine Carbone Rogers, a spokeswoman for the Highline School District. The district plans to propose another bond in the coming year.

The disparities are even starker in communities along the coast like Aberdeen, a faded logging hub where the Chehalis River spills into the Pacific and where grunge rocker Kurt Cobain, of Nirvana, grew up.

In 2011, structural engineers examined 12 school buildings in the city to see how they would perform in a powerful earthquake. The federally funded study found that seven buildings had a greater than 95 percent chance of extensive to complete damage.

Tom Opstad, Aberdeen's superintendent, walked through one of those buildings, Hopkins Preschool Center, on a recent spring day, pointing out the warped floors caused by shifting soil. The 60-year-old building also houses a day care and alternative high school — and has a 99.8 percent chance of major damage in a quake.

That means chunks of debris could rain down on schoolchildren and parts or all of the sprawling complex could collapse, said Cale Ash, a structural engineer at Degenkolb who helped with the study. The entire structure could slump when shaking liquefies the loose soil, causing more damage and trapping students if doors jam shut.

Opstad is laying the groundwork for a bond, but expects it will take more than one try to gain voter approval. The district hasn't approved a bond since 2003.

"There's not a lot of industry here to help support taxes, like there would be in Seattle," he said.

"We should be screaming"

Aberdeen is ringed with hills that offer tsunami escape routes for all of the district's schools. But along parts of Washington's outer coast, including the 25-mile-long sand spit called the Long Beach Peninsula, high ground could be out of reach for all but a few.

In the open ocean, a tsunami travels at the speed of a commercial jet. The surge slows and builds as it approaches land, muscling ashore faster than most humans can run. Scientists estimate the first waves will slam into Long Beach in as little as 20 minutes after the earthquake.

Local cross-country standout Ben Brownlee recently ran the 2-mile evacuation route from his former school, Long Beach Elementary, at The Seattle Times' invitation.

After a megaquake, children at Long Beach Elementary could have just 20 minutes to run to higher ground. We asked a local track athlete to see if he could make it before the tsunami. (Katie G. Cotterill & Ellen Banner / The Seattle Times)

The 17-year-old Ilwaco High student cut through the rodeo grounds and sprinted past cranberry bogs. He pulled up panting at the city's garbage transfer station, more than 100 feet above sea level, in just under 15 minutes.

In an actual quake, it will take several minutes for those who aren't injured to get their bearings and run. Then they'll face an obstacle course of downed power lines, toppled trees and buckled pavement.

There's no way teachers would be able to shepherd 250 terrified children, many with special needs, to safety in time, said Carper, the principal.

So Long Beach hopes to build a tsunami refuge on the school's old play field. City officials landed a $2 million federal grant to design and build a berm, essentially a man-made hill of hard-packed earth reinforced with concrete and steel.

The flat-topped structure would stand about 30 feet high, placing it nearly 50 feet above sea level. It would cover three-quarters of an acre and have room for more than 850 people to escape the water — including all of Carper's kids.

But it's not certain the structure will be built. Cost estimates are coming in at more than $3 million, with no obvious source of funding to make up the shortfall. Even if the city comes up with the money, the berm won't help the 170 youngsters who attend the district's other elementary school, 10 miles up the peninsula in the town of Ocean Park.

On another vulnerable spit of land about 40 miles north of Long Beach, the Ocosta School District faced a similar threat.

When Paula Akerlund took over as superintendent in 2011, she was haunted by the devastation from Japan's earthquake and tsunami earlier that year.

"That's the thing that wakes you up at 3 in the morning," she said.

The district, which includes Westport, is ailing from slumps in the fishing and timber industries. Household income is barely half the statewide median. The previous two school bonds had failed.

Animated graphic: The state's only school building constructed to provide shelter during a tsunami. (Zach Walker/The Seattle Times)

Working with scientists, engineers and emergency managers, Akerlund and the school board turned to the community again, with a proposal to replace the crumbling elementary school and add a gym that could double as a tsunami-evacuation structure. With room for 2,000 people on the roof, the structure could shelter all students, staff and nearby residents with room to spare.

The district and its allies sought support for the project from local residents at every opportunity: Every sports event, every concert and every school activity. A friends group set up a Facebook page. A local Realtor offered prizes for people who registered to vote.

The $13.8 million bond passed with 70 percent support from voters. The state provided an additional $2 million in matching funds. Earlier this month, the new gym opened.

State officials are eager to talk up Ocosta's success. But the fact that so many kids across the state remain at risk from quakes and tsunamis leaves Akerlund frustrated with the Legislature, the governor and other officials who refuse to take responsibility.

"You cannot fool around with children's safety," she said. "All of us in education are so polite. We should be screaming: This is not ethical."

Colorado Wildfires Continue, More Than 35,000 Acres Burned

By Kieran Nicholson

Denver Post, July 14, 2016

Several wildfires in Colorado, totaling more than 35,000 acres burned, remain active as firefighters work to control and extinguish the blazes.

The biggest blaze, the Beaver Creek fire, has burned 20,981 acres in northern Colorado along the Wyoming state line about 24 miles north of Walden, according to state and federal fire officials.

The Beaver Creek fire was detected June 19 and is burning through heavy beetle-killed timber. The fire is about 5 percent contained, and 286 firefighters are working on the blaze. The fire remains active and is expected to continue to spread to the north and east, according to the Western Colorado Interagency-Type 3 Incident Management Team.

The Hayden Pass fire continues to burn in the Colorado mountains about 20 miles southeast of Salida. It has scorched 14,788 acres and remains active, The wildfire is crowning and accelerating in the Mosher Creek area as it moves toward the Sangre de Cristo ridge line, according to fire officials. The fire, burning mostly through timber, heavy logging slash and chaparral, was first reported on July 8.

The Cold Springs fire is burning in Boulder County about 2 miles northeast of Nederland. It started Saturday on private property, has burned more than 528 acres and is 100 percent contained. At least eight homes have been torched, and about 1,000 residents were forced to evacuate. All roads were open, and all residents were allowed to return home.

Two men face criminal charges for allegedly starting the blaze.

Jimmy Andrew Suggs, 28, faces four charges, including two counts of fourth-degree arson and one count each of possession of a weapon by a previous offender and criminal trespass. Suggs is being held on $150,000 bail.

Zackary Ryan Kuykendall, 26, is facing two charges of fourth-degree arson and one count of criminal trespass. He is being held on $5,000 bail.

Both are scheduled to appear in court Sept. 1.

The Cold Springs fire continues to creep and smolder, according to firefighters. Crews continue to work on eliminating hot spots and protecting homes and structures within and near the fire perimeter.

Endangered Trout Feared To Be Impacted By Colorado Wildfire

Associated Press, July 14, 2016

COLORADO SPRINGS — State wildlife officials are concerned that an endangered fish may be extinct now that a wildfire burning in the southern Colorado mountains has reached a creek home to the thriving habitat of cutthroat trout.

The Gazette reports Greg Policky with Colorado Parks and Wildlife says the fish in a 3-mile stretch of Hayden Creek are "one of a kind." He says they're related to greenbacks but have DNA not known to be in any other fish.

Policky estimated the population of trout to be about 2,000. He says there's been ongoing efforts to sustain the fish, which are protected under the Endangered Species Act.

Officials say the Hayden Pass fire in the Sangre de Cristo Wilderness has spread across 13,000 acres. More than 100 homes have been evacuated. A helicopter continues efforts to keep the Hayden Pass fire away from structures near Coaldale, southeast of Salida on Wednesday, June 13.

78-acre Black Ridge Wildfire Near Durango Is 40 Percent Contained

By Jesse Paul

Denver Post, July 14, 2016

A 78-acre wildfire sparked Wednesday in the mountains south of Durango is 40 percent contained as crews work to keep the burn from spreading toward nearby homes.

Durango Fire Rescue said in a tweet Thursday morning that the fire has been 80 percent surrounded with retardant to keep it from moving outside its current lines.

The fire is burning in the Black Ridge area. Durango firefighters are working with the Bureau of Indian Affairs in the firefight.

The Southern Ute Indian Tribe says the fire is on their land and was reported at about 4 p.m. on Wednesday.

“Southern Ute Tribal Rangers are notifying residents in the area of the fire to be ready to evacuate should conditions change,” the tribe said in a bulletin.

La Plata County says flames are surrounded by 304 structures — including homes — but that so far residents are safe to stay put. Residents are on pre-evacuation notice, however, as a precaution.

“The fire is laying down as relative humidity is increasing in the area,” the county said in a news release Wednesday night. “Air crews dropped retardant around most of the perimeter of the fire and the fire has burned into the 2005 Black Ridge fire burn scar. Crews will remain on scene throughout the night.”

Aerial resources are expected to join the battle Thursday.

Exploding Propane Tanks Hinder Reporting Of Wildfire Damage

Associated Press, July 14, 2016

TIMBERON, N.M. — Exploding propane tanks Thursday kept firefighters from confirming the extent of damage in and around a southern New Mexico mountain village of Timberon where authorities said a wildfire apparently burned multiple homes.

Firefighters’ operations also were hindered by downed power lines in the area, according to state officials.

There are no reported injuries, the fire’s cause hadn’t been determined and there was no estimate when the fire would be contained.

The blaze led Gov. Susana Martinez to activate the state’s emergency operations center to help coordinate the response. Federal officials approved her request for funds to help cover the cost of firefighting efforts.

Martinez was briefed by incident commanders Thursday after flying over the fire, which had charred nearly half of a square mile.

“Sadly, the fire may have already destroyed more than a dozen homes, and many more are at risk,” she said. “I ask New Mexicans to join me in praying for the residents of Timberon.”

Otero County Sheriff Benny House told The Associated Press during a telephone interview that he saw about 15 burned structures while viewing just the fire’s perimeter Wednesday night and that many appeared to have been homes. There may have been additional burned structures in the interior of the fire area, he said.

The area consisted of wooded hilly terrain, House said. Timberon is 25 miles southeast of Alamogordo.

A multiagency team was arriving to take command of the incident by late Thursday night or early Friday morning.

Deputies went door to door Wednesday to recommend that residents evacuate, House said. Many homes in Timberon are not owners' primary residences, he said.

Several dozen Timberon residents spent the night in an evacuation shelter in Cloudcroft. But House said many people had other places to stay or weren't in the area.

The Latest: Federal Funding Approved For New Mexico Wildfire

Associated Press, July 14, 2016

TIMBERON, N.M. — The Latest on a wildfire burning in part of a mountain village in southern New Mexico (all times local):

5:25 p.m.

Gov. Susana Martinez says federal funding will help cover the costs associated with fighting a blaze that has destroyed homes and burned nearly a half square mile in southern New Mexico.

Martinez was briefed Thursday by fire officials on efforts to corral the blaze, which forced the evacuations the night before of dozens of residents who live in and around the community of Timberon.

The governor says the fire may have destroyed more than a dozen homes and that many more are threatened. Conditions have prevented firefighters from confirming damage reports.

Martinez also activated the state emergency operations center to help coordinate the response to the fire in Otero County.

___

12:50 p.m.

Gov. Susana Martinez plans to be briefed by fire officials leading efforts to corral a blaze that has destroyed homes in southern New Mexico.

Martinez will be visiting the Timberon area Thursday afternoon. She's expected to catch a glimpse of the fire as she flies in on a National Guard helicopter.

Fire officials say the blaze has burned about 290 acres and an unknown number of structures. Exploding propane tanks have kept firefighters from confirming any damage reports.

Otero County Sheriff Benny House told The Associated Press early Thursday that he saw approximately 15 burned structures while viewing the fire's perimeter Wednesday night and that many appeared to have been homes.

Some roads are closed in the area.

___

Noon

Authorities say exploding propane tanks are keeping firefighters from confirming how many structures have been destroyed by a wildfire burning in and near the southern New Mexico mountain village of Timberon.

A multiagency fire information service also reports Thursday morning that there are downed power lines in the area.

According to the service's update on the Timberon fire, it has burned an estimated 290 acres of private lane and that an interagency team will take over command of the incident by late Thursday night or early Friday morning.

Otero County Sheriff Benny House told The Associated Press early Thursday that he saw approximately 15 burned structures while viewing the fire's perimeter Wednesday night and that many appeared to have been homes.

There are no reported injuries.

___

11:10 a.m.

A wildfire that destroyed a dozen homes and scorched 28 square miles in the Manzano Mountains southeast of Albuquerque has been declared fully contained.

Fire officials say that means crews have completed a control line around the perimeter of the blaze, which was sparked a month ago by a wood-chipping machine being used to clear brush and forest debris as part of a federally-funding project.

Officials warned Thursday that 100 percent containment doesn't mean the fire is out.

There are still engines patrolling the area and watching for any fire activity.

The blaze forced residents from several small communities along the eastern edge of the Manzanos to flee their homes. Gov. Susana Martinez also declared an emergency after the fire ballooned to more than 19 square miles in two days.

___

9:10 a.m.

A southern New Mexico sheriff says he believes homes are among the 15 or so structures burned by a wildfire burning in and near the mountain village of Timberon.

Otero County Sheriff Benny House says many of the burned structures he saw when he viewed the fire's perimeter Wednesday night appeared to have been homes and says there could be more in the fire's interior.

House says the fire burned 250 acres of wooded hilly terrain as of Thursday morning. Its cause isn't known.

The sheriff says deputies went door to door Wednesday to recommend that residents evacuate. He says many homes in Timberon are not owners' primary residences.

Local fire departments are fighting the fire with help from the Forest Service.

Timberon is 25 miles southeast of Alamogordo.

___

8:30 a.m.

A wildfire is threatening a village in mountains of southern New Mexico.

The Otero County Sheriff's Office says the fire near Timberon has burned an estimated 200 acres as of Thursday morning and destroyed a dozen structures and a fire engine since being reported Wednesday afternoon.

Timberon is 25 miles southeast of Alamogordo.

Sheriff's dispatcher Chris Patton says no injuries have been reported and that it's not immediately known what type of structures burned. She says they could include homes, sheds and garages.

Patton says cause of the fire isn't yet known.

Officials say several dozen Timberon residents spent the night at an evacuation shelter in Cloudcroft.

Providence, Cranston To Get $18M Total To Hire Firefighters

Associated Press, July 14, 2016

Rhode Island's congressional delegation has announced a total of $17.8 million in federal funding to help Providence and Cranston hire and train new firefighters. The Providence Fire Department says eight firefighters were injured battling this house fire on Orms Street, Thursday, June 30, 2016. (WJAR)

Rhode Island's congressional delegation has announced a total of $17.8 million in federal funding to help Providence and Cranston hire and train new firefighters.

A spokesman for U.S. Sen. Jack Reed, a Democrat, says the funding will help fill a total of 95 firefighter positions that were vacated due to normal attrition and left empty because of economic hardship.

Providence will receive approximately $15 million to hire 80 firefighters. The rest will go to Cranston to hire 15 firefighters.

The funding is provided through the competitive Staffing for Adequate Fire and Emergency Response grant program administered by the U.S. Department of Homeland Security's Federal Emergency Management Agency in cooperation with the U.S. Fire Administration.

The federal grants will cover the cost of the new hires for the next two years.

Third Victim Dies In Wisconsin Flood Waters

Associated Press, July 14, 2016

HAYWARD, Wis. — A third person has died in the floodwaters in northern Wisconsin.

The Ashland County Sheriff's Office says an 82-year-old man was found dead early Thursday in a pickup truck in the floodwaters of the Marengo River. Authorities say the truck was found in the water near the bridge over the river in the Town of White River.

The sheriff's department says Elmer Lippo was an elected supervisor for the Town of Marengo. Two others have died in northern Wisconsin flooding since severe weather washed out roads and caused other damage earlier this week.

Highway 2 between Ashland and Hurley remained closed as well as other roads in the region. In the Chequamegon-Nicolet National Forest, the Beaver Lake Campground near Mellen is closed due to flood damage.

West Virginia's Money Woes Could Affect Flood Recovery

Associated Press, July 14, 2016

West Virginians who are trying to rebuild their lives from last month's severe floods could be almost completely reliant on federal agencies.

Slumping tax revenue and budget constraints mean the state's role in helping homeowners, businesses and local governments rebuild from last month's deadly floods could be limited, The Charleston Gazette-Mail reported (http://bit.ly/29KnVkq).

Gov. Earl Ray Tomblin said at a news conference Wednesday that he hopes the state's rainy day fund will be used to cover 25 percent of the costs of reconstructing public buildings and other infrastructure. The Federal Emergency Management Agency will cover the other 75 percent.

"Obviously, we do have the money there," Tomblin said of the rainy day fund. "Hopefully, the Legislature, at the appropriate time, will allow us to take that money."

In terms of repairing the estimated 2,500 damaged houses, though, Tomblin said he is not considering spending any additional money to supplement the federal disaster relief funding.

The June 23 floods killed 23 people and caused more than $55 million in damage to roads and bridges.

For businesses without flood insurance, owners are going to be reliant on loans from the U.S. Small Business Administration or private lenders, which, in some instances, can be insured by the West Virginia Economic Development Authority. That money needs to be paid back, with interest.

Homeowners without insurance will have to rely on the federal grants that FEMA provides through the agency's individual disaster assistance. Homeowners can receive a maximum of $33,000.

"When FEMA was created, it was created to give folks a step towards recovery — to get them safe, to get them sheltered — but it was never really meant to make them whole again, like they were pre-disaster" said Albie Lewis, the federal coordinating officer for FEMA, who spoke with the governor.

Money Woes Could Hamper Flood Recovery

Associated Press, July 15, 2016

CHARLESTON, W.Va. — West Virginians who are trying to rebuild their lives from last month's severe floods could be almost completely reliant on federal agencies.

The Charleston Gazette-Mail (http://bit.ly/29KnVkq) reports that the state's role in helping homeowners, businesses and local governments rebuild from last month's deadly floods could be limited by slumping tax revenue and budget constraints.

Gov. Earl Ray Tomblin said at a news conference Wednesday that he hopes the state's Rainy Day Fund will be used to cover 25 percent of the costs of rebuilding public buildings and other infrastructure. The Federal Emergency Management Agency will cover the other 75 percent.

In terms of repairing the estimated 2,500 damaged houses though, Tomblin says his administration is not considering spending any additional money to supplement the federal disaster relief funding.

West Virginia's Money Woes Could Hamper Flood Recovery

By Andrew Brown

Charleston (WV) Gazette, July 14, 2016

Nearly four weeks after severe flooding hit several counties in West Virginia, Gov. Earl Ray Tomblin and his administration said the Mountain State is moving into the long-term response phase.

But with an estimated 2,500 houses damaged and more than $55 million in road and bridge repairs needed — according to numbers provided by West Virginia Transportation Secretary Paul Mattox —the state's role in helping homeowners, businesses and local governments that are recovering from the flooding could be limited — or impossible — because of slumping tax revenue and budget constraints in the state government.

As a result, West Virginians who are trying to rebuild their lives will be almost completely reliant on federal agencies and the limits of the disaster recovery programs that they administer.

For the county and city governments, the costs of rebuilding public buildings and other infrastructure might be solved. The Federal Emergency Management Agency will cover 75 percent of the costs under the agency's Public Assistance program. Tomblin suggested that state lawmakers might be asked to appropriate the other 25 percent of those costs through the state's Rainy Day Fund.

At a news conference Wednesday, Tomblin said he anticipates calling the Legislature back to Charleston for a special session, but wasn't sure when that might occur.

"That's one of the reasons that we have a Rainy Day Fund," Tomblin said. "Obviously, we do have the money there. Hopefully, the Legislature, at the appropriate time, will allow us to take that money."

But for the average West Virginian, whose home or business was damaged or destroyed by the flooding, Tomblin said his administration is not considering any additional money to supplement the federal disaster relief funding.

For businesses without flood insurance, it means owners are going to be reliant on loans from the U.S. Small Business Administration or private lenders, which, in some instances, can be insured by the West Virginia Economic Development Authority. That money, obviously, isn't free, and needs to be paid back, with interest.

For homeowners without insurance, they are going to have to live with the federal grants that FEMA provides to them through the agency's individual disaster assistance. The max you can get through that program is $33,000 and, if homeowners or renters need any more to rebuild, they'll have to rely on the SBA for a loan or seek out private lending.

Tomblin made it clear Wednesday that the West Virginia government can't afford to fund other financial assistance for the people who lost their homes, clothes, furniture and cars to the surging floodwater that swept through parts of the region.

"We're not considering it at this time," Tomblin said. "Obviously, we're under some tight budget constraints ourselves."

The underlying financial problem is largely a result of the lack of flood insurance among many of the communities that found themselves awash on June 23. In some instances, homeowners in a floodplain dropped their insurance after they paid off their mortgage. Others weren't in the floodplain and weren't eligible for discounted insurance, but found their home under water anyway.

In Richwood, there were only 40 policyholders under the National Flood Insurance Program, as of May of this year. Clendenin had 60 insurance plans. Rainelle had 40. White Sulfur Springs had 84. And in Clay, there were only 6 flood insurance policies in place.

That means most of the people in those communities who were hit are reliant on whatever money FEMA decides they are entitled to.

While some are frustrated with the grant total they are qualifying for, federal officials made it clear that FEMA was not created to pay for everything that people lost. And after national flood events, like Hurricane Katrina and Hurricane Sandy, federal lawmakers have called for the agency to rein in the cost of major flooding events.

"When FEMA was created, it was created to give folks a step towards recovery — to get them safe, to get them sheltered — but it was never really meant to make them whole again, like they were pre-disaster" said Albie Lewis, the Federal coordinating officer for FEMA, who spoke with the governor Wednesday. "So we are just one part of that entire process. That is why it's so important that we partner with all the other agencies and volunteer agencies to bring people back to normalcy."

During Wednesday's news conference, Tomblin and members of his administration also said the warning systems for the major flooding event that killed 23 people worked properly and that it is too early to know what types of polices need to be reviewed or changed to help prevent or limit flooding damage of this magnitude in the future.

When questioned about a state Flood Protection Plan that is more than a decade old but not fully implemented, Jimmy Gianato, the director of the state's Division of Homeland Security and Emergency Management, said his agency has adopted some of the recommendations laid out in the 365-page report but that much of that plan required legislative action that never took place.

Gianato specifically cited the adoption of better warning systems for flooding, which now includes cellphone alerts, radio and television announcements and, in some cases, reverse 911 alert systems.

He also said additional gauges that track water levels have been installed in streams and rivers throughout the state over the past 10 to 15 years.

Neither Tomblin or Gianato directly stated during the news conference whether they will review the unadopted portions of the Flood Protection Plan. Tomblin spokeswoman Jessica Tice said that decision would have to be made later.

"A final decision has not yet been made regarding a review of the flood protection plan," Tice said. "Additionally, the need for a potential after-action review is still being assessed.

"Any additional factors or considerations will be up to the administration in place at that time."

Homeowner Sued For $25 Million Over California Wildfire

Associated Press, July 14, 2016

LOS ANGELES — The federal government sued a homeowner for nearly $25 million on Thursday, contending his negligence sparked a 2013 fire in the mountains east of Los Angeles that forced 5,000 people from their homes.

The lawsuit says that a short in a poorly maintained electrical junction box sparked a blaze in the San Jacinto Mountains above Palm Springs that charred more than 27,500 acres of brush and timber —

about 43 square miles — and at one point threatened the town of Idyllwild.

Investigators determined that the lid of the plastic box containing wires was warped and ajar, the lawsuit said.

"As a result, an electrical discharge inside the box shot sparks and hot material out of the box and onto dry ground vegetation below," according to the lawsuit.

"Property owners and their agents have a responsibility to ensure that property under their control is maintained in a safe fashion," U.S. Attorney Eileen M. Decker said in a statement.

The fire endangered "countless lives, including those of firefighters who battle these large-scale blazes," she said.

The fire burned for more than two weeks in and around San Bernardino National Forest. More than 3,000 firefighters, 250 fire engines and 30 aircraft fought the blaze.

The U.S. Forest Service spent more than $15 million on firefighting, and the blaze caused in excess of $9 million in damage to resources, ranging from wildlife and timber to eroded soil, according to the lawsuit. More than $300,000 was spent on emergency rehabilitation of the area.

The lawsuit, which alleges negligence and violations of California law, was filed in Los Angeles one day before the third anniversary of the fire's eruption. It names Tarek M. Al-Shawaf and two caretakers he employed at his home, known as Gibraltar West, in the community of Mountain Center.

The lawsuit was filed after Al-Shawaf and the caretakers failed to pay the costs of firefighting and fire damage demanded by the government, according to the lawsuit.

Messages for Al-Shawaf's attorney, James Lance of San Diego, weren't immediately returned.

Severe Weather, Power Outages In Oklahoma

WRC-TV Washington, July 15, 2016

Former Presidents George W. Bush, back right, and Bill Clinton, back second from left, speak on stage alongside former United Kingdom Prime Minister Tony Blair, back second from right, at the Presidential Leadership Scholars graduation on July 14, 2016. The three presidents were hustled away after winds began breaking windows.

A strong storm sent powerful winds through Arkansas and Oklahoma, forcing the evacuation of a high school graduation and leaving thousands without power, NBC News reported.

Former Presidents George W. Bush and Bill Clinton and former British Prime Minister Tony Blair were whisked away from an Arkansas high school graduation Thursday after severe winds began breaking windows. It wasn't known where they were taken.

The storm brought as much as 2 inches of rain that fell in six hours. There were also reports of scattered flaw floods. Sustained winds above 50 mph were recorded in many parts of the state, with hurricane force gusts above 70 mph in spots.

Electric utilities reported almost 130,000 people in Oklahoma and 63,000 in Arkansas were left without power because of the severe weather.

According to the National Weather Service, significant wind damage was possible across southeastern Oklahoma into western Arkansas as the system moves toward the mid-Atlantic region.

Weather Advisories Issued For Southwestern Pennsylvania

Pittsburgh Post-Gazette, July 14, 2016

Numerous weather advisories were issued in southwestern Pennsylvania this evening after strong storms made their way through the region.

Officials reported numerous trees and wires down throughout Allegheny County this evening after heavy thunderstorms began pounding the region around 8 p.m.

Earlier tonight, the National Weather Service announced a flood advisory for parts of Allegheny and Westmoreland counties. The weather service also issued a severe thunderstorm warning for northern Fayette County and southeastern Westmoreland County.

Up to an inch of rain hit the area, according to weather service meteorologist Brad Rehak.

Pittsburgh River Rescue responded to two overturned watercraft on the Allegheny River about 8:15 p.m., city public safety spokeswoman Sonya Toler said.

A boat with six people inside capsized near Washington's Landing Marina, Ms. Toler said. A canoe with two people inside overturned underneath the 31st Street Bridge, she said.

All of the boaters were rescued, and none of them required medical attention.

Duquesne Light reported that 350 customers in Monroeville were without power as of 10 p.m. Another

50 customers were without power in Castle Shannon, according to Duquesne Light.

The Pittsburgh Riverhounds game at Highmark Stadium was delayed during the thunderstorm as power went out in the stadium.

The Riverhounds said on their Twitter account that the power outage appeared to affect the entirety of Station Square.

Tornado Warning Over, But Counties Warned Of Thunderstorms

Associated Press, July 14, 2016

PHILADELPHIA – A tornado warning is no longer in effect for a county in eastern Pennsylvania and one in northwestern New Jersey but thunderstorms are still bearing down in some areas.

The National Weather Service had said a severe thunderstorm Thursday afternoon was capable for producing a tornado in Northampton County in Pennsylvania and in central Warren County in New Jersey. The warning passed at 3:15 p.m., but severe thunderstorm watches and warnings were in effect for several counties in New Jersey. Union County, eastern Passaic County, Essex County, southeastern Bergen County and Hudson County were all under a thunderstorm warning until 4:30 p.m.

The agency urges people in those areas to take cover until about 3:15 p.m.

DNR Grant To Stabilize Trails, Aquatic Habitats Along Vermillion River

By Natalie Daher

Minneapolis Star Tribune, July 14, 2016

A Department of Natural Resources (DNR) grant will help stabilize eroding trails along the Vermillion River in Farmington and improve the habitat for its aquatic species.

The $225,000 grant is expected to preserve the riverbank in Rambling River Park, a popular site for biking and trout fishing, between Schmitz-Maki Arena and the County Road 50 bridge. The city and the Vermillion River Watershed Joint Powers Organization, made up of Dakota and Scott County commissioners, will lead the project, and construction will begin in 2017 or 2018, planners say.

"We wanted to mitigate the erosion issue, because if we didn't, eventually it would eat away the trail," said Randy Distad, the city's parks director. "Down the road, we would have had to address reconstructing the trail because of the erosion."

During a recent site visit, officials with the DNR, the watershed group and the Dakota County Soil and Water Conservation District detected three areas with "considerable erosion," Distad said, along the trail. The project's other goals include providing refuge areas for trout and other aquatic species, restoring vegetation along the trail and mitigating future flooding.

The City Council approved an agreement with the watershed group at its latest meeting and will contribute $20,000 in staff time and in-kind services. The watershed group will contribute $30,000 for project design and management as well as $5,000 for construction.

The DNR requires construction to occur in April and September to protect trout spawning season. The city will next finalize designs and select a contractor, Distad said.

Residents Stranded, Roads Remain Closed After Torrential Rains

By Maggie Angst

Milwaukee Journal Sentinel, July 15, 2016

Residents in northern Wisconsin are grappling with the aftermath of extreme storms and flooding that swept through the area earlier this week, leaving three people dead, roads washed out and some residents still stranded in their homes.

Authorities on Thursday confirmed that a third person had died as a result of the flooding.

Elmer Lippo, 82, of Marengo, was found early Thursday in a pickup truck in the floodwaters of the Marengo River in the Town of White River.

The Ashland County Sheriff's Office said Lippo was an elected supervisor for the Town of Marengo.

Meanwhile, authorities said Thursday that main roads in several counties are still closed, including U.S. Highway 2 between Ashland and Hurley, state Highway 13 and U.S. Highway 63. And chances are they will not reopen anytime soon.

State and county engineers will be out evaluating damage to bridges and roads over the next few days.

"We want to make sure we're making these roadways as safe as possible, as soon as possible," said Diana Maas, spokeswoman for the state Department of Transportation's northwest region. "We're out there actively working to resolve as many issues as possible, and many other roadways are open already."

Gov. Scott Walker on Tuesday declared a state of emergency in eight northern Wisconsin counties — Ashland, Bayfield, Burnett, Douglas, Iron, Sawyer, Washburn and Price counties — after torrential rains flooded parts of the area, causing three fatalities, closing roads, destroying a harbor and washing out multiple roads.

Maas said the main corridors of U.S. Highway 2, state Highway 13 and U.S. Highway 63 are a major concern.

Repairs on state Highway 13 in Ashland County will take the longest, up to five months, she said. Two bridges near Highbridge were washed out and significantly damaged. The agency is hopeful an alternate route on county trunk roads can be used in a couple of weeks until the bridges on the highway can be replaced.

A bridge on U.S. Highway 63 also was significantly damaged near Grand View in Bayfield County. The state is working on terms to hire an emergency contractor by Monday. The highway will be closed for about a month, and there are no reasonable alternative routes in that area, according to Maas.

Water levels on U.S. Highway 2, which passes through Ashland, Bayfield and Iron counties, are too high to assess the damage right now, she said. Officials suspect the damage is minimal and that the road will reopen in a few weeks.

"We're hopeful the water will go down by the end of the week and we'll be able to fully assess the damage," Maas said.

The closures come at the height of region's busy tourist season. And local businesses and state Department of Tourism are encouraging visitors not to cancel their vacation plans. Many businesses and parks remain open, they say. But they urged travelers to call the local chamber or tourism office, or check state web sites for road closings and park and trail conditions.

Claire Rupnow of the Bayfield Chamber of Commerce and Visitor Bureau, said the annual Bayfield Festival of Arts is still on for this weekend, but some people will have to make a significant detour to attend.

"Roads to the west are open, so people coming from that direction, like Duluth will be fine," Rupnow said. "People from Michigan's Upper Peninsula or southeast Wisconsin will have about a three-hour detour."

High waters and road closures continued to strand some residents in Bayfield and Iron counties on Thursday.

In the Town of Lincoln in Bayfield, about 26 people were isolated in their homes, and authorities were using boats to get supplies to them "on a road that is now a river," said Jan Victorson, director of emergency management for Bayfield County.

Washed-out roads in the Town of Gurney in Iron County had left four families stranded in their rural homes off state Highway 169 as of Thursday morning. Town Chairman Tom Innes said authorities were hoping to reach them through a back channel by the end of the day.

Elsewhere, the U.S. Coast Guard continued to patrol Saxon Harbor in Ashland County and monitor stranded boats, which were destroyed by the storms. Local and county officials are meeting with the U.S. Coast Guard to determine a damage estimate to the facilities and develop a repair plan for the harbor.

About 85 boats and 100 boat slips were damaged or destroyed, according to the Wisconsin Emergency Operations Center. As of Thursday morning, 40 of those were displaced, some ending up miles off shore. Six were unaccounted for, and four had sunk, said Christopher Yaw, public affairs specialist with the U.S. Coast Guard.

"Pollution is the main concern because most of those vessels have fuel and oil on board," Yaw said. "We don't want any of that leaking and getting out into the environment so we're helping to get that cleaned up and mitigate those posing a threat."

Also Thursday, Sawyer County authorities were assuring residents that the Nelson Lake Dam is not in danger of failing. They continue to monitor water levels in Hayward, they said. And inmates from the Department of Corrections' Gordon Correctional Facility are helping to fill sandbags through Saturday.

The extent of the damage across the region is still being assessed. The Department of Transportation is working with the governor's office and the state Department of Administration, as well as the Federal Highway Administration, in an effort to secure relief funds.

U.S. Rep. Sean Duffy and Sen. Ron Johnson sent a letter to President Barack Obama on Thursday seeking disaster assistance.

Below are the preliminary damage estimates for counties assessed so far by the Wisconsin Emergency Management Center.

■ Burnett County: about $375,000 in damage to roads, bridges and other public infrastructure.

■ Douglas County: about $602,800 in damage and repair costs from flooding of roads, bridges and public buildings.

■ Sawyer County: about $70,000 in minor damage reported to 15 homes, and $365,000 to public infrastructure, including roads and bridges. County officials are reassuring the public the Nelson Lake Dam is not in danger of failing.

■ Chippewa County: About $25,000 in damage was reported to one home. The damage was caused by a tornado that touched down near the O'Neil Creek Campground.

U.S. Weather Forecaster Sees Likelihood Of La Nina August-October

Hurricane, Emergency Prep Are Key For Area Communities

By Jill Narciso, Senior Living Correspondent

Houston Chronicle, July 14, 2016

Despite a record 33 inches of rain in April, May and June, local retirement communities state they are more than prepared for this year's hurricane season.

Buckner Parkway Place and Holly Hall take the necessary precautions each year to make sure residents are safe at the time of an emergency.

"The time to prepare for an emergency is before you have one," said Carol Klappenbach, director of performance improvement at Holly Hall.

Accoding to Klappenbach, Holly Hall has enough emergency supplies to sustain its 216 residents for at least a week, including food, water, medication, flashlights, batteries and an emergency generator. At the start of hurricane season, Holly Hall updates inventory, adds extra supplies and updates its staff phone list. While Holly Hall facilities have not been impacted by recent floods, its surrounding streets have flooded and prevented staff from coming to work and relieving the prior shift.

Part of Holly Hall's disaster plan involves determining which staff realistically would be available in an emergency so they can better organize responsibilities. Klappenbach said while she is currently not seeing patients, she is a licensed RN and can help in an emergency if necessary.

"You just don't know," Klappenbach said. "In Texas, a storm comes out of nowhere and drops a lot of water."

Holly Hall residents are also notified in a written letter each year signifying the start of hurricane season, and staff helps residents register on the 211 emergency management database.

The retirement community at Buckner Parkway Place follows a similar emergency plan.

Sunny Chatagnier, executive director of Buckner Parkway Place, said the community will never run out of food for its 400 residents. Besides canned goods, Parkway Place has a contract with its suppliers to have extra food delivered if necessary, or to have a refrigerated truck available on site. In an emergency, residents will continue to have "real meals," Chatagnier said.

Other emergency supplies at Parkway Place include a large emergency generator, batteries, flashlights and medical supplies. There is also enough water set aside for drinking water, and water to flush toilets.

In addition, Parkway Place staff is trained on disaster response each year by the Office of Emergency Management. This month, Parkway Place also will hold an informational session for residents about hurricane preparedness.

However, Chatagnier said during a hurricane, most independent living residents like to stay with their families if possible, and they mainly track who remains on or off the site. Assisted living and skilled nursing residents remain at Parkway Place, and staff is directed to those who need the most care.

Both Parkway Place and Holly Hall are "shelter-in-place" communities, which means they only will be evacuated if they are notified by the state of Texas. In this scenario, Parkway Place residents will be transported to a sister community in the cities of Austin or Longview, while Holly Hall has facilities in town and out of town for residents to be transported if necessary.

Chatagnier said even with the recent floods, Parkway Place operations ran "as smoothly as normal" thanks to its staff, and at the time, residents were more concerned about their families.

With hurricane season stretching to Nov. 30, Chatagnier is confident in the community.

"With hurricanes we have advance warning," Chatagnier said. "For the most part, the safest place to be is here. Residents will be provided for and kept safe to the best of our abilities."

Emotional Healing After A Flood Can Take Just As Long As Rebuilding

NPR, July 14, 2016

A small memorial marks the former homestead of the Nicely family, who died in the June flooding of White Sulphur Springs, W. Va. Kara Lofton/West

Virginia Public Broadcasting hide caption toggle caption

A small memorial marks the former homestead of the Nicely family, who died in the June flooding of White Sulphur Springs, W. Va.

Kara Lofton/West Virginia Public Broadcasting

Most of the front door of Rachel Taylor's little yellow house in White Sulphur Springs, W. Va., is pasted with paw prints where her dog struggled to get inside during the flood last month. He was too big to carry through the rising waters.

Across the street, nestled between two battered houses, an empty lot is marked by a cross with an array of flowers and photos — a small memorial for a family washed away by the torrent.

Taylor's dog survived and is now with some of her family members in Kentucky. But those neighbors across the street, the Nicelys, were swept away when their house collapsed; they have since been confirmed dead.

"When I start feeling overwhelmed with this," Taylor says from her front porch, "I just look across the street at that memorial and I think, there's nothing that we have lost that can't be replaced or mended."

She and her husband spent seven years renovating this 1930s Craftsman house, room by room. They were just about done with renovations when their house flooded a few weeks ago. Today the living room is gutted.

"You know, the first couple of days it was very intense," Taylor says. "It was kind of 'crisis mode.' Maybe that's the way I would describe it, because you didn't really have time to think about it and process it."

But once the full extent of the damage set in, Taylor says, she developed severe nausea and carsickness to the point of not being able to drive.

A number of people, she says, have chalked up her symptoms to nerves. "You know, the stress level. You don't realize your body is just having a response to this."

Taylor worries that the houses in her neighborhood will remain abandoned and that she, her husband and her 14-year-old daughter won't feel safe at home anymore. She plans to rebuild, but says her family will likely sell the house and move.

Rachel Taylor surveys the flood damage from her front porch in White Sulphur Springs, W.Va. Muddy paw prints on the front door still mark her dog's panic as the waters rose. He survived, but others didn't. Kara Lofton/West Virginia Public Broadcasting hide caption toggle caption

Kara Lofton/West Virginia Public Broadcasting

"The words we use when we talk about it are 'I don't know if I have it in me;' 'I'm not sure if I can do it again,' " she says. "Things like that. And then we just say, 'Well, we'll take it one day at a time.' "

Psychologists say this kind of response is normal following natural disasters.

"It's a physical aspect of the stress response — it will affect the body's ability to concentrate, to rest and to be able to function," says Marcie Vaughan, leader of the state-funded West Virginia Community Crisis Response Team. "Cognition is slowed and impaired," she adds.

Vaughan's team offers support, counseling and referrals for further mental health care at local behavioral health centers.

"From the behavioral health perspective, we find we are more in need after the tenth [or] twelfth day," Vaughan says, "just because immediate needs of food, clothing and shelter take precedence."

In the first few days following the flood, Vaughan's team members split their time between helping people replace lost psychiatric medications and looking for signs of mental distress in people at shelters or feeding stations.

"We see fatigue, problems with cognition," she says. "You have individuals who walk into a supply center and they have no idea what they need."

A 2012 study published in the journal Social Psychiatry and Psychiatric Epidemiology found that while most people bounce back a few months after a disaster, if their ongoing stressors aren't addressed — such as a lack of permanent shelter, financial challenges and repeated exposure to the trauma — affected residents will continue to struggle.

In addition to Vaughan's team, church disaster-assistance teams and Hope Animal-Assisted Crisis Response — a support organization that uses trained therapy pets for comfort — stepped in to help.

"As the fatigue sets in and the frustration, we see an increased need for behavioral health intervention," says Vaughan.

Unfortunately, that's just when the work becomes hardest, Vaughan says, and it's often after national organizations and media have lost interest. Very real, tough problems persist, though only local groups and neighbors remain to extend helping hands.

This story is part of NPR's reporting partnership with West Virginia Public Broadcasting and Kaiser Health News.

FEMA HOUSING

FEMA Unveils 'Last Resort' Mobile Home Housing For Flood Victims

By Matt Maccaro

West Virginia MetroNews, July 14, 2016

QUINCY, W.Va. — For those unable to find temporary housing as they rebuild from last month's flood, FEMA unveiled temporary mobile homes in eastern Kanawha County Thursday.

About a dozen mobile homes were lined up, which can be used for up to 18 months in Greenbrier and Kanawha counties.

"This is housing of last resort," said FEMA Public Information Officer Bob Howard. "What we're trying to do is get people into more permanent housing, either rental units or other long term housing while they're repairing and rebuilding their homes. As has been identified in those two counties, there's a shortage of rental units."

The homes were available in one, two and three bedroom units, as well as accessible units for those who are disabled.

"The first thing we're trying to do is encourage people to find housing," Howard said. "There is a housing website that people can go on and check on that. Then we look at other options in the area; local hotels; these kinds of things."

Howard explained that even if the mobile units are being used long term, FEMA would still keep tabs on the rebuild of the residents' homes.

"People are evaluated on a regular basis what's the progress on rebuilding their home, what's their recovery plan. But it can extend up to 18 months."

For those still looking for flood relief assistance, Howard said the first step is to register with FEMA online at disasterassistance.gov or by calling 1-800-621-3362.

FEMA Seeks Landlords With Vacant Properties To House Flooding Victims

By Amanda Barren

WSAZ-TV Huntington (WV), July 14, 2016

KANAWHA COUNTY, W.Va. – Those left without a home because of the June 23 flooding will be eligible to apply for a temporary trailer to call home from the Federal Emergency Management Agency.

The units are fully furnished and come with utility hook-ups.

The mobile homes are actually a last resort for FEMA. The agency is trying is to get people into already standing apartments and homes. That is preferred because the trailers cannot go into the flood zones where the people once lived.

"There are combined units of state and federal people looking at all these accessible sites," said Thomas Kempton with FEMA. "They are working with the local community leaders to identify these sites. We have specialists. That's their job, to go out and search for those kind of sites."

Landlords with vacancies can email FEMA if they think they can help with housing needs. Send emails to: FEMA-Housing@fema.dhs.gov and include your name, contact number, and property location.

NFIP AND FLOOD MAPS

Flood Zone Changes Could Impact Thousands Of St. Johns County Structures

By Bakari Savage

WJXT-TV Jacksonville (FL), July 14, 2016

ST. JOHNS COUNTY, Fla. – The Federal Emergency Management Agency will be reconfiguring flood zone designations for thousands of structures in St. Johns County, which will affect how much homeowners pay for insurance.

About 10,000 buildings will be moved out of the flood zone and 1,600 will be moved into the flood zone, according to the preliminary map.

Properties in the coastal areas will be moving off the flood zone list, largely because of dunes. But low-lying spots in Ponte Vedra Beach, mainly Sawgrass, will be added to the flood zone list, the preliminary map shows.

Insurance agent Matt Carlucci said he has seen these changes happen before.

"The big myth is, 'Oh, I'm not in a flood zone.' Everybody is in a flood zone," Carlucci said. "People would be surprised at how little the retention ponds actually hold the rain. A lot of people in low-risk flood zones do get flooded."

Carlucci said anyone who lives in the Sawgrass area or in one of the neighborhoods being added to the flood zone list could see a change in the price of insurance.

"The premiums are going to go up because they're at high risk," Carlucci said.

The preferred rate for high-end flood insurance is about $250,000, Carlucci said. That would break down to about $500 per year.

He recommended that anyone who lives in a high-risk flood zone should get an elevation certificate, which will give an exact measurement of how high the property is above the base flood elevation.

That will help calculate the rate and could save money, according to Carlucci.

"Oftentimes, getting the elevation certificate will help you. If you don't, it'll go to the standard rate. That can run from about $2,000," Carlucci said.

Anyone interested in getting an elevation certificate will have to get in touch with a land surveyor, who will then come out to the home and do it.

People living in the affected areas can also call their insurance agent to discuss rate changes.

To find out if a home is impacted by the flood zone changes, check out the St. Johns County's flood map viewer.

FEMA said it will be holding public outreach meetings in the near future, which will provide additional information on any insurance impacts and the appeal process. The dates of the meetings have not yet been announced.

Palo Alto Considers Bracing Now For Sea Level Rise

By Jacqueline Lee

San Jose (CA) Mercury News, July 15, 2016

PALO ALTO – Many more Palo Alto homes and businesses than the 2,700 estimated to be vulnerable in a 100-year flood of San Francisquito Creek could be inundated if sea levels rise at least a foot, according to federal flood maps.

In an attempt to ward off such a disaster, the City Council has directed staff to plan for a 55-inch sea level rise by 2100. Staff requested that course at a May study session.

A 55-inch sea level rise would endanger properties from the Bay to Middlefield Road, between Embarcadero and San Antonio roads, according to maps from the Federal Emergency Management Agency.

Such flooding would cut off the Palo Alto Airport, Palo Alto Municipal Golf Course, the Regional Water Quality Control Plant serving multiple cities and the city's Municipal Services Center, thus limiting some emergency response capabilities.

Bayfront levees from San Francisquito Creek to the Mountain View border do not meet today's height and construction standards set by FEMA for 100-year floods, let alone for more potentially damaging sea level rise.

The local San Francisquito Creek Joint Powers Authority is studying the feasibility of proposals for new levees and results should be available this summer.

"The levee has to be rebuilt, but also raised," said Phil Bobel, the city's assistant director of public works.

A typical levee in Palo Alto stands about 10 feet high, Bobel said. Consequently, a 100-year flood in the area, or a tidal wave of 11 feet, would wash over an estimated 2,700 properties in Palo Alto, even if the sea level does not rise.

More Peninsula properties will be included in the floodplain if sea levels continue to rise.

Experts agree that the rate of sea level rise is expected to accelerate in the next century, but predictions range from 1 foot to 6 feet and beyond.

The Bay has seen 0.63 feet of sea level rise over the last century.

"We've got to protect our facilities," Bobel said. "But it actually makes sense to do things incrementally given the level of uncertainty."

One proposal would have the new levees built up to 18 feet, which assumes a mid-range estimate of sea level rise of 3 feet and takes into account higher waves from wind, Bobel said.

A 3.28-foot rise in sea level would put 220,000 Bay Area residents at risk, according to an estimate by the Pacific Institute. It's unclear how many Palo Alto residents that figure includes.

FEMA flood maps do not currently account for sea level rise, but the 3 feet was included to begin planning for sea level rise projections for the next 50 years.

"We don't know for sure how much it's going to rise, so you probably wouldn't design these levees at the extreme," Bobel said. "You would build them to that maximum height, but what probably makes the most sense is to build a big firm base for them ... so you can add height over time."

A feasibility study to be released this summer related to the Strategy to Advance Flood protection, Ecosystems and Recreation along the Bay, or SAFER Bay, project will include options for boundaries and height of the new levees.

The jurisdictions affected by the levee update project – Palo Alto, East Palo Alto, Menlo Park, Santa Clara Valley Water District and San Mateo County Flood Control District – will have to agree on where to place the levees.

Then, “hundreds of millions of dollars” will have to be secured locally and federally for the multi-year project, Bobel said.

In coming months, Palo Alto officials could be deciding what resources to pour into the effort and how much research to devote toward developing new zoning codes and building restrictions for areas potentially impacted by sea level rise.

Vice Mayor Greg Scharff said sea level rise is a concern, but it’s important to weigh it against the city’s other priorities. He anticipates other agencies will provide more data and clarity in the next two years, so the city may be in a better place then to help address this regional issue.

“We talk about a lot of stuff at council ... and then there’s no staff resources to do it,” Scharff said. “Should we be spending city time to do this at this time? Do you have the bandwidth?”

Councilman Cory Wolbach said he shares Scharff’s concerns about staff limitations and priorities, but sea level rise is too important of an issue.

“I’m not willing to drop this one,” Wolbach said. “We’re talking about an existential threat to large parts of Palo Alto, essentially irreplaceable, mission critical utilities equipment and other infrastructure.”

Some properties could potentially be affected by flooding from the Bay as well as San Francisquito Creek.

About 40 percent of the creek floodplain is also in the Bay floodplain, according to Len Materman, executive director of the San Francisquito Creek Joint Powers Authority.

The agency was formed following a combination of creek and tidal flooding in 1998 that caused millions of dollars of damage in Menlo Park, East Palo Alto and Palo Alto.

New Dorp Beach Houses To Be Acquired By Build It Back

Staten Island (NY) Live, July 14, 2016

STATEN ISLAND, N.Y. – A new city pilot program is poised to scoop up possibly dozens of abandoned properties in New Dorp Beach that have been badly damaged in Hurricane Sandy and left to rot.

Amy Peterson, director of the city’s Housing Recovery Office, announced the pilot, taking place in that neighborhood and in Brighton Beach in Brooklyn and Edgemere in Queens.

With her was Assemblywoman Nicole Malliotakis, who, along with state Sen. Andrew Lanza and Councilman Steven Matteo, last year asked the city to consider acquiring the abandoned properties through its Build It Back program, funded by the U.S. Department of Housing and Urban Development. Malliotakis and then-Councilman James Oddo had penned letters to the city since 2012, asking them to help with abandoned properties.

Peterson announced Thursday that the city is using its funds to buy houses, as long as owners are willing to sell.

Standing in front of an abandoned house at 32 Topping St., Malliotakis said residents have their property values lowered by neighboring abandoned and dilapidated houses that attract rodents and sometimes squatters.

The Topping Street house sits between two elevated houses — one rebuilt and elevated and the other in the process. The one-story home sits low to the ground, left abandoned for years. There are a handful of houses on the street that are elevated or in the process of being elevated. They sit beside houses like the one at No. 32 — close to the ground and vacant.

Nicole Romano, president of New Dorp Civic Association, is in an attached house and can’t elevate hers without her neighbors agreeing to raise their houses too. Plus there are other logistical issues. She is hoping she won’t have to elevate her house — once a planned seawall is built, it will protect homes in the area and flood insurance rates will decrease and she will be able to afford it.

“The wall is my saving grace,” she said.

There are many people who are finally coming home, back to the neighborhood they left after Hurricane Sandy “only to see there’s still a lot of devastation here,” she said.

The neighborhood has a slightly eerie feeling — pretty, newly reconstructed homes sitting next to destroyed, abandoned houses.

“The reminders of Sandy are still here,” Romano said.

Build It Back officials will canvass New Dorp Beach and the Brooklyn and Queens neighborhoods to identify which houses are abandoned. They will contact the homeowner or bank that owns the property and try to convince them to sell.

Once the city buys the properties, it will demolish the houses and sell the land to a developer who will build according to FEMA standards.

Peterson said the city would offer to purchase properties at post-storm values.

Malliotakis and Romano have already created a working list of many abandoned properties in the neighborhood, estimating there are between 40 and 50.

It's not the only community on Staten Island to see abandoned houses pepper its streets but it's the one selected by the city for the pilot.

Malliotakis expects the bank-owned properties to be eagerly sold to the city. After all, since the state passed a law recently battling "zombie" properties, banks have to care for and maintain houses they own once the foreclosure process begins, not once it's completed, which can take years.

"There's going to be really no reason for them to hold onto these properties and I hope they will sell so we can" get people into these homes.

Bloomingdale Bar's Kitchen Open For Business

By Deborah Walsh

North Jersey (NJ) Media Group, July 14, 2016

BLOOMINGDALE – The borough has had a new pub on Main Street for about nine months where residents can quench their thirst with a variety of tap beers and other libations, and now they can have "Soule food" too at River of Beer.

In celebration of the kitchen being open at River of Beer (aka "The River"), the public is invited to a grand opening on Tuesday, July 18, at 4:15 p.m. There will be a ribbon-cutting ceremony, and local and county dignitaries have been invited as well.

The River is run by the Soule family of Kinnelon. Fred Soule said business has been good, with his taproom getting busier and busier every day. The establishment began serving food two weeks ago, and the fare is drawing rave reviews. Those attending the grand-opening ceremony can taste for themselves as free samples will be provided.

Soule said The River gets its beef fresh from a Sussex County rancher, which is compatible with his aim to provide locally-sourced food and beverage options. The beef, used in The River's hamburgers and roast beef sliders, is from grass-fed cattle.

Soule's wife Nancy also came up with the recipe for "turkey gobblers," which consists of turkey wrapped in stuffing that is then fried and topped with cranberry sauce. That item is becoming a fast favorite, he said.

All the food is made from fresh ingredients and prepared from scratch, he said.

The holdup of the kitchen opening was the result of Federal Emergency Management Agency (FEMA) regulations. Because the basement of the establishment is located in the floodplain, FEMA would not allow food storage in refrigeration boxes in the basement unless the units met certain specifications. The owners of The River had to install watertight flood-proof units that had to be certified. Now that The River has received its certifications, it received its permanent certificate of occupancy, and the eagerly-awaited dining experience has begun. A new menu will be published shortly, Soule said.

The pub, which has a capacity of 86 patrons, prides itself in providing a fun atmosphere complete with eight TVs and games, like a giant Jenga. Young patrons routinely play with the pub's board games, and even put down their cell phones to do so, said Soule.

The interior features dark wood and a touch of antique furnishings, and the exterior draws customers to a fire pit and a corn hole game. The bar has 20 taps of beer from local craft breweries or microbreweries in the taproom. The beer inventory includes several selections of Ramstein beer from the High Point Brewery in Butler, which brews year-round and creates seasonal varieties. The beers are rotated, with patrons routinely getting the chance to try something different from microbreweries in the area.

The Main Street establishment also includes a whiskey bar that stocks craft whiskies. The pub has rear parking available, and patrons are permitted to park in the Wells Fargo lot.

For more information on River of Beer, visit riverofbeer.com or call 973-750-1820.

New FEMA Floodmaps Drawn For Lake Of The Ozarks; Some Homeowners To See Insurance Savings

By Nathan Bechtold

Lake Expo Online (MO), July 14, 2016

CAMDEN COUNTY, Mo. — New floodplain maps drawn by the Federal Emergency Management Agency (FEMA) will spell big savings for many homeowners at Lake of the Ozarks. The preliminary versions of the new maps were recently completed. Click to view.

The maps, known as "Flood Insurance Rate Maps" (FIRM) are used by insurance companies to set rates based on projected flood risks.

Camden County Presiding Commissioner Greg Hasty says the main areas affected by the new maps are mainly on the Niangua Arm, but some other areas are included too. He says the new maps are far more accurate than previous versions, and that they properly represent areas that genuinely do flood as well as areas that don't. None of the areas affected by the two floods in 2015 have been moved outside the flood zones, Hasty noted.

FEMA will be sending a consulting officer to discuss some of the specific ways the redrawn maps will affect county government and citizens.

Hasty says he has been working on seeing the flood maps redrawn for four years.

"These maps are a vast improvement and will remove thousands of homes in Camden County from a special flood hazard area," Hasty said, adding, "It's a great day for Camden County.

Climate Action Business Assoc. Shares Resiliency Plan With Scituate Businesses

By Kristi Funderburk

Scituate (MA) Mariner, July 14, 2016

Three interns with the Climate Action Business Association went store-to-store along Front Street on Friday to help get local merchants thinking about the dangers of rising sea levels.

The Boston-based non-profit organization identified areas that are vulnerable to storms and flooding to target for its Businesses Acting on Rising Seas campaign.

The college students' goals were to provide businesses with information on the effects of sea level rise and promote climate adaptation and resiliency planning.

"We think it's really important, but people don't take it into account when they're running a business," said Pete Hoegler, a Walpole resident and junior at George Washington University. "Economic development is really important in the state of Massachusetts and climate change is really going to effect that going forward."

Sea level rise has already been part of the conversation in recent years in Scituate, which has gone back and forth with the Federal Emergency Management Agency over its latest proposed flood maps. Town officials hope to keep working with the federal agency on flaws in the maps, though the maps are up for adoption at the special town meeting this fall.

According to a 2013 study that examined the effect of sea level rise in Scituate, an extra foot by 2038 wouldn't heavily impact the harbor businesses, putting mostly the docks off the harbor below water. Sea level rise of 1 foot with a storm surge from a Category 1 hurricane is expected to flood Cole Parkway through to Front Street, the study showed.

The town has also been working with Applied Coastal Research and Engineering to determine ways it can better protect its shoreline. In late June, a company engineer proposed options ranging from beach nourishment to managed retreat.

More recently, town officials made contact with the Dutch consulate, which has been connecting with Boston, to discuss with officials there ways Holland has been successful in preventing flooding, Public Works Director Kevin Cafferty said.

"We hope to have future meetings on it. We can share technologies and ideas back and forth," he said.

In spreading word of the Businesses Acting on Rising Seas, the Climate Action Business Association interns initially had some brush off from businesses that thought of them as a sort-of marketing team, but of the 20 shops they visited, every one ultimately accepted their Small Business Resilience Guide.

The guide offered tips on what the businesses could do to better prepare themselves. That included knowing your risk, such as by reviewing flood maps; planning for different scenarios from sea level rise to extreme heat; developing an emergency plan, including getting a disaster supply kit ready; and engage the community to drive climate awareness.

Some of the shop employees even joked with the students that if they were talking about flooding, they came to the right place, noting portions of the harbor are susceptible to flooding under certain tides and during bad storms.

"Raising awareness is great," Cindy Vogel, who works at The Welch Company, said of the association's effort.

She said while many who live in Scituate already know the flood risks, she thought it was a good idea the group was spreading the word for anyone who wasn't aware.

One message the group wanted to make clear was the harsh impact of a bad storm, and how preparation can help. Sam Morales, a Boston College senior from Washington D.C., said a quarter of the businesses affected by superstorm Sandy in New Jersey and New York didn't re-open.

"We're trying to take steps to help small businesses help prepare for that kind of disaster, which is expected to hit the region in the next six years or so," he said.

The trio of interns—including Hoegler, Morales, and Chris Burnham, a Connecticut College senior from Needham—asked some of the businesses if they had an emergency plan and most often heard no. The team ran into several stores where the manager wasn't in, but were able to verify Vision Source did have an emergency plan, Hoegler said.

Less than 5 percent of the businesses in any town they've visited, including Gloucester, New Bedford, and the Back Bay neighborhood of Boston, have had one, Hoegler said.

"That's really concerning considering these places are so vulnerable," he said.

Council Gives Stamp Of Approval On Hwy. 53 Consultant, Floodplain Relief

By Jourdan Vian

La Crosse (WI) Tribune, July 14, 2016

The city of La Crosse will get started developing its vision for the Rose Street corridor after the La Crosse Common Council Thursday approved a $200,000 contract with a group of planning consultants.

The council also delayed changes to the make-up and duties of the Aviation Board and put the final stamp of approval on the floodplain relief program.

Perkins + Will, ISG and Toole Design Group will assist a city committee as they work to develop a master plan for the Highway 53 gateway into downtown, from Exit 3 to the La Crosse River.

The design group also has experience framing corridor plans in Rochester, St. Paul and Minneapolis. Their proposal for La Crosse calls for a consultant team to focus on open access, redevelopment and new investment.

Council member Ryan Cornett, who chairs the highway 53 steering committee, said the group chose the consultant in part because of their ability to offer a working document, rather than one that would sit on a shelf somewhere gathering dust.

"We couldn't make a bad decision on this one and we're going to have a document in the end that will actually give us something practical to work with," Cornett said.

Council members Gary Padesky, Jai Johnson and Martin Gaul voted against the contract, with Padesky saying he didn't approve of the expense.

"I'm opposed to this. I don't know where everyone feels we have this money tree, but we can put that money to a lot better use," Padesky said.

Cornett disagreed, saying the plan would be "very important," as the Wisconsin Department of Transportation continues its road construction down the state highway, citing last year's controversy surrounding the differing viewpoints between the DOT and city when it came to the Exit 3 revamp planned for next year.

The city and DOT were at odds when it came to a number of details in the DOT redesign, which is part of its larger Interstate 90 project, before eventually finding an agreement in September 2015.

Cornett said the plan would prevent similar disagreements in the future.

"This will give us the tools to direct the city, and we will have a back-up document to show the way for it," Cornett said.

The contract was approved in a 13-3 vote.

The council voted to wait a month before deciding on changes to the Aviation Board membership and powers after council member David Krump raised concerns that the ordinance changes would delete language requiring council approval for contracts related to the operation of the La Crosse Regional Airport.

The proposed ordinance change strikes one instance of language requiring council oversight, but leaves another. Krump asked that it be clarified before approval.

In other business, the council unanimously gave the planning department final approval to move forward with the floodplain relief program, which will give financial assistance to home-owners attempting to raise their homes out of the floodplain.

Under the program, the city will offer 50 percent up to $20,000 for projects that result in a successful letter of map revision which states that FEMA agrees the structure is no longer in the high-risk flood area. To be eligible, a property would need to have an assessed value of more than $50,000 and be located within the city of La Crosse.

An estimated 1,800 structures are in the floodplain.

MITIGATION

County Adopts Updated Hazard Mitigation Plan

By Melissa Crockett Meske

Jersey County (IL) Journal, July 15, 2016

Ensuring eligibility for funds in case of a natural disaster was top of mind with Jersey County Board members on Monday night.

With updates made through December 2015, the board unanimously voted to adopt a revised Natural Hazards Mitigation Plan that meets the requirements set forth by FEMA for funding from state and federal levels if any natural disasters occur in the county.

The entire plan is available for viewing on the county's website under the "Code Enforcement" section.

According to Mary Kirbach, one of the board members serving on the Legislative Committee, Cindy Cregmiles completed most of the work needed to bring the document up-to-date since its first publication in February 2008.

Patti Thompson, communications manager for Illinois Emergency Management Agency, had recently shared with Journal staff that local governments would still be eligible for public assistance funding in the absence of a local hazard mitigation plan.

However, if a state plan was not in place that had been approved by FEMA, then local governments would only be eligible for emergency work such as debris removal and emergency protective measures. Permanent repairs would not have been eligible, according to Thompson. The state has a FEMA-approved plan in place through 2018.

Jersey County Board members also approved adoption of the 2016 Prevailing Wage Act resolution, with Roger Newberry casting the only dissenting vote. In a phone interview on Tuesday morning, Newberry explained his reason for voting against adopting the prevailing wage resolution.

"It seemed to me to be that wages would be set for workers such as mechanics and laborers based on the work they would be doing for the county rather than a set wage for anyone needing that type of work. For example, if a mechanic is working on a county vehicle, why pay them any more just because it is a county vehicle?" Newberry explained.

Chairman Don Little recommended the adoption of the resolution that would form the Jersey County Citizens Corps Council being organized through Larry Mead, ESDA coordinator. This group would consist of volunteers identified throughout the county that could be called upon as needed in the event of a countywide emergency.

An addendum presented by Gary Krueger, board member, to add a further definition of what constitutes a meeting and how that impacts board member compensation was referred to the Legislative Committee for further discussion.

The board also passed a resolution of sympathy for the family of Monica Goetten Brennan, daughter of former board member Willie Goetten.

In other county business, the audit for fiscal year 2015 was accepted and the list of election judges was approved. Also approved was the closing of the road for a fireworks display on July 30 for the New Piasa Chautauqua Community.

The animal control report for June was accepted, and County Clerk Pam Warford briefly described two new database tools developed in her office.

The board then adjourned into closed session to discuss mediation activity regarding the labor contracts with the United Steel Workers and Teamsters bargaining units, with no further action taken.

Escambia To Spend $4.5M To Buy Property For New County Jail

By Drew Buchanan

The Pulse, July 14, 2016

Escambia County commissioners voted Thursday to spend $4.5 million to purchase a 14-acre property in West Pensacola to construct and expand the county jail complex.

The purchase of the property on the southeast corner of Fairfield Drive and Pace Boulevard, commonly known as the McDonald Shopping Center, paves the way to develop the site for the new jail facility in the wake of the explosion that destroyed the jail's central booking facility.

The April 2014 explosion killed two people, injured more than 180, and destroyed the jail facility on Leonard Street. Federal Emergency Management Agency officials concluded last year that replacement of the jail was preferred over repair, which led to county officials pursuing sites where a new facility could be built.

As part of the plan, the county will retain a consultant to develop a master plan to assist with economic development and neighborhood revitalization within a 12-block diameter of the intersection of Pace Boulevard and Fairfield Drive in West Pensacola. The redevelopment would include reserving approximately 300 feet of road frontage for economic development, with an emphasis on small businesses and businesses owned by minorities and women.

"Today's decision helps move the construction of a new jail facility forward significantly," the county said in a statement. "The commission vowed to work with current tenants and leaseholders in their transition as the project progresses. Property owners will not be expected to vacate until six to 12 months from now."

Additionally, the county will build a youth center in the vicinity of the property that is similar in size, design and facilities as the Wedgewood Community Center.

Commissioners unanimously agreed the design of the expanded jail complex will be "street-friendly" and not institutional like the current complex design.

The property was originally appraised at $3 million, $1.5 million under the purchase price commissioners agreed to.

Despite the cost, commissioners agreed that rebuilding at the current site will allow the county to resolve stormwater issues surrounding the county complex and keep the sheriff's office and jail facilities consolidated in one central location.

Outside consultants hired by Escambia County have said that with the acquisition of the shopping center property up to 40 percent of the land will have to be used as a stormwater pond to mitigate flooding impacts in the flood-prone areas surrounding the jail.

As the county moves forward to rebuild the jail, the county is paying nearly half a million dollars per month to house inmates in out-of-county detention facilities.

Early estimates put the cost of building a new jail at more than $160 million, with FEMA and the state expected to contribute about $50 million for jail demolition and construction. County officials have said it could take up to four years to construct the facility.

Alachua County Commissioner Looks For Solution To Collapsed Northeast 96th Avenue Crossing

WUFT-FM Gainesville (FL), July 14, 2016

Alachua County Commissioner Looks For Solution To Collapsed Northeast 96th Avenue Crossing

Almost a year since the bridge on Northeast 96th Avenue in Gainesville collapsed after a storm, area residents are still parking their cars and walking across the collapsed bridge to their homes every day.

Alachua County Commissioner Robert Hutchinson said he is continuing to search for a temporary solution to the problem, namely the use of a Bailey bridge, a type of portable, pre-fabricated, truss bridge used by the military, to allow vehicles to cross the creek.

Hutchinson, who proposed the idea at the May 24 County Commission meeting, said he wrote to Gov. Rick Scott on June 14 thanking him for his offer to help Alachua County residents. In the letter, Hutchinson wrote that an 80-foot Bailey bridge or equivalent military surplus item would be a simple solution. As of last week, the Governor's office had not responded.

Area residents said they are disheartened by the situation.

Lisa Franklin, who lives on Northeast 96th Avenue, said she was waiting to hear if Hutchinson would meet with someone from Camp Blanding in Starke to find out if there are surplus bridges, and what the cost would be to get one.

Franklin said she has not heard anything since the Alachua County Commissioners meeting in May. While she said she understands the commissioner's hands are tied, she believes a declaration of an emergency early on would have provided aid from FEMA or a grant to cover the cost of a bridge.

She said the residents are still looking for a solution.

Roxanne Eckles-Macdonald, another Northeast 96th Avenue resident, said everyday activities like bringing in groceries have been made difficult.

"You don't realize how lucky you are when you have a driveway you can just drive up into," she said.

But the most difficult part, according to Eckles-Macdonald, is that emergency services cannot reach them.

"If we needed an ambulance, if we needed fire, how would they reach us and in a timely manner?" she said. "Someone could die before they could get to us."

If there is a Bailey bridge available, the best route is to get the military to transfer the bridge to the Florida National Guard since Gov. Scott could then declare the bridge as surplus, Hutchinson said.

"I think if that happens, we would be able to get some military guys or even ex-military guys to construct that bridge or assemble that bridge," said Hutchinson, who has been searching the Internet for surplus Bailey bridges. "That's, hopefully, if not a permanent solution, at least a solution that will last us for many years."

Hutchinson said the county might be looking for two Bailey bridges — the second one for Northeast 108th Avenue, where the crossing has also collapsed. But residents living on Northeast 108th Avenue have another way into their neighborhood, while Northeast 96th Avenue residents have only one road into their subdivision.

"It's not the public's bridge, and that's the problem we're dealing with here," Hutchinson said. "We're looking for a public solution, but at the end of the day, we can't do this for everybody, and we'll do the best we can."

Voters To Decide On Raising Building Heights And Density In Treasure Island

By Jennifer Rich

Tampa Bay (FL) Times, July 14, 2016

TREASURE ISLAND — Despite protests by some residents, the City Commission has decided to give voters the chance to decide whether there can be increases in height and density for some Gulf Boulevard development.

The commission voted last week to put proposed changes to its land use regulations and comprehensive plan to a vote in November.

In 2002, Treasure Island voters made it clear that all future increases in building height and density must be approved in a referendum vote.

The changes, if approved, would establish a planned development zoning district on the east and west side of Gulf Boulevard north of 127th Avenue and on the west side of Gulf Boulevard between 104th and 119th Avenues.

New structures in the district could take advantage of higher density and height in order to encourage redevelopment, city officials said.

The northern end of Gulf Boulevard, which would be included in the new zoning district, is the "gateway to the city," Community Improvement Director Paula Cohen said, and the proposed zoning changes would benefit redevelopment.

Properties on the west side of Gulf Boulevard between 104th and 119th have the greatest concentration of transient lodging in the city.

If approved by voters, density could increase from 50 to 75 units per acre in resort facilities high zoning and up to 60 units per acre in commercial general zones from the current 22 units.

The changes would also mean a possible increase in height from five stories to seven.

State and local agencies reviewed the proposed changes and found the suggested increases in density would not present significant problems related to water and air pollution, evacuation, sanitation, sewer and traffic.

"It's the voters decision," said Mayor Robert Minning, who plans to vote for the issue in November. "We are doing it because we are a 50-plus-year-old city in need of upgrades. With the (Federal Emergency Management Agency) restrictions we have now, if the hotels or condos needed to rebuild, they could not be built to current densities."

But some residents don't want the city to open the door to possible density and height increases.

"This plan is illegal because it doesn't comply with state statutes," said Shelley Eckert, a Key Capri condo owner. "The way they are setting this up, a person could go in and ask for a planned development district in places like Sunset Beach or Paradise Island."

Ella Solomons, a Sunset Beach resident, told commissioners that the assertion that increased density won't make for more traffic congestion "is ludicrous. One doesn't need a study to see the congestion that already exists during tourist season and is starting to become a problem year round."

She said the zoning changes, if approved, "would make Treasure Island look like every other overdeveloped town in Florida."

Former planning and zoning board member Heidi Horak said any increases in density "conflicts with the statewide policy of strategic retreat from our coastal barrier islands."

Some of the "loudest voices of protest" seem to be from residents of Key Capri Condominiums near Johns Pass, Minning said.

"That is a seven-story building, so I don't understand why they can have seven stories and the rest of the city can't," he said.

Eckert said Key Capri was built in the 1970s when the island's population was much less than today.

Minning said he would support the voters' decision.

"Whatever the vote, I will be happy to endorse it," he said.

Technical, Financial Assistance For Property Owners Among Flood Mitigation Options In Centralia

By Justyna Tomtas

Centralia (WA) Chronicle, July 15, 2016

The Centralia City Council on Tuesday night received an update on a flood mitigation program currently under development by the city.

Community Development Director Emil Pierson said the council is working with Kahle Jennings, public works director, and the Chehalis River Basin Flood Authority to come up with ways to help reduce flooding in the area.

"Sometimes we forget in the middle of summer what can happen at any time of the year," Pierson said. "One thing the council is charged with is using the toolbox in front of us and finding ways to mitigate the flooding that occurs in our community."

French Wetmore, of French and Associates, has been working with the Flood Authority and other agencies to come up with a variety of solutions.

He said historically Centralia's weak spot is helping individuals protect their properties in existing floodplains.

The program aims to help in that effort with six proposed approaches.

Wetmore said the city could get rid of buildings in harm's way, although that solution is not appropriate everywhere. Other perhaps more viable solutions include elevating buildings above the floodplain and creating flood walls or barriers.

Other options include dry floodproofing homes by converting the walls of structures into waterproof barriers, and wet floodproofing the inside of homes by placing valuables above the height of potential floodwaters. The least expensive option protects utilities by placing electrical components higher in a structure.

"That's the range of options for any particular property," Wetmore said. "Which one works on which building depends on the flood hazards being faced, but the area around here is very conducive to these measures."

He explained the program is currently in its draft form. The next steps would be to propose a program to be run by the city that would provide technical and financial assistance to property owners.

"The goal is to try to find funding opportunities so we don't have to wait till right when a flood occurs when we go to FEMA," Pierson said. "It doesn't matter what time of year, there would be funding available to protect homes and residences in a cost-effective manner."

French and Associates is funded through the Flood Authority, and since the money for this biennium is already spoken for, any financing would have to come out of the 2017-19 biennium.

Wetmore said he expects to have a draft program vetted by the Department of Ecology and ready to present as an option for the city to pursue at the next council meeting on July 26.

Highland Village Council Approves First Read For Age-restricted Development

By Laurie Mullens

Flower Mound (TX) Leader Star, July 14, 2016

Tuesday, the Highland Village City Council conducted a public hearing and approved the first read of an ordinance amending the zoning of a 26-acre tract of land on the east side of Chinn Chapel to allow for an age restricted (55-and-older) planned development.

The planned development would allow for a detached residential condominium development consisting of approximately 100 homes.

The applicant, G&A Consultants, on behalf of the Integrity Group, is proposing a maintenance-free, gated community integrated with quality amenities to enhance the quality of life for active adults seeking a maintenance free lifestyle.

Also at the meeting, the council approved a resolution awarding the bid for the Canyon Creek Drive drainage improvement project to SJ&J Construction, LLC in the amount of $260,572. Previously, the council approved the engineering design of the project in May 2015. Due to erosion around the culverts in the creek under Canyon Creek, the culverts are exhibiting failure causing damage to the pavement on Canyon Creek.

The project will consist of removing the existing 72-inch corrugated metal pipe, constructing approximately 60 linear feet of reinforced concrete boxes, the removal and replacement of approximately 45 linear feet of 6-inch water line, as well as 85 linear feet of asphalt.

Funding for this project comes from the 2016 tax note as well as FEMA reimbursements.

The council also approved a resolution supporting the Lewisville Independent School District in seeking fair and appropriate methods for educating local students. LISD has uncovered grading errors in a significant sample of the state standardized tests that were administered to local students during the 2015-16 academic year. At its own expense, tests were regarded.

Officials said the council supports LISD in their efforts to promote fairness and consistency in the state testing system, as well as in their efforts to seek restitution for the expenses incurred attempting to correct grading errors made on the state standardized tests.

During the mayor's comments, Mayor Charlotte Wilcox presented the winners of the Highland Village Balloon Festival Poster Contest.

Following the mayor's comments, Police Chief Doug Reim spoke about the recent tragedy in Dallas where four Dallas Police Officers and one DART Police Officer was killed in the line of duty.

The city is looking for ways to help the families and friends as they cope with the loss of their spouse, parent, child or sibling.

The city, Highland Village Business Association and the Highland Village Police Department are showing their support for the Texas Police Chiefs Association's Fallen Officer Fund.

The Fallen Officer Fund provides monetary assistance to Texas families of fallen heroes within 24 hours following an officer's line-of-duty death. Currently, the TXFallenPD shirt with the names of each Texas Police Officer killed in the line of duty since 2008 is available for purchase at bonfirefunds.com/txfallenpd. All proceeds go directly to the Fallen Officer Fund.

The HVTV Update informed residents that July is Parks and Recreation month. The Parks and Recreation Department has many athletic leagues and community education classes, check out www.hvparks.com to sign up.

The update also encouraged residents to “Be a Hero” and volunteer to be on a board or commission. Deadline to apply is July 29.

City officials encourage residents to fill out a vacation watch request with the police department. They also reminded residents to leave their pets at home and not in a hot car.

The council early work session and regular session is available on HVTV (Time Warner 16; Frontier 43) and via the website streaming by clicking HVTV. The meetings are also available for on-demand viewing on highlandvillage.org.

Kiawah Council Hears About High-tech Trash, Alligators

By Gregg Bragg

Kiawah (SC) Island Connection, July 14, 2016

Lengthy debates marked the July 5, 2016 meeting of The Town of Kiawah Island Town Council. Roll call confirmed all council members were in attendance for those who forgot their glasses, and remaining routines were quickly dispatched. Council shaved a full hour off last month’s three hour and 40 minute meeting with the help of a relatively thin agenda.

Citizens’ Comments

Wendy Kulick opened the first round of “agenda related” citizens’ comments by suggesting the town wait to act on hiring a new attorney until after this year’s election. Council should instead seek permission to use Young, Clement, and Rivers in the interim, she added. Such a move would enable the town to avoid “tying the hands of future councils,” an oft stated goal. However in this instance, council seems inclined to fill the vacancy during the current term.

Kiawah resident Dennis McGill asked if terms on the Board of Zoning Appeals were staggered, and if the current opening was restricted to the remaining term (end of this year]. He was informed, yes they were, and yes it was.

New Business

There was no old business, so council began a discussion on the amount of coverage the town receives from the Charleston County Sheriff’s office. The motion was made to extend the existing arrangement until Aug. 2, allowing time for a review. The town currently engages four deputies at a time, divided between the island itself and Freshfields 24 hours a day, seven days a week. The contract has a budget of $622,131. Changes in the amount of coverage and method of payment were being floated but hadn’t been resolved by the time the “current” contract expired at the end of June.

“

With the direction from the Public Safety Committee, staff is reviewing the current contract with the CharlestonCounty Sheriff’s Office and other community stakeholders to evaluate the town’s law enforcement needs. We anticipate completing this evaluation and bringing forth the Charleston County Sheriff’s Office Contract at the July Ways and Means Committee meeting,” said the town administrator in a memo to the mayor and council members. The temporary extension was approved unanimously, although there wasn’t as much discussion on this topic as some others.

“

As a means controlling and monitoring the amount of calls the town receives, Carolina Waste (trash and recycling) has proposed installing a RFID (radio-frequency identification system) that would log service real time through a barcode system when the containers are brought to and emptied at the truck.

The contractor as well as the town would have live-time access to this information through a web-based system, “said Rusty Lameo in a memo to the mayor and members of council.

This could help resolve a variety of issues, for example, mixups with cans being placed at the wrong house. “This system will also give us the ability to locate missing containers through its GIS system and send photos of problem areas such as: blocked streets, cans locked in garages and yard debris placed out improperly.”

He pitched the time savings staff could enjoy without the burden of monitoring and following up on collections. Carolina Waste Systems would also save time and effort by eliminating return trips to the island, and would front the estimated $60,000 for the system. However, CWS is asking for an additional $4.50/household [minimum] increase in the rate the town pays, and an extension of their contract until 2020 to recoup the investment.

Questions followed Lameos’s presentation for some time but resulted in unanimous approval of the agreement.

Debris removal, however, is a separate issue from trash and recycling. The contract with Phillips and Jordan for debris removal expired on June 1, 2016.

TOKI requested bids from five different companies but All South Consulting Engineers was the only firm to respond with a completed form. Given the lack of options and considering the Federal Emergency

Management Agency requires a mechanism in place for the removal of storm debris, debate was relatively short.

All South Consulting Engineers received unanimous support for services the town will only have to pay for in the event of a natural disaster. The quick pace of discussions on this topic would not extend to the next agenda item, however.

Board of Zoning Appeals member Jack Braden resigned his seat in late May. The town solicited candidates and ended up with a list consisting of Kiawah residents Wendy Kulick and Barbara Howell. Preparations for the council meeting included a memo from the town administrator to council which read, "I announced at the June Town Council meeting that due to Mr. Braden's resignation that we have one opening on the BZA. In addition, we sent out an e-blast to the community with same information that we have one opening. The Chair (Randy Gilmore) and members of the BZA reviewed the bios of both candidates, and after careful consideration recommend Mrs. Barbara Howell as the next appointee to the Board of Zoning Appeals."

The majority of council members said they didn't know Howell, despite her stint on the Public Service Commission.

Everyone on council knew Kulick though, if for no other reason than her seven years previous experience on the BZA, and they began questioning the recommendation.

Council member Wilson pushed back hard saying he had spoken with Gilmore and was certain Howell was the consensus candidate. Resumes of both candidates were detailed at length by each council member, and while they unanimously felt both candidates qualified, they unanimously voted to appoint Kulick to the position.

The subject of new employees was on the agenda after being tabled for 90 days {along with the purchase of an additional truck} in the course of last month's budget process.

Two council members (Weaver and Wilson) said including two positions in the budget represented an obligation to hire. They didn't feel there was a case for the positions, but neither wanted to delay the budget process. It didn't take 90 days for the town administrator to re-tool her pitch.

The great debate from last month resumed with renewed vigor and went on for some time. Each council member and several staff members had plenty to say about each position. Both positions were approved despite it all, with Wilson voting no on the communications position, and Weaver voting against the new permitting clerk.

The final item of new business on the agenda was a "Request to Proceed with Search for New Town Attorney." This wasn't a matter of making a motion so much as setting a policy direction. The town has formed an ad hoc committee which includes members of council, some residents and Charleston area attorney Dwayne Green. Three options fell out of the committee's discussions: hire someone, contract with someone or, retain a firm on an as needed basis.

The three options were discussed with every council member offering pros and cons. Green had advised the committee a rate of $160 per hour and 10 hours a week (about $80,000 per year), would both garner interest and produce viable candidates. The amount the town's current attorney is paid annually has been a confused issue for some time now. The town expects to begin immediately and make a decision before the end of the current term.

Reports

The town administrator has been busy working toward a new website and updating the town's "alligator protocol."

It seems the recent incident at Disney in Orlando, where a 2-year-old was taken by an alligator, has prompted a lot of calls about aggressive animals on Kiawah.

The mayor talked about legal action against the town's former treasurer and administrator but had little to report.

The town's attorney contacted both U.S. senators and U.S. Congressman Mark Sanford only to be informed there was nothing they could do. The attorney then defended the response saying there was a constitutional prohibition against representatives "appearing to interfere in legal matters." He continued by offering to contact others in law enforcement but no clear directive was given. There is still time for a civil suit, he concluded.

The mayor continued his report saying he and Wilson had been working aggressively to get the Cross Island Parkway on the county's list of priority projects. He even went to the trouble of paying consultant Mike Touhill $600 to produce a presentation to deliver during last month's meeting at St. John's High School, sponsored by the county and city of Charleston. He remembered it wasn't "that kind of meeting" only after he arrived.

"

It has to be Johns Island groups that make it (CIP) happen, if at all," the mayor said. Meetings with other groups (e.g. Johns Island Community Association and Johns Island Task Force) have shown more promise. He said the Coastal Conservation League and Lowcountry Land Trust were on board with the project in exchange for $125 million in conservation considerations. Colin Cuskley of Johns Island Task Force, couched his position in slightly different terms in an email to The Island Connection.

“

The Johns Island Task Force had been discussing the proposed upcoming Charleston County transportation sales tax referendum. The County has been soliciting groups and individuals for their priorities for potential road projects to be funded by the sales tax. The sales tax is also to include funding for the County Greenbelt program.

“

The Task Force supports including $125 to $200 million in the sales tax for Greenbelt programs. (The wide range depends upon whether you are looking at the net funds available from bonding the sales tax or the gross amount of sales tax needed to pay off the bonds over years.)

“

The Task Force supports four Johns Island road projects to be funded by the sales tax, in order of priority:

1. Flyover at intersection of Main Rd and Rt. 17
2. Widening of Main Rd. to four lanes, two each way, from Maybank to Rt. 17.
3. A more comprehensive solution to the Maybank corridor traffic problems beyond the current short term widening project from the Stono Bridge to River Rd.
4. Additional capacity from Betsy Kerrison and River Rd up to Maybank corridor, NOT to be widening of Bohicket or River.

This must include conservation and recreational components. In other words, yes, ‘Cross Island Parkway’

“

Natalie [Olson] from CCL attends our meetings. She has not opposed these priorities. I would not take that as CCL’s endorsement. So there is some basis for Mayor Lipuma’s assumption. But I think it is a bit of a stretch.”

Natalie Olson, Esq., Land Use Program Director & Staff Attorney with CCL also responded to a request for follow up information from The Island Connection.

“

We are advocating for $210 million for the greenbelt fund with that conservation component. However, we are supportive of a number of transportation projects in the region – especially the bus rapid transit on I26 and the Flyover at Main Rd and US17 (and widening Main Rd from US17 to Maybank). The other projects mentioned by the task force are also good considerations, and our position (especially [and] specifically on the “Cross Island”) is that first and foremost, a comprehensive study of Johns Island needs to be completed to determine what is the most efficient and effective use of funds for transportation and conservation. With this information, we will be able to justify and support the capacity improvements needed on Johns Island, but without that information, we cannot be supportive of a blanket statement or assumption on project design that hasn’t been fully studied [or] vetted with the community.”

Citizens’ Comments, round two

Kiawah resident Wendy Kulick took to the podium for the last installment of citizens’ comments. She hesitated for a moment and then thanked council for their strong show of support and for appointing her to the BZA.

Kiawah resident Dennis McGill reminded council about the details of an FOIA request filed with the town of Seabrook. The request revealed Kiawah spent more in any one of the last five years on their in-house attorney than the total Seabrook spent in five and a half years.

McGill added that this comparison of legal expenses did not include costs of TOKI’s arrangement with YCR, which handles the town’s human resource functions and any litigation. He suggested the town contact peers to see how they manage it.

Kiawah resident Marilyn Larach expressed her frustration with the additional taxes proposed by the City of Charleston for which “we get nothing in return.” She suggested the town council members take representatives from both the county and city on driving tours of Johns Island. She specified some of the worst choke points on and off of Johns Island (Maybank and River, Main and 17) and added the tours should be conducted during rush hour as a way to demonstrate the need for funds.

Herbert Hoover Students To Begin School Year Splitting Time In Elkview Middle Building

By Jeff Jenkins

West Virginia MetroNews, July 14, 2016

ELKVIEW, W.Va. — Herbert Hoover High School students will begin the new school year on a half-day schedule in the building that houses Elkview Middle School.

The state Board of Education approved the plan presented by Kanawha County School Superintendent Dr. Ron Duerring at its meeting Thursday morning.

The Hoover building at Falling Rock was hit hard in the June 23 flood. The Elk River exceeded its banks and flooded the school's first floor including two gymnasiums, a band room, administrative offices and other rooms. FEMA must still complete an assessment of the building.

When the school year begins Aug. 8 Hoover students will attend Elkview Middle School from noon to 4:30 each day. The Elkview Middle students will be in the building from 7:30 a.m. until noon, Duerring said.

Portable buildings will be constructed on the football field at Elkview Middle to house Herbert Hoover students.

"This is only going to be a temporary situation until we get a portable high school set up," Duerring said.

When those are completed Hoover students will return to a full school schedule. It's unclear when the Herbert Hoover building will be ready for students to return.

"At this time we do not have that kind of information. We are still in the emergency cleanup phase," Deurring said.

A meeting between Kanawha County school officials and the company with the modular buildings have a meeting scheduled for later Thursday, Duerring said.

The split schedule will involve feeding Elkview Middle students lunch before they leave and feeding Herbert Hoover students lunch when they arrive. Herbert Hoover students will practice sports in the mornings and Elkview Middle students in the afternoons.

Bus schedules are being worked out, taking into consideration a number of roads were damaged by the flood.

Duerring said he's not overly concerned about logistics.

"It's an issue of mobilizing everybody and getting the plan together and being proactive instead of reactive when the time comes," he said.

County Signs On For Island View Project

By Richard Johnson

International Falls (MN) Daily Journal, July 13, 2016

The Koochiching County Board this week approved a project partnership agreement with the U.S. Army Corps of Engineers for design and construction assistance for the $17 million Island View sewer project.

The project, near Voyageurs National Park and Rainy Lake, will extend service to about 162 residences and some resorts along Highway 11 East, from Tilson Creek to Sha Sha Point.

The county will receive $4.5 million from the Army Corps. County Environmental Services Director Dale Olson has said the project has just more than $13 million in state and federal funding, and the rest will come from assessments to property owners.

Olson said he hopes bids can be let this fall and construction can start in 2017. The project will take one-and-a-half to two construction seasons.

"We just have to kind of wait and see how the bids come in, and see how close we are," he told The Journal. "It's one of the biggest projects in the five-state area. When we asked how close bids were coming in, they said there are no projects this big to compare them to."

Olson said he will present information at next Tuesday's board meeting that will establish the property cost assessment policy and schedule a public hearing to take input on creation of the sewer system.

Commissioner Wade Pavleck said he hopes cost estimates can be available for homeowners at the hearing.

He said the county still has funding tied up in the state Legislature, as this year's legislative session ended without an approved bonding bill.

"I'm hoping that the Legislature will hold a special session and wrap things up," Pavleck said. "But if they don't, we're probably looking into next year to get the final money. In essence, we're moving forward without all of the funding that we would be able to get. But we're in pretty good shape. A lot depends on the bids, and how they come in."

Olson said the county can seek reimbursement from the grant for design work done to date.

The Island View work is part of a larger project, known as the Voyageurs National Park Clean Water Project, that would bring sewer solutions to communities that surround the park (see www.sehinc/online/namakan for more information).

In other business, the board authorized a budget adjustment of $14,000 to nominate the 1904 Williams Township school building for inclusion on the National Register of Historic Places, and approved spending $8,000 to hire a consultant to evaluate the building.

Commissioners set aside restoration funding in 2009, but delayed spending it until an assessment of the building's historic significance could be determined for placement on the National Register.

The building is on county land in the northwest corner of the county. It is the only remaining one-room school building of its kind in the county.

Its foundation needs repair in order for the building to be used as a community center and historic visiting site, said Ed Oerichbauer, director of the Koochiching Museums.

He said the building would probably be used more if it was renovated. Any work would probably be done in 2018.

"I certainly believe it's worth preserving," Oerichbauer said.

Many people in the township area believe the school building should be preserved, Commissioner Wayne Skoe said.

"My sentiment is, this is the only way to do this," he said.

Commissioners reviewed Federal Emergency Management Agency road projects in which FEMA awarded funding for repairs and mitigation due to flooding in 2014.

The board accepted a low bid of just more than $49,000 from Reierson Construction, Bemidji, for a repair project on County Road 146 at Littlefork, and a low bid of of just more than $64,000 from Redstone Construction, Mora, for work on a bridge on County State Aid Highway 22 at Beaver Brook, on the north end of Littlefork.

A contract was awarded to Gladen Construction, Laporte, for a low bid of just more than $467,000 for bridge and culvert replacement projects on Unorganized Township Road 17, between County Road 27 and Highway 6, east of Northome.

Also Tuesday, commissioners in committee began drafting a plan to study implementation of buffer zones.

The Department of Natural Resources this week released a map of Minnesota public waters and ditches requiring permanent vegetative buffers or alternative water quality practices, as part of its commitment to protecting clean water.

The map shows landowners and local governments where protective vegetative buffers of 16.5 feet or an average of 50 feet are required, as approved by the state Legislature in 2015 and revised this year. More than 90,000 miles of Minnesota waters require buffers or alternative water quality practices, according to the DNR.

Minnesota's buffer law establishes new perennial vegetation buffers along rivers, streams, lakes, public ditches and some wetlands. Buffers protect water resources by helping filter phosphorus, nitrogen and sediment.

The county board will discuss buffer requirements, the role of the county and the Koochiching Soil and Water District, and related information during its Aug. 9 meeting.

EPA Responds To Certification Story

By Frank Lewis

Portsmouth (OH) Daily Times, July 14, 2016

The Federal Emergency Management Agency (FEMA) has responded to a recent story in the Daily Times concerning the certification of the floodwall levee in the city of Portsmouth. The story related that there was no concern on the part of Wastewater Director Rick Duncan that the certification will take place. FEMA does not give any reason to believe it will be otherwise.

"Regarding the status of the levee accreditation process: our team has been working closely with the City of Portsmouth and the Village of New Boston regarding their levee accreditation packages within Scioto County, Ohio," Cassie Ringsdorf of FEMA Region-5 in Chicago, said in an email. "These levee accreditation packages were just recently submitted for FEMA review at the end of June 2016. We are currently reviewing them for completeness and will continue working with these communities to move the accreditation process forward."

The story expressed concern by insurance agent Dan Cassidy of Berndt-Murfin Insurance agency, that if decertification took place, FEMA might tell the city they would not issue flood insurance to people in the city.

"Regarding the availability of flood insurance in these areas: when levees meet Federal standards for protection, flood maps show them as accredited levees and show the land facing the levee as a moderate-risk area (Zone X) on the map," Ringsdorf said. "Flood insurance is not federally required by lenders, but it is strongly recommended and available for purchase by residents and business owners if that community participates in the National Flood Insurance Program (NFIP)."

Ringsdorf said, in situations when levees do not meet Federal standards, they are considered non-accredited, and flood maps show the levee-affected area as a high-risk area. She said the scenario does not mean federal flood insurance is no longer available.

"In these high-risk areas, most mortgage holders will be required to carry flood insurance by their lender. Residents and business owners can learn more about the NFIP and living behind levees by visiting www.FloodSmart.gov, and if they need to find an insurance agent in their area, estimate their insurance premiums or rate their flood risk, they can do so on this site," Ringsdorf said.

She said it is important to note that neither certification nor accreditation guarantees protection. All flood hazard maps showing levees will carry a warning that overtopping or failure is possible, and that flood insurance and adherence to evacuation procedures are strongly recommended.

U.S. FIRE ADMINISTRATION

New Jersey Firefighter Dies Following Call

Fire Engineering, July 14, 2016

Chief Engineer Richard N. Zadorozny of the Eatontown (NJ) Engine, Truck and Hose Co. #1 died earlier this week following a fire department response, according to the U.S. Fire Administration.

Along with other firefighters from his fire department, Chief Engineer Zadorozny, 66, was dispatched for an odor of natural gas at a local apartment complex on July 10. Operating the first responding apparatus, Zadorozny and his crew arrived on scene to investigate the incident. The odor was eventually unfounded and the apparatus returned to quarters.

Chief Engineer Zadorozny returned to his home for the evening and, a few hours later, suffered a medical event (likely cardiac). EMS responded to Zadorozny's home, but were unable to revive him. Zadorozny was pronounced dead a short time later.

Illinois Firefighter Collapses During Training, Dies

Fire Engineering, July 14, 2016

A 52-year-old volunteer firefighter has died after collapsing during training in Illinois.

According to the U.S. Fire Administration, on July 12, Captain Eric Kohlbauer of the Freeport Rural Fire Protection District was working with other members of his fire department on a pumper relay drill when he suddenly collapsed and fell face forward into a dump tank of water.

Fellow responders immediately placed Kohlbauer on the ground and rendered medical aid, including AED. Within minutes, Captain Kohlbauer was transported to the hospital where, despite all best efforts, he succumbed to his injury reported to have been an aortic rupture.

DHS/FEMA GRANTS

Houses Passes Four Critical Homeland Security Bills

By Amanda Vicinanzo

Homeland Security Today, July 15, 2016

The House of Representatives on Monday passed four homeland security bills to protect the United States against the wide array of ever-evolving threats facing the homeland today. The bills include measures to curb foreign fighter and terrorist travel to the United States, enhance airport security, and improve internal Department of Homeland Security (DHS) practices and procedures.

"We face an unprecedented pace of terror worldwide," said Rep. Mike McCaul (R-Texas), Chairman of the House Committee on Homeland Security. "To fully understand and defend against the growing threat, the United States must learn from our past actions, defend against current plots, and actively protect potential future vulnerabilities."

McCaul continued, "The bills passed by the House today do just that. These bills bolster security at airport entry points, preemptively defend against evildoers attempting to travel to our homeland, and improve DHS's internal operations to constantly find ways to improve safety and efficiency."

HR 4404, the Terrorist and Foreign Fighter Travel Exercise Act of 2016, introduced by Rep. Martha McSally (R-AZ), requires DHS to conduct an exercise to evaluate the nation's preparedness against all phases of foreign fighter and terrorist planning and travel to the United States.

The last major government exercise on terrorist travel was conducted by the Federal Emergency Management Agency (FEMA) in 2009 and focused primarily on terrorists attempting to infiltrate the United States rather than on Americans leaving the country to train overseas with terrorist groups as foreign fighters.

The bill is the result of the Task Force on Combating Terrorist and Foreign Fighter Travel, which investigated the threat pose by ISIS. The report includes 32 findings and 50 recommendations.

"In our findings, the Task Force found that the growing complexity and changing nature of the foreign fighter phenomenon may be creating unseen gaps in our defenses, yet it has been years since any large-scale stress test has been conducted," said Rep. McSally. "Carrying out such a test would be beneficial in understanding how partners at all levels of government, and abroad, are currently responding to these scenarios."

HR 4785, the DHS Stop Asset and Vehicle Excess Act of 2016, introduced by Rep. Scott Perry (R-PA), seeks to improve management of DHS's vehicle fleet. The bill directs the Under Secretary for Management to, among other things, provide Departmental components with a standardized vehicle allocation methodology.

Rep. Perry introduced the bill in response to several DHS Office of the Inspector General (IG) reports, including a 2015 report revealing that the vehicle fleet of the Federal Protective Service (FPS) has not been managed effectively, potentially costing DHS $2.5 million in FY 2014.

As Homeland Security Today previous reported, FPS's fleet consists of 1,059 SUVS – 93 percent of its total fleet—even though the National Protection and Programs Directorate Fleet Manual states that midsize sedan is the preferred vehicle, and an SUV only an exception.

A law enforcement SUV costs on average $1200 more annually than a sedan. Consequently, if sedans had been used instead of SUVs, FPS could have saved more than $1.1 million annually, according to the report.

"To ensure it has the optimal fleet necessary to meet its mission, FPS needs to develop and use a sound methodology instead of making ad hoc, undocumented decisions," IG auditors concluded. "Without better oversight and accurate data, FPS cannot ensure it is effectively managing its fleet, and it is also missing opportunities to identify cost savings."

HR 5385, the Quadrennial Homeland Security Review (QHSR) Technical Correction Act of 2016, introduced by Rep. Bonnie Watson Coleman (D-NJ) revises the requirements of the QHSR in an effort to improve the quality and timeliness of the review that DHS carries out.

This entails including more stakeholder engagement, conducting a regular risk assessment, and maintaining all documents regarding the Quadrennial Review.

In April 2016, GAO released its review of DHS's second QHSR, which was issued in 2014, and reported that, despite some progress in addressing weaknesses in the first review, there were several areas for improvement for future reviews.

The bill would make mostly technical changes to the current requirements for that quadrennial review implementing various GAO recommendations.

HR 5056, the Airport Perimeter and Access Control Security Act of 2015, introduced by Rep. William Keating (D-MA), requires the Transportation Security Administration (TSA) to update airport security risk assessments, specifically along airport perimeters and points of access to secure areas.

As Homeland Security Today reported earlier this year, weaknesses in TSA's oversight of airport perimeter security and access controls may be putting the nation's civil aviation system at grave risk, according to a recent Government Accountability Office (GAO) report.

"The intense scrutiny placed at checkpoints in airports, but not on the perimeter, is the equivalent of locking your home's doors while leaving your windows wide open. The GAO found that in many instances, the windows are open at our airports," said Rep. Keating.

McSally Bill To Prevent Foreign Fighter Travel Passes House

By Alex Murtha

Homeland Preparedness News, July 14, 2016

The U.S. House of Representatives passed U.S. Rep. Martha McSally's (R-AZ) legislation on Monday to require a stress test of U.S. government protection and prevention programs against terrorist travel.

The bill, the Terrorist and Foreign Fighter Travel Exercise Act, is the result of a task force on combating terrorist and foreign fighter travel into U.S. security that investigated vulnerabilities and threats posed by ISIS. After a six month investigation, the task force released a report containing 32 key findings and more than 50 different recommendations to strengthen the nation's safety.

"In our findings, the task force found that the growing complexity and changing nature of the foreign fighter phenomenon may be creating unseen gaps in our defenses, yet it has been years since any large-scale stress test has been conducted," McSally said. "Carrying out such a test would be beneficial in understanding how partners at all levels of government, and abroad, are currently responding to these scenarios."

The U.S. government last conducted an exercise of this nature with its Federal Emergency Management Agency in 2009. The exercise focused primarily on terrorists attempting to infiltrate the United States through a variety of means.

McSally noted that the task force should also focus on homegrown terrorists leaving the country to train overseas with terrorist groups as foreign fighters.

Rogers: National Security Agency Becoming 'FEMA Of The Cyber World'

By Yasmin Tadjdeh

National Defense Magazine, July 14, 2016

Following major cybersecurity breaches nationwide, the National Security Agency is increasingly being called upon to advise both government offices and the private sector, said the head of the United States' spy agency.

"Over the course of the last decade or so, increasingly NSA in its information assurance mission is being called upon to provide defensive insight as to how you stop penetrations — and once a network is penetrated — how do you drive the opponent out and then how do you configure structures so they can't get back in," said Adm. Mike Rogers, commander of U.S. Cyber Command and director of the National Security Agency.

Rogers said he often jokes with colleagues that, "we find ourselves becoming the FEMA of the cyber world."

During the infamous Sony hack — in which the motion picture company suffered a major data breach in 2014, allegedly at the hands of North Korea — NSA was called in to help, he said July 14 during remarks at the National Press Club in Washington, D.C.

"If you had told me as a military leader, as the director of the NSA, that I was going to be involved in supporting a motion picture company in responding to how it was going to deal with a significant penetration I'll be honest and tell you 'Boy, I don't think that's going to come up during my time as the director.' I failed to anticipate that one miserably," he said.

The NSA also was part of a team that provided expertise following the Office of Personnel Management breach in 2015, Rogers said. During that incident, millions of government employee's personal data was compromised.

Within Cyber Command, officials are working to increase its capacity and capability, Rogers said. Working alongside the Defense Department, the command is generating a "cyber mission force."

"It's a force of dedicated, focused, trained and organized cyber professionals" designed to provide the department with high-end cyber warriors, he said.

There are about 6,200 individuals within the force currently, he said. That is about half of the total goal, he added. Full operational capability is slated for late September 2018. Initial operating capability is scheduled for Sept. 30.

"That's only three months away so I'm focused right now on making sure … that we meet that timeline," he said. "I'm comfortable that we're going to meet those milestones."

Of the 6,200 individual currently in the cyber mission force, they are divided into 133 specialized teams. Some are defensive and some are offensive, he said.

Demand for these types of cyber warriors is high and exceeds capacity, he noted. "We're not even waiting until a team is fully constructed," he said. "As soon as we get a cadre we are putting teams on targets."

"Think about what that means," he said. "In DoD we don't take a fighter squadron and say, 'Well, you've got five of your 24 aircraft. We're sending you to Afghanistan.' We don't say, 'Hey, we've got a brand new carrier coming out of the yards. You've done your builders acceptance trials, but you haven't done your workups. We are forward deploying you to the Persian Gulf.' The reality is because of the dynamics of cyber, we need to apply capacity as soon as we're generating it."

Meanwhile, Rogers said that U.S. Cyber Command is working alongside the rest of the military to help destroy the Islamic State. "We are doing offensive actions right now against ISIL in cyber in the fight in Syria and Iraq," he said.

He declined to go into any further details.

FIRE GRANTS

Trumansburg And Ovid Fire Departments Receive Federal Grants

By Tom Reed

Lansing (NY) Star, July 15, 2016

Congressman Tom Reed announces the Trumansburg and Ovid Fire Departments will be awarded a regional federal grant through the Department of Homeland Security in cooperation with the U.S. Fire Administration and the Federal Emergency Management Agency.

"As a community, we care about demonstrating our appreciation by recognizing the men and women who are committed to keeping us safe," said Reed. "These individuals devote hours of hard work to protect us and it is only right we give them the resources they need to do their jobs."

The Trumansburg and Ovid Fire Departments will receive a $224,400 regional grant which will be used to purchase new self contained breathing apparatuses and replace old units. This will allow the department to update their units to ones that are up to current NFPA standards.

"As the Fire Chief of the Trumansburg Fire Department I would like to say thank you to Tom Reed and his staff for their efforts and to the Assistance to Firefighters Grant Committee for awarding us our Regional grant with the Ovid Fire Department," said Trumansburg Fire Chief Jason Fulton. "These funds of $224,400.00 will give us the opportunity to purchase new self contained breathing apparatus (SCBA) for both departments to replace old, broken, and out dated units that are not up to the current NFPA standards. The new SCBA will allow us to meet the current NFPA standards and will serve both of our communities for years to come."

Sandwich Selectmen Consider Grant, Fire Station Renovations

By George Brennan

Cape Cod (MA) Times, July 14, 2016

SANDWICH – With a potential $1.2 million federal grant pending that would allow the fire department to hire eight additional firefighters for two years, the Board of Selectmen held off on deciding what to do about renovations to the East Sandwich Fire Station.

Voters in May supported renovating that building, but rejected a $750,000 Proposition 2½ override to fund the positions.

But a grant Fire Chief William Carrico applied for could provide the funds, at least temporarily.

The potential of the town getting the grant "looks good," Carrico told selectmen Thursday night, noting that he had been contacted by a key official with the Federal Emergency Management Agency, which is awarding the so-called SAFER grant. "I could know as soon as (Friday)."

The grant isn't a complete solution because it only provides salary and related costs for two years. The town would still have to come up with $80,000 for equipment for the firefighters, as well as health care costs, Town Manager George "Bud" Dunham said.

But the grant would buy the town time to secure the funding, Selectman Patrick Ellis said, potentially spreading out some of the costs over three fiscal years by the time the firefighters are hired and trained.

Selectman Peter Beauchemin urged his fellow board members to move forward with the $1.2 million renovation of East Sandwich, regardless of the grant.

"We've got the money, let's do the fire station," he said.

But Selectman Frank Pannorfi was unconvinced it was a good idea without a plan to staff the building.

"Building a building for the sake of building a buiding makes absolutely no sense," Pannorfi said.

When Carrico floated the idea of rotating staff among the three stations – closing a fire station for a week at a time – Pannorfi liked that idea as a stop gap measure if the grant isn't funded.

"I don't think it's fair to people of East Sandwich to have half a plan," he said.

The board is expected to tackle the issue at its next meeting July 28.

Carrico said if the town receives the grant, it has 30 days to approve or reject it.

"If you decide to refuse the grant, I can never go back to the well again," he said.

Meanwhile, the Board of Selectmen unanimously approved a $1.2 million contract with architect Kaestle Boos to do the architectural drawings and engineering for a new police station, fire station and the renovations for East Sandwich.

If the board decides not to do the renovation, Dunham said there will be money returned to the town from the Kaestle Boos contract.

Amherst Seeks Grant To Add Firefighters

By Scott Merzbach

Amherst (MA) Bulletin, July 14, 2016

AMHERST — As fire tore through an apartment building on Belchertown Road last month, the first firefighter who responded to Alpine Commons was the only person on board the fire engine.

That firefighter from the Central Fire Station was unable to begin any work on combating the blaze.

"There's nothing we can do with one guy on one fire truck," said Fire Chief Walter "Tim" Nelson.

Even though eight firefighters were on duty June 4, four were already handling medical calls on two ambulances at the time the fire broke out, while three other firefighters arrived a short time later on a second fire engine from the North Fire Station, Nelson said.

Though Nelson acknowledges the lack of personnel to battle the fire did not change the outcome, noting that the fire had "a good head start," he said the apartment fire illustrates the challenges the department faces with a minimum staffing of seven firefighter paramedics on duty when the University of Massachusetts and two colleges are not in session, and a minimum staffing of eight career firefighters during the school year.

"Getting our staff up is a goal so that we can better serve the public," Nelson said.

To that end, Nelson said the department has applied for the Federal Emergency Management Agency's Staffing for Adequate Fire and Emergency Response grant program, also known as SAFER. If selected, the two-year, $1.08 million grant would add eight professional personnel, six who would join the 42 firefighter paramedics currently "on line," as well as one firefighter whose focus would be on prevention and another who would be dedicated to training.

"That would brings us up to 48 on the line," Nelson said. "This is a labor intensive business, and one of the major resources we need right now are people."

The grant, which will be awarded in late summer or early fall, would cover the full pay and benefits of those hired for the two-year period, at which time the town would determine whether it could absorb these costs into the department's $4.5 million budget.Annual calls at 6,200

Amherst firefighters respond to about 6,200 calls a year, with call volume rising at about a 2 percent annual rate. Nelson said nearly 80 percent of the calls are for medical reasons at an average of 90 minutes each due to ambulance trips to out-of-town hospitals such as Cooley Dickinson in Northampton.

The ambulances also serve four surrounding towns — Hadley, Leverett, Pelham and Shutesbury, encompassing 125 square miles and 80,000 people, Nelson said.

A study 13 years ago revealed that minimum staffing should be 11 firefighters.

Nelson said runs have been climbing steadily for 15 to 20 years. With the exception the weekends when UMass provides the town money to have at least 13 firefighter paramedics on duty during peak times, roughly 20 hours on Friday and Saturday nights, "we're barely keeping our heads above water," he said.

But firefighters are getting tired and can't get to all the work that needs to be done. "Our people are showing signs of stress," Nelson said. "There's a lot more work being done by the same pool of folks."

Meantime, the town is about to learn what the department needs through a staffing study to be done by The Carlson Group of Andover.

"We think this company will do well in giving our staffing an objective look," Nelson said.

Besides making recommendations about minimum staffing, the study may determine whether the department should have someone who directs, manages, supervises and coordinates the activities and operations of each shift.

"Another thing we'd like to see down the road is a shift commander," Nelson said.

Peter Hechenbleikner, the interim town manager, said in an email that the staffing and deployment study, which will be complete in three to four months, will inform the town as to what, if any, need there is for additional staffing.

Martinez Activates State Emergency Operations Center, Federal Funding Approved To Assist In Response

KRWG-FM Las Cruces (NM), July 14, 2016

Santa Fe, NM — Today, Governor Susana Martinez directed the activation of the New Mexico Emergency Operations Center to assist in the coordinated response to the Timberon Fire in Otero County. The Governor also announced that federal funding to help cover costs associated with fighting the fire has been approved.

"First and foremost, our priority is protecting the people of Timberon and surrounding areas," said Governor Martinez. "I've directed our state agencies to work together to ensure that all resources are available to assist in fighting the fire. Sadly, the fire may have already destroyed more than a dozen homes, and many more are at risk. I ask New Mexicans to join me in praying for the residents of Timberon."

The state has been approved for a Fire Management Assistance Grant from the Federal Emergency Management Agency to cover 75 percent of the cost of suppressing the fire. Eligible costs include pre-positioning of resources, evacuations and sheltering, traffic control, and fire equipment.

Additionally, the Governor has directed state agencies such as the New Mexico State Police, the Department of Homeland Security and Emergency Management, the Department of Transportation, New Mexico State Forestry, and others to assist in the response to the fire.

Earlier today, the Governor joined the New Mexico National Guard for a flyover of the affected areas to survey the damage, and received a briefing from incident commanders and first responders on the fire. The Timberon Fire has burned an estimated 290 acres so far. State, local, and federal partners involved will continue to monitor and respond to the fire in a coordinated manner.

New Mexico State Forestry and the New Mexico Department of Homeland Security and Emergency Management urge all state residents and visitors to do their part in preventing and being prepared for wildfire. Should evacuations because of wildfire become necessary, remember the "Five Ps" you need to have ready to go: People, important Papers, Prescriptions, family Pictures and Pets.

For current information about the Timberon Fire, active wildland fire in New Mexico or information on wildfire preparedness and prevention, log onto www.nmfireinfo.com or www.inciweb.org.

Jailer David Moss Wants To Arm All 38 Of His Officers

By Janie Slaven

Somerset (KY) Commonwealth Journal, July 14, 2016

Pulaski County Judge-Executive Steve Kelley opened yesterday's fiscal court meeting with a moment of silence in remembrance of "all the tragedies this country has faced this week."

While one would like to think the turmoil won't spread to this community, the possibility that it might has weighed on many local officials' minds.

In his departmental report, Jailer David Moss advised the court that he wants to arm each of the jail's 38 sworn officers. Currently the jail has six weapons, which are used primarily during transports such as to hospitals or other prisons.

"With what's happened across the country, our officers have the same powers as every police officer in the state of Kentucky," Moss said. "Our officers are wearing uniforms; they're unarmed…We're just trying to make it safe for them. That's just another officer in the county that's going to be able to help someone out if we need to."

Magistrate Glenn Maxey asked if the deputy jailers would be safer if they changed into their uniforms after arriving at work.

"I can see where you're going with that," Moss responded, "but they're officers…We don't allow them to be off-duty wearing their uniforms [but] they're on duty, to us, coming to work and going home."

The jailer also announced that the Pulaski County Detention Center has averaged 377 inmates over the past month — prompting the jail to stop accepting inmates from other counties for the time being.

Moss went on to say that overcrowding is an issue statewide with the Department of Corrections preparing to open up two private facilities to house approximately 1,600 state inmates.

While there were no planned speakers during the Citizens Comments portion of the meeting, Judge Kelley opened the floor for questions from the latest Leadership Lake Cumberland class.

Court officials gave a brief overview of the duties for a judge-executive and magistrates as well as discussed the budgeting process.

Judge Kelley also spoke about the new economic development initiative known as SPEDA (Somerset-Pulaski Economic Development Authority) as well as the current financial crisis for the Pulaski County Alzheimer's Respite Center.

"We are close to making that new organization," Judge Kelley said of SPEDA. "We've got a lot of people who care but we don't have one entity that's driving that…I think it's going to be a great tool moving forward for Pulaski County, Somerset and this region."

Regarding the Alzheimer's center, Judge Kelley said the county provides the building, utilities and maintenance in addition to a $7,500 annual stipend. While the county, he said, couldn't take over the center from the Lake Cumberland Area Development District, Kelley is hopeful the ADD can work with the center toward a resolution.

"Hopefully we'll be able to buy another 4-6 months to figure out how to go forward," Judge Kelley said. "We want it to stay open; it's a great program that's needed."

In other business, the court:

- heard from the Lake Cumberland District Health Department, whose board had approved property tax rates in the amount of three cents per $100 for both real and personal properties. The rates have not changed since 2011.
- approved a $2,500 Grand Slam sponsorship for the upcoming Ohio Valley Regional Tournament for 10-year-olds which will be hosted by the Lake Cumberland Cal Ripken League. Local coach Steve Acton estimated that the July 20 event (featuring 12 teams from six states) would bring up to 700 people into Somerset.
- approved a resolution to apply for a $419,000 Kentucky Department of Local Government/FEMA grant toward collecting LiDAR (Light Detection and Ranging) data for Pulaski and portions of three other counties. Judge Kelley said the aerial pictography and topographical data would be helpful for flood control and other development projects.
- heard from Community Development Director Tiffany Bourne regarding a successful Master Musicians Festival this past weekend. Bourne estimated the festival has a $3 million impact on the local economy.
- authorized bidding for a utility tractor.

- approved a list of state-approved building and electric inspectors able to work on projects in Pulaski County.

The next meeting of Pulaski County Fiscal Court is scheduled for July 26 at 10 a.m.

Federal Grants Will Enable Rhode Island Cities To Hire 95 Firefighters

By Gregory Smith

Emergency Management Magazine, July 15, 2016

The City of Providence will receive a $15,011,440 federal grant to hire 80 firefighters and stanch the bleeding from a mass loss of Fire Department personnel over the past 18 months.

And the City of Cranston will receive a $2,765,310 federal grant to hire 15 firefighters, increasing the possibility that the Fire Department will hire its first female firefighter.

Rhode Island's congressional delegation, Providence Mayor Jorge O. Elorza and Cranston Mayor Allan W. Fung announced Wednesday that FEMA has made the grants under the SAFER program. SAFER means Staffing for Adequate Fire and Emergency Response.

Providence will receive the largest SAFER award being made this year nationally, according to U.S. Sen. Jack Reed.

Providence has seen more than 100 uniformed personnel retire over the past 18 months, because, Public Safety Commissioner Steven M. Paré said, the department had a work force that skewed older and beyond the age of retirement eligibility. A significant factor in the exodus, he acknowledged, was the controversial change in the department's work schedule.

A SAFER grant carries the full cost of firefighters with fringe benefits for two fiscal years, after which the municipality must pick up the cost.

Providence has allocated money for an 80-person training academy, scheduled to begin in January or February. Receiving the grant creates an operating budget surplus of about $7.5 million for the 2016-2017 fiscal year because the city will not have to spend its own money initially.

On paper, the department has an authorized uniformed force of 438, is budgeted for 422 and has an actual head count of 342. Filling the 80 vacancies will bring it back up to 422.

In the 2015 calendar year, the department had 41,783 calls for service, of which 29,739 were for emergency medical services.

Cranston Fire Chief William McKenna could not be reached for comment.

The Cranston department has no members of racial or ethnic minority groups in its 195-member uniformed force and never had a female. A female is ranked number 18 on a hiring eligibility list, so as more retirements occur, it appears likely that her spot will be reached for hiring before the list expires and is replaced with a fresh list of recruits.

If Cranston did not land a SAFER grant, it planned to hire and train seven firefighters at its own expense. Now it can bring on 15.

Cranston has an annual average of 15,000 calls for service, according to the announcement.

Since 2005, fire departments and other first responders in Rhode Island have won more than $30 million in SAFER grants.

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

Schoharie Man Sentenced For Defrauding FEMA

Oneonta (NY) Daily Star, July 14, 2016

A 31-year-old Schoharie man was sentenced to prison Thursday in Albany for defrauding the Federal Emergency Management Agency for benefits after Hurricane Irene, according to a media release from the U.S. Attorney's Office.

Scott A. Clapper, Jr. was sentenced to 18 months incarceration for making false statements and submitting false documents.

The announcement was made by United States Attorney Richard S. Hartunian and Giovanni Tiano, Special Agent in Charge of the Department of Homeland Security's Office of Inspector General, Detroit Field Office.

Senior U.S. District Judge Thomas McAvoy also ordered Clapper to serve 3 years of supervised release, to begin upon Clapper's release from prison; to pay $16,426 in restitution to FEMA; and to pay a $1,300 special assessment to the court. Clapper will serve the 18-month prison sentence concurrently with state prison sentences he is serving for burglary convictions unrelated to his defrauding of FEMA. He becomes eligible for state parole in March 2019.

As part of his guilty plea in January, Clapper admitted to making false statements and submitting false documents to FEMA following Hurricane Irene, which struck New York in August 2011 and made uninhabitable the Schoharie County home in which Clapper was living at the time.

Clapper told FEMA that his monthly rent at his new home, in Westerlo, was $1,200, when it was really $500. In an effort to document the $1,200 monthly rent, Clapper also submitted to FEMA fake lease agreements and rent receipts containing the forged signature of his landlord. Clapper received $16,426 from FEMA as a result of the falsehoods, the release said.

This case was investigated by the Detroit Field Office of the Department of Homeland Security's Office of Inspector General, and was prosecuted by Assistant United States Attorney Michael Barnett.

Man Sentenced To 18 Months For Defrauding FEMA Following Hurricane Irene

WTEN-TV Albany (NY), July 14, 2016

A judge sentenced 31-year-old Scott Clapper Jr. to 18 months in prison for defrauding FEMA.

Clapper's sentence will be served concurrently with another sentence he is currently serving.

He will also have to pay $16,426 in restitution to FEMA and pay a $1,300 special assessment to the court.

Clapper admitted to making false statements, submitting false documents, and lying about how much he paid in rent in order to receive more than $16,000 in benefits from FEMA following Hurricane Irene.

According to the U.S. Department of Justice, Clapper pleaded guilty in January.

He faces a maximum of 30 years in prison.

Man Sentenced For Post-Irene FEMA Fraud

Oneonta (NY) Daily Star, July 14, 2016

A Schoharie man has been sentenced to 18 months in prison for defrauding the federal government after Hurricane Irene, a media release said.

Scott A. Clapper Jr., 31, pleaded guilty in federal court in January to making false statements and submitting false documents to FEMA following Hurricane Irene, which struck New York in August 2011. Clapper received $16,426 from the Federal Emergency Management Agency as a result of the falsehoods, the release said.

In the sentencing, Senior U.S. District Judge Thomas J. McAvoy for the Northern District of New York also ordered Clapper to serve three years of supervised release, to begin upon Clapper's release from prison; to pay $16,426 in restitution to the FEMA; and to pay a $1,300 special assessment to the Court.

Clapper's sentence was announced Thursday by U.S. Attorney Richard S. Hartunian and Giovanni Tiano, special agent in charge of the Department of Homeland Security's Office of Inspector General, Detroit Field Office.

Clapper will serve the 18-month prison sentence concurrently with state prison sentences he is serving for burglary convictions unrelated to his defrauding of FEMA, according to the release, and Clapper becomes eligible for state parole in March 2019.

The FEMA case was investigated by the Detroit Field Office of the Department of Homeland Security's Office of Inspector General, and it was prosecuted by Assistant United States Attorney Michael Barnett.

Schoharie Man Sentenced For Defrauding FEMA During Hurricane Irene

WNYT-TV Albany (NY), July 14, 2016

A Schoharie man is sentenced for defrauding FEMA after Hurricane Irene.

The U.S. Attorney's office says Scott Clapper Jr. submitted false documents after the storm made his home uninhabitable.

Clapper told FEMA his monthly rent was $1,200, when it was really $500.

He also submitted fake lease agreements and rent receipts in the amount of more than $16,000.

Clapper will serve 18 months in prison, concurrent with time he's serving for burglary convictions.

Schoharie Man Who Stole FEMA Money Heads To Prison

By JP Lawrence

Albany (NY) Times Union, July 14, 2016

ALBANY — A Schoharie man was sentenced 18 months in prison for lying to get more Tropical Storm Irene recovery money, federal prosecutors said.

Scott A. Clapper, 31, pleaded guilty to making false statements and submitting false documents to the Federal Emergency Management Agency. Clapper admitted to telling FEMA he paid more money for rent on his home than he actually did.

The storm hit New York in August 2011 and destroyed Clapper's home. He told FEMA he paid $1,200 rent a month at his new home in Westerlo, when it was actually $500. Clapper sent FEMA fake lease agreements and rent receipts containing the forged signature of his landlord.

Clapper received $16,426 from FEMA, the U.S Attorney's Office said. Clapper will have to pay back the $16,426 he received and a $1,300 special court assessment.

He will serve the 18-month sentence concurrently with state prison sentences he is currently serving for burglary convictions, the U.S Attorney's Office said. The burglary convictions are unrelated to his defrauding of FEMA.

Elgin Approves Bin Rules, Senior Housing Zoning, Firefighter Contract

By Mike Danahey

Chicago Tribune, July 15, 2016

The Elgin City Council Wednesday evening moved along approving new rules for putting up collection boxes in town, gave approval to conditional use zoning for a senior apartment complex and signed off on a new contract with the firefighters union — all by unanimous vote.

The new rules would have it that such outdoor bins may "only be located in conjunction with uses to which such receptacles are customary and traditional: units of local government, churches and not-for-profit organizations."

Where permitted, and before placing the collection bin, the bin's owner would have to obtain a $75 annual license, which would be waived for units of local government and not-for-profit organizations.

The application would require the property owner's written permission to locate the bin. The bin must display the name and contact information of the associated organization and whether the organization is for-profit or not-for-profit, the meeting material states.

A bin would not be allowed in a vacant lot, within a right-of-way, or within the area between a building and the street. Bins would have to be placed upon a hard surface, but not within a parking space.

A license sticker would have to be attached to the bin, and the bins would be required to be serviced regularly, with no overflow of items allowed.

Maintenance failure would mean the bin license holder would be given 48 hours notice to address the issue. Failure to do so, would mean city staff would remove the bin and any contents and hold such for seven days.

Bins could be retrieved after the city receives payment of a $100 administrative penalty, plus $25 per day penalty charged for storage and other reasonable removal costs must also be paid. Citations in the amount of $50 to $750 per day per offense, could be issued to both the collection bin owner and the property owner.

Council member Rich Dunne said he noticed how bins were being dealt with when on the East Coast in 2012 in the aftermath of Hurricane Sandy for his job with FEMA. Council member Terry Gavin said he and a resident spotted a bin near an east side grocery store almost a year ago. And Council member John Prigge paid compliment to Community Development Director Marc Mylott for staff being proactive addressing a spate in recent months where dozens of such bins have sprouted up across the city.

After the meeting, Mylott said one man had recently been written a citation for leaving such bins on private property and violating existing rules. However, the city still was unsure for whom the man was working, Mylott said.

The new rules are set for final approval at the Aug. 10 City Council meeting.

The unanimously approved request for conditional use zoning was granted to the developers of Fox River Crossing, a new, affordable apartment complex for those 55-and-older being planned for the northwest corner of Route 31 and Lawrence Avenue.

The Ohio-based Buckeye Community Hope Foundation project calls for a 94,583 square-foot, 4-story residential apartment building that would have indoor parking on the first floor and 60 residential units on the second through fourth floors. The indoor parking would have 60 spots, and there also would be outdoor parking for 12 vehicles.

Council members noted the need for more senior housing in Elgin and that the building will bring life to a corner not far from downtown that has been an empty lot for more than almost a quarter century.

Council member Carol Rauschenberger, though, asked the city and developer to see if anything can be done to help make it easier for pedestrians to get from where the building would be across busy Route 31. The Gail Borden Public Library and The Centre of Elgin are just across the Fox River from the site.

The vice president of the foundation's housing division, David Petroni, told the City Council funding for the project would come through a highly competitive program using federal money run through the Illinois Housing Development Authority.

As such, Petroni said that if all goes well work probably wouldn't start until 2018 — or late 2017 at the earliest on the project, which will house income-qualifying residents.

As for the fire contract, with no comments offered, the council unanimously approved the agreement.

The last contract with the International Association of Firefighters Local 439 expired in 2013, and the new one covers 2014 to 2017. Per recession-related concessions, the old contract had no annual salary increases. The one the council OK'd has 2.5 percent annual pay hikes built into it.

According to the contract document, effective Jan. 1, 2017, the base pay range for union firefighters would range from $67,181 for those starting to $132,338 for those at the highest level of base pay for captains. The union ratified the agreement last Friday.

Q And A: Laguna Niguel Fire Captain Scott Ashbach Talks About Hurricane Katrina, Saving Kids And Battling The San Gabriel Complex Fire

By Marie Ekberg Padilla

Orange County (CA) Register, July 13, 2016

Aliso Viejo resident Scott Ashbach, a Laguna Niguel fire captain from Station 39, is among the hundreds of firefighters who recently battled the more than 9,500-acre San Gabriel Complex fire in Angeles National Forest.

The fire included the Reservoir fire and the Fish fire, which is nearly contained. Ashbach, 48, a logistics manager, is part of the incident management team consisting of several agencies and hosted by the U.S. Forest Service fighting the fire.

"Although we all wear different uniforms, I truly feel that our varied background, experiences and diversity is one of our greatest assets," he said. "The experience we bring back to the home agency is invaluable. It's the kind of training and experience that will help keep us safe and make better decisions when the next large incident strikes the O.C."

Here's what Ashbach had to say.

Q. How has the experience been battling the San Gabriel Complex fire?

A. With the exception of the extreme heat at the beginning of the fire, this has been like battling a typical wildland fire. Air and ground resources worked very well together to suppress the main bulk of fire movement in the first couple of days. Once most of the smoke faded away … several days of mop-up put firefighters on the ground throughout the perimeter to assure there are no residual fires at the parameters edge to about 100 feet into the burned area. This process requires lots of manpower, and lots of manpower requires lots of support. That's where the logistics section comes in – my forte.

Q. What was your role during this fire?

A. Almost every large emergency incident has four major sections that come into play – operations, finance, planning and logistics. The section that I've been a part of for the last 15 years is the logistics section. I like to think of this section as the backbone of the incident. The section provides important aspects of the incident that include radio communications, food, intraincident medical response, supply, vehicle mechanics, a central ordering point, office trailers, electricity, fuel, telephones, copy services and the list goes on. On this fire, I'm feeding the troops.

Q. What other large fires have you worked during your career?

A. I've been to many large incidents, including the Station fire in the Angeles National Forest, the North Pass fire in the Mendocino and dozens of others from the Klamath, Six-Rivers, Inyo and Sequoia to the San Bernardino and Cleveland national forests. Our team has traveled a couple of times out of state as well, including responses to large fires in Nevada and just last year to Washington. As a member of California US&R Task Force 5, a FEMA Urban Search and Rescue Task Force, I was a part of the response to hurricanes Katrina and Rita in 2005 and hurricanes Gustav and Ike in 2008.

Other interesting experiences during the first part of my career include the Los Angeles riots in 1992 and the Laguna fire in 1993. Of course, I can't forget some of the more local fires, like Santiago in 2007 and the Freeway fire in 2008.

Q. Why did you want to become a firefighter?

A. When a high school friend of mine showed up at my house wearing a fire department uniform, I started asking about it. I started as a paid-call firefighter in 1987. They were typically called to the station via pager, then jumped on "big red" and responded to the incident as needed. At $7 per call, it wasn't much of a career, but at the time it was a great way to jump-start a career while going to college, paramedic school and the fire academy. In 1996, I was hired as a full-time firefighter by the Laguna Beach Fire Department. One year later, I was picked up by the Orange County Fire Authority. I've been there ever since. It's the best job in the world.

Q. What is the biggest challenge working as a firefighter?

A. A lighthearted conversation was interrupted by a call to respond to a cardiac arrest victim. We've responded to many of these before. The challenge comes when you're faced with the unexpected. Just as soon as I stepped off the engine, I was handed a lifeless, 3-week-old child who had succumbed to meningitis.

Of course, I didn't know what had caused this child's condition, so instinctively I started CPR. By the end of the event, the child had passed and I had been exposed to meningitis, requiring treatment. Emergency calls involving children are always challenging to first responders. As your career advances and your own children begin to enter the picture, these types of events become more and more difficult to rationalize.

Q. What is the biggest reward working as a firefighter?

A. The rewards come with a big dose of perspective. Medals or monetary packages don't really mean much after a while, so I'd like to think that the rewarding part of this career is served up by an uncommon, experienced and firsthand appreciation for the life we've been empowered and honored to lead as a public servant. It's a perspective most folks don't have and it's one that provides a framework for the appreciation of relationships, talents and energy-expending efforts that make life meaningful.

FEMA Disaster Registration Assistance Still Available

By Jeff Schrock

WBOY-TV Clarksburg (WV), July 14, 2016

WEBSTER COUNTY – FEMA is still working in Webster County to help residents with disaster assistance.

They are going door to door asking residents if they've registered or not. FEMA members are equipped with IPads to help people register, rather than having them go to disaster recovery centers or call in.

"We want to make sure we have teams that go door to door as we're doing today, catching anybody that may slip through the cracks because that's something we don't want to happen," said Jerry Cooper, of FEMA.

People have 60 days from the day of the disaster to register.

You can apply by phone by calling 1-800-621-FEMA (3362) or online at www.disasterassistance.gov

.

Hoover High Students To Temporarily Attend Elkview Middle

By Ryan Quinn

Charleston (WV) Gazette-Mail, July 14, 2016

Kanawha County Schools Superintendent Ron Duerring said Thursday that Herbert Hoover High students will temporarily attend classes in the Elkview Middle building in the upcoming school year, until they can move into portable classrooms on Elkview's football field.

Duerring also told the Gazette-Mail on Thursday that he couldn't say if the existing Hoover building in Clendenin, which received about 7 feet of water in the late-June flooding, will ever reopen. He said damage assessments of Hoover's building are ongoing. It is about a mile and a half from Elkview Middle.

As of late last week, he said it was still his goal to open all four of the county's flood-damaged schools on time for the Aug. 8 start date that applies to almost all Kanawha public schools. That start date is West Virginia's earliest.

When asked what new information has put into question whether Hoover will reopen at all, he said, "Plans change, and that's all I can tell you."

He said he couldn't say how long the school sharing period will last.

"We hope it's for a very short period of time," Duerring said.

He said there are about 700 Elkview Middle students and 800 Hoover High students.

Duerring's statements came after the West Virginia Board of Education, in a voice vote with no nays heard, approved a waiver of its policy regarding instructional time, to allow Elkview students to attend their school in the morning and Hoover students to attend it in the afternoon.

Betty Jo Jordan, executive assistant to state schools Superintendent Michael Martirano, said the policy waiver was required, to allow the school system to drop below the state-required minimum daily instructional minutes: 315 for elementary schools, 330 for middle schools and 345 for high schools.

Lou Maynus, Kanawha's assistant superintendent over middle and alternative schools, said Hoover students will have 205 daily instructional minutes during the school-sharing period, while Elkview students will have 240. Duerring said students will get more instruction time than the minutes indicate through digitally delivered assignments.

Elkview students, whose bell schedule last school year was 8 a.m. to 2:45 p.m., are set to attend their school from 7:30 a.m. to noon each day, while Hoover students, whose bell schedule last school year also was 8 a.m. to 2:45 p.m., will attend from noon to 4:30 p.m.

Hoover students will have sports practice in the morning, while Elkview students will have it in the afternoon. When asked where practices and games will take place, with the football field hosting portables, Maynus said the plans are still being developed and should be finalized in the next few days.

Duerring said he didn't yet know what form of portable classrooms — which can range from single-classroom portables to large ones with inside hallways — Kanawha will receive or how much they will cost, but he said it's possible the Federal Emergency Management Agency will cover a significant amount of the cost.

He said putting them on Elkview's field will allow that school's cooking facilities to serve Hoover students.

During the school sharing, Elkview students will have when they arrive in the morning and lunch from 11:30 a.m. to noon. Hoover students, who won't get school breakfast, will have lunch from noon to 12:40 p.m.

Hoover will have 45-minute-long classes on an alternating schedule, with one set of classes one day and the other set the next day.

Maynus said that, during the temporary period, Elkview will go from two daily periods of "related arts" classes, like chorus, current events and health, to one daily related arts period that would alternate from one course to the other each day.

She also said there will be weekly, instead of daily, "developmental guidance" periods for most Elkview students. She said these periods, also called "Herd Time," provide time for things like career exploration and anti-bullying lessons.

Duerring said all students would return to full-day schedules when the Hoover students move into the portable classrooms.

Some of Hoover's senior band students said Thursday that they're glad to have a place for classes, although they're not looking forward to going back to middle school.

"I'm eager, but I'm not," Marie Good said during a break in marching band practice Thursday. "I'm just happy I have some place to go and take my courses. [But] I just left middle school."

Good said she and her classmates have to be understanding of the situation.

Wesley Monk said he is disappointed that he'll spend at least a portion of his last year of high school away from the school he attended.

"It's OK, for a short time," he said, "but I don't really want to spend an entire year going to Elkview."

DOT: Flooding Shouldn't Affect Road Projects

Morgantown (WV) Dominion Post, July 15, 2016

MORGANTOWN — West Virginia Department of Transportation (DOT) Spokesperson Carrie Jones said the DOT's efforts in flood-ravaged southern West Virginia will not result in less funding or fewer projects for the rest of the state.

Jones said the latest estimates put damages to transportation infrastructure at $52 million in the wake of historic flooding that claimed more than two dozen lives and damaged or destroyed thousands of homes and businesses.

While Jones didn't specify what percentage of the cost will be covered, she explained that the state "will be reimbursed by FEMA and the Federal Highway Administration for a majority of the costs."

Regarding manpower, Jones said DOH personnel from across the state were sent to the impacted areas to remove debris and slides from roads, stabilize embankments and clear ditches and culverts.

Aside from the personnel, Jones said projects planned for this summer in other parts of the state will not be impacted.

"As far as the impact to funding for projects, that shouldn't be affected," Jones said, adding that the temporary mobilization of DOH personnel shouldn't impact paving as the vast majority of paving projects are contracted out.

Flood Relief Continues As Residents Of Southern West Virginia Are Still In Need

By Victoria L. Cann

Clarksburg (WV) Exponent-Telegram, July 14, 2016

CLARKSBURG — A little over three weeks after the flooding occurred in southern West Virginia, disaster relief efforts are ongoing with various organizations helping those affected.

Ricky Eads, volunteer coordinator for Mountain Mission in Charleston, said it is still the first stage of disaster relief. They are no longer looking for clothing or cleaning supplies at the moment.

"We are trying to get supplies so people can start cleaning and repairing things right now. Hopefully, we will be starting a new phase of relief in the upcoming weeks," he said.

Mountain Mission is looking for donations of batteries, flashlights, rakes, work gloves and undergarments such as socks and underwear.

Eads said they have an abundance of clothes and cleaning supplies.

"We have received a lot of food donations. The only problem is that people no longer have a place to cook meals. So we are asking for can openers and grills, things people can make food with," Eads said.

Carissa Collins, executive director of the Northeast West Virginia chapter of the American Red Cross, said that even in the beginning while the Red Cross was providing emergency relief, they had trained case workers out providing support for survivors.

"Red Cross case workers have met one-on-one with those impacted to learn what kind of care might be needed in the coming days and weeks to help them maintain their independence," she said.

So far they have opened at least 1,200 cases to assist those affected. Something what takes only hours to cause destruction can take months and years for people to recover and rebuild, and she said the Red Cross will be there.

"On July 6 the emergency relief efforts were estimated to cost them $5-$6.5 million. We have raised approximately $940,000 in designated donations and pledges that will stay and go directly to the West Virginia flood relief efforts," said Krista Farley Raines, regional communications and marketing director for the American Red Cross.

She said the financial stipulations and estimates are bound to change as they continue to respond and identify people's needs and continue to enhance their efforts.

"The amount of costs estimated include providing food, shelter, blankets, cots, emotional support, and health services, case work efforts, relief supplies, and the people and things such as vehicles and technology that make it possible," Raines said.

The Red Cross has provided 190,000 meals and snacks as well as distributing over 7,700 cleanup kits. Raines said they have had 585 Red Cross workers from all over the nation respond for relief efforts.

"Disaster assistance grants have exceeded $28 million for the West Virginia storm survivors. That includes $24.2 million just in housing assistance," said John Homstad, FEMA media relations officer at the West Virginia field office.

He said their efforts are focused on housing and that their emphasis is making sure individuals have safe, secure, and sanitary places to stay.

"Our goal is to keep people in their homes if we can. For people who have had homes destroyed and need a place to stay, FEMA offers housing assistance. We try to always utilize already existing housing," he said.

Homstad said the housing assistance entails money for rentals and repairs to be done in homes. Greenbrier and Kanawha counties are declared for a particular housing mission, meaning they will be utilizing manufactured housing units.

"People can also fill out an application for a low interest disaster loan from the U.S. Small Business Administration. They're our federal partner and provide these loans to businesses of all sizes, homeowners, and renters," he said.

Anyone looking to volunteer can sign up at bit.ly/WVFloodVol with the American Red Cross. Information regarding what donations are needed can be found at wvvoad.communityos.org.

Morgantown Salvation Army Assists In Flood Relief

WAJR-AM Morgantown (WV), July 14, 2016

MORGANTOWN, W.Va. — The Salvation Army of Morgantown has returned from flooded southern West Virginia but expects to be needed for weeks to come.

Lt. Allen Adkins served as incident commander for Salvation Army operations for two weeks shortly after the June 23 disaster.

He said when first arriving, volunteers have to focus on logistics.

"Drinks and snacks and supplies, cleaning kits and hygiene kits, we make sure those items are staged when we need them so we can have access to them."

The Salvation Army remains in the flooded regions rotating incident commanders every two weeks.

According to Adkins, the organization has provided disaster relief since early 1900's beginning in Galveston, Texas in 1900 when a hurricane ripped through the town killing up to 8,000 people.

In West Virginia, FEMA $29.4 million has already been approved in individual assistance along with $24.9 million in housing assistance.

"Everything you have is there one moment and then it's gone. Not only is yours gone, but also your neighbor's, your neighbor's neighbor. These communities, some of the devastation is pretty intense," Adkins assessed.

Adkins noted there are two stages of response in a disaster.

First, The Salvation Army addresses immediate needs in the disaster mode stage.

Next, volunteers are there for necessities and emotional support.

"We go in, we help not only to bring food, clothing and shelter and those sorts of things. We're also there to try to help to bring hope to people knowing there is a tomorrow. We just try to bring needed aid to them," Adkins said.

Adkins explained that canteen work continues in a number of counties.

He will share more on The Salvation Army flood relief efforts and needs on WAJR's Morgantown AM Friday at 9:20 a.m.

Disaster Survivor Assistance Teams Working Across State

Clay County (WV) Free Press, July 14, 2016

Twelve teams of disaster survivor assistance (DSA) specialists are now working in affected areas across West Virginia, helping survivors of the devastating floods, mudslides and landslides that began June 22.

The teams are made up of disaster specialists from the Federal Emergency Management Agency (FEMA). Using the latest mobile technology, DSA teams can register survivors with disaster assistance, update their records and make referrals to whole community partners. Team members tailor the information and services they provide to the individual survivor's needs.

Like all FEMA field personnel, team members carry official identification. Residents are encouraged to ask for official identification before providing personal information.

In addition to the registration opportunity offered by recovery teams, survivors can register for assistance by the following methods: Visit DisasterAssistance.gov or call 800-621-3362. TTY users can call 800-462-7585. Those who use 711 or Video Relay Services can call 800-621-3362 to register.

By registering with FEMA, survivors may qualify for federal disaster assistance such as: Grants to rent a temporary place to live; Grants for essential home repairs not covered by insurance.; Grants for disaster-related needs not covered by insurance — such as medical, dental, transportation, funeral expenses, moving and storage fees, personal property loss and child care.

Registering with FEMA is also the first step in qualifying for help from the U.S. Small Business Administration (SBA). Low-interest disaster loans from SBA are available to businesses of all sizes (including landlords), homeowners, renters, and private non-profit organizations to cover losses not fully compensated by insurance. Low-interest disaster loans help fund repairs or rebuilding efforts and cover the cost of replacing lost or disaster-damaged real estate and personal property. Economic injury disaster loans are available to businesses and private non-profits to assist with working capital.

Business owners can find an electronic loan application on the U.S. Small Business Administration's secure website at disasterloan.sba.gov/ela. Questions can be directed to the SBA Disaster Customer Service Center at 800-659-2955/ (TTY) 800-877-8339 or by visiting sba.gov.

West Virginians seeking information about disaster-related services and unmet needs should call West Virginia 211, a statewide information and referral service. Contact 211 for help finding food, childcare, crisis counseling, and many other resources in your local community

The West Virginia Voluntary Organizations Active in Disasters (VOAD) has set up a hotline for flood survivors needing free cleanup services: 800-451-1954. Volunteers who wish to help with flood response and recovery may sign up at www.volunteerwv.org or www.wvvoad.org. To make a financial donation, visit https://wvvoad.communityos.org/cms/home

To find current shelter locations for displaced survivors who need a place to stay overnight, please call the American Red Cross at 800-RED-CROSS or download the FEMA App on a mobile device.

Herbert Hoover, Elkview Middle To Go Half Day Due To Damaged Schools

By Anna Baxter

WSAZ-TV Huntington (WV), July 14, 2016

KANAWHA COUNTY, W.Va. – With the start of the school year less than a month away in Kanawha County, a plan is officially in place for where students of the badly damaged Herbert Hoover High School will go for classes.

The school will have a split schedule with middle school students at Elkview Middle School. The middle school will go from 7:30 a.m. to noon, and the high school will go from noon to 4:30 p.m. It's a schedule Kanawha County Superintendent Dr. Ron Duerring says took a lot of planning.

"On a split schedule we met with both principals, we developed a schedule," Duerring tells WSAZ. "We looked at transportation, we looked at food services, and we got all of that ready to go because we wanted to be proactive rather than reactive when the time had come. It just took planning but it worked out really well."

Duerring says getting students back into the classroom by the Aug. 8 start date, and giving them a since of normalcy back into their lives after going through so much, is really important.

"That's what we're trying our best to do here," Duerring said. "And that's why we devised a schedule so we could get our kids in on the first day of school and bring some normalcy to them, to help them, be able to feed them. If somehow they were looked over we can help them and provide services, like a clearing house. Our counselors I know will work with these students if something has been missed or they need help with an outside agency. So that we can help take care of our children after all this is their school, this is their school system and we need to take care of our children."

Duerring says breakfast and lunch will be available for the middle school students and lunch will be available to the high school students.

Tim Clifton is a teacher at Herbert Hoover and he says it's great to see a plan in place, and he's ready to get back to any classroom setting and see his students again.

"That first day we'll get a chance to talk, to talk it out," Clifton said. "The kids are gonna cry when they have a chance and the pressure's off, and when there's people caring, they often cry, and talk. And I think it'll be a good thing not a bad thing to get them started again."

The schools will operate under the split schedule until a modular campus is in place on the Elkview Middle School football field. Once everything is in place, the Hoover students will then use the modular campus and both schools will go back to a normal all day schedule. No time frame of when the modular campus will be ready has been determined.

The future of the current Herbert Hoover building is still up in the air, but Clifton says he's positive that they will return "home."

"It'll happen. It's not 'if' it's 'when.' I don't know when," he said.

Duerring says all subjects will still be covered during the shortened schedule. Last year more than 700 students each attended both Elkview Middle and Hoover High.

WSAZ reached out to FEMA to get a comment on their assessment of the damage to the school, however they said all updates will have to come from the school board.

ORIGINAL STORY 7/14/16 @ 10 a.m.

KANAWHA COUNTY, W.Va. (WSAZ) – Herbert Hoover High School will not open for the first day of school after floodwaters severely damaged the school.

Students at Hoover will start the school year with a shortened schedule and attend classes at Elkview Middle School.

The West Virginia State Board of Education unanimously voted Thursday to grant Kanawha County a waiver which will allow for a shortened school day for both Elkview Middle School and Herbert Hoover High School students due to the recent flooding, according to a spokesperson.

That way students at both schools can attend classes in the same building, but only go half days.

Students at Elkview Middle will attend class from 7:30 a.m. until 12 p.m. Herbert Hoover attend classes at Elkview Middle from 12 p.m. until 4:30 p.m. Students at Elkview Middle will still be served breakfast and lunch while operating under this temporary schedule. Hoover students will be served lunch at the beginning of their school day.

A spokesperson with the state board of education says the two schools will operate under this schedule until a modular campus is constructed for Hoover students. She also says the campus would be built at Elkview Middle School.

No date was released on when the modular campus would be operational. However, during the meeting Kanawha County Superintendent Dr. Ron Duerring told the board the modular campus will be constructed as quickly as possible, but did not provide an exact date for completion.

According to a news release, Hoover will still have seven periods, but they will be on a rotating schedule from day to day. However, students will attend 7th period every day. That's the period students have classes like choir and band. Classes will be 45 minutes.

The contingency plan at Elkview Middle School will focus on the four core subjects.

701 students attend Elkview Middle School. 770 attend Hoover.

During the June 23 flood, more than two dozen schools were damaged. Herbert Hoover suffered some of the worst damaged.

The first day of school is August 8.

You can read more about the plans for these two schools by clicking the link.

Chamber To Offer Grant Help To Flooded Small Businesses

By Shauna Johnson

West Virginia MetroNews, July 14, 2016

CHARLESTON, W.Va. — At least $100,000 in grant funding will initially be available through the

West Virginia Chamber of Commerce Foundation for qualifying small business owners trying to recover from the devastating June 23 flood.

Shauna Johnson/WVMetroNews.com

The Clendenin Dairy Queen, known for its hot dogs, was destroyed in flooding along the Elk River. This photo was taken on June 25, 2016.

"What we need to do is help get some of these small businesses back on their feet as soon as possible," said Steve Roberts, president of the West Virginia Chamber of Commerce.

"Many small businesses really are the fabric of a community, particularly in a small town."

The Chamber, he said, is trying to fill a need with the grant program, funded with donations, since so many affected business owners did not have flood insurance and assistance options for flooded businesses from the federal government are largely limited to low-interest loans through the U.S. Small Business Administration.

Individuals can qualify for grant assistance through the Federal Emergency Management Agency, businesses cannot.

Helping businesses with flood recovery helps communities, in Roberts' view.

"Imagine if you're a small hardware store or you're a small lumber company, right now, people want to get to you to get the supplies and materials they need," he said. "The sooner we get them back on their feet, the sooner we get them open, the sooner those communities begin to recover."

As of Thursday, about $100,000 had been raised for the Chamber's grant effort and, Roberts said, that amount was growing each day. During a preliminary survey, about 50 applications for or interest in the direct mini-grants for small businesses had been identified.

The West Virginia Bankers Association is working with the West Virginia Chamber of Commerce on the effort.

More information on grant donations or applications is available by calling the West Virginia Chamber of Commerce at 304-342-1115 or by clicking here.

During an expected Special Session later this year, state lawmakers could be asked to approve additional grant funding from the state for small businesses in flood recovery.

Though the Chamber has not yet taken an official position on the possibility, "This is a case where just a little bit of money can help many of these businesses," Roberts said on Thursday's MetroNews "Talkline."

"A very small public investment would yield huge dividends in terms of quality of life, in terms of allowing people to be able to stay in their community because the goods and services that they depend on would then be available."

More Counties Eligible For Federal Flood Assistance

Charleston (WV) Gazette-Mail, July 14, 2016

The U.S. Department of Labor has approved a $3.5 million grant to Workforce West Virginia to create temporary cleanup and recovery jobs in the wake of last month's floods.

The National Dislocated Worker Grant will be used to target in Clay, Fayette, Greenbrier, Kanawha, Monroe, Nicholas, Pocahontas, Roane, Summers and Webster counties, according to a news release from the Department of Labor.

The money, according to the release, will provide for temporary employment on projects to help clean up, demolish, fix, renovate and rebuild public structures, facilities and land that were affected by the flood. The temporary workers may also work on the homes of people who qualify for the federal weatherization program, with priority given to elderly or disabled residents.

Also, several more counties have been approved for "public assistance" to help with recovery from last month's floods.

Braxton, Gilmer, Lewis, Randolph, Upshur and Wayne counties have been approved for the assistance, according to the Federal Emergency Management Agency. That money can go to public or nonprofit agencies to fix, rebuild or replace public facilities and infrastructure destroyed by a disaster.

In addition, Lincoln County — which was previously approved for assistance to pay for "emergency protective measures" as a result of the disaster — is now eligible for all forms of public assistance.

Counties previously approved for public assistance included Clay, Fayette, Greenbrier, Jackson, Kanawha, Monroe, Nicholas, Pocahontas, Roane, Summers and Webster.

Volunteer organizations are making a final push to get support to families cleaning out their homes after the floods.

The AmeriCorps disaster response teams arrived in West Virginia this week.

They will help organize volunteers for the next 10 days.

Health officials have urged getting homes cleaned out as quickly as possible to help avoid the spread of black mold.

Herbert Hoover High School Location Closed To Start School Year

WOWK-TV Charleston (WV), July 14, 2016

KANAWHA COUNTY, WV –

Kanawha County Board of Education approves a temporary schedule for flood damaged schools until all repairs can be made.

Elkview Middle School Students will be in class from 7:30 AM – 12 PM at Elkview Middle School and Herbert Hoover High School students will attend classes at Elkview Middle School from 12 PM – 4:30 PM. They will use this schedule until portables are placed at Herbert Hoover High School.

Kanawha County Superintendent Duerring says 45 portables will be placed on Herbert Hoover High School's football field. He doesn't think it will take a long time to get them.

Duerring says that, at this time, he has no idea how long it will be before Hoover is back open.

Fundraising Ongoing For Shared-use Path

By Carrie McDermott

Wahpeton (ND) Daily News, July 14, 2016

Organizers of Breckenridge's planned shared-use walk/bike path along Highway 75 on the city's north side have reached 86 percent of their fundraising goals.

The entire project will cost approximately $750,000, with the local share of $103,000 still needed.

The city's Economic Development Director, Stan Thurlow, gave an update on fundraising efforts to the Breckenridge Port Authority Board Wednesday afternoon.

He explained The Minnesota Department of Transportation had $550,000 available for project grants and the city received $150,000 of that, or about one-third available for the entire state. A Transportation Alternatives Plan grant netted the city $468,000 toward the project, and locally, the city's Active Living Committee has helped raise $29,000.

To be able to use the grants received, the project has to be completed by June 2018, Thurlow said, which means a call for bids would need to go out this winter.

He said the city has also applied for a $75,000 Bremer grant to help with the local share.

The shared-use path would run along Highway 75/Fifth Street North from the old Dairy Queen north to CHI St. Francis Health.

Those interested in donating to the bike path fund are asked to contact City Hall at 218-643-1431.

In other news, the board's executive committee recommended approving a $49,000 Minnesota Investment Fund loan to Scott Tischer and his wife for building improvements at Tischer Therapeutic Services on Nebraska Avenue, the former River of Church building across the street from City Hall. After some discussion, the board agreed to approve the loan.

Resident Bernie Koch attended the meeting and requested a Port Authority sign, located on property he recently purchased from the board, be moved to allow for construction of a building. The sign is along Highway 75 South. Public Utilities will help move the posts and the board gave Koch permission to dismantle the sign so he can begin construction.

Two outlots in the Gewalt Addition, purchased as part of the flood levy project, were discussed. The lots are between the levy and Tangen Addition. They can be sold but there is a drainage easement that goes through the lot so no permanent structures can be built on them.

Adjacent landowners Dean Jirak and Darren Leinen have brought in fill to level the lots out, seeded grass and have been maintaining them, according to minutes from the June 22 meeting. Leinen put a movable shed on the lot next to his. The shed conforms with the 200 square-foot maximum size in the Tangen Addition covenants, although he did not receive prior authorization from the city to put up the shed.

The board had offered to sell the lots to the adjacent landowners for 25 cents per square foot with the understanding they must conform to the Tangen covenants. The property owners rejected the offer. The board approved requesting a counter offer from the landowners and invited them to the next meeting, scheduled for July 27.

Mayor Cliff Barth reminded the board that representatives from FEMA and the U.S. Army Corps of Engineers will be at the July 18 city council meeting to discuss flood work around the city. The public is invited to attend. Representatives of the office of Minn. Rep. Collin Peterson are expected to attend, as well.

FEMA Approves $28 Million For Disaster Assistance

By Liz McCormick

WMKY-FM Morehead State University (KY), July 14, 2016

Governor Earl Ray Tomblin says it will be some time before the state has fully recovered after devastating floods in late June. He says he anticipates the damage to well-exceed $100 million.

Governor Tomblin held a press conference Wednesday to update the state on the status of recovery efforts in West Virginia.

Tomblin says 12 counties have been approved for FEMA assistance, and more than 7,000 residents have applied for individual assistance. FEMA has approved more than $28 million for individuals and households.

More than 3,300 visitors have stopped by at recovery centers. More than 400 disaster-related unemployment claims have been filed.

Roadways impacted by the flooding have reached about $55 million worth of damages.

"Obviously this, you know, as big as it is, it's going to take some," Tomblin said, "and you know, it will be expensive and ongoing for some time to handle all the cleanup of this event."

Tomblin says he's planning to schedule a special session sometime soon to see what the state Legislature can do to help in the relief efforts.

Walker Directs Agencies To Assist In Northern Wisconsin Flooding

WEAU-TV Eau Claire (WI), July 14, 2016

MADISON, Wis. – On Tuesday, Governor Scott Walker participated in a storm damage tour to assess the need for assistance in northern Wisconsin following heavy storms in the area, which led to his declaration of a State of Emergency. Governor Walker released the following statement today after his briefing on the situation:

Wisconsin Emergency Management briefed us today about the ongoing flooding situation in northern Wisconsin, and we continue to gather information from local emergency management staff regarding the severity of the damage so we can prepare a request for a federal disaster declaration. We are working diligently to ensure services and resources are made available to all citizens and communities impacted by this event.

The following state agencies have resources available to assist local communities:

- Wisconsin Emergency Management (WEM) continues to work with local, tribal, and county officials assessing the damage and coordinating state resources. WEM is also working closely with the Federal Emergency Management Agency and other federal agencies to provide situational awareness and review all possible disaster resources.
- The Department of Administration (DOA) will work with communities to make Community Development Block Grant Emergency Assistance Program (CDBG-EAP) funds available. The funds may be used to assist eligible, low to moderate income homeowners for housing rehabilitation; business assistance; and/or repair local public infrastructure and community centers. Local communities should work with the Division of Energy, Housing, and Community Resources to apply. Please visit our web page or call (608) 266-7531.
- The Department of Agriculture, Trade, and Consumer Protection (DATCP) will connect affected farmers with crop damage and livestock shelter needs for assistance and counseling through its Farm Center and Animal Health Division. The connection can be made by dialing 800-942-2474. Major storms bring transient (temporary) home improvement workers and scams to Wisconsin communities. Contact the Bureau of Consumer Protection to find out if there are complaints on file against the contractor. The Consumer Protection Hotline can be reached at 800-422-7128 or via email: datcphotline@wisconsin.gov. Additional information is available at http://datcp.wi.gov.
- The Wisconsin Housing and Economic Development Authority (WHEDA) is working directly with the American Red Cross on emergency housing for residents displaced by the flooding. Homeowners with a WHEDA mortgage that have been negatively impacted by the flooding should contact WHEDA at 800-562-5546.
- Department of Natural Resources (DNR) will monitor groundwater issues in regards to flooded wells, monitor and inspect dams in the affected area, and work with local communities to expedite the permitting process for necessary repairs.
- The Department of Transportation (WisDOT) staff are inspecting and documenting the impacts and damages to existing infrastructure and looking into what type of funding may be available for repairs. Road closures and detours are available at www.511wi.gov.
- The Public Service Commission (PSC) will continue to monitor utility infrastructure, local grid reliability, and fuel supply to the region.

The Department of Health Services (DHS) has been, and will continue to be, in contact with local health departments and is providing resources and assistance as requested. One of the resources available is the Wisconsin Flood Toolkit, designed to aide local leaders in offering clear and accurate information about keeping people and property safe before, during, and after a flood. You can find the Wisconsin Flood Toolkit here.

FEMA Disaster Recovery Center At Palestine Mall

Jacksonville (TX) Daily Progress, July 14, 2016

PALESTINE – Starting July 12, FEMA will open a Disaster Recovery Center at the Palestine Mall, according to a release issued by City Communications and Best Practices Officer.

The center, located at 1920 S. Loop 256 inside the former pain management clinic, will help and check the status of applications for disaster relief and help applicants write letters of appeal from the April 30 flooding.

The Disaster Recovery Center will be open from 9 a.m. to 6 p.m. Monday through Friday, and from 9 a.m. to 2 p.m. on Saturdays.

FEMA recently declared Anderson County, along with Cherokee, Smith, and Wood counties, to be part of a federally-declared disaster area and available for individual relief. The disaster area encompasses counties in Texas affected by heavy rains and major flooding from April 17 to April 30.

To apply for disaster assistance online, visit disasterassistance.gov, or call 1-800-621-FEMA (3362). Representatives from the Small Business Administration will also be on hand to help with federal disaster loans for businesses, nonprofits, homeowners, and renters.

Texans Have Two Weeks Left To Register For April Flood Disaster Aid

Tomball (TX) Potpourri, July 14, 2016

Texans who suffered damage or losses from the April storms and flooding have only two more weeks to register with FEMA for federal disaster assistance.

Residents of 16 counties who experienced damage or losses between April 17 and 30 have until July 29 to register for assistance after FEMA – at the request of the state – extended both the deadline to register as well as the period of time during which damage is eligible.

Residents of Anderson, Austin, Cherokee, Colorado, Fayette, Fort Bend, Grimes, Harris, Liberty, Montgomery, Parker, San Jacinto, Smith, Waller, Wharton and Wood counties as well as those who work in those counties are encouraged to register with FEMA if they have not already done so.

Disaster assistance for homeowners and renters may include grants to help pay for temporary housing and essential home repairs, as well as other serious disaster-related needs such as medical and dental expenses.

Applying for disaster assistance is essentially a two-step process, which ensures consideration for all FEMA programs and the U.S. Small Business Administration disaster loans. First, register with FEMA, then complete and return the no-obligation SBA loan application, if one is offered. There is no charge to apply for the loan and if approved, no obligation to accept it.

Disaster survivors may register the following ways:

Online at DisasterAssistance.gov.

By phone at 800-621-3362 (FEMA). Applicants who use 711 or Video Relay Service may also call 800-621-3362. Persons who are deaf, hard of hearing or have a speech disability and use a TTY may call 800-462-7585. The toll-free numbers are open from 7 a.m. to 10 p.m., seven days a week. Multilingual operators are available.

At a disaster recovery center. To find the nearest one, go online to the disaster recovery center locator at asd.fema.gov/inter/locator.

FEMA grants do not have to be repaid. FEMA assistance is nontaxable and will not affect eligibility for Social Security, Medicaid or other federal benefits.

Survivors should register even if they have insurance. FEMA cannot duplicate insurance payments, but underinsured applicants may receive help after their claims have been settled.

A free multilingual guide to the types of assistance available can be found at fema.gov/help-after-disaster.

$975,000 In Storm Aid Approved In County

By Arthur Hahn

Brenham (TX) Banner-Press, July 14, 2016

The Federal Emergency Management Agency has approved almost $1 million in storm recovery payments in Washington County.

FEMA officials said Wednesday that $975,271 for 217 applications has been paid out, an average of about $4,500 for each.

What Texans Are Asked When Applying For FEMA Assistance

Spring (TX) Observer, July 14, 2016

Residents of 24 Texas counties affected by storms and flooding that occurred in May and June are encouraged to register with FEMA for federal disaster assistance. Having the information they need ready when they call or go online to register will speed the process.

Applicants will be asked for the following information:

- Social Security number
- address of the damaged primary residence
- description of the damage
- information about insurance coverage
- a current contact telephone number
- an address where they can receive mail
- a bank account and routing numbers for direct deposit of funds

Eligible individuals and households of the 24 declared counties have until Aug. 10 to apply for assistance for damage that occurred between May 26 and June 24.

The affected counties are Austin, Bastrop, Brazoria, Brazos, Burleson, Eastland, Fayette, Fort Bend, Grimes, Harris, Hidalgo, Hood, Kleberg, Lee, Liberty, Montgomery, Palo Pinto, Parker, San Jacinto, Stephens, Travis, Tyler, Waller and Washington.

Applying for disaster assistance is essentially a two-step process, which ensures consideration for all FEMA programs and the U.S. Small Business Administration disaster loans. First, register with FEMA, then complete and return the no-obligation SBA loan application, if one is offered. There is no charge to apply for the loan and if approved, no obligation to accept it.

Disaster survivors may register the following ways:

- online at DisasterAssistance.gov
- phone 800-621-3362 (FEMA). Applicants who use 711 or Video Relay Service may also call 800-621-3362. Persons who are deaf, hard of hearing or have a speech disability and use a TTY may call 800-462-7585. The toll-free numbers are open from 7 a.m. to 10 p.m., seven days a week. Multilingual operators are available.
- at a disaster recovery center. To find the nearest one, go online to the disaster recovery center locator at asd.fema.gov/inter/locator.

FEMA grants do not have to be repaid. FEMA assistance is nontaxable and will not affect eligibility for Social Security, Medicaid or other federal benefits.

Survivors should register even if they have insurance. FEMA cannot duplicate insurance payments, but underinsured applicants may receive help after their claims have been settled.

A free multilingual guide to the types of assistance available can be found at fema.gov/help-after-disaster.

For more information on the Texas recovery, visit the disaster webpage for the May-June storms at fema.gov/disaster/4272; or visit the Texas Division of Emergency Management website at txdps.state.tx.us/dem. Follow FEMA on Twitter @femaregion6.

31 Homes Among 60 Buildings Destroyed Or Damaged In Timberon Fire, Now At 290 Acres

By Blair Miller And Caleb James

KOB-TV Albuquerque (NM), July 14, 2016

Thirty-one homes are completely destroyed and among 60 total buildings damaged or lost after a fire burned through Timberon, a community southeast of Alamogordo, Wednesday and Thursday.

Gov. Susana Martinez announced 31 homes had burned at a Thursday afternoon press conference, where she also declared a state of emergency in order to free up federal funds to help in the emergency response. One firetruck for Timberon's volunteer fire department was also lost to the flames.

"I've directed our state agencies to work together to ensure that all resources are available to assist in fighting the fire. Sadly, the fire may have already destroyed more than a dozen homes, and many more are at risk. I ask New Mexicans to join me in praying for the residents of Timberon," Gov. Martinez said in an afternoon news release after she toured the site in a National Guard helicopter.

The approval of a Fire Management Assistance Grant from FEMA means 75 percent of the cost of suppressing the fire and evacuations will be covered.

The fire was estimated as being 290 acres in size Thursday night. Though flames and smoke had dissipated since the fire first started Wednesday evening, it continues to burn and is 0 percent contained.

Exploding propane tanks had kept firefighters from getting close enough to the fire to confirm the number of damaged or destroyed properties earlier Thursday.

160 personnel are at the site of the fire.

Many who are now realizing they have lost their homes remain at a Red Cross-sponsored evacuation center around an hour away at Cloudcroft High School.

"It's like something you'd see in Iraq or something: cars melted down and stuff. It's crazy," said evacuee Jake Yancy.

The entire community of Timberon was evacuated Wednesday night. The junction of State Road 6943 and Sunspot Road and the area south of it is closed.

The entire area is part of a "no entry" zone. A fire line has been established around the perimeter of the fire and is holding, crews said Thursday night.

Timberon Fire At 290 Acres; 60 Structures, 16 Vehicles Burned

By Jacqueline Devine

Las Cruces (NM) Sun-News, July 14, 2016

TIMBERON, N.M. – Mandatory evacuations are still in effect after a wildfire swept through private and public lands in Timberon that destroyed 60 structures and burned 16 vehicles during the estimated 290-acre fire.

Otero County with several state and federal fire fighters responded to the fire at 3:30 p.m. Wednesday in the isolated town about 30 miles south of Cloudcroft.

No injuries have been reported. One Timberon VFD fire engine was also damaged

Timberon's power lines were knocked down during the fire. Air tankers from Alamogordo's White Sands Regional Airport continue dropping slurry on the fire and hot spots.

Gov. Susana Martinez toured the most damaged areas of the fire Thursday afternoon.

Martinez said she was shocked that the damage was much worse than expected.

"We have four homes that have mild to medium damage to them, 16 vehicles have been destroyed as well. I flew over the fire earlier, I could see the retardant that was dropped in order to keep the perimeter," Martinez said. "I could see the homes from up above, it's just a white ashy pile that you see. I've met volunteers that are helping feed firefighters that are here. I met a lady that actually lost her home in the last fire but she's here cooking and making sure everyone gets fed that are here at the management center."

She said she met and talked to a former Timberon fire chief during her tour.

"There's another gentleman I met who was the previous fire chief in Timberon along with his wife and he left his home to go fight fires. He is 80-years-old," Martinez said.

She said she learned the Federal Emergency Management Agency is helping with the cost of fighting the fire.

"We're making everything available that the community needs from the state government," Martinez said. "We have received a federal grant that has now been approved that will pay 75 percent of the costs of containing and fighting this fire. That means 75 percent will go to paying firefighters, they will be reimbursed and the costs to the county will also be reimbursed for the fighting of this fire. The state will be able to pick the rest of the 25 percent."

U.S. Forest Service spokesman Caleb Finch said firefighters continue to work on containing the fire at this time.

"As of right now there is zero percent containment. We expect containment to increase in the next few days, the control lines are holding and they have been holding throughout the day but we want to ensure the resources on the ground continue to establish a good control with those lines as that happens," Finch said. "When we get through the burning periods, we will be able to increase containment."

He said 160 personnel are assisting with the fire that includes state, county and federal units and they expect more soon.

"Currently we have 160 personnel and that's a combination of engines and crews, state, county, volunteer fire departments and federal units," Finch said. "We expect another 40 to 60 to arrive in the next 24 hours that will help extinguish the hot spots which will help us wrap it up sooner than anticipated."

He said the cause of the fire is undetermined at this time.

"The cause of the fire is still under investigation, we have fire investigators on scene right now. Some of the evacuees are able to come look at their homes as we make containment with the fire according to the Sheriff's Office, New Mexico State Police and New Mexico State Forestry regarding the coordination of bringing those homeowners in to look at their homes and retrieve valuables," Finch said. "We do our best not to allow anyone to come in to the perimeter of the fire because we still have 160 people working the fires."

He said fire personnel continue to determine the exact acreage of the fire.

"The number of acres may increase with more accurate mapping. The monsoon rains are late this year and so we are abnormally hot and dry. We still can have fires in July but it is abnormal this time of year. If the public can just be cognizant of how they're treating their camp fires and their barbecues that will help reduce the risk of wildfires," Finch said. "I think it's great that there's a lot of inter-agency coordination among numerous agencies like state, local and federal. It's a great way to show support for the residents of Timberon and what they've experienced and also the firefighters have also received support."

The Cloudcroft High School gym is being used as shelter for evacuees until the fire is fully contained.

The American Red Cross confirmed that a total of 21 people stayed overnight when the fire started and 15 people have registered with them making it a total of about 40 Timberon residents who have stayed at the shelter.

"We are providing warm blankets and everyday essentials. We also have extra meals for people that get hungry in between meals. Residents have also donated towels so evacuees could take showers here," said American Red Cross Disaster Chair James Gutierrez. "We also heard from a lot of outside agencies like the Presbyterian Medical Group that is willing to assist with mental health counseling or if they just need to see a doctor. Unfortunately we do not allow pets unless it is a service animal. Livestock is being set up at the Otero County Fairgrounds."

Communities from around the area have also come together to show support for Timberon residents on Facebook and they encourage anyone that needs help to speak up. Assistance can be found on the following Timberon Facebook pages, https://www.facebook.com/groups/126788310437/ and https://www.facebook.com/groups/274514549576721/

Some Butte Fire Property Owners Unhappy With Tree Removal Plan

By Courtney McKinney

Calaveras (CA) Enterprise, July 14, 2016

Some property owners in the Butte Fire burn area Wednesday voiced concerns about the number of purportedly hazardous trees that county officials seek to remove from private properties.

The remarks came during a public meeting in Mountain Ranch hosted by Calaveras County Public Works Department personnel. Officials are asking owners of more than 260 parcels with hazardous trees on their properties to provide right-of-entry releases by July 22. The right-of-entry forms will allow the county's contractor, Tetra Tech Inc., to access private property to cut down the trees.

One man who spoke at the meeting called the tree plan "overdone, expensive and excessive," while others said that there are trees marked for removal that could potentially survive.

"We have lost thousands upon thousands of trees in the fire, so if we can save one, do it," another man said. Neither man identified himself and both left before the meeting ended.

The federally funded tree removal program targets trees deemed to pose threats to Calaveras County roads. County officials estimate that 6,500 dead trees that are on private property stand close enough to county roads to endanger motorists if they fall.

Typically, the Federal Emergency Management Agency pays 75 percent of the cost for such post-disaster projects, while state and local agencies pay for the rest. But because of the high risk posed by the hazardous trees, the federal and state governments have stepped in to pay for removal, which means it will not come out of county coffers or out of the pockets of county residents.

The professional arborist for the project, William Butler of Butler Enterprises, told residents that although some trees may seem OK from the outside, there are many secondary issues for trees with fire damage that are not easy to see. He and the program manager of Tetra Tech, Will Mcgowen, both assured residents that only trees deemed unsafe for county roads will be removed. "We are working in your best interests," Mcgowen told the crowd. "We are personally accountable to the county."

Another concern raised by some property owners is the requirement that they bill their insurance for the tree removals. According to Earl Seaberg of the Public Works Department, FEMA requires homeowners with insurance for tree removal to submit bills to their insurers for reimbursement while those without insurance will not be required to do anything.

Landowners who have trees cut down on their properties through this program can keep the logs if they wish. Otherwise, Tetra Tech will place the trees in storage. Another point of contention at the meeting came when residents were told that they are not allowed to receive double benefit from the removals, meaning they cannot sell or barter the felled trees.

Landowners with hazardous trees on their properties who do not participate in the removal program will be liable for any trees that fall onto county roads and for damage caused by the trees.

The meeting ended with county officials reiterating how important it is to public safety for the trees to be removed. They said landowners can and should call the designated hotline with any questions or concerns about tree removal on their properties. That number is 754-6767. The questions and answers from Wednesday's meeting will also be available on the county website.

Meanwhile, Tetra Tech personnel on Wednesday began posting right-of-entry permits at the entrances to properties where owners have agreed to cooperate with the tree removal program. The permits are displayed on small wooden stakes.

Santa Clarita's Sage Fire Burns 1,100 Acres; 92 Percent Contained

By Debbie Sklar

My News LA (CA), July 14, 2016

The Sage Fire, which has scorched 1,110 acres west of Santa Clarita, was 92 percent contained Thursday was firefighters patrolled the area putting out hot spots, authorities said.

Two patrols of firefighters were assigned day and night through tomorrow night to put out hot spots, said Inspector Gustavo Medina of the Los Angeles County Fire Department.

Since the blaze was reported about 12:05 p.m. Saturday, three firefighters have been injured and at least one building damaged. The cause of the fire was still under investigation, as was the issue of whether the house fire was related to the Sage Fire, Medina said.

After the fire was reported on Saturday, residents were evacuated from 700 homes but were told about 9:30 that night that they could go home.

The Federal Emergency Management Agency announced that it has authorized the use of federal funds to assist with the firefighting effort, which has involved personnel from Los Angeles County, the city of Los Angeles, the U.S. Forest Service and the Orange County Fire Authority. Fire Management Assistance Grants provide federal funding for up to 75 percent of eligible firefighting costs.

Winners And Losers Of The Week

By Kenneth Quinnell

AFL-CIO, July 14, 2016

Each week, we take a look at the biggest friends and foes of labor. We celebrate the workers winning big and small battles, and we shame the companies or people trying to deny working people their rights.

Winners: Home care workers, now that nearly 2 million of them have overtime protections.

Runners-Up: Fire Fighters (IAFF), for assisting locals apply for FEMA grants to improve firefighter safety and effectiveness, totaling $500 million.

Losers: Manufacturers that pay low wages, as a new report shows that one-third of working people in nonsupervisory positions in manufacturing are on public assistance.

Runner-Up: U.S. District Judge Sam R. Cummings in Texas, for blocking the "Persuader Rule," which would have increased transparency for those attempting to influence union elections.

ZIKA VIRUS

Lawmakers To Go On Recess Without Addressing Zika

By Andrew Taylor

Associated Press, July 14, 2016

WASHINGTON – Congress is about to leave for a seven-week vacation without giving the Obama administration any of the $1.9 billion it's seeking to battle the Zika virus, and a Senate effort to revive the nuts-and-bolts process of passing agency budgets was dealt a significant setback at the hands of Democrats.

Meanwhile, House Republicans are poised to pass a $32 billion spending bill for the Interior Department and the Environmental Protection Agency as lawmakers exit Washington for a seven-week recess, though the move would do little to advance GOP leaders' hopes of fixing the Capitol's shattered budget process.

The House measure, laced with a wish-list of GOP provisions to roll back Obama administration clean air and water regulations, faces a White House veto threat – as does a $1.1 billion GOP-drafted Zika measure that's been grounded by abortion politics and other problems.

GOP efforts in both the House and Senate to restart the annual budget process hang by a thread, pointing to yet another take-it-or-leave-it trillion-dollar-plus bill this fall to keep the government open weeks before the election. The House Interior measure would be just the fifth of the 12 spending measures to clear the House. In the Senate, an effort by majority Republicans to revive debates on the measures – which had languished under Democratic control of the chamber – hasn't gone as well as hoped.

Senate Democrats on Thursday again filibustered the advance of an annual Pentagon spending measure over fears that Republicans would boost defense while keeping domestic programs frozen. And a much-needed bill to battle the Zika virus faces a Democratic filibuster on Thursday, as well, over a GOP provision that would block Planned Parenthood from receiving anti-Zika funding.

"When they were in the majority, they didn't want to pass appropriations bills. When they were in the minority, they don't want to pass appropriations bills," said Senate Majority Leader Mitch McConnell, R-Ky., who has been frustrated in his efforts to move the measures through. "I gave it every opportunity this year to succeed. We have spent weeks and weeks and weeks trying to get a regular order of process on appropriations through the Senate."

The House measure, likely to pass late Wednesday, is red meat for conservatives seeking to take a whack at the Environmental Protection Agency. But its passage would run into a veto threat from President Barack Obama and a certain filibuster from Senate Democrats.

The Interior and EPA funding bill is part of the $1 trillion-plus budget to bankroll day-to-day agency operations. In the past, Congress has devoted much of the spring and summer to passing the 12 individual spending bills that are a part of that process. But divided government between the Obama administration and Republicans controlling Congress has produced lowest-common-denominator catchall spending bills that offended lawmakers on both the political right and left.

The House measure would block EPA rules on coal-fired power plants and clean water rules involving coal operations. The Obama administration has successfully used veto threats to strip such provisions in the past. The GOP measure also cuts the budget of the EPA, an agency loathed by many Republicans.

Meanwhile, Senate Democrats are poised to vote Thursday to again block bills to finance the fight against the Zika virus and fund the Pentagon for the upcoming budget year. The Zika measure has been hung up over Democratic objections to GOP language that would block Planned Parenthood clinics in Puerto Rico from receiving money to fight the virus.

At the same time, Senate Democrats have blocked action on a huge Pentagon spending bill over a move by House Republicans to use accounting moves to add $18 billion to the measure. Democrats say the GOP move would unravel last year's hard-fought budget deal, which reversed curbs on both Pentagon and domestic accounts.

McConnell has called for re-votes Thursday on both the Pentagon and Zika measures as the final major action before the chamber adjourns until after Labor Day.

In one bit of progress, the House was on track to clear for Obama's signature legislation requiring labels on foods containing genetically modified ingredients.

Congress Takes A Vacation Without Doing Anything About Zika

New York Times, July 14, 2016

Members of Congress are about to leave Washington for seven weeks without passing a bill to pay for the fight against Zika. Their failure to do so will delay the public health response to the mosquito-borne virus that causes birth defects, unnecessarily putting thousands of people at risk.

As of June 30, nearly 600 pregnant women appeared to be infected with Zika in American states and territories and seven babies had been born with birth defects linked to the virus. Public health experts believe these numbers are likely to increase in the coming weeks as mosquitoes become more prevalent, especially in Florida, Hawaii and Texas. This calls for swift action by the government, but instead the Republicans who control Congress are trying to exploit this crisis to advance ideological causes.

The House last month passed a bill that would allocate $1.1 billion to fight Zika by funding vaccine development, mosquito control efforts and other programs. But Republican lawmakers attached so many objectionable provisions to the measure that Democrats have effectively blocked the bill in the Senate where 60 votes are needed to cut off debate and bring legislation to a vote.

The biggest problem with the bill is that it would provide funds for contraception and maternal care only through public health departments and Medicaid-run clinics. This provision is designed to freeze out private providers like Planned Parenthood, which Republicans love to hate. For no good reason, it would deny many women in Puerto Rico and Southern states who do not live near public health centers the care they need. It should not be lost on anyone that Republicans insisting on this condition are usually eager to embrace the private sector and to criticize government programs.

Another troubling aspect of the bill is that, to offset costs, it would rob other important programs of about $750 million; funding for Ebola, for example, would be cut by $107 million. The bill would also relax environmental laws by allowing businesses to spray pesticide near lakes, rivers and other waterways without notifying the Environmental Protection Agency. Republicans say that this would make it easier for local governments to control mosquitoes — even though the law on pesticide spraying already has an exception for health emergencies.

The absence of funding, however temporary, is expected to cause major problems. Many local governments need federal assistance to control mosquitoes in the coming weeks. And researchers at the National Institutes of Health may be forced to stop tests on a potential vaccine as well as efforts to develop tools that can quickly diagnose Zika infections, which in most people do not cause any visible symptoms.

It's always troubling to see good legislation hijacked to score political points. In this case the timing could not be worse.

GOP Calls Out Obama For Millions Of Unspent Dollars Amid Zika Fight

By Sarah Ferris

The Hill, July 14, 2016

Top Republicans in Congress are demanding to know why the White House is holding onto more than $400 million that they say could have already gone to fighting the Zika virus.

Six leading GOP appropriators wrote to President Obama on Thursday, voicing strong concerns about the administration's slow pace in exhausting its existing resources on Zika, as Democrats dig in their heels to demand a $1.1 billion emergency spending bill.

"This money is available immediately to prepare for and combat Zika, yet is seemingly not being spent," the letter reads, echoing remarks by House Appropriations Committee Chairman Hal Rogers (R-Ky.) on Wednesday.

Lawmakers remain at a standstill over Zika funding as members of both chambers departed Thursday for a record seven-week recess. A last-ditch move to approve the funding by Senate Republicans on Thursday failed after Democrats blocked the GOP's bill for a second time.

A once-promising Zika compromise bill, which had been backed by both parties in the Senate, collapsed late last month after House GOP leaders decided to advance their own version in protest of a Democratic sit-down over gun controls bills. The most recent version, which has earned no Democratic support, also faces a veto threat from the White House.

Officials from the Department of Health and Human Services (HHS) told reporters last week that about $112 million of the roughly $589 million from the Ebola funding has gone out the door to fight Zika as of July 5.

That would mean the White House has drained only about one-sixth of its half-billion dollar funding pool for Zika amid vocal calls from Democrats to approve $1.9 billion in emergency spending.

Federal health officials have rejected the GOP's claims that Democrats are choosing not to spend the money they have on hand. An HHS official argued that the process for spending federal dollars "takes time," and that the president made his $1.9 billion request knowing it would be a lengthy process.

"The suggestion that repurposed Ebola funds are sitting unused is misleading," the HHS official said. "We have gone through the standard process for awarding that money, and much of it will move in July and August."

The Centers for Disease Control and Prevention is planning to give states and territories nearly $100 million over the next month to fight Zika.

Last Friday, the CDC doled out another $25 million in state and local government grants.

HHS has also warned that its vaccine work — undertaken by the Biomedical Advanced Research and Development Authority — "is in the middle of vaccine-related negotiations that will exhaust all of its repurposed Ebola funds."

Congress Will Go The Rest Of The Summer Without Passing Anything On Zika

By Michael Mcauliff, Senior Congressional Reporter, The Huffington Post

Huffington Post, July 14, 2016

WASHINGTON — The political conventions, followed by a long summer break, proved a higher priority for Congress on Thursday than funding the nation's response to Zika, as the Senate failed again to pass legislation dealing with the mosquito-borne illness.

With Congress leaving this week to pick presidential candidates, and then staying on recess until after Labor Day, the rest of the summer will pass before there's another chance for lawmakers to fund the efforts to prevent Zika from becoming an epidemic in the United States.

The virus is linked to severe birth defects, including microcephaly, and was recently blamed for the death of a Utah man. According to the most recent count from the Centers for Disease Control and Prevention, more than 3,600 people in the United States and its territories have been diagnosed with the disease, including 599 pregnant women.

The White House sought $1.9 billion for anti-Zika efforts in February. The House passed just $622 million in May on a party-line vote, and the Senate passed a bipartisan bill for $1.1 billion soon thereafter. In working out the differences between the measures, a Republican-led conference committee kept the Senate's spending levels, but added riders restricting birth control, promoting the Confederate flag, cutting Obamacare and relaxing clean water rules. It also included a provision to cut funding for the ongoing response to Ebola, which would run out of money in October.

The resulting measure again passed the House, but Democrats in the Senate objected to the "poison pill" riders that were added, and blocked it. It is that same measure, offered again by Senate Majority Leader Mitch McConnell (R-Ky.), that failed again Thursday on a procedural vote, with Democrats preventing it from getting the necessary 60 supporters.

The vote was preceded by finger-pointing from each party's leader, who each said that everything the other guy claimed was false.

"The idea that it would underfund Zika. The idea that it would prohibit funding or deny access for birth control. The idea that it would actually weaken clean water protections... We've shown how these claims just don't stand up to scrutiny," McConnell said.

"I would like to echo the words of the senior senator from Texas, who said that our Democratic colleagues seem to be operating in a 'logic-free zone' when it comes to Zika," he added. "It's time to get back to reality. This is a serious crisis that demands serious solutions."

Senate Minority Leader Harry Reid (D-Nev.) mocked McConnell's claims, since the provisions that have angered Democrats are, in fact, included in the bill.

"I assume that my Republican friend feels if you say just the opposite of [what] is valid and true, that some people will believe it," Reid said. "You talk about a logic-free zone, as my friend mentioned. We've got one in the last half-hour here."

Not only did the Zika bill come laden with partisan riders, it was attached to a much larger measure to fund military construction and veterans affairs.

The failure of the bill came just two days after the White House and the Department of Health and Human Services warned in a letter to McConnell that efforts to curtail the Zika virus would suffer if lawmakers did not act.

"It is imperative that Congress act to pass a bipartisan Zika supplemental bill before departing for summer recess," wrote budget director Shaun Donovan and HHS Secretary Sylvia Burwell. "Failure to do so will significantly impede the administration's ability to prepare for and respond to possible local transmission in the continental United States and Hawaii, and address a growing public health crisis in Puerto Rico."

Delaying funding would slow the development of a vaccine and hinder the CDC's ability to track the spread of the disease and control mosquitoes, the letter said.

CDC head Tom Frieden has estimated that preventable cases of babies born with birth defects from Zika will each cost an average of $10 million over a lifetime to treat.

At least eight babies have already been born in the continental United States to mothers who are believed to have contracted the virus while traveling.

Sen. Patty Murray (D-Wash.) denounced the outcome of Thursday's vote.

"It's been more than five months since President Obama put forward his proposal to combat Zika, and more than two months since the Senate passed a strong, bipartisan downpayment on that proposal," Murray said in a statement. "But instead of staying the bipartisan course, Republicans have unfortunately chosen to put their ideological battles against Planned Parenthood and women's health providers ahead of the health needs of women and children nationwide."

Senate Rejects Zika Package Again, No Signs Of A Deal

Roll Call, July 14, 2016

The 52-44 vote on the motion to limit debate on the $1.1 billion anti-Zika funding bill amounted to a last-minute attempt by Senate Majority Leader Mitch McConnell to move the legislation to the president's desk with the chamber set to leave for a seven-week summer recess Thursday afternoon. Sixty aye votes were required to advance the measure.

"It's time for our friends to start worrying less about pleasing outside political groups and start worrying about actually helping the Americans who are counting on all of us," McConnell, R-Ky., said, during floor remarks Thursday morning.

Democrats have repeatedly criticized Republicans for including language in the conference report that Democrats say would prevent funds from going to

Planned Parenthood clinics in Puerto Rico. Republicans have shot back at Democrats by saying their position on the conference report represents a lack of support for pregnant women throughout America.

Minority Leader Harry Reid critiqued House Republicans during his floor speech, calling them "crazies." The Nevada Democrat also said not allowing funds to go to Planned Parenthood's Pro Familias clinics in Puerto Rico would limit the ability of women to prevent pregnancy while Zika continues to be a threat.

"How could anyone in good conscience vote for that [bill]?" Reid asked, referring to provisions in both the Military Construction-VA and the Zika sections of the conference report. "We can't and we aren't going to."

House Speaker Paul D. Ryan , R-Wis., slammed Senate Democrats for blocking the Zika aid package at his weekly press conference Thursday.

"They need to drop politics and pass the bill," Ryan said. He specifically objected to Democratic criticisms of offsets: "They wanted no offsets, we partially offset it with what I would call extremely vanilla offsets."

"They need to drop the politics and pass the bill so we can respond to this real need," Ryan added.

As the clock ticked down to the vote, House Appropriations Committee Democrats sent a last-minute letter to Ryan, encouraging Republicans to take a vote on a bill that would allocate the $1.9 billion in emergency funding that President Barack Obama requested in February. Democrats have made numerous attempts to do the same thing during committee meetings on the fiscal 2017 spending bills. All of those proposals have failed.

The letter followed a final plea from the White House on Wednesday that did not cite a specific dollar amount or the so-called poison pills, but encouraged Congress to pass anti-Zika funding before leaving for recess.

Ranking member of the Appropriations Committee Barbara A. Mikulski , D-Md., said on Wednesday that her "optimism is shrinking" when asked about the prospects for a last-minute Zika deal.

Republican Sen. Roy Blunt of Missouri, who negotiated the Senate's $1.1 billion emergency compromise with Democratic Sen. Patty Murray of Washington in May, said on Wednesday that the "meaningful conversations" are taking place at the leadership level. He named McConnell, Reid, Ryan and House Minority Leader Nancy Pelosi , D-Calif.

The inability of the Republican-led Congress to pass the legislation is a politically risky move ahead of the seven-week summer recess. The number of infants born with microcephaly linked to the Zika virus will continue to grow in the coming weeks and months.

As lawmakers from both political parties return to their districts to fundraise and run for reelection, additional funding for the Centers for Disease Control and Prevention and the National Institutes of Health will be held off for at least a couple of months.

Congress is slated to return in September and while the political parties could hash out a deal then, they may likely feel less pressure to act with summer over, unless Zika becomes a larger public health problem. Without any of the 12 fiscal 2017 appropriations bills enacted, they will only have four weeks to negotiate and vote on a stopgap spending measure known as a continuing resolution to keep the government funded past the end of the fiscal year on Sept. 30.

However, there is a possibility that bill could include additional money for the CDC and NIH to continue their research and vaccine trials.

Zika Funding Bill Fails As Congress Is Unable To Reach Compromise

By Will Drabold

TIME, July 14, 2016

After months of negotiation and national calls to action, Congress will not provide any money to fight the spread of Zika in the United States this summer. The final chance this summer to fund the White House's February request evaporated in the form of a failed Thursday vote in the Senate.

The White House did not immediately provide comment on the stalemate and how it will impact efforts to combat the spread of the virus. President Barack Obama previously blasted Republicans in May for not allocating money to fight Zika and criticized their proposal to spend funds left over from fighting Ebola on Zika, something the administration started doing in April.

Both Democrats and Republicans said they wanted to spend money to prevent the spread of Zika, but political disagreements ultimately trumped numerous health warnings. Senate Democrats refused to support House Republican additions to the legislation that would reduce funding for Planned Parenthood, defund parts of the Affordable Care Act and reversed a ban on flying Confederate flags in military cemeteries.

[Read more from TIME: 10 Zika Facts You Need to Know Now]

After this week, Congress will recess till September. That punts funding for research and prevention of a virus that is proven to cause severe birth defects in infants and has already infected more than a thousand travelers in the continental United States.

Zika has infected more than a million people in Central and South America. Hundreds of babies have been born with shrunken heads, a disease called microcephaly, from mothers infected with Zika.

When Ebola ravaged Africa and fears rose that the deadly disease could spread in the U.S., Congress allocated $6 billion to fight the virus. So far, the White House has reportedly spent more $700 million

in leftover Ebola funding to fight Zika.

There are over one thousand Americans in the U.S. with travel-associated cases of Zika, including 320 pregnant women. There are also 2,534 people in U.S. territories who are infected, including 279 pregnant women. In the U.S. there have been at least three reported cases of infants born with Zika-related microcephaly. On Wednesday, it was confirmed

a baby born with microcephaly in Texas received the defect from the Zika virus. The child's mother traveled to Latin America during her pregnancy.

"We are disappointed," says Dr. Umair Shah, executive director of Harris County Public Health. "We confirmed the first travel associated case of Zika in Texas in January, and yesterday we confirmed the first travel-associated case of microcephaly."

"It would be a lot better if we had those resources," Shah adds. "I have to be honest, our team is stretched quite a bit."

Shah says he hopes that should funding be passed after the recess, he hopes the funds could go towards retrospectively covering costs incurred by health departments during the outbreak response.

[Read TIME's Cover Story About Zika and How to Beat It]

Before the vote, Senate majority leader Mitch McConnell attacked Senate Democrats for blocking the bill. "

This is a serious crisis that demands serious solutions," McConnell said on the Senate floor. "It's time for our friends to start worrying less about pleasing outside political groups and start worrying more about actually helping the Americans who are counting on us."

In a floor speech Thursday, Senate Democratic leader Harry Reid fired back, accusing Republicans of making the bill impossible to vote for.

"The Republicans are choosing vacation over protecting pregnant women and their babies from these terrible birth defects that can be prevented," Reid said.

Zika is transmitted by mosquito bites or through sex. More than 1,110 Americans now have Zika they contracted while traveling. Whether Zika has transmitted between people in the U.S. is unknown. But public health experts have told TIME they believe local transmission may have already happened and would be difficult to track. Local transmission is expected to be worse in Florida and Texas where the type of mosquito that carries Zika is abundant while travel to Central and South America is high.

There is no drug or vaccine for the virus.

Partisan Split Delays Zika Bill

By Shannon Firth

MedPage Today, July 14, 2016

WASHINGTON – As partisan rancor around stalled Zika legislation continues, the chances of reconciling the bill before the Senate's 7-week recess vanished.

On Thursday, the House version of the Zika bill failed a test vote in the Senate with a 52-44 tally. The vote signaled that the bill would not come to an up-or-down vote.

"The problem is only getting worse," said Sen. Marco Rubio (R-Fla.), chair of the Senate Subcommittee on Western Hemisphere, Transnational Crime, Civilian Security, Democracy, Human Rights, and Global Women's Issues in his opening remarks at a hearing a day earlier, speaking of the Zika virus epidemic.

"It is our duty to act now while we can still get ahead of this disease and before it is simply too late," he said.

Physician and health policy groups were disappointed with Congress's inaction.

"Without ensuring there are sufficient resources available for research, prevention, control and treatment of illnesses associated with the Zika virus, the United States will be ill-equipped to deploy the kind of public health response needed to keep our citizens safe and healthy – especially since the spread of mosquito-borne illness is accelerated during the summer months," said Andrew Gurman, MD, president of the American Medical Association, in a press release on Thursday.

"By the time Congress returns in a couple of months, the damage to our nation from Zika will likely be irreversible. This failure to act severely hampers the full response that is greatly needed," said Richard Hamburg, interim president and CEO of Trust for America's Health, a health advocacy non-profit.

Democrats continue to oppose the latest version of the Zika bill, while acknowledging that the politicking in Congress has inflamed the public.

"This is why people hate Congress. This is why people hate Washington," said Sen. Tim Kaine (D-Va.) at Wednesday's hearing.

Kaine, who has emerged as a potential pick to be Clinton's running mate, argued that the bipartisan $1.1 billion bill the Senate passed was originally a "clean bill."

"It was about one thing: fighting Zika," he said, but then the House revisions loaded the bill with other provisions targeting Planned Parenthood and the Affordable Care Act.

A visibly irritated Sen. Barbara Boxer (D-Calif.) said the new bill could do more harm than good by undercutting family planning services.

"Birth control should not be controversial and it's part of the first line of defense," she said, reminding the committee that Zika is sexually transmissible.

The House version of the bill also "eviscerates" the Clean Water Act, she said.

Under current law, pesticides from an approved list can be sprayed near water sources without a permit in emergencies, but the Environmental Protection Agency must be notified.

Under the Zika bill, however, "[t]here's no more right to know ... you may not get the Zika but your kid could get cancer from swimming in water that's laden with a pesticide that's very harmful."

Senators on both sides tried to bully witnesses over to their camp.

"Does the House bill take money away from Planned Parenthood?" Sen. Cory Gardner (R-Colo.) asked CDC Director Tom Frieden, MD, MPH, point-blank.

Frieden parried, saying he didn't know the "exact funding allocations."

"I believe the answer is 'no.' And if you can, get back to me on that," Gardner shot back.

Boxer badgered Irene Koek, acting deputy assistant administrator for the U.S. Agency for International Development, who struggled to get her words out without interruption.

Boxer asked whether specific countries in Latin America and the Caribbean where women had been warned to postpone pregnancy actually had the infrastructure to provide free contraception.

Koek said that in most cases supplies were available but delivering them was sometimes a challenge.

Boxer also questioned Frieden about rumors that Olympic athletes would be tracked after the events to see whether or not they contracted Zika.

Frieden confirmed that the CDC has a "memo of understanding" with the U.S. Olympic Committee and said that a university in the U.S. would be testing the athlete volunteers to see who was infected and who wasn't.

"If the risk is so great that you're going to spend money following them maybe they ought to know it," she said.

Rubio pressed Frieden to explain how delaying funds would impact his agency.

Frieden said delaying funding meant delaying long-term research into understanding how to effectively protect pregnant women from the virus. He noted that the CDC had already borrowed emergency funding from states and that those monies needed to be repaid.

"This is not the way to fight epidemics," he said.

But Frieden didn't stop there. He also lobbied for a public health fund similar to the Federal Emergency Management Agency (FEMA) where resources could be tapped during health emergencies like this one. Boxer, who has a bill outlining plans for such a fund, made a similar pitch during her opening statement.

Kaine also backed the idea.

"We don't know where a hurricane will hit. We don't know where there will be a forest fire, where there will be a flood but we do know from experience that there will be these items and so we budget for them. And then we deal with them. We don't do that with respect to infectious disease," he said.

Zika's Spread Can't Be Stopped, Study Argues, But It Will Burn Out In 3 Years

By Nick Miroff

Washington Post, July 14, 2016

Trying to stop the Zika virus from spreading in Latin America is probably pointless, according to a new study by medical modeling experts at Imperial College London, who predict the epidemic is likely to fizzle out on its own within three years.

The findings, published Thursday in the journal Science, used Zika data collected across Latin America, where the outbreak erupted last year in Brazil. The study concludes that attempting to prevent Zika by eliminating the mosquitoes that spread the virus is a largely futile endeavor, because those methods haven't eliminated dengue fever, which is carried by the same vector.

In February, after Brazilian officials linked Zika to surging numbers of fetal deformities, U.N. health officials declared Zika a "public health emergency of international concern." Nations across Latin America sent out brigades of soldiers and sanitation workers to battle mosquitoes, while urging women to avoid or delay pregnancy for up to two years.

But the study argues that Zika is simply "not containable" and will simply fade away on its own once enough people develop antibodies to the virus.

"The current explosive epidemic will burn itself out due to a phenomenon called herd immunity," according to Neil Ferguson, the lead author and a professor at Imperial College's School of Public Health.

"Because the virus is unable to infect the same person twice — thanks to the immune system generating antibodies to kill it — the epidemic reaches a stage where there are too few people left to infect for transmission to be sustained," he said.

More than 1,100 Americans have been infected with Zika, mostly while traveling abroad, but mosquitoes are not spreading the virus on the U.S. mainland, according to the U.S. Centers for Disease Control and Prevention.

A $1.1 billion bill to increase funding for Zika prevention and research has stalled in Congress, after Democrats rejected Republican attempts to attached provisions that would restrict funding for abortion, birth control and other programs.

According to U.N. officials, the epidemic already appears to be declining in South America. In Colombia, the nation with the second-largest number of reported infections after Brazil, authorities say Zika has peaked.

Still, experts caution that it is too early to declare any sort of victory. Many Zika-infected patients do not seek medical attention because they experience relatively mild symptoms, or no symptoms at all. There is no cure for the virus either, and many Latin Americans in areas with a lot of Zika know that doctors have little to offer beyond pain relievers, so they simply grit it out at home.

Ferguson and the study's other authors argue that efforts to slow the spread of the virus through mosquito control may, in fact, prolong the current epidemic: "Slowing transmission between people means the population will take longer to reach the level of herd immunity needed for transmission to stop. It might also mean that the window between epidemics — which we predict may be over a decade — could actually get shorter," he said.

One concern raised by the study's authors is that by the time a Zika vaccine is ready for testing, "by the end of the year if not sooner," there may not be a community left in Latin America with enough cases of the virus.

Zika Outbreak May Have Peaked In Brazil, Researchers Say

By Liz Szabo

USA Today, July 14, 2016

Brazil's Zika outbreak, which grew explosively after the virus first appeared in the country a year ago, appears to have peaked, with fewer new infections and cases of birth defects, new research suggests.

Zika cases hit a high of nearly 8,000 suspected new infections in Brazil in March and have declined steadily since then to fewer than 200 a week.

It's possible that the Zika outbreak — which has spread to 40 countries in the Americas — is burning itself out in Brazil as a large portion of the population survives infection and becomes immune to the disease, said Neil Ferguson, co-author of a study published online Thursday in Science.

"The epidemic is probably at least more than halfway through in Brazil," said Ferguson, director of the MRC Centre for Outbreak Analysis and Modelling, School of Public Health at Imperial College London.

Not all experts are convinced Zika is on its way out of Brazil.

The declining number of cases is more likely caused by the change of seasons in the Southern Hemisphere, said Michael Osterholm, director of the University of Minnesota's Center for Infectious Disease Research and Policy.

Brazil and the rest of the Southern Hemisphere are heading into winter, when the weather is cooler and drier, which tends to make the mosquitoes that spread Zika less active, Osterholm said.

While it's possible Zika cases will pick up again when spring returns, Ferguson said infections are unlikely to be as numerous as when the virus first hit Brazil. New diseases tend to spread explosively when they arrive in an area with no previous exposure, he said.

A Zika outbreak in French Polynesia, for example, infected 66% of the population in the six months between October 2013 and April 2014. Studies suggest Zika first entered Brazil between May and December 2013. The first official diagnosis of the virus wasn't made in Brazil until April 2015, largely because

Zika's symptoms — which include rash, fever and joint aches — are similar to those of dengue, a disease that's common throughout Latin America and the Caribbean.

As a population develops immunity and there are fewer susceptible people left to be infected, outbreaks tend to wind down. That appears to be happening in Brazil, Ferguson said.

Doctors have been concerned about Zika's spread because it can cause devastating birth defects, including microcephaly, in which babies are born with abnormally small heads and incomplete brain development. Brazilian health officials have confirmed more than 1,600 cases of microcephaly since the Zika outbreak began, about 10 times more than usual. Seven babies in the U.S., whose mothers were infected due to travel, also have been born with microcephaly or other birth defects.

Researcher Karin Nielsen, who is conducting a study of pregnant women infected by Zika in Rio de Janeiro, said she and her colleagues haven't diagnosed the virus in a pregnant woman since April.

"We were getting 20 to 40 pregnant women a week with Zika in January and February," said Nielsen, director of the Center for Brazilian Studies at the University of California-Los Angeles. "We just don't have those numbers anymore."

Zika seems to have been replaced in Rio by another mosquito-borne virus, called chikungunya, Nielsen said. Although chikungunya can cause fever and severe joint pain, it doesn't cause birth defects. Mosquitoes can also spread chikungunya more quickly than Zika.

Mosquitoes need to incubate chikungunya for only three days before they can spread it to a person, Nielsen said. In contrast, mosquitoes need to incubate Zika for 10 days. That means that mosquitoes, which only live about a month, are much more likely to live long enough to spread chikungunya than Zika, she said.

Ferguson predicts the Zika outbreak in the Americas will be largely over in about three years. But that doesn't mean the disease will disappear.

Viruses tend to return when there are enough susceptible people, such as children, to sustain a new outbreak, Ferguson said. So even if Zika fades in the short term, it could cause regular outbreaks among children who've never been infected by it before. This phenomenon explains why viruses such as chickenpox tend to be diseases of childhood.

Zika is still spreading in many other parts of the Americas. Doctors in Puerto Rico, which reported its first case of the virus in December, have now diagnosed nearly 2,500 cases of the virus. The true number of cases could be much higher, given that 80% of people with Zika have no symptoms.

Health officials in the U.S. are worried the disease could spread here, as well, although they note that American's use of air conditioning and window and door screens are likely to prevent massive outbreaks by reducing the number of people exposed to mosquito bites.

Zika Epidemic In Latin America May Have Peaked, And Scientists Predict It Will Be Over In 3 Years

By Melissa Healy

Los Angeles Times, July 14, 2016

Researchers modeling the rampant spread of the Zika virus say that, like a wildfire consuming a parched landscape, the epidemic that has caused a plague of birth defects in Brazil is already showing signs of slowing and is likely to largely burn itself out in three years.

Peak Zika spread may already have passed, said researchers writing in the journal Science. At a slower rate and with seasonal ebb and flow, the Zika virus' march across the Americas, they reckon, will likely grind to a halt.

After Latin America's current Zika epidemic goes to ground, the group's epidemiological model suggests that another epidemic spread of Zika in the Americas is unlikely for "at least a decade."

"The current epidemic is not containable; at best, interventions can mitigate its health impacts," wrote a group of researchers led by Imperial College London epidemiologist Neil M. Ferguson. "More optimistically," they added, "the natural dynamics of the epidemic are now likely to give a multiyear window to develop new interventions before further large-scale outbreaks occur."

Discovered in 1947 and introduced into Brazil in 2013, the Zika virus has brought mild illness to the populations of 65 countries, and has become epidemic throughout South and Central America. Since 2014, more than 1,400 babies with grievous birth defects have been born to women in Brazil who were infected with Zika during their pregnancies. And Zika, which has been determined to cause brain abnormalities in gestating fetuses, has been blamed.

Until at least 2026, the researchers said, the virus' prodigious spread will be its undoing: having infected and thus inoculated most in its path, Zika would be deprived of the kindling that allows a viral outbreak to gain a foothold and march across a human landscape it has trodden before.

With much of Latin and South America having already been exposed to Zika virus and thus immune to further onslaughts, researchers said Thursday that "herd immunity" is likely to take over by 2019. Herd immunity takes hold when a dwindling slice of the population remains vulnerable to becoming ill and sustaining the transmission of virus to others who have not yet been exposed.

Under those circumstances, small, localized outbreaks of Zika will occur, the group acknowledged. But the viral epidemic's opening volley in the Americas will have ended.

The conditions for an epidemic's resurgence do not return until a new generation of never-infected children repopulates the landscape with potential victims, and elderly people's immunity to Zika begins to wane.

In Zika's case, that process will take a decade or more, the authors of the new report project.

Future epidemics of Zika infection, the group said, will likely affect a younger and younger population, as the probability rises that most older people in the virus' path have been exposed before and developed immunity. Even so, they wrote, future outbreaks will continue to take hold in areas where women of childbearing age have not yet been exposed to the virus. As a result, "substantial risk to pregnant women in future Zika epidemics" is highly likely.

Those projections came in two articles published Thursday in the journal Science. To make them, a respected team of epidemiologists collected data on the rate at which the Zika virus, which incubates in the bellies of biting mosquitoes, spread through Brazil and marched northward through Latin America.

They measured Zika's rate of spread as it waxed and waned with the seasons and different mosquito populations. And they gauged the deceleration of its spread as large swaths of the populations in Zika's path were infected and gained immunity against the bug.

Finally, in a bid to sketch the likely future of the epidemic, they projected those observed patterns onto a map of the areas into which Zika is now spreading, and allowed those patterns to play themselves out.

The results are subject to many caveats, and to assumptions that could be unique to the circumstances from which the model's data were collected. But modeling results like these allows researchers to make informed estimates of epidemic patterns, and often to highlight factors that could accelerate or delay a viral epidemic's resolution.

Mosquito-control efforts were one such factor flagged by the authors of the latest study.

Evidence from other outbreaks of mosquito-borne illness has suggested that battling Zika by reducing mosquito populations could slow the population's path to herd immunity, wrote Ferguson and his colleagues.

By protecting more of the population in Zika's path from becoming uninfected, aggressive mosquito control could also leave a larger share of people uninoculated. That, in turn, could shorten the time window during which there exist too few potential victims for a Zika epidemic to stage a resurgence.

A delay in reaching the threshold for herd immunity, wrote the researchers, could make it particularly hard for women who have delayed pregnancy to remain patient.

The new analyses are not without detractors.

"I think this model is a real overreach of the data we have," said Michael Osterholm, director of the University of Minnesota's Center for Infectious Disease Research and Policy. Osterholm pointed to the four-year spread across the United States of the West Nile virus — which is in the same family of viruses as Zika. Because only mosquitoes and not birds are implicated in its spread, Zika, he said, likely spreads far less fast. Yet Zika is thought by the researchers to have covered far more ground in much less time than West Nile took to spread.

"I really believe the worst is yet to come with Zika throughout the Americas," said Osterholm. "It has not peaked."

Safe sex without condoms? With drugs keeping HIV in check, infected partners didn't spread virus

Zika Outbreak To End In 2 To 3 Years, Scientists Predict

By Julie Steenhuysen

Reuters, July 14, 2016

Full-text stories from Reuters currently cannot be included in this document. You may, however, click the link above to access the story.

Zika Epidemic In Latin America May Be Subsiding But U.S. Still Could See A Spike

NPR, July 14, 2016

A sitting duck. That's what South America was a few years ago when Zika first struck. The continent had never recorded a case of the mosquito-borne virus. And everyone was susceptible.

"So you get this huge raging epidemic that blows through the population, usually very fast and infects a pretty high percentage of the population," says Justin Lessler, an epidemiologist at the Johns Hopkins Bloomberg School of Public Health.

That's exactly what happened. Millions of people across South and Central America have been infected with Zika. More than a thousand babies have been born with birth defects caused by the virus.

But now the worst might be over.

Lessler and his colleagues report evidence Thursday that the epidemic has peaked and started to subside. The virus has spread so quickly and infected so many people that it's actually burning itself out, the team writes in the journal Science.

By graphing the number of Zika cases over time, it easy to see cases have been declining rapidly over the past few months. But Lessler and his team couldn't tell if this decline was because the epidemic is waning or because the mosquito season is South America has finished for the year.

To figure that out, Lessler and his team built a simple computer model of Zika spreading across the Western Hemisphere. The model predicts the epidemic will probably last another 1.5 to 2 years and will likely peter out by spring 2018.

Then Zika will lay low for years, the team predicts. There could be small outbreaks, but "the disease is going to appear for all intents and purposes to have gone away," Lessler says. "It could be five years or even a decade before we have another significant epidemic."

The reason for this is pretty simple: A large portion of the population in Latin America will have been exposed to Zika and become immune to the virus.

"You can think of it like the forest after a giant fire," Lessler says. "All of the extra brush is gone, and it's going to take a while before enough brush — or in the case of a disease, enough susceptible people — can build back up to support another fire."

Clearly this is good news for South America. But what does it mean for the U.S.?

"That's an interesting question," says Bryan Lewis, a disease modeler at Virginia Tech.

The new study suggests Zika will be a threat in the U.S. for a few summers to come, Lewis says. But this summer will likely be the worst in terms of the number of imported Zika cases we get."Because the spike in Latin America is probably the highest it's going to be this current season," he says. "This summer is probably the big one."

All these predictions need to be taken with a big grain of salt, cautions epidemiologist Alex Perkins at the University of Notre Dame, because they are based on computer models — which aren't great at making long-term forecasts.

"It's much like when you watch the nightly weather," he says. "The weather people usually do a very good job of saying what the weather is going to be like tomorrow. But the longer time horizon you look at, the harder it is to predict what's going to happen."

Zika Outbreak Could Last 3 Years, Scientists Estimate

By Alexandra Sifferlin

TIME, July 14, 2016

The Zika virus outbreak spreading through the Americas could go on for three years, according to a new study published in the journal Science.

Scientists from Imperial College London and Johns Hopkins Bloomberg School of Public Health estimate that the current Zika epidemic will be "largely over" in Latin America in three years. That's because so many people are being infected, and therefore become immune to the virus. "Herd immunity will likely then cause a delay of over a decade until further large epidemics are possible," they write in the study.

The Zika virus is confirmed to cause the severe birth defect microcephaly, and it's estimated millions of people are infected in the Americas. In the continental U.S. there are over 1,000 people infected due to travel, including 320 pregnant women. There are also 2,534 people in U.S. territories who are infected, including2 79 pregnant women. On Wednesday it was reported that the first baby in Texas with Zika-related microcephaly was born. The U.S. Congress on Thursday failed to pass the $1.9 billion in funding to fight Zika that was requested by the White House in February.

The researchers note that some countries where the virus is spreading have advised people to avoid pregnancy, which the study authors write "has been criticized for being infeasible for many women—especially long term." Understanding a country's local context through monitoring could be helpful, they suggest. Mosquito control can also help prevent some spread, but the authors argue that expectations should be realistic, and that traditional insecticide use has not necessarily prevented other serious mosquito-borne diseases like dengue from spreading in the past.

"Like Ebola, Zika is a public health crisis in which policymakers have had to make decisions in the presence of enormous uncertainty," the study authors conclude. "The current epidemic is not containable; at best, interventions can mitigate its health impacts. More optimistically, the natural dynamics of the epidemic are now likely to give a multiyear window to develop new interventions before further large-scale outbreaks occur."

Latin America Zika Outbreak Should 'Burn Out' Within 3 Years, Scientists Say

By Mary Elizabeth Dallas

HealthDay, July 14, 2016

A team of British experts in disease outbreaks believes that the Zika epidemic afflicting Latin America will end within three years.

They based their estimate on modeling using available data on the outbreak, which has so far involved thousands of cases of Zika-linked birth defects, mainly in Brazil.

The Zika virus is typically spread by mosquito bites. For most people the health risks are mild. But, maternal infection in pregnancy can trigger microcephaly, a condition where babies are born with too-small heads and neurological issues.

The new analysis uses "all available data to provide an understanding of how the disease will unfold – and allows us to gauge the threat in the imminent future," lead researcher Neil Ferguson said.

"Our analysis suggests that Zika spread is not containable, but that the epidemic will burn itself out within 2-3 years," Ferguson, of Imperial College London's School of Public Health, said in a college news release.

Reporting July 14 in the journal Science, Ferguson and his team pulled together all the existing data on Zika transmission throughout Latin America. They then used this data, along with information on outbreaks of similar viruses, such as dengue, to create a model that represented the current outbreak and future patterns of transmission.

Because people who have already been infected with Zika are unlikely to be re-infected, the epidemic should burn itself out within three years, the study authors estimated.

"The current explosive epidemic will burn itself out due to a phenomenon called herd immunity," Ferguson explained. "Because the virus is unable to infect the same person twice – thanks to the immune system generating antibodies to kill it – the epidemic reaches a stage where there are too few people left to infect for transmission to be sustained."

That will mean Zika can't gain a foothold again in the Latin American population for at least a decade, when a new generation without exposure will emerge, the researchers said. "This mirrors other epidemics, such as chikungunia – a similar virus to Zika – where we have seen explosive epidemics followed by long periods with few new cases," Ferguson said.

As for the current Zika outbreak, it may already be too late to do much to curb case numbers, he said.

"Efforts to contain the epidemic would have needed to have been implemented much earlier in the current Zika epidemic to have a major effect – but by the time we realized the scale of the problem it was too late," Ferguson said.

He added that all of this means that efforts to find a vaccine should be encouraged, while Zika is still highly active.

Another study published in the same issue of Science looks to the future of epidemic control, as well. Researchers in the United States believe new strategies are needed to prepare for unexpected mosquito-borne epidemics, such as the recent outbreak of the Zika virus.

The history of Zika, which was discovered in Uganda in 1947, may provide valuable lessons for the current crisis in Brazil, Colombia, Puerto Rico and other parts of the Americas, said scientists from Johns Hopkins University Bloomberg School of Public Health in Baltimore.

"The rise of Zika after its long persistence as a disease of apparently little importance highlights how little we truly understand about the global spread of mosquito-borne viruses and other lesser-known diseases," said the study's co-leader, Justin Lessler, an associate professor of epidemiology.

"Over the past decades, dengue, chikungunya, West Nile virus and now Zika have emerged or re-emerged across the globe. Yet why these viruses have expanded their range and others have failed to invade areas potentially ripe for their spread remains a mystery," Lessler said in a university news release.

Most people infected with Zika have few or minor symptoms. But since early 2015 thousands of women – largely in Brazil – exposed to the virus in pregnancy have had babies with serious birth defects. Many of the infants have smaller heads and brains associated with microcephaly.

The Hopkins researchers analyzed existing studies on Zika to assess its global threat. They came up with two main theories that could help explain why Zika has become such a risk.

One theory is that the virus mutated and became more dangerous and infectious.

The alternative theory is that the virus previously spread among just a small group of people, so its effects were less obvious. But once Zika spread to Brazil – a country with 200 million people having no immunity to the virus – the complications became more apparent.

"Despite knowing about this disease for nearly 70 years, we were completely surprised and rushing to discover the very basic things about it when it invaded the Americas," Lessler said.

"We have been completely unable to stop its spread. That is a problem for how we approach public health," he added.

Better preparation is essential, Lessler said. "We will always be in this situation when something new comes about or something little-known re-emerges unless we do a better job planning for threats more generally instead of always fighting the last battle," he said.

There is currently no vaccine or cure for Zika. The Hopkins review called for more research to assess the effectiveness of mosquito-control methods.

Zika Epidemic Should Fizzle Out Within 3 Yrs: Study

AFP, July 14, 2016

The outbreak of the mosquito-borne Zika virus, blamed for a surge in birth defects, has likely reached its peak in Latin America and the epidemic should be over within three years, researchers said Thursday.

The study by scientists at Imperial College London appears in the US journal Science.

"The current explosive epidemic will burn itself out due to a phenomenon called herd immunity," said Neil Ferguson, a professor at Imperial's School of Public Health.

"Because the virus is unable to infect the same person twice – thanks to the immune system generating antibodies to kill it – the epidemic reaches a stage where there are too few people left to infect for transmission to be sustained."

This should happen within two to three years, he added.

Then, this herd immunity "will likely delay the next large Zika epidemic for more than a decade."

The virus, though first discovered in 1947, largely took public health officials by surprise when it began spreading through the Americas last year and causing birth defects.

The rise in infants born with irreversible malformations has been most acute in Brazil, where some 7,438 suspected microcephaly cases have been reported as of May and 1,326 cases confirmed, the study found.

Typically, Brazil saw fewer than 200 annual cases of microcephaly – in which the infant is born with an unusually small head and brain.

Zika infections have been reported in dozens of countries throughout the Caribbean and Latin America.

The United States has seen a rise in travel-associated cases, but so far no local transmission has been observed.

– Vaccine too late? –

Ferguson also warned that efforts to slow the spread of Zika, by increasing mosquito-control measures, could actually prolong the epidemic.

And efforts underway to design a vaccine – which officials have said could take several years – may come to fruition too late, he said.

"If our projections are correct, cases will have dropped substantially by the end of next year, if not sooner," said Ferguson.

"This means by the time we have vaccines ready to be tested, there may not be enough cases of Zika in the community to test if the vaccine works."

Amid concerns about the potential spread of Zika during the upcoming Olympic Games in Rio de Janeiro, a separate report out Wednesday by the US Centers for Disease Control and Prevention said that the risk of transmission is low.

As many as 500,000 international visitors and athletes from 207 countries are expected to travel to Rio, but "this travel volume represents a very small fraction –- less than 0.25 percent –- of the total estimated 2015 travel volume to Zika-affected countries," said the CDC.

"Visitors to the Games are expected to have a low probability of mosquito-borne Zika infections because the Games will occur during the winter season in Rio de Janeiro (August 5-21 and September 7-18, respectively) when the cooler and drier weather typically reduces mosquito populations."

The US agency did raise particular concern, however, about Chad, Djibouti, Eritrea and Yemen. It said "these four countries do not have substantial travel to any country with local Zika virus transmission, except for their participation in the Games, and have environmental conditions and population susceptibility to sustain mosquito-borne transmission of Zika virus."

Pregnant women should not travel to the Olympics, and all visitors should take steps to avoid mosquito bites and prevent potential sexual transmission of the virus, the CDC urged.

The CDC Wants Your Semen (If You've Had Zika)

By Elizabeth Cohen, Senior Medical Correspondent

CNN, July 14, 2016

The Centers for Disease Control and Prevention is collecting semen from hundreds of men in the United States in order to figure out how long the dreaded Zika virus lasts in the bodily fluid.

The virus can be transmitted sexually, and it's been known to linger in semen long after a man's fever, rash and itchy eyes have gone away.

If a man has the virus in his semen and has sex with a woman who is pregnant or becomes pregnant, the baby could be born with devastating neurological birth defects.

After about two months of recruiting, some 40 men who've had Zika have volunteered to donate their semen. The CDC hopes to bring in about 210 more.

The men are asked to make about a dozen donations in their homes every other week for six months after their illness, and each time are given a $50 multi-use gift card.

A courier picks up the donations, which are then delivered to the CDC's labs in Fort Collins, Colorado.

"I'm happy to say patients really have been quite receptive about volunteering their specimens," said Dr. Paul Mead, the senior epidemiologist at the CDC who is running the study. "They seem to understand the importance of the study."

So far, there have been more than a thousand cases of Zika in the United States, and that number is expected to grow.

There have been 14 cases of sexual transmission of the virus, according to the CDC, although some experts think the actual number is higher.

The CDC currently recommends that men who've had Zika use a condom or abstain from sex for six months after their illness.

That advice is based on studying the semen of just three men who had Zika, which is why the CDC is doing the larger study.

Separately, the CDC is doing a study in Puerto Rico that will examine the semen of men who contracted Zika but never actually had symptoms of the disease – an important group since many who become infected have only mild symptoms or none at all, according to the CDC.

In addition to looking at the virus in semen, the Puerto Rico study will also be examining blood, saliva and vaginal secretions.

The CDC plans to recruit 300 men and women in Puerto Rico who've had Zika and 1,000 people who live in the same households.

"The response has been amazing. People have welcomed strangers to come and get their bodily fluids," said Dr. Gabriela Paz-Bailey, the investigation's lead researcher.

She said the Puerto Rico study is the largest collection ever of bodily fluids from Zika patients.

"Nearly everyone we've approached has agreed to participate," Paz-Bailey said. "They understand that many things are not yet known."

CDC Going After Your Zika Semen, Report Says

By David Oliver

US News & World Report, July 14, 2016

If you're a man who's had the Zika virus, the Centers for Disease Control and Prevention will pay you for your semen.

The agency has gathered about 40 volunteers to donate semen for a new study but is looking for approximately 210 more, according to CNN. Those who volunteer will receive a $50 multi-use gift card after providing a dozen samples every other week for half a year.

Each participant's samples will be picked up by a courier and sent for testing at the CDC's labs in Fort Collins, Colorado, where scientists will study how long the virus survives in bodily fluid. Though the virus spreads primarily through infected mosquitoes, it can also be transmitted through sexual contact, but it's unclear how long virus particles remain in the body after symptoms disappear. This research will help shed light.

The CDC has not yet responded to a U.S. News request for more information about the study.

Fears about Zika are at a fever pitch leading up to the 2016 Olympic Games in Rio de Janeiro, Brazil, which kick off August 5.

CDC data shows there have been 1,133 cases of Zika in the U.S., 14 of which were sexually transmitted. Travel-associated cases tallied at 1,132, with just one laboratory-acquired case.

Only 20 percent of those infected with Zika will show symptoms, which include fever, rash, red eyes and aching joints.

The CDC recommends men who live in or have traveled to active outbreak areas either abstain from sexual activity or use condoms during sexual contact.

Had Zika Virus? CDC Is Offering Men Who Have Been Infected $50 Gift Cards To Provide Sperm Donations

By Stephanie Castillo

Medical Daily, July 14, 2016

Hey, guys who have been infected with the Zika virus — want a $50 gift card you can use just about anywhere? Donate your sperm to the The Centers for Disease Control and Prevention (CDC).

For the past two months, the organization has been recruiting men to donate their semen samples in order to figure out how long Zika stays in the bodily fluid, CNN reported. So far about 40 men have signed up to make donations every other week for six months after they've recovered from the virus. The CDC is hoping to recruit at least 210 more, and yes, guys are given a gift card for every donation.

It's convenient, too. CNN reported that a courier picks up the donations so that they can be delivered to the CDC's lab in Fort Collins, Colo.

"I'm happy to say patients really have been quite receptive about volunteering their specimens," Dr. Paul Mead, the senior epidemiologist at the CDC who is running the study, told CNN. "They seem to understand the importance of the study."

The CDC reported 14 cases of sexually transmitted cases of Zika virus, with experts anticipating many more.

John Moore/Getty Images

Maybe you're wondering why sperm — isn't Zika contracted through a mosquito bite? Typically, the answer is yes. If humans are bitten by an infected mosquito from the Aedes genus family, the same mosquitoes that carry dengue, chikungunya, and yellow fever, they can develop symptoms. But there are a number of cases that have been contracted through sexual contact. In fact, the CDC reported 14 cases of sexually transmitted viruses, with experts bracing for a higher number of cases in the future.

The donation program has inspired a separate study in Puerto Rico, where Zika has been spreading more rapidly compared to other countries. Some believe the country's crippling debt has hampered its response, especially when it comes to getting women contraceptives. Reuters reported that only a small fraction of methods to prevent Zika-related birth defects were expected to get to women in June. Long-term birth control isn't on the table either (think of an intrauterine device) since many local doctors are not trained to implant them, according to Reuters.

CNN reported a fraction of Puerto Rican men and women have contracted the disease, but did not experience any symptoms; in which case, they'll sample blood, saliva, and vaginal secretions on top of men's sperm.

Zika has been spreading across South America at an alarming rate, as well as parts of the United States and western Europe. The World Health Organization (WHO) is even facing pressure to postpone next month's Rio Olympics due to the fact this latest outbreak originated in Brazil. While the virus usually only amounts to a week-long mild fever, skin rash, and muscle aches and fatigue, it can pose a special threat to pregnant women, namely microcephaly — a condition that affects fetuses in utero so they're born with severely small heads and develop neurological issues.

The CDC is regularly updating its Zika and sexual transmission page with the latest information, which at this point includes transparent insight into how little we still know. For now, condoms are considered the best way to reduce the chance of getting Zika from sex, as is the case for all sexually transmitted diseases. And for pregnant couples with male partners who live in or travel to areas affected by the virus, the advice to "use a condom every time they have sex or not have sex" is in bold. Couples trying to get pregnant should talk to their health care provider, the CDC said.

Study Finds Zika In Woman's Genital Tract

Can Women Spread Zika Sexually, Too?

By Julie Beck

The Atlantic, July 14, 2016

So far, all known cases of sexually transmitted Zika have involved a man spreading it to a partner. The virus thrives in semen, and lives there longer than it does in blood, which is why experts recommend that men use condoms if they've been in areas where Zika is spreading—for six months if they've had symptoms, and eight weeks even if they haven't.

Currently, the website of the Centers for Disease Control and Prevention states, "We don't know if a woman with Zika can pass the virus to her partners, during vaginal or oral (mouth-to-vagina) sex." But now there's reason to suspect that women might be able to.
Related Stories

In a new case study published in The Lancet Infectious Diseases, doctors at Pointe à Pitre University Hospital, in Guadeloupe, treated a woman with Zika in May, and detected the virus in her genital tract. When she first came in, her blood tested positive for Zika, though her urine did not. Three days after the onset of her symptoms, doctors did a genital swab, a swab around the opening of the cervix, and also took a sample of cervical mucus. All three samples tested positive for Zika virus RNA. They did another round of tests 11 days after her symptoms started—of blood, urine, and cervical mucus—and while the blood and urine were clear, the virus was still in the mucus.

This doesn't prove anything, but it does raise the possibility that sexual transmission of Zika could come from anyone. And it seems there's something about sexual fluids that helps Zika survive longer in the body. How long is unclear; apparently at least 11 days in a woman is possible.

The researchers speculate that this discovery could open the door to a much more serious one. "Our findings raise the threat of a woman potentially becoming a chronic Zika virus carrier, with the female genital tract persistently expressing the virus RNA," the study reads. For women hoping to have children, given the risks of Zika to fetuses, that could be a huge threat.

Pa. Giving Out Zika Prevention Kits For Pregnant Women

Philly (PA), July 14, 2016

The Wolf administration is distributing free kits for pregnant women to protect against the Zika virus.

The kits contain small amounts of federally approved insect repellent for skin, permethrin spray repellent for treating clothing and shoes, standing water tablets for killing mosquito larva, condoms to prevent sexual transmission of Zika, and educational materials in English and Spanish, the state Department of Health said Thursday.

They will be available in "limited quantities" to pregnant women from local health departments, community health centers, offices of the Women, Infants, and Children federal nutrition program, and non-profit organizations that primarily serve low-income or homeless women, the state said in a news release.

The kits at this point are mainly an educational campaign since no infections in the continental United States have been transmitted via local mosquitoes. But more than 1,300 cases have been acquired by Americans traveling in areas where mosquitoes that carry the virus are circulating and another 14 via sexual transmission, according to the U.S. Centers for Disease Control and Prevention. The totals include 39 cases in Pennsylvania and 50 in New Jersey. The CDC said 346 of the cases in U.S. states and another 303 in American territories such as Puerto Rico, where mosquitoes currently are carrying the virus, involved pregnant women as of July 7.

"While Zika is spread primarily by mosquitoes that are infected with the virus, it also can spread through sexual contact with individuals who have the disease," Pennsylvania Health Secretary Karen Murphy said in the release. "Because Zika poses serious health risks for babies born to women who contracted the virus during pregnancy, the kits include health education materials and prevention tools to avoid mosquito bites and sexual transmission of the disease to pregnant women. Using the products in the Zika Prevention Kit can help protect you and your loved ones from the virus."

New Jersey is considering a similar measure, a spokesperson for the state health department said.

Some women who were infected during pregnancy have miscarried or given birth to babies with abnormally small heads and other serious birth defects. Some health authorities have advised women traveling in areas where the virus is circulating – much of South and Central America and the Caribbean, including Puerto Rico – to temporarily postpone becoming pregnant.

The mosquito species that is mainly responsible for spreading millions of cases of the virus does not thrive in the mid-Atlantic region even in summer. But another species that is among the biggest nuisances locally, known as the Asian Tiger mosquito, has been shown to be capable of transmitting Zika in laboratory settings, although in temperate regions it has been an inefficient transmitter of related viruses like Dengue.

Zika is far from the only disease carried by mosquitoes, however. The New Jersey Department of Health on Thursday confirmed the state's first human case of West Nile virus this year, in a 48-year-old Camden County man who remains hospitalized; information about the disease is posted here.

Pennsylvania has had one case so far this year, in Indiana County.

West Nile, while typically causing mild symptoms, if any, is most dangerous for people who are elderly or have compromised immune systems, and can be fatal in some cases.

Zika, by contrast, almost never causes serious harm – except for pregnant women and, in rare cases, others who are stricken with a temporary paralysis known as Guillain-Barre syndrome.

Pa. Offering Zika Prevention Kits For Pregnant Women

By Adam Smeltz, Pittsburgh Post-gazette

Pittsburgh Post-Gazette, July 14, 2016

Zika prevention kits designed to safeguard pregnant women from the mosquito-borne virus will be available across Pennsylvania, the state Department of Health announced this morning.

The department will begin distribution today for the kits, which include insect repellents, water tablets for killing mosquito larva and condoms to prevent sexual transmission of the virus, the department said in a news release. Pregnant women can pick up the kits at no charge from local health departments, federally qualified health centers, community health centers, nonprofit organizations and offices for the Women, Infants and Children assistance program.

A complete list of kit providers is posted at www.zika.pa.gov. The cost of the effort wasn't immediately clear.

"Because Zika poses serious health risks for babies born to women who contracted the virus during pregnancy, the kits include health education materials and prevention tools," state health secretary Karen Murphy said in a statement.

The Centers for Disease Control and Prevention has confirmed 40 Zika cases in Pennsylvania since the winter, all in people who contracted the virus while visiting an outbreak-affected area abroad, according to the health department. While no Zika cases have been tied to mosquitoes in the continental United States, health authorities are monitoring domestic populations of the insect.

Most Zika cases are thought to arise from mosquito bites, but the disease can spread through blood transfusions and sexual contact, as well. About 20 percent of infected people show symptoms, most recovering within several days from fever, joint pain or other mild ailments.

But researchers have linked the infection in pregnant women to serious birth defects, such as microcephaly. Children with the neurological condition often have developmental issues, according to the Mayo Clinic.

Alabama Lab Gets Almost $1 Million For Zika Research

By Amy Yurkanin

Birmingham (AL) News, July 14, 2016

An Alabama drug development lab will receive almost $1 million to expand research into Zika virus, which is carried by mosquitoes and has been linked to serious birth defects.

The grant to Birmingham-based Southern Research from the National Institute of Allergy and Infectious Diseases could grow to $3.9 million over the next two years, according to a press release.

Scientists at Southern Research have studied mosquito-borne illnesses including dengue, chikungunya and West Nile Virus. The grant will fund efforts to develop non-human primate models that can be used to test Zika virus treatments, according to the statement.

"Our ultimate goal with this project is to establish a model of Zika virus infection that can be used for the evaluation of new vaccines and therapeutics in optional efficacy studies sponsored by NIAID," said Jonathan Rayner, principal investigator on the project, in a statement.

Zika virus has been linked to an increase in cases of microcephaly, or unusually small heads and brains, in newborns. The condition can cause lifelong disability. Public health officials have warned women who are pregnant or trying to become pregnant to avoid travel to areas where the virus is prevalent.

Zika virus only causes symptoms in about one out of every five cases. Symptoms include fever, rash, red eyes and joint pain.

Zika can be spread by mosquitoes or by sex with an infected person. Eleven people in Alabama have tested positive for Zika virus, but all have been associated with travel to an affected area. No locally or sexually-transmitted cases have been reported in the state, according to the Alabama Department of Public Health.

Southern Research Gets Nearly $1M Grant To Study Zika Virus

By Peyton Shepard, Editorial Intern

Birmingham (AL) Business Journal, July 14, 2016

The National Institute of Allergy and Infectious Diseases of the National Institutes of Health have given Southern Research a government contract worth nearly $1 million for use in its research on the Zika virus.Southern Research's Drug Discovery and Drug Development divisions have worked for the past year to develop a vaccine for the virus, which the World Health Organization has determined to be an epidemic.The contract will allow the institute to broaden their research as they attempt to develop a non-human primate model for antiviral drug testing, which will help inform other research into potential vaccines."Our ultimate goal with this project is to establish a model of Zika virus infection that can be used for the evaluation of new vaccines and therapeutics in optional efficacy studies sponsored by NIAID," said Jonathan Rayner, head of drug development and a principle investigator, in a statement. "There is an understanding that the virus may continue to spread into new regions over the summer. Therefore, this contract from NIAID is timely and will help us to expedite efforts to understand the pathogenesis of this virus, and support the search for new vaccines and therapeutics."

Related: How Southern Research is working to limit the spread of Zika

The company's infectious disease research team has conducted studies on six strains of the virus, and created an antiviral test that will allow other researchers to gauge the efficacy of the drugs they develop.While the initial contract is worth $901,048, it could expand to almost $4 million over the course of the next two years."Southern Research has a long history of pivotal work on infectious diseases, including mosquito-borne illnesses including dengue, chikungunya, and West Nile Virus," said Art Tipton, president and CEO of Southern Research, in a statement. "Our team is uniquely positioned to support the growing body of global research on the Zika virus through translational science, and we're grateful for the solid partnerships we've developed over the years with the NIH and NIAID."

Zika Virus Worries Pregnant Women As Mosquito Season Approaches

By Maggie Fox

Today Show Online, July 14, 2016

It was Christmas, and Victoria Eljach was visiting her family in Colombia. Zika was all anyone talked about on the television news, she said. The virus had by then been carried from Brazil to Colombia — and suspicions were growing that it was causing a horrendous birth defect called microcephaly.

Eljach went home to Houston after the holidays. Zika was making news in the U.S., too, as the Centers for Disease Control and Prevention alerted pregnant women to stay away from Brazil and Colombia. Even women who might become pregnant should consider staying away, the CDC warned.

"Then, two months later, I learned I was pregnant," Eljach said. "I was very scared."

Now 22 weeks pregnant, Eljach is thriving. But she's not relaxed.

"I thought I was going to be safe here in Houston but there's Zika in Houston," said Eljach. Just last week, three patients getting pregnancy care at Legacy tested positive for Zika virus. Now they are being monitored closely to see if the virus will affect their babies.

So far, all 1,300 known cases of Zika in the continental United States — and all 340 pregnant women affected— are related to travel. Either the women were infected in another country where Zika is spreading, or they were infected by their husbands or partners who had traveled.

Jennifer Weiss / NBC News

Victoria Eljach, who is 22 weeks pregnant, watches as Dr. Juan Franco performs an ultrasound on her Friday, July 8, 2016, in Houston. Two months after visiting family in Colombia, Eljach learned she was pregnant. "I was very scared," she said.

One baby has been born with microcephaly in the Houston area. Nine babies have been born in U.S. states with Zika-linked defects, and another six died, miscarried or were aborted, the CDC says.

"The mother, who traveled from Latin America, was tested for Zika, but had received inconclusive test results. Since the infant received a definitive positive lab result for Zika, it is suspected that the mother probably carried the virus while pregnant, and presumably was infected in Latin America," the county health department said in a statement.

It's just a matter of time before someone who brings the virus to Houston is bitten by a mosquito and the virus starts to spread locally, experts agree. While no one predicts an all-out epidemic like in Brazil or Puerto Rico, it's enough to make Eljach and her medical providers nervous.

Victoria Eljach takes notes on her cell phone as she and her husband, Jorge Varón, wait to check out after a routine prenatal checkup.

"I thought it was in Central and South America. That's why I felt safe here," Eljach said. "But with summer coming, I saw there were some cases here in Houston."

She made another trip to Bogota after doing some research and seeing that Bogota's elevation made it an unlikely home for the Aedes aegypti mosquito that spreads Zika. The virus is more common in low-lying, humid, tropical areas — like Houston. At 8,600 feet, Bogota's higher above sea level than Denver.

Nonetheless, the trip troubled her doctor Dr. Juan Franco at Legacy Community Health, a network of not-for-profit clinics in the Houston area. Eljach, a behavioral analyst specializing in developmental disorders, had been Franco's patient for eight years.

He had her tested for possible Zika infection, just to be sure: She was clear.

"We screen every patient who comes through Legacy," said Franco. "We are testing people who have recent travel [to Zika-affected areas].

No one knows what percentage of women infected with Zika go on to have babies with birth defects. As with other infections that cause birth defects, the most dangerous time appears to be earlier in the pregnancy — when damage to just a few cells has big consequences.

Victoria Eljach, who is 22 weeks pregnant, has her blood pressure taken by nurse Cindy Lozano during a routine prenatal checkup Friday, July 8.

But the evidence is building that infection at any point during a pregnancy can endanger the baby. And women who don't have symptoms from their Zika infections do not appear to be safe; babies with severe birth defects have been born to women who do not remember any symptoms of a rash or fever.

Since Zika does not appear to cause symptoms in most people it infects, this worries doctors who fear an invisible epidemic of birth defects.

"It's a delayed catastrophe," says Dr. Peter Hotez, dean of the school of tropical medicine at Baylor College of Medicine in Houston. "It is every parent's worst nightmare."

Dr. Juan Franco confirmed to patient Victoria Eljach that she is having a boy while performing an ultrasound. Eljach's pregnancy is doubly high risk because of her travel and her husband's.

At 36, Eljach is considered at moderately high risk to be having her first baby, anyway. And she's doubly at risk. Her husband, Jorge Varón, lives in Panama, traveling frequently around the region for his work in the retail industry.

Eljach is worried about sexual transmission of Zika.

"We are sleeping together but nothing is happening," she said, laughing.

"The other night, my husband came to visit me. We left the balcony door open," she said. They fell asleep but in the middle of the night she got a rude awakening.

"He heard a mosquito in his ear and he took the OFF and started spraying me all over," she said.

Eljach's taking every precaution she can. "I love to go to the pool in the summer but I am scared," she said. "My doctor tells me to always wear pants and to cover up and to use repellent. I am using OFF every day and I try to stay indoors."

Zika fears have cramped her style in other ways, also. "I had to cancel some trips to Mexico and Colombia that I had scheduled," said Eljach, who likes to visit family frequently and who also had hoped to fit in one last Caribbean vacation before she gave birth.

But with the Zika risk so high this summer, Caribbean resorts are off-limits for pregnant women.

'Mosquitoes are everywhere'

Every pregnant woman at Legacy gets a Zika kit: a ziplock bag with a bottle of repellent containing DEET; condoms; and a card with information about how to avoid mosquito bites.

"There are patients who ask us about mosquito repellent. We just assure them it is safe during pregnancy," Franco said. The CDC says DEET is safe for pregnant women and children alike and is more effective than some "natural" formulations that can irritate the skin.

Franco also tested a woman from El Salvador who did test positive for Zika and whose baby so far is healthy. "The patient came to us at 36 weeks," Franco said. So far, the news is good.

"She delivered in late May. The baby is doing well," he said.

Eljach talks to nurse Cindy Lozano during a routine prenatal checkup.

He's treating a patient from Brazil who had the symptoms of Zika infection and who tested positive for infection at 16 weeks. She's now 20 weeks pregnant.

"I think it is just a matter of time before we see these numbers increase," Franco added. "There are lots of women with husbands who travel back and forth."

And he doesn't doubt there could be local outbreaks. "Mosquitoes, as we are aware, are everywhere in Houston," Franco said.

Dr. Ann Barnes, chief medical officer for Legacy, agrees.

"I think there is significant concern, and justified, on that. Houston is notorious for being a place where there are lots of mosquitoes in summer," she said.

Excited and concerned

When treating women who have evidence of Zika infection, the team at Legacy will follow the CDC protocols, which include regular ultrasounds to check the baby's development.

"What we are looking for is any changes in the circumference of the head. We are looking for microcephaly," Franco said. "When the baby is born, we test the placenta." If the virus is in the placenta, that indicates it's also been in the baby's body and could have done damage.

Not all of Zika's destruction immediately apparent. Sometimes babies miscarry or die shortly after birth, and some have normal-sized heads but scans indicate extensive brain damage. Some have hearing and vision abnormalities. So all babies born to women who had Zika while pregnant need close scrutiny.

And if there are problems, they could end up being expensive for parents, taxpayers or both.

"It would be very difficult for most of our patients to care for a sick baby. Most are indigent," Franco said. While Medicaid covers the children, it's not always easy to find the care. "The problem is finding physicians to care for them," Franco said.

Eljach had her latest ultrasound just last week, and everything looks fine. The scan confirmed that she is having a boy.

"I am excited but at the same time I am a little concerned," she said.

There is one area of disagreement — the baby's name.

"I like Santiago. I like Emilio. My husband likes Valentino," she said, smiling.

Stop Using The Zika Virus To Attack Planned Parenthood

By Dawn Laguens

STAT, July 14, 2016

Imagine a virus for which there is no vaccine that can be sexually transmitted and lead to devastating birth defects. Imagine also that a powerful tool is available to combat it. You would expect — even demand — that policymakers immediately make that tool as widely available as possible.

That virus, the Zika virus, is here today. But Republicans in Congress are ignoring medical science by trying to restrict access to family planning, a proven form of protection from Zika's harms, as part of their ongoing and dangerous crusade against women's health care providers.

The Zika virus, transmitted by mosquitoes and by sex, is a global public health crisis. It puts the health of pregnant women and families in jeopardy. Medical science and common sense would dictate that family planning services like contraception that help prevent sexual transmission of the virus and prevent or delay pregnancy should play a central role in combating this epidemic. Yet Republicans in Congress are recycling age-old political attacks on birth control and Planned Parenthood to try to justify their indefensible position on Zika.

The scientific and public health communities speak with one loud and urgent voice: Zika poses its greatest threat to pregnant women and babies, and so family planning and maternal health care must be a central part of combatting the virus. It is the primary strategy recommended by the World Health Organization, the US Centers for Disease Control and Prevention, the American Congress of Obstetricians and Gynecologists, and many others.

Republicans in the House of Representatives want to cut off reproductive health care providers from receiving Zika emergency funds. They also want to go further — their goal is clearly to limit family planning access at every turn. The House Fiscal Year 2017 Labor, Health and Human Services bill would eliminate all funding for Title X, the nation's family planning program. Title X provides essential services to 4.1 million people every year; Planned Parenthood centers provide preventive health care to 1.5 million of those women, men, and families.

Similarly, a House committee approved on Tuesday the Fiscal Year 2017 State and Foreign Operations Appropriations Bill, which imposes severe cuts to international family planning funding.

As Republicans in Congress have done before, this legislation puts politics before science and excludes critical reproductive health organizations that are uniquely suited to address the Zika crisis. Under the new legislation, qualified health care providers like ProFamilias in Puerto Rico, the first organization there to publicly discuss the connection between Zika and reproductive health, would not receive any funds to fight the epidemic simply because they are affiliated with the International Planned Parenthood Federation.

In a public health emergency, it is illogical and unethical to prevent the people and organizations who are best qualified to help, and who are already making a difference, from doing more.

Women in Latin America and the Caribbean face immense difficulty accessing reproductive and maternal health services. In this region, which is the hardest hit by the Zika virus, more than half of women who need pregnancy-related medical care do not receive it. An estimated 23 million women in the region have an unmet need for contraception.

In the US and Puerto Rico, women are fortunate to have Planned Parenthood, ProFamilias, and other organizations that strive to bridge this gap. But the weak Zika-response plan proposed by Republicans in Congress would endanger those who are most vulnerable to this epidemic — pregnant women and their developing babies. It blatantly disregards the facts from the public health community, and throws common sense out the window.

In the face of a public health emergency, in defiance of advice from countless health experts, and against the wishes of 65 percent of Americans who have called for the government response to Zika to include reproductive health care, Republicans in Congress still refuse to drop their dangerous crusade against women's health care providers and instead adopt common sense to pursue an attainable solution.

At the end of this week, Congress will break for its summer vacation. Approximately 600 pregnant women in US states and territories have already been infected with the Zika virus, and many more are likely to get it before Congress returns to work on Sept. 6. Congress should act now to pass a bill that includes funding for expanded family planning services as part of the US response to the Zika outbreak.

We cannot afford congressional inaction. We cannot afford one more life altered irrevocably and senselessly by the preventable outcomes of the Zika virus. We need a real response that empowers women.

Congress must step up now to defend the women and families counting on them to address and prevent this public health crisis while there is still a window to do so. Republicans' political games will mean loss and heartache to families in the US and around the globe.

Dawn Laguens is executive vice president of the Planned Parenthood Action Fund.

EMERGENCY PREPAREDNESS

Vermont Needs 'Actors' For Emergency Exercise

Brattleboro (VT) Reformer, July 14, 2016

WILMINGTON – The town is seeking actors to participate in Vermont's Vigilant Guard catastrophic exercise on July 29.

Volunteers are needed to help prepare emergency responders in Vermont for future disasters. About 36 people are needed to spend a day at a shelter, have simulated injuries or illnesses, and other roles. Volunteers will be given a role to play and instructed on what needs they should present to responders. They will then play out the scenario in order for evaluators to record how fire, police, rescue, and other responders react. Those observations will then be used to identify gaps and improve responses. Before the event, actors will be given a complete orientation to the incident site and what actions are expected of them. Food will be provided.

Six volunteers are needed from 8 to 10:30 a.m. and 30 volunteers from 4 to 6 p.m. Actors must be 18 or over with the following exceptions: 16-17 year-olds may participate with parents' permission. Younger children can participate if part of a "family" at a shelter.

If you are interested in volunteering, contact Jessica DeFrancesco at the Town Offices at jdefrancesco@wilmingtonvt.us or 802-464-8591. The state is also looking for participants. For more information, email brittany.marquette@vermont.gov.

Three years in the making, the state-wide Vigilant Guard exercise will include 5,000 people and evaluate the effectiveness of state and local responses to a number of crises. The exercise is being organized by the Vermont Division of Emergency Management & Homeland Security, in collaboration with the Vermont National Guard, and is scheduled for July 25 through Aug. 2.

Vigilant Guard is Vermont's largest ever emergency exercise and will play out in 50 locations throughout Vermont, to include state agencies, local communities, 16 hospitals, the Burlington Airport, and the Vermont National Guard among many others. The goal of the exercise is to evaluate performance and identify gaps that may exist in the state's response to a catastrophic event.

Emergency Operations Centers at several state agencies and the National Guard will be activated at different times during the week, and the exercise will culminate with a 53 hour around-the-clock activation at the State Emergency Operations Center involving all agencies.

"We've designed this exercise to pose as many real challenges as possible," DEMHS Director Christopher Herrick said. "Urban search and rescue teams will work with the National Guard to clear tons of debris, the Health Department will receive and distribute Strategic National Stockpile medicines and supplies, and actors will inundate hospitals and shelters needing assistance. This degree of realism will help us hone our response by identifying not only what went right, but what went wrong and rectifying those mistakes in the future."

National Guard vehicles will be on the road and in the sky during the event, and hundreds of members of the Guard will perform emergency tasks for which they have trained.

The Vermont Department of Health will play a major role during the exercise. A simulated health emergency will test that department's ability to respond and distribute life-saving medications.

Should a real emergency occur the public will be notified through traditional means like Vermont Alert (http://vtalert.gov), the Emergency Alert System, or through the media.

Specific details of the exercise will remain confidential as some participants cannot know those details before being evaluated during the exercise.

Communities that are participating include Colchester, Guilford, Lyndon, Newport, Wilmington and Windsor. Agencies, departments and other state entities participating include the Department of Public

Safety, the Division of Fire Safety, Urban Search and Rescue, the Vermont State Police, the Agency of Agriculture, the Agency of Commerce and Community Development and the Agency of Transportation.

In addition, 16 hospitals around the state will be involved, as well as Civil Air Patrol, the National Weather Service, the Red Cross, Vermont Electric Cooperative, Federal Emergency Management Agency and the Centers for Disease Control.

Activities include natural disaster response and recovery, a medical surge and a cyber attack.

'Largest Ever' Emergency Drill To Test Vermont Responders

By Elizabeth Hewitt

Bennington (VT) Banner, July 14, 2016

COLCHESTER – A series of simulated incidents over the course of nine days this summer will test Vermont's emergency responders.

The event, called Vigilant Guard, will take place in 50 places around the state and involve some 5,000 emergency responders, according to the Division of Emergency Management and Homeland Security, part of the Department of Public Safety.

State law enforcement, multiple state agencies, 16 hospitals, the Burlington International Airport, the Federal Emergency Management Agency, the Vermont National Guard and others will participate in Vigilant Guard, which will begin July 25.

Several municipalities — including Colchester, Guilford, Lyndon, Newport, Wilmington and Windsor — are also part of the plan.

At a news conference Wednesday at Camp Johnson, the Vermont National Guard base in Colchester, Gov. Peter Shumlin invoked the experience of the state during Tropical Storm Irene in discussing the significance of emergency response training.

Shumlin stood in front of a simulated disaster site featuring concrete rubble, upside-down cars and shipping containers, which will be used for practicing urban rescues.

DEMHS Director Christopher Herrick speaks about Vigilant Guard. Photo by Elizabeth Hewitt/VTDigger

"It's important when we're trying to save lives and deal with crises to have rehearsed, to have figured out who does what when, to have figured out how we minimize loss of life and loss of property," Shumlin said.

He and others said Vermonters are likely to see some activity during the course of the drill, including movement of the Vermont National Guard by land and air.

State officials characterized the event as the "largest ever emergency exercise" in Vermont. It has been in the works for three years. The federal government, which requires such tests of the state's emergency response system, is footing the estimated $570,000 bill, according to Christopher Herrick, director of the Division of Emergency Management and Homeland Security.

Herrick said he could not share many details of the event, in part because he does not know the details, but that simulations will test cybersecurity as well as urban search and rescue.

The response effort will be headquartered at an operations center in Waterbury, he said. It will test the coordination of responses across multiple agencies.

"Vigilant Guard is designed to challenge us, and when I say 'us' I mean the entire state, to handle situations with which we may be familiar and, more importantly, those we haven't seen," Herrick said.

Organizers of the simulation are seeking 200 actors to participate in the drill to "inundate" hospitals and emergency shelters around the state to test preparedness, Herrick said.

Evaluators and monitors will be on site to observe and gather data from each simulation, he said. Agencies will analyze the results and draw on them to make changes to the system.

If at any point during the simulation there is an actual disaster, the exercise will be halted, Herrick said.

Health Commissioner Harry Chen said he expects "nearly every" employee of the department will be involved with the simulation in one way or another.

"This is an important exercise because we must be ready for anything, whether it be a natural disaster like (Tropical Storm) Irene, an actual disease threat like H1N1, a cyberattack, or any combination of these catastrophes. We must have a system ready to respond immediately and effectively to any threat of the health and lives of Vermonters and visitors," Chen said.

Some secondary roads in certain locales may be temporarily closed, but detours will be made clear, according to Jessica Stolz, of the emergency management division.

Planners for the event have contracted with local and regional businesses for services during it, according to Stolz.

Emergency Preparedness Solutions, a private business, is helping to organize the evaluators for the event, and Norwich University is assisting with the cybersecurity element. There are also contracts with local food providers for meals and with hotels to house personnel coming to the state for the event, she said.

Emergency Preparedness Workshop July 26

The Catholic Messenger, July 14, 2016

Faithful Readiness: An Emergency Preparedness Workshop for Faith Communities will be held July 26 from 9 a.m. to 4 p.m. at St. John Vianney Catholic Church, 4097 18th St., Bettendorf.

It is a collaborative effort between FEMA, U.S. Department of Homeland Security Center for Faith-based & Neighborhood Partnerships, and state and local partners. The event is free, but registration is required.

Participants will meet FEMA Region VII liaisons to discuss the Faithful Readiness Initiative involving faith communities throughout the region, be introduced to FEMA's booklet, "Developing a High Quality Emergency Operations Plan for your House of Worship" and connect with new partners ready to help support your house of worship's members prepare for emergencies.

Please register at: http://goo.gl/forms/dWb72AXfz84ej09C3 or email dave.donovan@scottcountyiowa.com with subject line "RSVP-Iowa" and include name(s) of participants, organization(s), title within the organization, e-mail address and phone number. Seating is limited. Lunch will be provided by the Red Cross.

Preparing For The Unpredictable

By Carolin Jones

Tacoma (WA) Weekly, July 14, 2016

Imagine you are on your way to work, and the earth starts shaking. Bridges collapse, I-5 turns into a massive sinkhole, and if you make it out alive, you are now stuck in your car in the middle of chaos, injuries and no option of receiving help anytime soon. Are you prepared to be stuck in your car without help for days? Living on air and sunshine won't be an option as the human body can go without water for about four days. Now, what?

The Center for Disease Control estimates that half of adults in the U.S. are unprepared for emergencies. But, the solution is closer than you think. American Preparedness, a Burien-based company, has made it its goal to keep people safe, and started packing emergency preparedness kits that have all things you need once disaster strikes.

"We offer the insurance we hope you never have to use," says Jeff Guite, American Preparedness president, who founded the company in 1981. Guite, who is a disabled veteran and whose company employs service-disabled veterans, wanted to keep serving his country after he left the Army in 1969.

Guite's military background inspired him to start emergency kits. "Military people are ready to go before anything happens. I thought: How about a survival package for people before a disaster occurs?" Guite says.

American Preparedness' ready-to-go kits come in a variety of sizes. A one-person kit at $54.95 includes a first aid pack, hygiene pack, emergency drinking water pouches, food packets, a thermal blanket, flashlight and batteries, whistle, poncho, lightsticks, and hand warmers. Items essential when waiting for help during a three-day period – or riding along in the backseat for five years until it's time for a replacement.

Guite, who is also Native American and a member of the Huron Tribe, has partnered with various tribes throughout the Pacific Northwest to outfit members for disasters. The company was able to partner with the Puyallup Tribe and supply backpacks for seniors on the reservation.

About 9,000 injuries are expected just along the Washington coastal regions and I-5 during an earthquake according to the Federal Emergency Management Agency (FEMA). Guite urges residents to take personal responsibility when it comes to preparing for disaster. "There isn't any cavalry to the rescue. If you don't have the supplies in place before the disaster happens, you're in deep trouble," Guite says.

American Preparedness has taken the plan-ahead mindset a step further and donated emergency kits to groups especially vulnerable to the aftermath of a disaster. Seniors, low-income families, and school children are often the ones least prepared for an emergency.

Guite and his team started the "Kits for Kids" program in 1991 and have since distributed several thousand kits to ensure safety in schools. In July 2015, American Preparedness partnered with King County Senior Services and Swedish Hospital to donate 1,500 emergency kits to seniors receiving Meals on Wheels services.

"If you're ready for a big earthquake, or volcanic eruption – you're ready for anything," says Sarah Foster, Public Information Officer at Pierce County Department of Emergency Management. She says residents should consider what essentials they need to survive for a few days as every situation is unique, and special medications or pets should be considered when putting a kit together.

"What does your routine look like? What supplies do you need if you were cut off and the roads are closed? How would you make sure that you, your family and your pets are safe?" Foster says. She recommends to assemble kits for at least five to seven days and place them at home, work and inside the car. Adding a written list of important phone numbers to the kit, as cell phone batteries won't last forever and contact information might become unavailable, is essential when coordinating with families and friends.

The Pierce County Department of Emergency Management offers courses for residents that want to learn more about their individual neighborhoods and what potential hazards they can encounter during an emergency. The free training aims to prepare residents to help their community during a disaster and act as an effective first responder.

Emergencies can come in many forms, ranging from natural disasters, man-made catastrophes, and terrorist attacks. Guite says he used his emergency kit's light sticks to highlight his damaged vehicle and ensure safety for himself and other drivers. He also heard about his light sticks finding their way to rock concerts, heat packs going to sporting events and flashlights randomly disappearing. But no matter where the kit ends up, it is essential to be prepared. "Education and training never produce fear. Take personal responsibility for your family's safety," Guite says. American Preparedness is always looking for volunteers to help with the emergency kit assembly.

Pet Health: Emergency Preparedness Helps Animals During Wildfires

By Dr. Ragan Adams

SOURCE at Colorado State University, July 14, 2016

As the hot, dry summer envelops Colorado and wildfires burn across the state, the news fills with horrifying images, heartfelt evacuation stories and heroic emergency responses. The steady flow of fiery reports is a stark reminder that natural disaster could suddenly disrupt any of our lives.

Rather than dreading a potential fire, use your energy to prepare. Friday, July 15, is National Pet Fire Safety Day – a perfect time to make sure you and your pets are ready for evacuation and emergency shelter, should the need ever arise.

Preparing for your pets' welfare in an emergency will help first responders, evacuation groups and emergency animal shelters better care for the animals, and will give you peace of mind. The Federal Emergency Management Agency has a comprehensive Family Emergency Guide, but for the 60 percent of households with pets, preparation must be made for animals as well.

Effective emergency planning involves backup help from other people; a basic understanding of emergency response and resources in your community; setting aside needed animal feed and supplies; compiling health records and care instructions; and clearly communicating this information in written plans and simple signage. Planning for pets

CSU veterinary students treat a horse evacuated from the 2012 High Park Fire at The Ranch, Larimer County Fairgrounds. Photo: William A. Cotton, CSU Photography

Start by making with friends, family and neighbors a "buddy plan" that addresses the needs of your pets, horses or livestock. You may be at work and unable to access your animals when a fire, flood or other disaster unfolds. As part of the plan, make sure your buddies have written permission to care for your animals and have access to your pet emergency kit and kennels.

Know evacuation routes. Fires can blow up quickly, so it is best to identify multiple evacuation route options.

Put a sticker or sign on your house to inform fire personnel that there are animals inside. It's a good idea to place this kind of emergency sticker adjacent to entrances, such as the door from your garage to home, where the information would be easily visible to responders.

The Colorado Division of Homeland Security and Emergency Management urges residents to sign up for emergency alerts on county websites. The division offers a list of local emergency management websites, and other ways to stay updated on local emergencies. Create a "ready-go" bag for your pets that includes:

Food, water and medications for three days

Copies of vaccination records and medical histories

List of important animal emergency contacts, such as the names and locations of veterinary offices

Collars with tags and microchip information

Photos of you with your pet

Bowls, can openers, spoons

Cat litter, scoop and pan

Pet first-aid kit

Bedding, crate or carrier

Leashes, harnesses

Toys, grooming supplies

Paper towels, trash bags, disinfectant

Towels, gloves and hand sanitizer

Learn more about pet preparations in Ready Colorado's Plan for Pets guide. Planning for non-commercial livestock

Many families own acreage on which they keep small numbers of horses, goats, chickens, sheep and/or cattle whose emergency needs also must be considered. The above readiness tips may be revised for larger animals, with preparation on a different scale.

For instance, rather than crates, you might need a trailer; instead of dog food, you might need to set aside hay and grain. When identifying evacuation routes, you might need to make sure they will accommodate a horse or livestock trailer. Prepare for larger animals with:

Three days of food, water and medication

Registration papers and brand inspection cards

Copies of veterinary records

List of animal emergency contacts, such as animal control, animal shelter, veterinarians

Halters, lead ropes

First-aid kit

Grooming tools

Water and feed buckets

Fly spray

Tack

Muck bucket, rake and shovel

Learn more about livestock preparations in Ready Colorado's Plan for Livestock guide. Taking these steps may help calm your anxiety about the potential for natural disaster – and will provide concrete help to ensure animal safety when time is of the essence.

Dr. Ragan Adams is a veterinarian and coordinator of Colorado State University's Veterinary Extension team. She is a senior research associate in the Department of Clinical Sciences and produced "Saving pets, saving people," a video about how two Colorado counties developed animal disaster response plans.

FEMA, Lowe's To Offer Tips, Methods To Prevent, Lessen Future Disaster Damage

Beckley (WV) Register-Herald, July 14, 2016

As West Virginians repair or rebuild their homes damaged by last month's storms, floods, landslides and mudslides, Federal Emergency Management Agency (FEMA) and local Lowe's Home Improvement stores have teamed up to provide free information, tips and literature on making homes stronger and safer.

FEMA mitigation specialists will be on hand, this week and next, at in-store information centers in five area locations to answer questions and offer home improvement tips and proven methods to prevent and lessen damage from future disasters. Most of the information is geared for do-it-yourself work and general contractors.

FEMA advisers will be available July 14-19 from 7 a.m. to 7 p.m. daily at Lowe's stores in:

Fayette County: 46 Fayette Town Center Road, Fayetteville

Nicholas County: 5200 W. Webster Road, Summersville

Kanawha County: 1000 Nitro Marketplace, Cross Lane

Cabell County: 700 Mall Road, Barboursville

Free reference booklets, in English and Spanish, with information on protecting your home from flood damage, will be available at all locations. More information about strengthening property can be found at fema.gov/what-mitigation.

West Virginians who have questions about their flood insurance policies and coverage should contact the National Flood Insurance Program call center at 800-621-3362 (Option 2) between 9 a.m. and 7 p.m. Monday through Friday. Specialists can help service claims, provide general information regarding policies, and offer technical assistance to aid in recovery.

Additional information on West Virginia's disaster recovery can be found by visiting fema.gov/disaster/4273, twitter.com/femaregion3, twitter.com/FEMA, facebook.com/FEMA, fema.gov/blog and the flood information pages at http://wvflood.com

Senate Passes FAA Funding Bill With Drone Directives

Radio Magazine, July 15, 2016

WASHINGTON – A bill authorizing continued funding for the Federal Aviation Administration lays out several directives pertaining to drones with regard to firefighting, air traffic control, research and mid-air collisions with manned aircraft.

On Wednesday, the Senate voted 90-4 to pass the ''FAA Extension, Safety, and Security Act of 2016

" to extend funding for the agency through Sept. 30, 2017. The bill represents the third extension to reauthorize the FAA after the full, six-year reauthorization choked on a provision to privatize air traffic control. This latest 14-month extension is needs the president's signature by July 15, when current authorization ends and both the House and Senate adjourn for summer break.

The bill includes provisions for drones, or "unmanned aircraft systems," as they are referenced in the text. These provisions build on rules

for operating drones that the FAA established last month, most of which cover basic flight parameters such a altitude, line-of-sight operation, piloting qualification, restricted airspace and registration.

The FAA extension bill further directs the FAA to coordinate with the Department of the Interior and Agriculture Department to expedite the authorization of drones in firefighting. It also instructs the FAA to work with the Federal Emergency Management Agency to do the same for drones used in efforts to restore utilities in the event of a major outage.

Also on the firefighting front, the bill authorizes the FAA to go after drone operators who interfere with wildfire suppression efforts with a fine of up to $20,000. Drones have become an increasingly common sight for pilots flying in flame retardant and fire jumping teams. Aircraft were temporarily grounded last month because of drone interference during efforts to contain a wildfire in the San Gabriel Mountains in Southern California, ars technica

reported. Firefighting aircraft were grounded last week after drones were spotted over the Saddle Fire in Utah, according to KSL

.

The bill further calls on the FAA to team up with the National Aeronautics and Space Administration to continue developing an air traffic control system for drones, and figure out how to integrate it into the national airspace system, including the use of "decision-making by adaptive systems, such as sense-and-avoid capabilities and cyber-physical systems security."

NASA and the FAA also are directed to create comprehensive "testing or modeling" of drones colliding with jets, propeller and rotary aircraft of various sizes, speeds and points of contact.

Finally, the FAA will have to deliver a study to the House Committee on Science, Space, and Technology and the Committee on Transportation and Infrastructure on "the potential use of probabilistic assessments of risks by the administration to streamline the integration of unmanned aircraft systems into the national airspace system, including any research and development necessary."

Kara Calvert, director of the Drone Manufacturers Alliance, released the following statement after the Senate vote: "The Drone Manufacturers Alliance is pleased the House and Senate have passed a short-term FAA extension bill. We applaud the inclusion of provisions to protect emergency responders from unauthorized drones, while also encouraging the use of drones to save lives and property in emergencies.

"However, new requirements for mandatory reporting statements and identification standards could end up limiting the benefits of drone technology, and these provisions will require careful coordination with the FAA to ensure they are implemented without stifling innovation.

"We look forward to working with congress and the FAA to advance a streamlined regulatory process for low-risk 'micro' drones and preserve the FAA's sole authority over unmanned aerial operations."

A Futuristic Marriage: Spy Satellites And Virtual Reality Could Pair To Aid Field Agents

FedTech Insider, July 14, 2016

U.S. government diplomats, officials and soldiers are often deployed to far-flung regions of the world and need to relay to officials back in Washington what they are seeing on the ground. Often, this is done via secure cables and electronic communications.

However, at some point in the future, those in the field could send back images that their stateside counterparts can access via virtual reality — letting them get a realistic look at what conditions are like on the ground using a VR headset. The agency that uses spy satellites to gather information and images from around the globe could be a key part of that effort.

Though it's in the early stages, Nextgov reported last month that conversations "have just started" between National Geospatial-Intelligence Agency (NGA) immersion researchers and the agency's mobile application developers to merge VR and mobile apps, according to Joe Wileman, a researcher at NGA.
Bridging the Gap with VR

At NGA's headquarters in Springfield, Va., emerging technology developers are experimenting with Oculus Rift VR headsets and other gadgets to push the boundaries of the agency's tech ambitions.

Before, as Nextgov notes, those in the field could use a tripod-mounted scanner to take images that would then be composited into a 3D-panoramic view. However, using a smartphone camera and mobile apps, users can take photos of wherever they are —perhaps a streetscape somewhere, which could then be loaded into a generic building model at NGA. "We can then take those images and then overlay them on top of the building, so that our model becomes now the actual building," an unnamed agency researcher who spoke on background told Nextgov.

Wileman said an American embassy employee based in Nepal, for example, could use such technology to bring a Federal Emergency Management Agency official into a disaster zone if another earthquake shook the country, as occurred in April 2015.

Or perhaps, “we can’t afford to send somebody to Mogadishu [who can] walk around and see what it really looks” like, but “we may have somebody in a consulate who is in there who can take the day and take photos” to send those images back, another unnamed researcher told Nextgov.

What are the practical implications of such technology? Beyond relaying information about, and conditions of, a foreign location, it could help intelligence analysts assess whether or not it is safe for certain individuals to be in a specific area, or how intelligence officers could avoid detection, Nextgov notes.

In June, Lenovo released the PHAB2 Pro, billed as the world’s first Tango-enabled smartphone to enable augmented reality experience. Project Tango, which Google first unveiled in early 2014, lets mobile devices quickly and easily make a 3D map of an indoor space using 3D motion tracking and depth sensing.

Yet, as Nextgov notes, it’s unlikely that NGA will be rolling out similar gadgets in the near future, thanks to rigorous data security requirements imposed by the Department of Defense and the intelligence community. Still, it seems possible VR and spy satellites could be married at some point in the future.

Hospitals Prep To Treat Protesters And Delegates At Upcoming Conventions

By Dr. Mary Carr

WBT-AM Charlotte (NC), July 14, 2016

(CLEVELAND) – With thousands of people expected to pour into the cities of Cleveland and Philadelphia for the upcoming Republican and Democratic conventions, hospital health officials are prepping for any kind of medical emergency, both large and small.

In Cleveland, the three major health systems have been working out a coordination plan to ensure they can handle a mass casualty event and also everyday medical needs like helping a delegate get prescription drugs they forgot.

Dr. Michael Anderson, Chief Medical Officer University Hospitals Case Medical Center in Cleveland, told ABC News a hotline is being set up so all attendees can get easy access to medical help. He said if people need help getting medication or finding an urgent care center they can call the number. Additionally at the hospital – one of two Level-1 trauma centers in the city – the staff has been prepping for over a year to handle various crises.

“We said no vacation for trauma surgeons,” that week, Anderson said. In case of a mass casualty event, Anderson said the health system would be able to quickly accommodate multiple patients.

He said all staff have been warned to “have your cellphone, have a full tank of gas,” in case of emergency.

Anderson also said they’ve been consulting with experts about how to treat tear gas or pepper spray injuries if needed. He pointed out that all hospitals in the region must have enough supplies to be self-sufficient for 72 hours in case of emergency.

At Cleveland Clinic, officials have put into place 200 surge plans in place to address everything from an increased number of dehydration cases to mass disaster responses.

“We’ve been planning for this for the past year-and-a-half in concert with the other health systems here in Cleveland,” a spokeswoman for Cleveland Clinic told ABC News in a statement. “We have done numerous drills in preparation for the upcoming convention with the city of Cleveland and others.”

MetroHealth System, which runs the other Level-1 trauma center in Cleveland, said they expedited construction on a new ICU center to ensure they had extra beds before the convention and all staff are expected to be ready to respond.

“We have been preparing for a while and will be adequately staffed,” Hospital spokeswoman Tina Arundel told ABC News. “There are no vacations and people are expected to be here.”

Hospital team members also take part in FEMA training regularly in order to prepare for large-scale events.

“They learned how information flows, who makes what decisions when coordinating with cities, counties, etc. and even went through full scale exercises,” at the training, a Arundel told ABC News.

In Philadelphia, officials said past events like the papal visit have helped them prep for the upcoming influx of visitors.

Mark Ross, Regional Manager of Emergency Preparedness for the Hospital & Healthsystem Association of Pennsylvania, said they have planning for the Democratic National Convention for months.

“This is a big city, we do big events, we’ve had a few recently here with the papal visit and the unfortunate events around Amtrak 188,” said Ross. “We routinely meet plan, exercise, and coordinate between healthcare and all our other partners in emergency management, law enforcement, fire, EMS."

Tom Runkle, Associate Administrator at Hahnemann University Hospital, administrators have been prepping different responses for a variety of disaster events.

"We have an administrative team that will be on standby that week and will be on call in the event something occurs," said Runkle. "If we have large crowds we're expecting to see a lot of dehydration, heat exhaustion, so we're stocked up with cases of bottled water that we'll have available. We have 150 cases of bottled water."

In case of a major event the medical staff has been going through multiple drills to prepare.

"We normally do seven to nine drills a year," he said. "We just change the scenarios to kind of reflect what's going on in the environment. We just did a mass casualty drill three weeks ago."

Tears And Laughter: Wilcox County

By Amanda Walker

Alabama Live, July 14, 2016

As I have said before, not everything here is beautiful. Headlines that make it across the county line are seldom positive. During the past week we have had three gang related shootings that reportedly stem back to the fatal May 29 shooting at the Flip Flop Club. The shootings have had everyone's attention.

A lot of people also turned their attention to the hearing Thursday evening that finalized the EMA director being relieved of her position. Anytime there is a job opening in Wilcox County involving a salary and a car, it always creates somewhat of a hustle and shuffle.

Still others were angry that there are county commissioners who have had time to already begin trying to sabotage reelection campaigns of fellow commissioners two years from now, but who did not have the leadership ability to make sure employees in positions the commission supervises were meeting important deadlines. The state EMA Director had to make a special trip to a commission meeting in order to spell out the problem. As a result of the incompetence, the county lost out on just over $400,000 in disaster assistance relief from FEMA.

Maybe it is the heat and humidity that has everyone so sensitive, but anyone not upset over the shootings, or the lost money or worried over who will replace the EMA director, seemed to be offended by a picture that was on the back page of last week's Wilcox Progressive Era. It was a picture of a couple of young guys playing around at the river the way young guys play around in 2016, but it was perceived by some readers as being distasteful.

This was amusing to me. I found it interesting that a silly picture truly offended people, but for about three weeks straight the facts about the Commission Chairman having a sexual relationship with a student while he was teacher were spelled out in great detail and it didn't seem to overly offend too many. It didn't even seem to bother local advocates of abused women and children...partly, I suppose, because so many of them already knew. And I think that speaks a lot about a person's character. It's the type of thing you can genuinely judge someone on. So rationally, it would seem a man disqualified by the state to teach children should be by default no longer qualified to lead an Alabama County. But...I guess there needed to have been pictures.

So it is true that Wilcox County can often look a bit like a disaster area from a distance, but what we have now is the opportunity to learn from one another. We have a mingling of races and cultures and ages. We are all imperfect and have all fallen short of the glory. There has to be some hope of finding harmony and moving forward, as the alternative serves no one well.

When a destructive storm blows through all you can do in the aftermath is what is directly in front of you. Whatever is within your reach and ability, and in doing that, you arrive at something more that needs to be done and then you do that too. It's the same with cleaning up your own act or cleaning up the county's image and reputation. If we all to the best of our being do over and over, the things we are individually charged with doing, and if we will do them truthfully and in accordance with what best serves our community as a whole, we should shortly find ourselves better than we thought us to be. We owe it to our children to at least try and set a functional example for the future.

We Are Stronger After Hurricane Dennis

By Lisa Newell

Gulf Breeze (FL) News, July 14, 2016

It passed without much fanfare, but back in 2005, it was front page news. Jim Cantore from the Weather Channel was setting up to broadcast live from Pensacola Beach in what was anticipated to be a direct hit by Hurricane Dennis, just 10 months after Hurricane Ivan shocked us with its power.

Many people were still living in FEMA trailers, many houses were still sporting "blue roofs" or tarps to cover damage from the previous storm.

The MRE's (Meals Ready to Eat) were still in the pantry, a reminder of the situation we were in after Ivan.

People were still experiencing post traumatic stress disorder from Ivan's impact. Some lost everything, down to the concrete slab. Others found everything ruined by rising water.

Others had minimal damage but were still affected by the losses in their community, the disruption of services and the disruption of routines. Schools were canceled for months. The high school gym was still not repaired. Churches became makeshift care centers, providing sandwiches and kindness while people applied for benefits from the Federal Emergency Management Association.

Many others were still negotiating settlements with their insurance companies.

Now, here was another storm gathering strength in the Gulf, ready to threaten whatever we had rebuilt in the previous 10 months.

Hurricane Dennis made landfall near Navarre on July 10 and the impact was most intense to the east. However, as a "dry storm," Hurricane Dennis knocked out power to many Gulf Breeze homes for many days.

Although Dennis didn't find much to destroy in Gulf Breeze that wasn't already destroyed by Hurricane Ivan, Dennis packed quite a punch economically.

Several families decided enough was enough and sold their homes to move inland and a housing glut took the place of the housing shortage that Ivan caused. Investments in our area remained down through the Great Recession and the Deepwater Horizon disaster in 2010.

We are turning the corner now, and most of our homes are built to withstand strong storms but we've also endured higher insurance premiums and a bit of cynicism over what your policy will cover. We are wiser and stronger but we must remain vigilant against the next storm.

Bay Area Leaders, Community Members Discuss Obama Town Hall

KGO-TV San Francisco, July 14, 2016

SAN FRANCISCO –

The conversation continued online following President Barack Obama's historic town hall on ABC7. We gathered Bay Area leaders and community members for perspective where you live.

This local event, that took place at 9 p.m. on abc7news.com and ABC7 News on KOFY-TV 20, will be available to watch online on Friday.

Our guests included:

Allwyn Brown – Richmond Police Chief

Chief Allwyn Brown has been a sworn member of the Richmond Police Department for over 30 years, serving as assistant police chief between July 2015 and January 2016, and then he was appointed interim police chief. He was promoted to sergeant in 1994 – then later served as acting lieutenant for one year helping to institute a new policing system before being promoted to captain in January 2008. He served as one of two deputy chiefs in the Department between 2010 and 2015. Chief Brown attended POST's Supervisory Leadership Institute (Class 86), and he is a graduate of Police Executive Research Forum's Senior Management Institute for Police (SMIP). He holds a Master's Degree in HR Management and an undergraduate degree in Business/HR Management.

Antwan Wilson – Superintendent of Oakland Unified School District

Before serving as Superintendent of Oakland Unified School District, Antwan Wilson was the Assistant Superintendent for Post Secondary Readiness in Denver Public Schools for six years where he led

Denver's Middle, High, and Intensive Pathway Schools.

Under his leadership in Denver, there were significant improvements in graduation rates, reductions in drop-out rates, increases in students entering college, a doubling of enrollment and qualifying score rates in Advanced Placement courses, tripling of Concurrent Enrollment college-level courses, and a revamping of the district's Intensive Pathway Options.

Prior to this role, Antwan served as a high school principal in a high poverty neighborhood and as a middle school principal in Denver Public Schools and Wichita Public Schools respectively. Antwan has also worked as an assistant high school principal and as a middle and high school classroom teacher in Wichita, KS, Lincoln, NE, and Raleigh, NC.

Antwan graduated with Distinction from Nebraska Wesleyan University with a Degree in History-Social Science Education with Minors in Women's Studies and Minority Studies. In addition to an advanced degree in School Leadership Degree from Friends University, Antwan is a graduate of The Broad Academy class of 2014.

Antwan and his wife – a career educator – have been married for 18 years and have three children – a middle school student, and two elementary school students who attend public schools.

Arash Daneshzadeh – Communities United For Restorative Youth Justice (CURYJ)

Dr. Arash Daneshzadeh is a scholar-activist, and former war-displaced refugee, whose research in the UC Davis School of Education, centers around the decriminalization of historically dehumanized youth of color. He is the author of scholarly articles, books, and op-eds that focus on youth incarceration including: How Whiteness Stole Justice, Dismantling The School To Prison Pipeline: An Anthology of Solutions, Unhooking From Whiteness: Volume 3, Hip Hop & Dismantling The School To Prison Pipeline. He is the editor for the Journal of Peace Studies, and serves as an editor for the Journal of Culture and Education. The crux of his praxis converges on the intersections between youth incarceration, indigenous incarnations restorative justice, hip hop pedagogy, identity formation, and organizational theory. Dr. Daneshzadeh is a faculty member at the University of San Francisco-- School of Education, as well as faculty for the Prison University Project at San Quentin State Penitentiary. He currently serves as the Director of Programs at CURYJ (Communities United for Restorative Youth Justice) in Oakland, California. Learn more about his work at: https://www.youtube.com/watch?v=Fw9tD6sdH24 and curyj.org.

Carroll Fife – Oakland Alliance

Carroll Fife is an organizer, educator and mother who has lived and worked in Oakland for the past 30 years. As founder and co-chair of Oakland Alliance, Carroll works to increase access to jobs, housing, and quality education for disenfranchised Oakland residents. As an educator, Carroll focuses on the impacts of race and income inequality on student achievement, developing holistic, culturally affirming curriculum to engage urban students in life saving education. As an activist, Carroll is a leader in the Oakland Alliance, OaklandWORKS, Oakland Justice Coalition, the State of Black Oakland Central Coordinating Committee, and the Post Salon Community Assembly, just to name a few. In 2014, Carroll served as the Campaign Coordinator for Dan Siegel for Mayor of Oakland, which ultimately became the moral compass for all other mayoral candidates that year. She was also a delegate to the DNC's 2016 Platform Committee where she held the line for radical, grassroots values. Carroll is currently employed as a legal assistant and apprentice at Siegel & Yee, a prestigious Oakland civil rights law firm that primarily represents whistleblowers and victims of police violence and employment discrimination.

Casey Griffin – Parent Activist from The Village Method (Union City)

I am a career public servant for 25 plus years and enjoy serving others through leadership. I am happily married with a blended family of five children and five grandchildren. In my spare time, I support my local community in a few ways. I serve as President of a local actors guild and, serve as a Parent Ambassador for The Village Method (TVM) initiative.

www.thevillagemethod.org

Chris Copeland – Retiree

I spent my childhood moving around the world (Turkey and Germany, and many US stations) with my family, being an Air Force brat.

I spent 38 years in the insurance industry, and retired five years ago as a Vice President and Executive General Adjuster in the claim department of a Major insurance company. My father was an officer in the USAF, and he taught me to shoot, from the age of seven. I have been a competitive shooter in various disciplines for all of my adult life. I am now 66 years old, and still competing.

I am an alumnus of the FBI Citizens Academy, and have been a volunteer role player for SF FBI SWAT on many occasions. I have also been a role player for FEMA training, including being trapped in a collapsed building for two hours. The fire fighters who tried to rescue me were finally told to "black Tag" ,me on the grounds that it was unlikely that I would survive for the additional two hours it would have taken to get me out. Black Tag, means administer a large dose of morphine and leave to die. This was all simulated in the actual collapsed building located at the FEMA training site at Moffett Field.

I have been the photographer for more than a dozen Community Theatre productions, and acted in one, playing Wiley Post in "The Will Rodgers Follies". I have one magazine cover, and dozens of published photos .I live on two acres of redwood forest in the Santa Cruz Mountains.

Christopher (Chris) Bridges – Equal Justice Society

Chris is a graduate of Northeastern University School of Law, where he served as an active member of the Black Law Students Association, the Asian Pacific Law Students Association, and the Latin American Law Students Association. He also holds an MS in Criminal Justice from Michigan State University and a BS in Political Science and BA in Criminal Justice, both from North Carolina Central University. Chris began his legal career in 2012 with the ACLU of Northern California as the Racial Justice Project Fellow, where he worked on school to prison pipeline issues as a member of the Education Equity team. Chris began his work at the Equal Justice Society in Oakland as the Butler Koshland Fellow and is currently focusing on school discipline and education issues as well as inequities within the criminal justice system. To aid in these efforts, Chris is using social science, structural analysis, and real life experiences to help broaden conceptions of present-day discrimination to include implicit bias.

www.equaljusticesociety.org

John Dennis – Republican Party

John Dennis is Nancy Pelosi's 3-time former opponent for Congress. He is the former chairman of the Republican Liberty Caucus of California, currently serves on the national board of the RLC, is a member of the San Francisco Republican Central Committee and is a California Republican Party delegate.

www.sfgop.org

Joseph Jackson – Richmond Youth Council

I am a native of Richmond, CA and product of my environment, I am a community leader, advocate and believer in change in our communities. I am a Police Explorer with a local police department and what many called an endangered race with having the status of being a young black man.

http://www.ci.richmond.ca.us/1074/Richmond-Youth-Council

Kamau Walton – Black Lives Matter

Kamau Walton is a member of Black Lives Matter Bay Area and Critical Resistance. Since the Black Friday 2014 BART Shutdown they have supported and participated in several Black-led direct actions across the Bay Area. In 2014 they were the lead coordinator in the fight to stop Urban Shied and increased militarization in communities of color in the Bay Area. Kamau has also worked against the violence of policing as one of many leaders in the successful fight to stop civil gang injunctions in Oakland, as well as worked to abolish solitary confinement during and following the historic prisoner hunger strikes in California in 2011 and 2013.

Mandela Schumacher-Hodge – Kapor Capital

A former public school teacher, education policy researcher, and PhD candidate, Mandela Schumacher-Hodge began her career in tech as startup founder. After raising funds from Kapor Capital, 500 Startups, and Imagine K12, Mandela's company, Tioki, went on to build technology that helped hundreds of schools across the country secure great teachers for their students. Thereafter, she was recruited to Startup Weekend Education (SWEDU). In just two years, Mandela and her team successfully scaled the organization from three to six continents, officially establishing it as the largest initiative in the world focused on teaching people how to use entrepreneurship to improve education.

In October 2015, Mandela joined Kapor Capital as its founding Portfolio Services Director. At the Oakland-based venture capital firm, Mandela oversees a portfolio of 114 tech startups, helping them make progress on their business, social impact, and diversity goals. Most recently, Mandela helped launch a first-of-its-kind venture-backed diversity pledge titled the Founders' Commitment. 77 companies in the Kapor Capital portfolio have already signed on, and over the next year, Mandela will work alongside acclaimed diversity expert and Kapor Capital Partner, Dr. Freada Kapor Klein, to develop diversity workshops and resources to help founders make progress on their Commitment.

Over the past five years, Mandela has advised hundreds of aspiring entrepreneurs and her writings on Medium and Forbes are a reflection of those lived experiences. To-date, Mandela has presented on over 50 stages and has received several recognitions, including being named to the Forbes 30 Under 30 in Education list, presenting at TEDx, and publishing three Top 20 Medium articles.

Maria Poblet – Causa Justa::Just Cause

María Poblet is Executive Director of Causa Justa :: Just Cause. She is Chicana and Argentine, with extensive experience in Latino community organizing, connecting the provision of services to organizing and leadership development. She led the merger between St. Peter's Housing Committee and Just Cause Oakland that created Causa Justa :: Just Cause, and the subsequent merger integrating POWER (People Organized to Win Employment Rights). This strategic growth aggregated the power of neighborhood-based Latino & African American organizing, creating a single, regional, multi-racial powerhouse for racial and economic justice. Next City named her a US Vanguard Fellow -one of 40 leaders under 40 inspiring better cities. Under her leadership, CJJC's work addressing racialized displacement has earned a number of Awards, including the Patiño-Moore Legacy Award for breaking down barriers between Latino and African American communities, and building a national movement to ensure the well-being of all America's families. Within and beyond her role at Causa Justa, María is active in social movements, serving in the leadership of the US Social Forum, the Grassroots Global Justice Alliance, and various progressive formations. She is a founder of the US chapter of the World March of Women. Maria had the privilege of being mentored by June Jordan, and was the Artistic Director of Poetry for the People before she fell in love with community organizing.

Michelle Meow – SF Pride Board President

Michelle Meow, host and producer of "The Michelle Meow Show," is your A-Z, covering the LGBT, LMNOP, and everyone in between. She attended San Francisco State University and received a B.A. in Broadcast Journalism and shortly after, started her career in radio. Michelle's show can be heard in San Francisco and nationally on the Progressive Voices Network. The local TV show can be seen on KOFY TV, Ch 20/ Cable 713 Sunday nights at 930pm. Michelle has also been a co-host of the San Francisco Pride Parade broadcast since 2006. She is currently the President of the San Francisco Pride Board of Directors. She is a self-described LGBT history geek, information sponge, and a lover not a fighter. On the weekends, she can be found laying around with her cat and partner humming a song she's never heard of.

www.michellemeow.com

www.sfpride.org

Rachel Williams – Yelp

Rachel Williams returned to Yelp in 2014 to assume the role of Head of Diversity and Inclusion. She is currently focused on building Yelp's diversity initiatives to accelerate action. Having grown up in San Mateo, CA, Rachel often found that she was one of only a couple faces of color in her classrooms. This early awareness of her own differences inspired her thirst for increased diversity and inclusion at a young age.

With a B.A. in Psychology from UC Berkeley and more than 15 years of human resources experience in a variety of industries including technology, life sciences, consumer products and retail, Rachel has honed her expertise in recruitment, organizational development, and strategic change activities. She is thrilled to be able to narrow her focus on Diversity and Inclusion, a very important element of the employee experience and a passion for Rachel. She returns to Yelp after most recently serving as the Head of Talent Acquisition for ClearSlide. She has also held talent acquisition roles at SolarCity, Peet's Coffee & Tea as well as an executive search consultant for venture capitalists.

Ronald Shaw – Richmond Youth Service Bureau

Dr. Susan DeMersseman – Child Psychologist

Susan DeMersseman, Ph.D. is a psychologist and writer in the San Francisco Bay Area, where she has worked with children and families for more than 30 years. This has given her a backstage pass to the wonderful and challenging world of parenting.

Dr. DeMersseman grew up in South Dakota and has shared that experience and the rich community of the Bay Area with her husband and her now grown children. When she appears on local media or at parent workshops she is often introduced as a "parenting expert," a label she describes as her favorite oxymoron (followed closely by sweet "sixteen").

Dr. DeMersseman's writing has appeared in many national publications and in several books. This book and her website offer a sensible and sometimes humorous approach to being a parent. Her blog includes articles on raising children, gardens, and awareness.

Walter Katz – San Jose Independent Police Auditor

Walter Katz is the Independent Police Auditor for the City of San José. He is an attorney who was appointed by Mayor Sam Liccardo and the City Council in November of 2015 and he assumed his responsibilities this past January. Previously, Mr. Katz served as a Deputy Inspector General for the County of Los Angeles Office of Inspector General (OIG) which oversees the Los Angeles County Sheriff's Department. In that role, he led the Inspector General's effort in monitoring the LASD's body-worn camera implementation program and developed a framework for increased transparency by the LASD to disclose use of force and civilian complaint information to the public through open data. Prior to the Inspector General, he was an attorney at its predecessor agency, the Office of Independent Review, where he monitored and reviewed the LASD's investigations of deputy-involved shootings and disciplinary investigations. Mr. Katz has also advised other police agencies and municipalities in their reform efforts.

Mr. Katz is active in the National Association for Civilian Oversight of Law Enforcement (NACOLE), where he serves on the Training, Education and Standards Committee and has frequently been a panelist or moderator on open data, accountability and transparency issues. He has written about police accountability in the Harvard Law Review Forum and The New York Times. Prior to his work in civilian oversight of law enforcement, he served a deputy public defender in Southern California for seventeen years.

He received his law degree from the McGeorge School of Law in Sacramento and his undergraduate degree from the University of Nevada, Reno.

Are Elected Officials Doing Enough For Flood Relief?

By Rachel Ayers

WOAY-TV Bluefield (WV), July 14, 2016

WHITE SULPHUR SPRINGS-- White Sulphur Springs is working hard to rebuild after flood waters destroyed much of the town. While residents work tirelessly to rebuild, some feel elected officials like Congressman Evan Jenkins aren't doing enough.

"When I would get home from volunteering all day long I would get on Facebook. I've heard people talking about Mr. Jenkins coming and helping them, but I would get on Facebook and almost every hour he was able to be on there posting things and taking pictures. That's great to let everyone know what is going on, but then it goes a little deeper and you realize is he really helping. It's more than just taking a picture of where you are. It was upsetting to be out here working all day while he is on his phone being escorted around with his staff taking pictures," Nick Irvine said.

Irvine claims that Jenkins came to homeowners and offered them little help, but not before snapping a photo.

"He came to visit my neighbor who is currently pregnant and her house was destroyed," Irvine said. "He said FEMA will help you and we will get you taken care of. Later FEMA compensated her less than two thousand dollars and he took a picture and was gone. It's really upsetting for someone in that situation to get a hey I'm here and see you are doing pretty bad but let me get a picture with you."

Some of the photos Jenkins posted were from Emmanuel United Methodist Church in White Sulphur. Pastor Shari Stilgenbaur says his visit there was a positive one.

"We had a truck come with supplies for the people in need and he happened to be here. He and two of his assistants just jumped right in. They grabbed dusk masks and started unloading the truck. I got kinda tickled. That truck has Lyme in it that had made a mess and they grabbed some brooms and started sweeping that truck out," Stilgenbaur said.

But Jenkins' Facebook posts aren't the only thing that has Irvine concerned.

"He posted mobile office hours and they aren't really neat any disaster hours and they are only open for an hour," Irvine said. "He claims he can cut through all this red tape with FEMA, but how many people are you actually going to help that need it in one hour?"

We reached out to Congressman Jenkins' press secretary and received no response at the time of this story. We also reached out to Jenkins' current political rival Matt Detch. His press manager who also happens to be his sister said they cannot comment on Mr. Jenkins' involvement in flood relief, but did say "I need to point out something people may not realize about my brother – he is HIGHLY allergic to mold. Even though he can barely breathe, and his eyes are red and swollen, he has been out cleaning. It would have been very easy for him to say he couldn't clean. He, however, hasn't complained or made any excuses."

We will see how the floods have impacted this political race come November, but Mr. Irvine says he probably won't be voting for Jenkins' re-election.

Should State Bail Out Flooded Businesses?

By Hoppy Kercheval

Charleston (WV) Gazette-Mail, July 15, 2016

Dozens of West Virginia business men and women who were flooded out in the June 23 storm face the difficult and life-changing decision of whether or not to rebuild.

Individual flood victims can qualify through the Federal Emergency Management Agency for direct cash grants, with a maximum of $33,000, to help them get back on their feet.

Businesses do not qualify for cash assistance. Instead, they can receive loans from the Small Business Administration.

However, many business owners, especially if they are older, are reluctant to take on a big loan at 4 percent interest for up to 30 years. If they don't or can't, many of these flooded businesses will never reopen, causing even greater economic hardship in communities that were struggling before the flood.

Should the state step in and help out? House Speaker Tim Armstead, R-Kanawha, whose district includes hard-hit Clendenin, believes it should. "I think we've got to," Armstead said.

"I'm not for handouts, [but] this is make or break for them. In the long run, it's a sound investment."

Gov. Tomblin is open to the idea, but cautious. "We want to do everything to get these businesses open again, but how far can we go? There is a finite amount of money that the state would have available to put into a program like that."

It's a conundrum.

On one hand, what is the taxpayers' obligation to help out an unfortunate victim of the flood? Some of the businesses in the flood plain are protected because they bought flood insurance from the federal government, while others rolled the dice or never imagined the water would reach their doors.

But on the other hand, one could argue the government has a moral obligation to provide assistance to all those impacted by a historic natural disaster.

Additionally, the state has an interest in helping maintain the health of communities.

Bill Ore owns and operates the Clendenin Pharmacy. The store, which has been a business landmark in the town for decades, was destroyed by the flood. He's operating temporarily out of a trailer, but doesn't know if he wants to take on massive new debt to stay in business.

"We are devastated," he told me. "We have no churches, we have no bank, no grocery store. We have nothing. I just think they should be putting more help in here to get people started again, but it doesn't look like they are going to."

Kanawha County Commission President Kent Carper supports the concept of cash grants from the state to damaged businesses. "It wouldn't take that much to take care of the businesses in the entire flooded area of the county."

Maybe not for one county, but there are a dozen counties that had flood damage with perhaps a couple hundred businesses that need immediate assistance to keep their doors open.

How much can an already cash-strapped state afford to hand out? How do you administer such a program to determine which requests are legitimate? Are some businesses more worthy or viable than others?

Under normal circumstances, free market principles should apply with businesses rising or falling based on their merit with the government acting as a neutral observer. But these are not normal times.

This is a historic disaster that will alter the nature of communities forever. Public policy makers must give that serious consideration as they decide what investment the state should or should not make rebuilding devastated businesses.

11 Years After Katrina, FEMA Has Learned From Its Failures

By Richard Rainey

New Orleans Times-Picayune, August 27, 2016

After striding among piles of broken drywall, soggy carpets, and mud-stained sideboards on a sun-drenched street in Zachary early this week, President Barack Obama did to FEMA Administrator Craig Fugate what George W. Bush did 11 years ago to his own disaster chief, Michael Brown, in the immediate aftermath of Hurricane Katrina.

Obama praised him.

"Somebody who I can't brag enough about," he said of Fugate. "One of the best hires I made as president."

By most accounts, Fugate has steered a seamless federal response to the Louisiana flood of 2016, earning Obama's plaudits but also praise from local officials and residents who say the agency has responded quickly to immediate needs.

But Bush's words in early September 2005, spoken from an airplane hangar in Mobile, Ala. — "And Brownie, you're doing a heck of a job" — became a sarcastic catchphrase for FEMA's botched response to the costliest hurricane ever to hit the Gulf

Coast. Aid was late or non-existent, locals complained of confusion and obstruction. Brown would resign days after accepting his boss' praise.

Approaching the 11th anniversary of Katrina's landfall Monday (Aug. 29), those two scenes between a president and his emergency manager bookend a startling evolution of a federal agency from maligned incompetence to a well-coordinated disaster response team. And Louisiana, once the stone on which FEMA stumbled, is now the beneficiary of that transformation as it recovers from a deluge.

It's unfair, admittedly, to compare this month's flood to the one that followed Katrina. Central Louisiana was struck by a massive rain event that forced rivers and bayous over their banks and into towns. Thirteen people died. Katrina's waters were from a man-made disaster, wrought by faulty levees that left houses underwater for weeks. St. Bernard Parish and swaths of the North Shore were swamped and flattened. More than 1,800 people died.

Katrina became FEMA's crucible, one that it did not quickly rise to meet.

"It was probably one of the largest disasters they had to work on, and I've got to say — and I know that they had a lot of great people back then — they weren't really organized for a large-scale operation. That was pretty obvious," said Kevin Davis, former St. Tammany Parish President and director of the Governor's Office of Homeland Security and Emergency Preparedness under Gov. Bobby Jindal.

After levees failed across New Orleans and water poured into the streets, disarray marked the response. With faint understanding of the city's topography, Brown and FEMA's top brass weren't aware of the magnitude of the flood. They dismissed reports from Marty Bahamonde, FEMA's only staffer on the ground, that the 17th Street Canal wall had broken and later that 80 percent of New Orleans was underwater. Brown told CNN that FEMA didn't know for three days that hundreds of people were trapped at the Convention Center with no food or water.

After rescues were well underway, FEMA turned away offers of personnel and supplies from the Department of Interior and denied a request from the state Wildlife & Fisheries agency for 300 rubber boats. It was slow to provide food, shelter, and supplies to first responders and stranded residents alike. Its leaders bickered with Gov. Kathleen Blanco and New Orleans Mayor Ray Nagin over who was in charge.

And when the response switched to recovery, there were the infamous FEMA trailers, those glorified recreation vans, hastily built and steeped in toxic resins, that populated yards and vacant lots for years after the storm.

They were only supposed to be in place for up to 18 months. The last one purportedly left New Orleans in February 2012, more than six years into the recovery. By then it was the wrong kind of icon: a symbol of FEMA's grinding, inept bureaucracy.

Brown and others were hauled before Congress in the days and weeks after Katrina. From those testimonies grew an eventual overhaul of the way the agency responds to large-scale disasters.

FEMA hadn't always been in disarray. Dinged for a similarly slow response to Hurricane Andrew in 1992, the agency had improved during the Clinton years. It's director, James Lee Witt, earned praise from Democrats and Republicans for his response to the Oklahoma City bombing and other disasters.

Then the attacks of Sept. 11, 2001 changed the world. FEMA was rolled into the newly created Department of Homeland Security, and terrorism threats replaced natural disasters as the catastrophes warranting the most attention.

"If you look at the history of FEMA, we tended to grow and get resources after a bad response, and when we were doing well, resources got pulled away," said Fugate, who was director of Florida's emergency management in 2001. "And so, when you look at 9/11, nobody questioned FEMA's response, from deployment of the Urban Search and Rescue Teams to the recovery. By and large, FEMA did its job. But in the creation of what I like to refer to as an era, when almost everybody went to look at terrorism attacks, I was kind of looking around going, 'Last time I checked, hurricanes didn't stop.'"

Rather than stand up a new state homeland security department, Fugate's boss at the time, Florida Gov. Jeb Bush, instead pumped federal funding into Florida's emergency management programs.

"Quite honestly, we were able to maximize the infusion of homeland security dollars and the attention on terrorism to build a much more robust, capable response that then paid off in the '04 hurricane seasons and again in '05," Fugate said.

Fugate carried that fundamental understanding — that states and local governments are best suited to be the first responders in a disaster — with him when Obama hired him to run FEMA in May 2009. By then FEMA had undergone a dramatic revamp to reconcile its failures during Katrina. Its role as a secondary, support organization was more clearly defined. It was given more autonomy within DHS to manage a response to a disaster. And Its budget was increased.

During Katrina, Brown testified Katrina ran on about $1 billion. In 2016, that budget was $13.9 billion.

Its role as a secondary, support organization was more clearly defined. It was given more autonomy within DHS to manage a response to a disaster. And its budget was increased. During Katrina, Brown testified Katrina ran on about $1 billion. In 2016, that budget was $13.9 billion.

"It's a 180-degree turn," said Davis, who had testified before Congress after the 2005 storm. "We got through Katrina. It was very lengthy and bureaucratic, and people were being moved in and out of the organization regularly so you had no continuity of knowledge at the time ... but I think it awakened on the federal level the need to reevaluate their response to a state when a call is made. And I have to say they've done a great job."

Congress also put aside a $2 billion disaster relief fund that FEMA can tap to get ready for a disaster, even before an official declaration. It's that tranche that Fugate tapped to spend $127 million in the immediate wake of this month's floods.

Out of that 2005 catastrophe, FEMA eventually emerged as a bright spot. Fugate credited major overhauls of federal law after Katrina and the Obama administration's willingness to overreact to a potential disaster rather than wait for it to unfold.

"Previously, you're always pretty much waiting for the governor to ask before you did it, and the problem with that is you're maybe a day or two or three days into something by the time you get asked, and we're not that nimble," he said. "So we're fortunate that President Obama has made it very clear that he'd rather err on getting there and not being needed than not being there at all."

One outward sign of FEMA's new approach are the temporary homes it plans to deploy in the 20 parishes drenched in the August floods. These are prefabricated, modular homes with two or three bedrooms and access ramps for those with physical disabilities. While they cost more — between $59,000 and $69,000 — than the glorified RV trailers that dotted lawns and landscapes after Katrina, they signal FEMA's pivot in philosophy from "What can we afford to do?" to "What do people need?"

"I'm proud to call these FEMA trailers," Fugate said in an interview Thursday. "They're not the RVs we were using. And again, it shouldn't be taken that the RV industry doesn't have a good product, it's just a product that's not designed for long-term housing."

The change is also evident in the push, learned during Superstorm Sandy in 2012, to gut homes quickly to reduce the need for temporary housing and preserve stricken communities. But more subtly it is a refashioned attitude at FEMA — what Obama called a "change of culture" — that has improved its ability to respond, Fugate said. The agency now recognizes that residents, business owners, local police, paramedics, firefighters are the best resources in the first minutes and hours of a disaster.

"While everybody from the Coast Guard to the state Fish & Wildlife, they get the press releases out about how many people they saved, you and I know that most people got saved because a neighbor knocked on a door or showed up in a boat," Fugate said. "If we'd waited for all the official stuff to kick in, we'd have lost more people.

"So I'm of the mind to look at the public as a resource, not a liability. Yeah, there are some crazy people out there doing stupid stuff, but we shouldn't use that to then frame the whole thing as 'We shouldn't have engaged the public because there's risk.' There's always going to be risk."

La. Congressional Delegation: Raise Federal Cost Share; Include Both Floods

Monroe (LA) News Star, August 27, 2016

Louisiana's congressional delegation has joined Gov. John Bel Edwards in asking for the federal government to take on a bigger share of the cost for flood response and recovery for both the August disaster in southern Louisiana and the March deluge in northern, central and southern Louisiana.

The delegation — Republican Sens. David Vitter and Bill Cassidy and Reps. Ralph Abraham, R-Alto, Steve Scalise, R-New Orleans, John Fleming, R-Minden, Cedric Richmond, D-New Orleans, and Charles Boustany, R-Lafayette — made the request in a letter sent to Federal Emergency Management Agency Administrator Craig Fugate on Friday.

They asked for the feds to bump up their share of the costs from 75 percent to 90 percent and include both floods as one.

Abraham has seen 22 of the 24 parishes in his 5th District declared major disasters in the March and August floods.

"We've been hurt mightily by these two disasters," said Abraham in an interview Saturday with USA Today Network of Louisiana. "We are all Louisianians. We want to make sure nobody gets left out of the box."

Thirty-six parishes were declared federal disasters in the March flood. Twenty have been declared in the

August flood, but the summer flood affected higher populated areas, thus causing more damage.

Each of the six congressional districts has had at least one parish flood this year. Some parishes have been affected by both flood events.

FEMA uses a formula to determine its share of disaster recoveries. To reach a 90 percent share, damage must reach the level of $137 per capita. With 4.6 million people in Louisiana, the total would have to reach $637 million. "We'll shatter that in both events," Abraham said.

"Louisiana has suffered tremendously this year, experiencing two federal disasters within just six months," Cassidy said in a statement. "More than half of our state has been somehow affected. That's why Rep. Abraham and I are asking FEMA to consider both of these disasters as one and to recommend a cost-share adjustment to the president."

The letter specifically requests FEMA consider both the flooding from March that affected northern, central and southern Louisiana and the current flood in southern Louisiana as a single disaster when making its cost-share reduction determination.

"I've seen the devastation up close — both from the flood in March and this historic recent flooding," Fleming said in a statement. "Given the magnitude of the damage, FEMA should reduce their cost share to help Louisianians get back on their feet again."

"The road to recovery for Louisiana will be long and costly, and we will need all the assistance we can get," Boustany said in a statement. "I urge the consideration of these devastating disasters together in order to provide timely relief for the thousands of flood victims throughout our state who desperately need it."

Jay Dardenne, Edwards' commissioner of administration, said the "request to consider the floods as a singular event is appropriate. It makes sense to roll them together," he said Saturday.

"It will make a huge difference for us as a state if we can reduce our cost share to 10 percent, particularly on the front end because we have to spend it first before we can be reimbursed," Dardenne said.

Louisiana Will Need Congress' Help After Flooding

By Melinda Deslatte

Associated Press, August 28, 2016

BATON ROUGE, La. – Insurance payments and traditional federal aid programs won't be enough to respond to the catastrophic flooding that ravaged tens of thousands of homes across south Louisiana, wrecking entire subdivisions and devastating entire cities.

Louisiana, once again, will be asking Congress to lend a hand to an ailing state.

But the state delegation lacks some of the seniority it once had, and stalemates in Congress have made it difficult to even get funding for a Zika virus response to final passage, raising worries that flood disaster aid may be hard to get.

Plus, several of Louisiana's congressional members voted against a Superstorm Sandy relief package only a few years ago, which could make it an uncomfortable ask of colleagues to help their state now.

The full scope of the flood's destruction is only starting to become clear as people rip out the insides of homes and deposit moldy carpets, soaked drywall, water-damaged furniture and heaps of personal belongings onto their front lawns.

Gov. John Bel Edwards estimates well over 100,000 homes took damage from the floodwaters. That doesn't count ruined businesses, fire stations, schools and other public buildings.

State officials first will need a better tally of the devastation to make a case for congressional assistance. As a preliminary request, Edwards asked President Barack Obama during his Tuesday visit to push Congress for federal block grant aid.

"This was a one in a thousand year flood event, and most of the affected homeowners did not, nor were required to, have flood insurance," the governor wrote in a follow-up letter handed to the President. "The (FEMA) individual assistance funds that will be available, while critical, will simply not be sufficient to allow our citizens to rebuild their homes."

Obama said he'll support the recovery effort, both through his oversight of existing federal aid programs and in urging further action from Congress.

"The whole country is going to continue to support you and help you until we get folks back in their homes and lives are rebuilt," the President told Louisiana residents.

In trying to negotiate a relief package, Louisiana should be helped by the clout of U.S. Rep. Steve Scalise, R-Metairie, the third-ranking GOP member of the House. In a statement, Scalise called making sure that assistance is available to flood victims his "top priority."

Congress isn't currently in session, but members of the Louisiana delegation say they've started laying the groundwork for aid requests.

"We're going to need some supplemental help," said U.S. Rep. Charles Boustany, R-Lafayette, whose district had widespread damage. "I just don't see any way out of it, when you have communities where 90 percent of homes were flooded."

Beyond block grant money, Boustany expects the agriculture industry will need specific aid. He's also looking at possible tax relief Congress could offer storm victims, like easing penalties for tapping into certain retirement accounts if people need the money to repair and rebuild.

Boustany, running for a Senate seat against U.S. Rep. John Fleming and 22 other opponents, said he's concerned a vote that Fleming, Scalise and U.S. Sen. Bill Cassidy took against Sandy relief in 2013 may make it tougher for Louisiana to win support for flood aid.

"I warned members of our delegation and others who have experienced disaster that if you oppose Sandy relief you're going to come across as being hypocritical and the next time we need help, we may not have it," Boustany said.

Cassidy, R-Baton Rouge, said he voted for Sandy aid and has a track record of supporting disaster relief for states, but couldn't support legislation bulked up with "pure pork which was unrelated to Sandy." He said if his colleagues "vote against our folks" because of his Sandy vote, they are "deliberately misunderstanding" his position.

Fleming, R-Minden, offered a similar defense, saying he didn't support final passage of some Sandy aid because a long list of spending unrelated to direct storm response was added.

"I support the appropriate use of federal funds to help when disaster strikes," Fleming said in a statement.

Thousands of Louisiana residents will be waiting to see Congress' reaction.

In Louisiana, The Political Mess May Outlast The Flood

By Andrew Vanacore

Politico Magazine, August 27, 2016

BATON ROUGE, La. — Imagine everything you own, dunked in dirty water and mounded on the curb outside your house. Old VHS tapes, the piano, the wardrobe, the family photos. The water came up so quickly you couldn't save anything. Now, imagine the same thing at the house next door and the one across the street. All the way down the block and the block after that. Ramparts of debris, piled head-high in front of every home. That's how things look right now across whole neighborhoods of Baton Rouge and the surrounding counties, or parishes as they're called in Louisiana. It's all the more breathtaking because it wasn't supposed to happen here. This isn't below-sea level New Orleans caught in the path of a hurricane. This is the high-and-dry state capital. This is where people fled after Hurricane Katrina, and, ironically, where many stayed, thinking they were finally out of harm's way.

And yet here we are, with 13 dead and perhaps 40,000 homes damaged (the estimate keeps climbing) after a storm that dropped more than 20 inches of rain in some areas over the space of a few days. Meteorologists pegged the odds of seeing an event like that in a given year at between 0.2 percent and 0.1 percent—a once-in-a-1,000-years storm. Nearly a third of the state has been declared a federal disaster area.

Two weeks after the rain finally stopped and the flooding began to recede, a reflexive need to help has taken hold. Co-workers, church groups and perfect strangers are still turning up to help stunned flood survivors tear out sodden drywall and insulation. Neighbors downriver, who have done all this before, are eager to lend a hand. As are the nonprofit groups that sprang up in Katrina's wake, with intimate knowledge to pass along about battling the red tape of the recovery bureaucracy and the black mold endemic to water-logged houses. While the flood was still rising around people's homes, a fleet of good Samaritans with fishing boats, known locally as the Cajun Navy, came to the rescue. In Lafayette, a city to the west of Baton Rouge where low-lying neighborhoods had been swallowed by the Vermilion River, I ran into a couple who had driven a half hour from Opelousas with a boat in tow. They were sick of watching the disaster unfold on Facebook and the TV news. "People need help," they said.

But this kind of goodwill is going to do only so much for beleaguered flood survivors. And that's where the politics of America's latest natural disaster will get dicey. Start with the local officials in charge of hauling off all of that putrid debris—the contractor in charge in Baton Rouge says he has enough trucks; we'll see—and go all the way up to Louisiana's new Democratic governor and the Washington lawmakers holding on to the federal purse strings. Data from the local chamber of commerce show there were twice as many homes inundated in the region as active flood insurance policies. Local officials estimate that nearly half the homes that took on water in East Baton Rouge weren't even inside areas where mortgage companies require flood coverage. If these people are going to fully recover, it will be up to state or federal taxpayers to bear the burden.

First, the good news. The man in charge at the Federal Emergency Management Agency these days is Craig Fugate and not Michael Brown, who became the face of a botched federal response after Katrina. Brown still argues—as recently as last year in this magazine, actually—that he was not to blame for the ghastly suffering that took place in the Superdome and elsewhere, saying the important decisions were out of his hands. But it's hard not to feel better about the new guy's track record. We learned in 2005 after Katrina that Brown, before his time at FEMA, used to work for the International Arabian Horse Association. Fugate's résumé is basically just a list of dozens of storms that he helped respond to while he was an emergency manager in Florida, first at the county level and then for the state. So far, he hasn't had a "heck of a job" moment damage his career the way Brown did.

A speedy, competent response on Fugate's part may redound to the benefit of his boss, although President Obama has already caught criticism for deciding not to cut short his vacation when the flooding hit. Donald Trump beat him to the ground and got his picture taken handing out supplies from the back of a truck. House Majority Whip Steve Scalise, who represents a congressional district near New Orleans, promptly issued a statement calling on Hillary Clinton to make the trip as well. And he made sure to point out that Clinton at the time was on a fundraising swing through "Hollywood, Beverly Hills, Silicon Valley and the Hamptons."

Scalise may have more of a role to play than issuing partisan news releases, however, which brings us to some of the problems Louisiana might run into should the state come to Congress for extra recovery dollars. The FEMA response is just a first step. The agency helps shelter flood survivors in the immediate aftermath of a storm and pays for some other incidentals. But up to only about $33,000 per person. The average is typically much less, say around $8,000. That won't cut it for people trying to replace a house without flood insurance. So it may not help that Scalise and two of his Republican colleagues from Louisiana voted against the $50 billion that Congress set aside for survivors of Hurricane Sandy in early 2013. They opposed the Sandy bill on grounds that it was stuffed with "pork barrel" spending unrelated to the storm. And granted, the package certainly did stretch the definition of emergency aid. Millions of dollars were set aside, for example, for projects aimed at mitigating the impact of future storms. And conservative groups were aghast at the $2 million earmarked to repair the roof at the Smithsonian Institution in Washington.

But the dust-up also reflected a new political reality. In 2005, a similarly-sized aid package for the states walloped by Katrina passed the Senate with a unanimous vote and drew opposition from only 11 House members. President George W. Bush was signing it a little more than a week after the storm. The states hit by Sandy, which killed 117 and did $70 billion in damage, had to wait three months, in part because Scalise and others pushed amendments to offset the relief by cutting other areas of federal spending. More than 200 Republicans voted against the final bill. (A year later, the conservative Heritage Foundation came out with a report bemoaning how often the states have come to rely on the federal government to pick up the recovery bill, and recommending the feds cut back on how frequently they declare official disasters.) No one from the New York or New Jersey delegations is threatening to derail future aid for Louisiana, but things could certainly get awkward in the next few months. Our state's Democratic governor, John Bel Edwards, has already presented Obama with a wish list, and it includes forgiveness for the money the state owes the federal government for improvements to the levees around New Orleans.

Here's another potential problem for Louisiana. By any definition, the flooding that hit Baton Rouge and other parts of Louisiana was a major event. But the storm—there doesn't seem to be another way to put it—has a bit of an image problem. For starters, it didn't have a name. Andrew, Sandy, Katrina. These are monikers that strike fear, at least for people of a certain age from certain parts of the country. What happened in Louisiana this month was an anonymous rainstorm. There was no edge-of-your-seat buildup as it crossed the Gulf of Mexico and took aim. There were no dramatic cable news images of sandbags being dropped into a breach in the levee. The New York Times got a scolding from its own public editor for failing to devote more resources to the coverage. It must have been hard for the rest of the country to sense any kind of emergency going on in the first place. And it will be the rest of the country devoting tax dollars to the cleanup, if Congress steps in.

Which, as anyone who lived through Katrina or Sandy knows, is only the start of what can go wrong. If Louisiana's delegation in Washington steps up and wrangles the extra money, it's likely to be the state's governor who handles getting it to the right people, a job that could be legacy-defining for him. Edwards pulled off a stunning upset to win office last year. He is the only Democrat elected to statewide office in Louisiana, a state whose shade of red has been deepening for a generation. And so far, his time in office has been devoted almost entirely to the state's woeful budget situation. Now, the governor's office is likely to be consumed by recovery efforts for the foreseeable future. The potential pitfalls are legion, and familiar in New Orleans: contractor fraud, grants that don't cover the real cost of repairs, confusion about the strings attached to federal dollars. Louisiana's last Democratic governor, Kathleen Blanco, was widely criticized for the headaches that plagued the Road Home program after Katrina. She declined to even run for a second term. If Edwards wants one, he may have to do better.

Louisiana, Its Floods, And The Presidential Question

By Douglas McCollam

The New Yorker, August 27, 2016

In Louisiana, the history of rain and flooding flows through the culture. Whether from the skies, the rivers, or the encroaching ocean, the people of the southern half of this subtropical state are pitted in a constant contest against water. Indeed, but for seasonal flooding through geologic history, much of the very land they live on would not exist.

But even for the Bayou State, the deluge that began on August 11th was extraordinary. More than two feet of rain fell in seventy-two hours across a wide band of the state north and west of New Orleans, causing local tributaries to reach flood stages never before recorded. More than sixty thousand homes and businesses were inundated. A sixty-mile stretch of Interstate 12 was shut down, stranding more than a hundred motorists in their cars. In all, more than a hundred thousand residents had to be evacuated out of the flood zone. And unlike the traditional televised countdown that precedes the arrival of hurricanes—complete with B-roll footage of cleared-out store shelves and boarded-up windows—the 2016 flood appeared more or less out of nowhere, a slow-moving low-pressure system conjured seemingly overnight.

The combination of the sudden onset of disaster and the perceived lack of attention to their plight by the national media produced strong feelings of aggrievement among the state's residents. And it didn't take long for that anger to home in on the figure of President Obama, who, for reasons that perplexed many victims, opted to ride out the disaster on Martha's Vineyard instead of visiting the flood zone or even tossing on a jacket and making some televised statement of support. Soon enough the meme of Obama in golf shorts squeezing in another eighteen holes juxtaposed with images of evacuated refugees and flooded communities began to circulate widely on social media. Matters weren't helped when Donald Trump showed up near Baton Rouge with a semi-trailer full of supplies. ("I think Obama just had a par on 16," one Baton Rouge friend texted me from the flood zone during Trump's visit).

The issue of federal response to natural disasters is, for obvious reasons, a touchy one in South Louisiana. It's been more than a decade, but memories of the federal government's botched response to Hurricane Katrina still vex many residents. In President Obama's seemingly nonchalant attitude, many saw a reminder of President George W. Bush's ineptitude in the days following that deadly hurricane. The comparison seems unfair based on the facts. Obama apparently stayed in close contact with Louisiana's Governor John Bel Edwards, who, concerned about diverting resources to cope with the Presidential entourage, said he was O.K. with Obama holding off on a visit. In stark contrast to the delays, red tape, and managerial incompetence that snarled the federal response to Katrina, Louisiana officials of both parties have praised the initial federal response to this month's flood. Craig Fugate, the administrator of the Federal Emergency Management Agency, was on site almost immediately, and more than a thousand FEMA staff members were deployed in the days after the storm. Jeh Johnson, the Secretary of Homeland Security, also toured the region.

Given that the federal government seems to have supplied all the requested help, worked closely with state officials, and been attentive to the needs of victims, it can be asked, What difference would it have made if the President had shown up earlier? Not that much, Obama seemed to say when addressing the criticism surrounding his delayed visit during a tour of the flood zone, earlier this week. "One of the benefits of being five months short of leaving here," he said at a curbside press conference in a Baton Rouge neighborhood, "is I don't worry too much about politics."

Part of the local criticism of Obama is certainly political. Louisiana is among the reddest states in the country, and many of the rural parishes north of New Orleans that were hit hardest by the flood are decidedly conservative. "You have to remember that in a poll taken just a few years ago a majority of Louisiana Republicans blamed Obama, not Bush, for the response to Katrina," John Barry, whose book "Rising Tide" is a definitive history of the great Mississippi River flood of 1927 that devastated Louisiana and other Southern states, says. Still, Barry thinks that Obama probably should have come South sooner. "Symbols are important. Physical presence matters," Barry says, noting that, for raising donations and drawing national attention, little competes with a Presidential visit. "This event didn't really register in a huge way in the national psyche."

The politics of disaster response can be unpredictable. During the 1927 flood, President Calvin Coolidge designated Herbert Hoover, his Secretary of Commerce, to head flood-relief efforts, declining to get personally involved or even to visit the flood zone despite a national clamor that he do so. Hoover used the publicity he garnered as flood savior as a springboard to the White House the following year. The decision at the time by local political and financial power brokers to dynamite the levees south of New Orleans to save the city from potential flooding gave rise to a populist backlash among rural voters who got flooded instead; their anger fuelled Huey P. Long's rise in Louisiana.

The Advocate, in Baton Rouge, likened Obama's reserve to that of "Silent Cal" Coolidge—Louisianans have long memories—and raised the example of Lyndon Johnson, who, after Hurricane Betsy, in 1965, prowled the still darkened and flooded blocks of the city's Ninth Ward by flashlight, announcing, "This is your President! I'm here to help you!"

While no one would confuse President Obama's contained persona with L.B.J.'s backslapping bonhomie, the President did show respect for symbolism when Hurricane Sandy blasted the East Coast, in late October, 2012. Touring the devastated coastal region, comforting victims, winning praise from New Jersey Governor Chris Christie, Obama received an approval bump from his handling of the disaster in the week leading up to the Presidential election. Meanwhile, his Republican opponent, Mitt Romney, seeking to avoid the perception of political opportunism, could only sit on the sidelines and stew, holding small donor events far from the disaster zone. Some inside Romney's campaign came to see the storm as the final turning point that sealed the 2012 race for the incumbent.

Oddly, the politics of the Sandy response may yet have an impact on Louisiana's recovery effort. Though the final tab for flood damage is still being added up, it's likely that the state will need to go to Congress to request more money to aid in the recovery. In 2012 a similar request by the states affected by Sandy was opposed by several members of Louisiana's congressional delegation, including the Republican Steve Scalise, who is currently the House majority whip. The Louisiana representatives complained that the final Sandy relief bill was larded with projects unrelated to the disaster and demanded that the funds be offset by spending cuts elsewhere in the budget. The bill passed over their opposition, but now the Louisiana politicians are at pains to explain why their votes shouldn't be held against their state's flood victims. The situation is "apples and oranges," a spokesman for Scalise told the Los Angeles Times, noting that the congressman actually voted for the initial disaster-relief bill before voting against the more expensive final package. Maybe, but that's the kind of political distinction that can easily get lost in a flood.

A Mom's Life, Rebuilt After Katrina, Wrecked By Baton Rouge Floods

By Eve Troeh

NPR, August 27, 2016

"It was wonderful to feel like I'd never have to be homeless again."

Myra Engrum is sitting in a McDonald's in Louisiana, steeling herself for another day of mucking out her flooded home. The parking lot is full of construction trucks and cars with a insurance company logos. A lot of meetings are happening here.

"I had over four and a half feet of water in my home, on the inside and outside," she says. "This is my first home that I ever purchased. I got the home right after Katrina."

Engrum, like many of those who lost everything in the recent floods around Baton Rouge, La., is a veteran of disaster. She lost everything when Hurricane Katrina hit New Orleans 11 years ago, and like thousands of others moved north to rebuild her life, bringing along her pregnant daughter.

Her daughter died soon after childbirth, and Myra

Engrum became the baby's mother. Jeremiah is now ten; she's 61.

The two of them were in their small brick ranch house earlier this month when the flood came.

"I call him my hero," she says, "because that Saturday, it was not raining. We were in the living room; he looked through the mail slot and said, 'Mommy there's water in the street.' "

They drove out, just in time. That night, around midnight, Engrum sat in her car with her son in the dark, and something clicked. Her disaster experience from a decade ago kicked into gear.

"All of a sudden I said 'Jeremiah, do you have a tablet? '" Engrum says. " 'I need a tablet to write on, I've gotta make some notes.' "

Her son pulled a notebook from his backpack. Now it's on the McDonald's table, full of lists, phone numbers, names of FEMA reps and insurance agents.

"Because of my experience with Katrina, I knew that people were gonna be asking things like 'What did you lose in the house?' " Engrum says.

Eventually she's ready to face the day, She heads out to her house on Acacia Street to meet her contractor, who says he's going to spend the day gutting her kitchen.

Engrum had taken the precaution of buying flood insurance, but it only pays for home repairs. She couldn't afford the more expensive policy to cover contents — the kitchen appliances that are now piled in a mountain out front, for instance.

The list of things Engrum may have to pay for out of pocket is endless: "Everything I owned — pots and pans, cabinets, you name it, mattresses, Jeremiah's camping stuff, his Boy Scouts uniform."

Engrum won't let Jeremiah see the house — health officials want kids to stay away from moldy homes and slippery debris, and she worries it would be traumatic for him.For now, they're staying with one of Jeremiah's former teachers, an hour's drive away.

Each day Engrum makes the trip to Baton Rouge to drop her son at day camp, while she deals with house stuff. Today, she stops in to check on him.

It's hard to tell if he understands the extent of what's been lost. He lists off the library books he had checked out when the water rose, and Engrum tells him they're gone. He says he hopes they'll be understanding about not getting them back.

As he runs off to return to day camp it starts to rain. Standing beneath the concrete overhang, Engrum starts to sing an old spiritual, "Nobody Knows The Trouble I've Seen."

It feels like a momentary break from the huge tasks ahead — finding work and a place to live, providing a stable life for Jeremiah. She's starting all over again.

She's done it before, but that doesn't make it any easier.

Donald Trump Has Now Given More To Charity In The Last Four Months Than In The Previous 10 Years Combined

By David Fahrenthold

Washington Post, August 26, 2016

On Friday afternoon, Greenwell Springs Baptist Church in Louisiana confirmed that it had received a $100,000 personal check from Donald Trump.

Trump had promised the donation a week earlier, after he'd visited the church during a tour of flood-damaged areas of the state. The church's interim poster is Tony Perkins, who is also the head of the Family Research Council, an influential social-conservative group.

The church itself, located near Baton Rouge, has coordinated volunteer efforts and provided hot meals to victims and those working on the cleanup. Before Trump's visit to the state, Gov. John Bel Edwards (D) had suggested a "sizable donation" to another charity, the Baton Rouge Area Foundation's Louisiana Flood Relief Fund. Trump gave that group nothing. A spokeswoman said he'd given to the church instead.

In a statement, Perkins said that Trump's donation would be used only for disaster relief, and kept separate from the church's general operating fund.

"The funds will not be used for normal church expenses, nor will the funds be used for cash grants to individuals," Perkins said. "Any funds not used in this initial relief phase will be used for subsequent efforts to support and/or directly restore and rebuild homes and church facilities impacted by the flood."

That was at least the second time this year that Trump has given a personal check to a charity. Both of those donations were entwined with his campaign.

In May, under pressure from the media, Trump made good on a promise he'd made at a campaign event four months earlier: to give $1 million to a veterans' charity. And now, after a high-visibility trip to Louisiana with his running mate, Trump gave from his own pocket again.

Now, it appears that Trump has given more of his own money to charity in the last four months than he gave in the last decade combined.

Since 2006, Trump has given $675,000 to the Donald J. Trump Foundation, a charity he founded in the late 1980s. The bulk of that money was given in 2006, when he donated $610,000.

Trump's donations fell off sharply in 2007 and 2008. Then they stopped completely. Tax records show no gifts from Trump to his own foundation since a $30,000 gift in 2008. The foundation's coffers have been filled, instead, by gifts from other donors.

The Post has made a months-long effort to identify instances where Trump made personal donations to other charities — surveying more than 270 nonprofits with some past ties to the GOP nominee. But that effort has turned up only a handful of other gifts, the most recent of which was in 2009.

In all, the total of all the donations that The Post has discovered between 2006 and this May — to the Trump Foundation and other charities — appears to be less than $800,000.

It is impossible to give an exact number, because in some cases organizations disclosed only a range of dollar figures, not the exact value of Trump gift.

Hope Hicks, a spokeswoman for Trump's campaign, did not immediately respond to an inquiry asking why Trump's generosity had apparently increased so sharply since the spring.

What changed in the spring? Trump locked up the GOP nomination, for one thing.

For another, The Washington Post and other media outlets began looking into Trump's charitable giving, after Trump had made that public promise to give $1 million to veterans — and then delayed paying it off.

Trump has not released his tax returns, which would show exactly what he had given to charity. He has, however, said publicly that his net worth is over $10 billion.

Florida Donors Favor Clinton Over Trump

By Ledyard King

Fort Myers (FL) News-Press, August 27, 2016

WASHINGTON – Floridians have given three times as much to Democrat Hillary Clinton as they have to Republican Donald Trump, the latest campaign finance figures show.

Of the $40.5 million Sunshine State donors have shelled out to all presidential campaigns so far, Clinton has gotten one-third: $13.3 million.

Trump has received about $4 million, less than the amount raised in-state by either of Trump's two former GOP rivals — former Florida Gov. Jeb Bush ($6.6 million) and Florida Sen. Marco Rubio ($5.5 million), according to Federal Election Commission records.

It's not a surprise. Clinton is a prolific fundraiser with deep-pocketed support in Florida. Trump made little effort during the primary to solicit contributions, touting his independence from special interests he said couldn't buy him.

More than half Clinton's haul — $7.2 million — came from South Florida: Miami-Dade, Broward, Palm Beach and Monroe counties.

Other places that gave to her include the Orlando area ($1.2 million), the Tampa-St. Pete metro area ($1.05 million), Sarasota/Bradenton ($773,000), Southwest Florida ($630,000), greater Jacksonville ($434,000), the Space and Treasure coasts ($375,000), and the Big Bend region ($337,000).

Trump, on the other hand, has drawn fairly evenly throughout the state.

Palm Beach County donors gave him the most ($581,000), but there were no standouts among the other areas — Southwest Florida ($466,000), Miami-Dade ($432,000), Orlando area ($392,000), the Space and Treasure coasts ($300,000), Tampa-St. Pete ($244,000), the Panhandle ($185,000), and greater Jacksonville ($157,000).

The number and size of campaign contributions isn't necessarily a sign of voter support, though most recent polls have Clinton leading Trump by percentage points in Florida.

Breaking pledge not hurting Rubio much

It looks like Florida voters have largely gotten over Marco Rubio's decision to break his pledge not to run for re-election.

Most voters (53 percent) responding to a Monmouth University poll said Rubio decided to run for a second term after losing his bid for the White House (despite his repeated insistence he would return to private life in January) more to improve his chances for a future presidential run than to serve the public (25 percent).

Despite that, more Florida voters approve (47 percent) than disapprove (39 percent) of the job Rubio has done as a senator, and a plurality (40 percent) hold a favorable opinion of Rubio compared to 33 percent who don't.

The poll, issued last week, also showed Rubio with a 5-point lead over Rep. Patrick Murphy, the Jupiter congressman expected to win the Democratic Senate nomination in Tuesday's primary.

The telephone poll of likely voters has a margin of error of plus or minus 4.9 percentage points.

Carlos Beruff, Republican businessman running against Rubio for the GOP nomination, has hammered the incumbent for breaking his promise. But Patrick

Murray, director of the Monmouth University Polling Institute, said Rubio's large lead over Beruff suggests the argument isn't sticking.

"People just personally like Rubio in Florida enough that it's overcoming those negatives," Murray said.

Florida is ground zero for TV ads

Here's a shocker to any Floridian with a television: The Sunshine State boasts three of the nation's top five media markets when it comes to number of presidential campaign ads on TV.

Tampa has seen 6,553 ads aired from June 8 through Aug. 18, the single most saturated media market in the nation, according to the Wesleyan Media Project, a nonpartisan center that tracks political advertising.

The Orlando media market followed with 5,723 ad airings. West Palm Beach, with 4,623, was fifth.

Those are among the more than 2 million TV spots for all political races that have aired so far nationwide during the election cycle, according to the center. The cycle officially began Jan. 1, 2015 but most of the ads have been running in recent weeks.

At this point during the last presidential cycle in 2012, there had been about 1.87 million total airings.

An estimated $1.56 billion has been spent to date, according to Wesleyan.

About one-third of that total ($517 million) was spent on nearly 610,000 ad airings in the presidential race, while spending on campaigns for U.S. Senate came to $247 million for more than 280,000 airings.

Spending on races for governor and U.S. House lag behind, clocking in at a little over $80 million apiece. Just over $34 million has been spent on ballot measures so far.

"Judging by where advertisers are putting their money, Florida, Ohio and North Carolina are the biggest presidential battlegrounds in 2016," said Michael Franz, co-director of the Wesleyan Media Project. "These swing states have not changed much, if any, from four years ago."

Obama heaps praise on Fugate

President Obama believes a Floridian was one of his best hires.

That's how he described Federal Emergency Management Agency Director Craig Fugate during a trip to flood-ravaged Louisiana on Tuesday.

Obama said Fugate "has done such an outstanding job not just in dealing with this particular incident, but has really rebuilt FEMA so that there's a change of culture," the president said. "And everybody knows that when a disaster happens, FEMA is going to be there on the ground, cooperating with state and local officials rapidly and with attention to detail, and keeping the families who've been affected uppermost in their minds. So we very much appreciate everything Craig has done."

Not everyone is that impressed with the agency, tarnished by its sluggish response to Hurricane Katrina more than decade ago. It's accused of responding too slowly or too ham-handedly at times. But Fugate has won praise from both sides of the aisle for being a straight shooter — no easy task in Washington.

Obama hired the former Alachua County paramedic in 2009, after Fugate had spent eight years running Florida's Department of Emergency Management.

During the news conference in Baton Rouge, Obama conceded it wasn't easiest of visits for his crisis czar, and not just because of the floods that killed 13 and left tens of thousands homeless.

"It's hard, by the way, for Craig to be here because he's a Florida Gator — (laughter) — and he's been seeing a lot of LSU T-shirts as we've been passing by," the president said.

In Louisiana Flooding, It's Neighbor Helping Neighbor

Voice of America, August 27, 2016

Graham Kinchen had an emergency when a sandbag wall near his home began to fall apart.

The wall was protecting his house in Baton Rouge, Louisiana from the recent flooding.

He let people know about his problem on Facebook and by telephone. Within five minutes, friends gathered to help rebuild the wall.

The incident shows how neighbors have helped each other in response to the recent flooding in Baton Rouge and nearby communities. Baton Rouge is the capital of the southern state of Louisiana.

Storms and flooding hit the area from August 8th to 14th. Thirteen people were killed and about 100,000 homes were damaged. Thousands of people are homeless. Many are staying in shelters or the homes of friends or family.

Spirit of Cooperation

"We have seen a great spirit of cooperation, with neighbors, churches and friends pitching in," said Peter Kovacs, editor of The Advocate, the daily newspaper in Baton Rouge." Many of us have unexpected houseguests, and we're making a great adventure of it."

Kinchen and his wife, Denise, use a boat to get from their front door to the road. Sandbags have been keeping most of the flood waters out of their house.

Louisiana has suffered severe flooding before. Hurricane Katrina in 2005 killed 1,833 people and heavily damaged or destroyed 300,000 homes.

Many residents of New Orleans left their flooded homes behind and moved to other cities, including Baton Rouge. Eleven years later, many former New Orleans residents remain in Baton Rouge.

Obama: Confident Rebuilding Will Move Forward

“Sometimes when these kinds of things happen, it can seem a little bit too much to bear,” said President Barack Obama. Obama was in Baton Rouge Tuesday, noting that he had visited New Orleans after Hurricane Katrina when he was a U.S. senator.

Obama said he is confident flooded communities in Baton Rouge and nearby communities will recover, just as many neighborhoods in New Orleans did after Hurricane Katrina.

“And the reason I can say that with confidence is because that’s what Americans do in times like this,” Obama said. “I know how resilient the people of Louisiana are, and I know that you will rebuild again.”

By resilient, Obama means having the ability to overcome problems, no matter how tough.

Dustin Clouatre is a member of the self-named “Cajun Navy.” It is a group of residents who use Facebook to organize private boat owners to rescue people and move food and other aid where it is needed.

‘Love Is All You Need’

He soon became popular on social media.

“Me and my uncle had just gotten a family out of a house and something got caught in the motor,” he said. It was a sign that said, “Love is All You Need.” The photo quickly spread on social media.

David Vitter is a Republican senator from Louisiana. He visited flooded communities with the president on Tuesday.

“There’s a spirit of helping folks and it really was in full display when the president visited the neighborhood,” Vitter said.

Vitter calls the rain that brought the floods a 1000-year event, meaning it has a one-in-1,000 chance of happening in any year. The Red Cross said it is the biggest natural disaster in the United States since Super Storm Sandy in 2012.

Despite this, Vitter and others said the Louisiana disaster has not received much news coverage outside the state.

Competition for News Coverage

“I think people are a little disaster weary, plus there are other competing stories,” Vitter said.

Both Vitter and Obama praised the willingness of people to help each other.

They spoke to a young African-American man, who was helping his father clean out his flooded home. The man was also helping his dad’s elderly white neighbor, who lives alone.

The work of removing flooded walls, floors and furniture is not easy.

Kevin White has been working on flood relief for the past week in Saint Amant, Louisiana. He said the smells at the water-damaged houses are terrible.

White is housing a family of four who were flooded out of their own home. He and the family spent the past few days tearing out walls and throwing out everything else damaged in his guests’ flooded house. The damaged things represent almost everything the family owned, he said.

____

sandbag – n. bag filled with sand and used as a weight or to build temporary walls to protect homes and businesses

pitching in – v. offering help

houseguests – n. people who are invited to stay at a person’s house

confident – n. having a feeling or belief that people can do something well or succeed at something

resilient – adj. having the ability to overcome problems

display – n. put out so people can see it

weary – adv. tired, lacking interest because you have seen it often before

furniture – n. chairs, tables, beds, etc., that are used to make a room ready for use

Filing, Payment Extensions For Those Affected By Flooding

Associated Press, August 27, 2016

BATON ROUGE, La. (AP) — State tax extensions are available to Louisiana taxpayers whose homes, business and critical tax records are located in 20 parishes designated as federal disaster areas following recent flooding.

The Louisiana Department of Revenue says for sales, severance and excise taxes due on or after Aug.

11 and on or before Oct. 31, the extended deadline is Nov. 15.

For withholding tax returns and remittances due on or after Aug. 11 and on or before Nov. 15 the extended deadline is Nov. 30.

For individual income, corporation income, franchise and other income taxes, along with estimated tax payments due on or after Aug. 11 and on or before Jan. 17, 2017, the extended deadline is Jan. 17, 2017.

For items submitted by extended deadlines, the department will waive penalties and interest.

Dukes Of Hazard Actor's Louisiana Home, Studio Swamped

By Chevel Johnson

Associated Press, August 27, 2016

Actor, writer and director John Schneider, known for his past role on the "Dukes of Hazzard" and current role on "The Haves and the Have Nots," thought the first flood he experienced at his Louisiana production studio was bad.

Now, he knows there are different levels of what's considered "bad."

Schneider's Livingston Parish-based studio — which includes his home, offices, cars, wardrobe, sound stages, and more — flooded in mid-March but the water didn't get into his 116-year-old home. This time around, he wasn't as lucky.

He says overflow from the Tickfaw River this month inundated all of his property in Holden, flooding his home with about 4 feet of water as well as another house in which his mother lives. He says he's lost a lot of memorabilia and equipment but his situation is not unique. About 90 percent of the homes in the parish were flooded.

Still he says the response by friends and strangers has been amazing.

CNN Segment On Flooding Leads To $1 Million Donation

By A.J. Katz

AdWeek, August 27, 2016

CNN anchor Ashleigh Banfield was conducting a live, in-studio segment on her program Legal View last week about the horrific flooding in Louisiana. Heart breaking photos of a flooded-out local Salvation Army were shown in the background during her report. Banfield then held a remote interview with Captain Brett Meredith, head of the that Salvation Army of Baton Rouge, who was speaking from a temporary office. This doesn't end up being your typical conversation. How so? An anonymous donor went on to pledge $1 million to the Salvation Army for Louisiana relief efforts, citing this exact interview in the process. Here's Banfield's conversation with Captain Meredith:

An Inconvenient Truth: Few Signs Of Global Warming In Antarctica

By Michael Bastasch

Daily Caller, August 27, 2016

Antarctica has confounded scientists, defying the dire predictions of scientists the South Pole would shrink and exacerbate sea level rise in the coming decades.

Climate models predicted Antarctic sea ice would shrink as the world warmed, and that warming would boost snowfall over the southern continent. Neither of those predictions have panned out, and now scientists say "natural variability" is overwhelming human-induced warming.

"Truth is, the science is complex, and that in most places and with most events, natural variability still plays a dominant role, and undoubtedly will continue to do so," Chip Knappenberger, a climate scientist with the libertarian Cato Institute, told The Daily Caller News Foundation.

"This applies to goings-on in Antarctica as well as in Louisiana," Knappenberger said, referring to the recent flooding in Louisiana activists have already blamed global warming for.

What recent studies have shown is that natural variability in the climate system plays a big role in the South Pole, and there are few signs of man-made global warming in Antarctica.

Shouldn't There Be More Snow?

Antarctica is a tricky topic for scientists. It has a long history of chaotic weather and dramatic changes in its ice sheet, and scientists are realizing just how difficult it is to predict future behavior down under.

A recent study seemed to sum up what Knappenberger said should be the "consensus" of mainstream scientists: global warming has exerted little to no detectable influence in Antarctica.

Scientists with Columbia University's Earth Institute found there's been little change in Antarctica's annual snowfall, which flies in the face of what climate models predicted would happen as the planet warmed.

They blamed strong "natural variability" for the models' failures.

"This new paper affirms these other recent findings showing that the expected signal from climate change has been struggling to rise above the noise of natural variability over recent decades, but expects the signal to eventually become noticeable," Knappenberger said of the study.

Columbia scientists, however, said global warming's influence on the South Pole should become apparent "by the middle of the current century, thus mitigating future increases in global sea level."

This is just one of several recent papers suggesting natural variability is still dominant in the South Pole. So why don't we hear more about supposedly good news?

"When it comes to 'good' expectations, such as increase in the surface mass balance of Antarctica, activists prefer to ignore the projections, and instead claim that recent trends indicate the situation is 'worse than expected,'" Knappenberger said.

The Ice Is Melting … Maybe

Scientists have also been warning for years that, on net, Antarctica has been losing 147 gigatons of ice per year for the last decade or so, mostly from melting on the northern Antarctic Peninsula and its western ice sheet.

There's seems to be a news story every day about how things are looking worse in the Antarctic. The Washington Post, for example, recently warned a long crack in western Antarctica' ice was growing. Sounds scary, but sort of obscures what's happening overall with Antarctica.

A 2015 study by NASA found Antarctica's ice sheet increased in mass from 1992 to 2008. The study found ice gains in Eastern antarctica more than offset ice loss from melting glaciers in the west.

Zwally's study was controversial and challenged years of assumptions about what was happening in the South Pole. But months later another study was published showing a "pause" in warming on the Antarctic Peninsula due to a recovering ozone hole and shifting wind patterns.

"The ozone hole contributed to a warming of the Antarctic Peninsula, but has given a small cooling around the rest of the Antarctic," John turner, a variability climatologist with the British Antarctic Survey, told The Daily Caller News Foundation.

Turner, one of the paper's co-authors, found the ozone hole and wind patterns created a cooling trend over the Antarctic Peninsula, masking the warming trend predicted by climate models.

"It's recently been published that the level of stratospheric ozone has been slowly recovering since the late 1990s, which has played a part in the cessation of the 'peninsula warming' that we reported in our recent Nature paper," said Turner.

"Parts of the ice sheet are certainly melting, but as a result of relatively warm waters getting under the ice shelves and melting the ice from below," Turner said.

Turner and his colleagues noted that even in a warming world Antarctic temperatures can go up or down in a given year, such is the power of natural variability over the region.

Ice, Ice, Baby!

Climate models predicted Antarctic sea ice would shrink as a result of global warming, but the opposite happened. Antarctic sea ice actually increased in the last two decades.

Chinese scientists compared climate model sea ice predictions to actual observations from 1979 to 2005 and found "the main problem of the [climate] models is their inability to reproduce the observed slight increase of sea ice extent."

As it turns out, natural variability plays a big role here as well.

"Sea ice extent is strongly influenced by the winds and these have increased from the south over the Ross Sea, contributing to a small increase in total Antarctic sea ice since the late 1970s," Turner said. "The increase in ice seems to be within the bounds of natural variability."

Had Chinese researchers gone beyond 2005, they would have found more than just a slight increase. 2014 was the first year on record that Antarctic sea ice coverage rose above 7.72 million square miles. By Sept. 22, 2014, sea ice extent reached its highest level on record — 7.76 million square miles.

Antarctica also had unique ocean currents that keep surface waters cooler than the rest of the world.

A June 2016 study found Antarctica has a unique current pulls cold water from the Southern Ocean's depths to the surface, causing the surface water to be colder than, say, in the Arctic. Cold water has helped sea ice hit record levels in 2014.

FEMA HOUSING

Much Like Post-Katrina, A Major Homeowner Aid Package Could Make Or Break Flood Recovery

By Gordon Russell

Baton Rouge (LA) Advocate, August 27, 2016

Drop the phrase "Road Home" around New Orleans and other parts of southern Louisiana, and you're likely to hear groans, followed by horror stories about interacting with the suits who ran a homeowner-aid program that became synonymous with government inefficiency.

But dig deeper, and many people will tell you the money that flowed through the Road Home — even if it was too little and very late — was the difference between rebuilding after Hurricane Katrina or walking away.

"The Road Home was the key to the region's recovery," says former Gov. Kathleen Blanco, who traveled to Washington nine times to seek money for the program and then opted not to seek a second term in the wake of its frustrating launch.

Now, after historic flooding in Baton Rouge and other areas of the state, Louisiana may have arrived at another moment where a decision by lawmakers in Washington on how generously to respond will be make-or-break for a whole region.

It's no stretch to say that the Road Home, warts and all, saved New Orleans after the disaster that struck 11 years ago this week. In the months after the storm, the scale of the damage, the realization that many devastated homeowners lacked flood insurance and the fact that many of the hardest-hit survivors were among the region's poorest led to a surreal debate about whether New Orleans would ever recover, or whether parts of it should simply be abandoned.

In the end, Congress and the George W. Bush administration doled out $13.4 billion to underwrite the Road Home program. Affected homeowners, about 130,000 of them, got an average of $70,000 apiece.

Were it not for the Road Home, most experts believe the New Orleans of today — not to mention Jefferson and St. Bernard parishes — would look very different.

Vera Triplett, an educator who after Katrina led the Gentilly Civic Improvement Association, shudders to think about it.

"Even now, you see blocks and blocks of homes that are unfinished, or where more work still needs to be done," Triplett said. "I imagine we'd have that on a much more massive scale had it not been for the infusion of those funds."

There's no guarantee the great flood of 2016 will attract a federal care package. It will be up to Congress to decide that.

But in New Orleans Mayor Mitch Landrieu's view, getting Congress on board with a program that bridges the huge gap between the losses suffered by property owners and the amount they'll receive from their insurance claims is more than crucial. It's the "whole ballgame," the mayor said in a recent interview.Going beyond the basics

For now, Louisiana is receiving the basics that come with every federally declared disaster: temporary housing assistance and help with debris removal and other short-term needs, including "individual assistance" grants handed out by the Federal Emergency Management Agency that top out at $33,000 but are usually a fraction of that amount.

But larger bailouts of affected property owners have become increasingly common in recent years, starting with a special package aimed at helping lower Manhattan after the 9/11 terrorist attacks of 2001 and continuing four years later with grant programs for those whose homes were ruined by hurricanes Katrina, Rita and Wilma.

Congress sent a similarly massive pile of money to help the Eastern seaboard recover from 2012's Superstorm Sandy, but even more modest disasters, such as last year's devastating floods in Texas and South Carolina, have been deemed worthy of special appropriations.

Typically, money to support homeowners' recovery comes through a supplemental appropriations bill that is passed by Congress, allocated to the U.S. Department of Housing and Urban Development and then sent to the affected state in the form of block grants. It's up to the state to design the program, though HUD must sign off on the rules.

Not surprisingly, there's a consensus among Louisiana's largely Republican congressional delegation and its Democratic governor that plenty more aid will be needed this time. The Obama administration is also showing clear signs of support.

Julian Castro, the HUD secretary, said Thursday after touring the flooded region that the administration sees "a real need for significant investment in getting people back to where they were before."

U.S. Rep. Garret Graves, R-Baton Rouge, called the standard off-the-shelf aid "wholly insufficient" and said a much bigger aid package will be needed.

So did U.S. Rep. John Fleming, R-Minden, one of three members of Louisiana's delegation who voted against the omnibus bill for Sandy victims in 2013 — a stand that has drawn criticism recently as Louisiana's delegation prepares to rattle the cup for money for the Pelican State.

Several members of New Jersey's delegation have said they still have a sour taste in their mouths over the Sandy votes, but they promised not to hold it against Louisiana in 2016.

Edwards will meet with Louisiana's entire congressional delegation Monday in Baton Rouge to make sure everyone's on the same page, according to a spokesman. U.S. Rep. Steve Scalise, R-Metairie, who as majority whip is the third-ranking member of the House, is expected to carry the ball on an appropriations bill.

No one has yet begun to float specific amounts of aid that will be needed, in part because damage estimates — and estimates of uninsured losses — are still all over the map.

They've been changing steadily as the floodwaters slowly recede. Some reports — such as one by the Baton Rouge Area Chamber — have estimated there could be as many as 145,000 flooded homes across the region, a number that would put this unnamed rainstorm within an order of magnitude of Katrina. (The federal government's final estimates for Katrina damage in Louisiana were 515,000 housing units damaged, 204,682 of them severely or totally.)

In a letter delivered to the president during his visit to Baton Rouge on Tuesday, Edwards said he expects to provide the Obama administration with "clear information about the damage assessments and specifics about the necessary federal assistance" by Sept. 2.Worse than Katrina?

The numbers that have emerged so far suggest that a request for several billion dollars could be in the offing.

While the scope of damage is certainly less, the insurance picture could be much worse, at least proportionally, than it was after Katrina. Whereas only about one-quarter of the owner-occupied homes ruined in Katrina lacked flood insurance, early estimates are that at least two of every three homes inundated in the 2016 storm were not covered by flood policies.

Many of those who got swamped had good reason to think they'd never see water in their homes — another reason there could be broad support for an aid package.

New data released by East Baton Rouge city-parish officials, for instance, indicate that about half of the homes inundated in this month's floods were not considered to be in "high-risk" areas, meaning their risk of flooding was less than once per 100 years — and their banks therefore didn't require the owners to carry flood insurance.

"Most of the people affected by this disaster received advice through their lenders that they didn't need insurance," said Walter Leger, a lawyer and native of St. Bernard Parish who headed the Housing Committee for Blanco's Louisiana Recovery Authority after Katrina. "And that advice was given indirectly by the federal government through the development of the (federal) flood maps.

"You can't accuse homeowners in these areas of being irresponsible. The federal government basically said, 'Don't worry about it.' Does the federal government now have an obligation to help? A legal obligation, maybe not. But a moral obligation? Probably yes."

In such large-scale events, refusing to help the uninsured punishes the insured as well, Blanco pointed out. "Their properties are devalued when they're living next to blight," she said. "There's a common good here we need to look for."

If there's a consensus that a homeowner-aid program is needed for the Baton Rouge region, that doesn't mean the lamented Road Home model must be re-created exactly.

There's no reason to think it would be. The Road Home was the first such effort of its kind and thus presented a raft of unique challenges. There was endless debate over rules: how much money was required; how to give it out; what steps homeowners should be forced to take to reduce future risk.

Then, an entire bureaucracy had to be built from the ground up to oversee the dispensing of the money and make sure it was being spent as intended. The rules were constantly being rewritten as problems arose.

Most significantly, the program was changed at HUD's insistence from one based on reimbursements for completed renovations to straight-up grants.

The Blanco administration had designed the program so that homeowners would be reimbursed as they rebuilt, figuring that more people would actually renovate that way, and that it would be harder for unscrupulous contractors to take advantage of unwary homeowners. The Bush administration wanted to get the money moving more quickly, and it forced the change to a lump-sum grant.Learning from experience

That dust-up was one of many signs of partisan tension between the Blanco and Bush administrations — tension that appears to be mostly absent so far in this disaster, with Edwards and Obama belonging to the same political party.

Also in the plus column for Louisiana this time: Residents and officials now have a much better idea about what to do, and what not to do, after such an event.

That's been obvious even in the immediate response to the storm, with volunteer gutting crews from around south Louisiana ripping out sodden drywall and insulation as soon as the waters receded.

As Leger put it: "Unfortunately, we have gained a tremendous amount of experience and expertise."

Leger, who has been involved in discussions about what a new homeowner aid program might look like, said Louisiana will benefit both from its history with the Road Home and from the experiences New York and New Jersey have had with dispensing Sandy aid.

"We have the benefit of both the achievements and the failures of various programs," he said. "Certainly there are things that we'll model."

In Sandy, for instance, the aid programs that policymakers built managed to avoid the accusations of built-in racial discrimination that dogged the Road Home, according to James Perry.

Perry, a New Orleans fair housing advocate who successfully sued the Road Home over its practice of awarding grants based on a house's pre-storm value rather than the cost of rebuilding it — effectively punishing people in poor neighborhoods — said HUD has since "universally agreed" that the cost of rebuilding should govern the size of the grant.

All of this was uncharted territory 11 years ago, when Leger recalled acquiring a copy of the Marshall Plan — the American blueprint for reviving Western Europe after World War II — because there didn't seem to be another prototype.

"I'd put it under my pillow at night, hoping I'd learn by osmosis," he said.

One common element among all large-scale disasters, in Leger's view, is that people will be reluctant to reinvest in their communities without robust government intervention. That's especially true in the most damaged areas, like Livingston Parish this time.

Leger said: "I used to tell people all the time, 'When a house burns down, it's a terrible tragedy. But when a whole community floods, you lose everything that makes a community your home: your dentist, your favorite restaurant, the grocery store. Until you know they're coming back, it's hard to come back, and until they know you're coming back, they might not come back.' "

Rule Could Limit Where FEMA Mobile Homes Are Set Up In Ascension Parish

By Kevin Frey

WAFB-TV Baton Rouge (LA), August 26, 2016

GONZALES, LA (WAFB) –

Some leaders are worried that one regulation on FEMA's new mobile homes could greatly limit where they are set up in Ascension Parish, forcing people to live far away from their own property.

The "Manufactured Housing Units" can be installed on people's property, in commercial parks, or – as a last case scenario – in parks established and maintained by FEMA.

Under the rules, however, the units cannot be located in places deemed as "Special Flood Hazard Areas" – a specific type of flood plain.

Much of Ascension Parish is designated as this particular type of flood zone, according to maps posted online by the parish government. That includes the communities of St. Amant and Sorrento, which were severely impacted by the flooding.

"When you put that designation and put that blanket over where it can't go. Well, it's basically it can't go in Ascension Parish, in 70 percent of Ascension Parish," said Parish Council Chairman Randy Clouatre.

The historic flooding had a wide impact in the parish, with between 17,000 and 19,000 homes impacted. Possibly more than 50,000 people are now left to rebuild.

Many of them could be forced to live in those FEMA mobile homes.

Clouatre said the restriction could force many Ascension Parish residents to set up their mobile homes far from their own property, thereby serving as a hindrance to the rebuilding process.

"It's not feasible for a person trying to rebuild their home, rebuild their lives, and get back in working in the community, to send them away," Clouatre said.

He is calling on Louisiana leaders at the national level to ask FEMA for an exception to the rule.

"We need them to go, beat up somebody, get the red tape removed," he said.

A spokesman for FEMA said the reason mobile homes cannot be placed in those areas is largely a safety precaution for the people inside. He also said letting the homes get flooded would be a waste of taxpayer money.

First Look Inside New FEMA Housing Units For Flood Victims

WAFB-TV Baton Rouge (LA), August 25, 2016

BATON ROUGE, LA (WAFB) –

On a mobile device? Click here to take a look at the HUD-approved trailers.

The first set of FEMA temporary housing units are expected to arrive in south Louisiana Friday.

So far, 56 people have been approved to get one of the manufactured housing units or MHUs as they are called.

"We have 100,000 registered for FEMA. 56 people vetted now. 214 in the queue that been approved but we need to inspect," said Willie Nunn with FEMA.

FEMA is first looking at people who can keep one of their own property. It would be placed in either the front or back yards and they would have to have access to power, water, and sewage as well as be out of a flood zone.

The options available for the mobile homes include one, two or three bedroom or a handicap accessible.

Some have wondered if these are the same from Hurricane Katrina.

"In Katrina, I would say it was travel trailers, it was all hands on deck," Nunn said. "These are the trailers that come from qualified, safe and secure. These are federally-inspected mobile homes that we can rest assured are safe for the inhabitant."

FEMA said they are also looking at commercial RV and mobile lots. Beyond that, it is up to the state and local officials to decide whether there will be specific parks set aside to house groups of the mobile homes.

Click here for more information about the interim housing assistance.

NFIP AND FLOOD MAPS

After Superstorm Sandy Missteps, FEMA Touts Flood Insurance Reforms, Lessons Learned

By Chad Calder

Baton Rouge (LA) Advocate, August 27, 2016

If the Federal Emergency Management Agency dealt itself a black eye with the poor job it did responding to Hurricane Katrina in 2005, the horror stories that came out of the flood insurance claims process after Superstorm Sandy gave the agency another nasty shiner seven years later.

And for tens of thousands of victims of this month's Louisiana floods who actually had flood insurance coverage, the reports of widespread denials and low-balling of claims, altered engineering reports and a Kafkaesque appeals process that came out of New York and New Jersey after Sandy are hardly encouraging as they begin trying to collect for damages.

FEMA, however, points to new leadership at the National Flood Insurance Program and a series of reforms either enacted or underway as evidence that it has learned valuable lessons from the experience that still has some Sandy victims seething.

"We are working closely with survivors to make sure they are paid and that every dollar that is owed is paid out," FEMA spokesman Rafael Lemaitre said. "We are committed to that, and that applies to Louisiana as well."

The NFIP, which is now part of FEMA, was created in 1968 after decades of flood losses caused private insurers to exclude flood coverage from the typical homeowner's policy and later drove them out of the market almost entirely.

About 80 percent of the country's 5.1 million flood insurance policies are so-called "write your own" policies that originate with and are serviced by private insurers, who were kicked out of the program in the 1970s but came back in in the 1980s. Even those policies that are purchased directly from the NFIP are farmed out to contract companies.

Essentially, the government holds the bag and is responsible for the program, but it uses the private sector to market, write and service the policies.

But the underlying economics of flood insurance remained deeply flawed, and the NFIP took a giant hit from Hurricanes Katrina and Rita in 2005, forcing it to borrow $17 billion from the U.S. Treasury.

Then Sandy cost the program another $7 billion, and as the claims process for that storm began, consumer complaints and news reports about problems began to emerge.

Adjusters were invoking an obscure clause in flood policies known as the "earth movement" exclusion and using it to deny claims based on cracks in foundations and in basements that they said were evidence of structural problems before the storm.

Some adjusters' reports were found by an NPR "Frontline" investigation to have been edited by managers who simply inserted the word "not" before "covered" in their conclusions, and some former adjusters spoke of pressure to deny claims to keep the losses down.

Exasperated policyholders said they filled out the same forms multiple times and repeatedly had to start over with the various representatives who took their calls. Thousands of cases ended up in court.

FEMA has avoided publicly getting into the reasons why there were problems with the program, but it denies they were as widespread as news reports suggested.

Roy Wright, who was promoted to director of the program in June 2015, has only gone so far as to characterize some of the work by Sandy adjusters, who report to the private insurers, as "sloppy."

FEMA spokesman Lemaitre stressed last week that most of the Sandy claims were handled fairly, a point he said was validated by a review by the Senate Banking Committee.

He also said the program's financial straits are neither a threat to policyholders' chances of getting paid what they're entitled to nor an incentive to underpay claims.

"The answer is unequivocally 'no,' " Lemaitre said about that question, noting that FEMA has $3 billion cash on hand to deal with disasters. "There is a $23 billion debt. But that does not preclude FEMA from paying every dollar of every claim."

Nevertheless, Lemaitre said FEMA is clear-eyed about the fact there were problems after Sandy.

"People were underpaid, yes," he said. "I'll leave the legal stuff to the courts, but what I can tell you is that after Hurricane Sandy, there were people who were underpaid by their insurance company."

Lemaitre said FEMA has stepped up its efforts to make changes to the program and make sure the private insurance companies that participate in the program "share our values and put policyholders and survivors first."

When Wright came in as director, allegations of wrongdoing were referred to the appropriate state attorneys general, and the agency began settling the more than 1,500 lawsuits it was still facing for underpayment of claims.

FEMA set up a claims review process to invite any of the 144,000 flood insurance claimants to challenge their awards. About 20,000 came forward, and FEMA has worked through about 91 percent of those reviews and has paid out another $93.8 million.

It has settled 1,618 of the 1,632 suits and paid out another $163.9 million, though some Sandy victims have complained they still don't have enough to rebuild and resent that FEMA paid the legal bills of insurers but not of policyholders.

Lemaitre said FEMA has taken several steps to right those wrongs.

He said it has increased its scrutiny over contract engineers, whose bills used to be paid automatically but now must first be reviewed and approved. It launched a hotline for policyholders who had issues with their insurer, and it hired a full-time flood insurance advocate who works directly with private insurers to "make sure they share our values," Lemaitre said.

In May, FEMA overhauled the appeals branch and separated it from the claims branch in order to make it more independent and transparent, he said.

Wright also has begun the process of trying to make FEMA's arrangements with private insurers easier to alter, add oversight provisions and generally keep up with changes since private insurers came back into the system in 1983.

However, Amy Bach, director of the consumer advocacy group United Policyholders, said that while FEMA has instituted some reforms since Sandy, "there have not been any of the kind of deep reforms that are needed to make the flood program more fiscally efficient."

She said the flood insurance advocate is a good idea but should be far more than a single position, and that there should be penalties for companies that underpay claims.

Lemaitre pointed to the response to floods in Texas, West Virginia and South Carolina since Sandy as evidence that things have gotten better. "We have not seen widespread challenges with regard to flood insurance claims in those disasters," he said.

In South Carolina, the state's Department of Insurance and its Department of Natural Resources, which includes the agency that handles flood mitigation, said they didn't hear many complaints of denied or low-balled claims stemming from the major flooding around Columbia last fall.

"I'm usually the first one who is skeptical about federal involvement, and I know about the debacle and the experiences (people had) with Sandy," state Insurance Commissioner Ray Farmer said. "I was prepared for that. What I was not prepared for was the excellent service we got for our consumers. As far as the NFIP, there were no coverage issues that arose, and whatever was a covered claim was a covered claim."

Lemaitre said that for the March flooding that hit more than 30 Louisiana parishes, the NFIP has paid 5,000 claims a total of $228 million, an average of about $46,000.

Louisiana Insurance Commissioner Jim Donelon, who said he remembers watching a particularly damning post-Sandy report on “60 Minutes,” said he has met with NFIP Director Wright and was assured claims here would be handled properly. He said he asked whether backwater flooding might not be covered and was told that it would be.

“Call me naïve,” he said, “but I just don’t believe that our federal government would take advantage of victims of these events for the alleged purpose of diminishing the costs of the program.”

Donelon said that while his department doesn’t regulate flood insurance, “if we find there are any violations, we will certainly report them.”

With Insurance Claims In The Balance, Flooded Homeowners Fed Up With Debris Pickers

By Amy Wold

Baton Rouge (LA) Advocate, August 27, 2016

The piles of debris lining the streets of many flooded neighborhoods now come with their own signage – “Our crap, not your’s,” or “you loot, we shoot,” or even more to the point, “do not touch.”

The signs written on plywood or messages painted on appliances started popping up soon after the flooding subsided and residents had a chance to start cleaning out their homes.

“Right after we put our stuff out, we had people asking if they could take the washer and dryer,” said Kim Halphen, 46, from Walker, who had large “do not touch” signs in front of the house debris. “We can’t get rid of it until the (insurance) adjusters come.”

The problem has received a lot of attention in neighborhoods and on social media where people with pickups or even trailers are going through the piles of debris and taking anything of worth. It has riled many homeowners who are concerned it’s hurting their chances of collecting from insurance or FEMA aid.

“They’re rummaging through everybody’s worldly possessions,” said Don Gerard, 60, of Walker.

One evening, Gerard said he drove to his house and saw four men in a pickup loading material from the debris pile and had made it to his house. Gerard asked the men to leave the stuff alone, but they told him they were going to keep looking anyway.

That could be a problem for people, he said, because insurance companies are asking homeowners to save certain things such as pieces of carpet or wood trim.

Andrew Haley, 32, filmed a number of trucks taking away just appliances while he was helping his insurance adjuster parents work in East Baton Rouge Parish Monday

The workers identified themselves as working with FEMA or the city-parish, but Haley said after working a number of flood disasters with his parents, he knew that wasn’t true.

“They’re not cleaning anything up. They’re just taking the appliances,” Haley said. “The insured has no way to get these items paid for.”

Haley said he decided to post the video on Facebook to bring attention to the problem.

“People shouldn’t take advantage of other people in need,” Haley said.

Central’s Mayor Jr. Shelton took a much more firm approach.

“If we catch them, we will arrest them,” Shelton said. “They’re profiting off the backs of tragedy of people.”

Residents should document what is coming out of their homes for insurance purposes, but the piles don’t have to remain intact for FEMA, he said.

“FEMA is not looking at your piles,” he said.

However, trash pickers coming through a neighborhood looking for anything valuable out of people’s yards are like vultures, Shelton said.

It also becomes a safety hazard because people will dismantle piles to get at the stuff they want, leaving material in the streets, he said.

“It’s going to become a bigger problem the longer it (debris) stays on the street,” Shelton said.

Reimbursement for lost household items can follow a couple paths and each has different requirements for documentation depending on whether a homeowner has flood insurance or is going to be applying for FEMA grants.

“Make sure you take your pictures because debris pick up is going on now,” said Karen Khonsari, city-parish director of environmental services in East Baton Rouge Parish.

For insurance purposes, including the National Flood Insurance Program, documentation of household items with photos, serial numbers, makes and models is important and should be done before or directly after something is moved to the curb for disposal, said Kurt Pickering, FEMA media relations manager for the Louisiana flooding recovery.

For those without flood insurance, photos are always a good safety net, but claims can be made even without the documentation, he said. The adjuster can see where the appliances were hooked up and see imprints in the floor along with the water level in the house. Unlike insurance, FEMA grants and assistance would pay the same for a high end dryer as a low end one, so serial numbers are less important.

Not having a photo won't impact a FEMA grant, he said.

A misconception is that FEMA grants are supposed to cover losses, but it's not insurance. The FEMA grants are instead meant to help people get back on their feet in a habitable home, but not replace the value of what was lost, Pickering said.

Having appliances taken from yards by people other than the debris contractor is not something he said they've seen a lot, but it does happen. However, that has little to do with how much or whether a homeowner can get FEMA assistance, he said.

"The idea that we need to look through a pile is not true," Pickering said. "It's not a good idea to have it (debris) sitting outside the house."

St. Charles Dodged Historic Flood, But Not Residents' Attention

By Anna Thibodeaux

St. Charles (LA) Herald-Guide, August 27, 2016

Since Louisiana's historic flood, the telephone has been ringing steadily at local insurance companies to buy policies, inquiry about coverage and ensure flood insurance is current.

"It was expected," said Lisa Clark, staff assistant at State Farm in Luling who's been in the insurance business 30 years. "We might average one to two a month, but I've written policies for four people already this week. I expect more actually."

Their phones also have steadily remained busy with calls from people asking for insurance quotes, as well as from those who want to ensure their policies are current.

This isn't a surprising trend considering one in eight East Baton Rouge businesses and residents have flood insurance, although it wasn't required for their area hit by a disaster some have compared to Superstorm Sandy. Their houses are located in an area identified by FEMA as Zone X, which meant mortgage providers did not require they have flood insurance.

FEMA has announced a grant program for those affected that would provide up to $33,000 assistance if they lived in Zone X.

Statewide, an estimated 21 percent of Louisiana residents have flood insurance, a number that even the state's Insurance Commissioner Jim Donelon deemed low.

Earl Matherne, St. Charles Parish's planning administrator, said FEMA uses the 100-year flood level to designate flood zones, but the Great Flood of 2016 exceeded it possibly reaching the 500-year level in an area where water rose five to six feet.

In St. Charles Parish, Matherne reported flood insurance policies were down by 1,047 as of June of this year.

"Regardless of what zone you're in, I think it's urgent to carry flood insurance," said Jason Noto, agent for Farm Bureau Insurance. "I think the biggest thing is that we live in Louisiana – the whole state is a flood zone."

Noto questioned how anywhere in the state can be designated as Zone X, which he maintained has "put people in financial crisis in Baton Rouge because they weren't required to have the insurance."

At his office in Luling, the phone has been ringing about flood insurance, too.

They're averaging a dozen calls a day from people who want to buy it, get quotes or update policies.

"We are absolutely seeing an increase in demand for flood insurance," Noto said. "There's a lot more people looking to review their policies to ensure their coverage is up to date."

People are a lot more receptive to discussing their coverage, he said. And, even with levee construction underway in the parish, Noto said flood insurance is a necessity because there is no way to predict what nature will do.

Bottom line, he added, "History can be made in one day."

MITIGATION

Denham Springs, Central Residents Worried About Federal Requirements To Elevate Homes

By Heidi Kinchen And Timothy Boone

Baton Rouge (LA) Advocate, August 27, 2016

Denham Springs residents, anxious to rebuild their homes and lives after the devastating floods earlier this month, packed a church sanctuary Saturday to find out whether they will have to elevate their homes before they set about getting permits to make the needed repairs.

The answer they received was as unsettling as the question: "That is one of the issues we are trying to address," Mayor Gerard Landry told an audience of about 250 people at the New Covenant Baptist Church.

Homes built before latest flood hazard maps were adopted in 2012 largely avoided having to comply with federal and local requirements that they stand at or above the Federal Emergency Management Agency's most recent base flood elevations. Existing structures were "grandfathered in," and homeowners were allowed to make minor improvements without triggering the new standards.

But that all changes when a home sustains damage equal to half or more of its value.

Then it must be built at or above the base flood elevation, according to minimum standards set by the federal government and adopted by local governments in order to participate in the National Flood Insurance Program.

In a city like Denham Springs, where more than 3,000 of its 4,200 homes saw 18 inches or more of floodwater this month, the number of people who may now be required to elevate their homes or find somewhere else to live has put city officials on edge.

Landry said he has talked to numerous officials at the state and federal levels – including Gov. John Bel Edwards, Louisiana's congressional delegation and the U.S. secretary of Housing and Urban Development.

"That issue has to be solved at the federal level," Landry told residents, "but we here in the city of Denham Springs are going to do whatever we can to get you back into your homes."

Similar concerns were expressed Friday night in Central at a FEMA town hall at Zoar Baptist Church that Mayor Jr. Shelton said more than 1,200 people attended.

"There are citizens coming to me literally with tears in their eyes," Shelton said. "They're helpless. And we can't get anybody other than (U.S. Rep.) Garret Graves or (U.S. Sen.) Bill Cassidy to acknowledge a problem on the federal level."

Shelton said widespread house raising would cost more than most Central residents can afford. He said FEMA needs to allow people to rebuild at the level their house currently stands, with the understanding they will have to pay more for flood insurance. "We can't have whole subdivisions raised," he said.

Shelton said if people walk away from their homes because of rebuilding costs, it will hurt the local and national economy. "What will happen to the mortgage companies and the finance companies?" he said. "People are so frustrated. I'm begging for the federal government to come through and come through quickly."

In Denham Springs, the answers were less than soothing to Paul Wesley, who said his neighbor recently received a permit to rebuild but was told by FEMA that he would have to raise the home 6 feet. Newer homes in the subdivision also were built up 6 feet, he said.

"Us having to raise our houses 6 feet off the ground to rebuild them would undo any help we would get from anybody to rebuild," Wesley said. "We need something done before we can rebuild our houses."

FEMA representatives at the meeting avoided similar questions about elevation requirements by punting back to the city and parish.

"They lay out those ground rules," said Carl Ray, a mitigation specialist. "You'll have to be in line with the city or parish ordinance. Contact your floodplain manager for requirements."

Landry said after the meeting that the city adopted its flood prevention ordinance, which mirrors federal regulations, out of necessity.

"They kicked it back to us, saying, 'It's not our standards. It's the city's standards,' but guess what? If we didn't adopt those standards, they wouldn't be able to get flood insurance," Landry said.

Landry urged residents to remain calm, register for federal assistance and work with the city's permits department as he and other officials worked on possible solutions.

In the meantime, Landry said debris removal efforts continue. Ceres Environmental had 16 trucks on city streets, as of Friday, and had covered about 25 percent of the city so far.

"The contract says they will make two or three passes, but in all reality, it will probably be eight, nine or 10 times because it takes time to get everything out of your homes," Landry said.

Debris removal is expected to continue for about 45 to 60 days, he said.

The city's contract covers only city streets, with the Louisiana Department of Transportation and Development being responsible for state highways, Landry said.

The contract also does not address commercial debris, which has caused problems in the city's Antiques Village, where waterlogged furniture and other items are stacked in precarious piles that tumble out onto Range Avenue anytime someone picks through the trash, Landry said.

The mayor said he is working with Mark Harrell, the parish's emergency preparedness director, to address that issue.

Livingston Parish Residents Seek Flood Answers At Community Meeting

By Earl Phelps

WBRZ-TV Baton Rouge (LA), August 27, 2016

DENHAM SPRINGS – Livingston Parish residents attempted to get answers concerning how to begin the rebuilding process at a community meeting Saturday.

Many of the residents were looking to find out whether home elevation would be necessary or required.

"This is a question that's going to have to be answered at the federal level," Denham Springs Mayor Gerard Landry said. "That's why I reached out to our U.S. senators and congressmen as early as I did."

Paul Wesley attended the town hall meeting. His home is included in the 90 percent of Denham Springs homes that were damaged by flood waters. Wesley says he did not have flood insurance.

"We need help, and we need help now," Wesley said.

Wesley says his biggest problem is not knowing if, or how much he was have to elevate his home before he can start major renovations.

"If this FEMA regulation is in affect," he says, "us having to raise our house 6 feet to rebuild them would undo any help we can get from anybody. We wouldn't be able to rebuild them. We need some so we can rebuild out where they are."

FEMA has yet to set a requirement on any possible elevation requirement. The mayor says it could be a year or more before a decision is made.

US Rep. Abraham Says Louisianians "Take Care Of Each Other"

By Raymond Daye

Avoyelles (LA) Journal, August 28, 2016

With the nation's eyes on Louisiana and the record-breaking floods that have displaced thousands and killed at least 13, U.S. Rep. Ralph Abraham said the country also sees the character of the Bayou State's people.

"We do circle the wagons to deal with adversity," Abraham told the Marksville Chamber of Commerce Aug. 18. "We take care of each other."

Abraham said what sets Louisiana's response to disasters apart from other states' is the widespread reaction of communities reaching out to help those in need.

"In other states, there are individuals who want to help, but it's different here," Abraham said.

The Mangham Republican said that communities in South Louisiana responded to floods in North and Central Louisiana earlier this year.

"It's what we do," he added.

Most of Abraham's other remarks dealt with national issues – including the national debt, Obamacare, illegal immigration and terrorist threats on the nation's southern border.

Abraham said there is a known Hezbollah command center within a few miles of the U.S.-Mexico border.

"In the front of the building, it operates a legitimate taxi cab business," he said. It operates a counterfeiting operation in the back half of the building, he added.

ISIS also has a presence near the Mexican border, Abraham said.

"We know what they are doing," he continued. "We are watching them, but we cannot strike."

Abraham said the issue "that keeps me up at night" is the staggeringly high national debt, which is now almost $20 trillion.

Congress can "kick the debt down the road" and not deal with it, but it must pay the interest on that debt.

In 2016, the interest is $230 billion "which is twice what we give our veterans in a year, including all programs for veterans."

Abraham said he has heard complaints that Congress doesn't do anything.

He said members of the House – where the GOP has a working majority – have passed 350 "good bills," but only 26 made it through the Senate to become law.

During the question and answer period, Marksville Mayor John Lemoine told Abraham that the city and Police Jury had wanted to work together to clear out a drainage canal behind the Garan plant in Marksville.

"We met with FEMA and the Corps of Engineers a couple of years ago to present ways to relieve flooding in the city," Lemoine said. "The Corps flatly rejected the idea. They said they didn't want us digging back there because it's wetlands. We told them we wouldn't be digging. We only want to clear out the debris and trees blocking up the canal."

Lemoine said about 50 houses flooded in Marksville, and he believes some of that flooding could have been avoided had the city and parish been given permission to move forward with the clearing project.

"That canal drains 60 percent of Marksville," Lemoine said.

Abraham said he would contact the Corps concerning the issue.

HURRICANE RECOVERY

Film Recalls Katrina's "Cajun Navy": Heroic, Unselfish Despite Orders To Turn Away

By Patricia Gannon

Baton Rouge (LA) Advocate, August 27, 2016

The "Cajun Navy" that swung into action during the recent flooding got a much different reception from those who tried to help out in the aftermath of Hurricane Katrina.

"From my limited observation, the big difference was that in this recent flood event, it was the local governments that stepped to the front of the line, especially the sheriffs' offices," said Allan Durand, a St. Martinville attorney and filmmaker. "They didn't wait for federal or state guidance … and after Katrina, who would reasonably expect them to wait for it anyway."

In 2005, as New Orleans lay roof-deep in water from the Category 3 storm, hundreds of civilians and their boats were turned away by police. Some from the Acadiana area, later dubbed the "Cajun Navy," stayed the course and saved an estimated 10,000 lives.

"This was magnificently unselfish," said Durand. "Heroic in the traditional sense. And I'm a sucker for heroes and hero stories."

Now, he's telling of their bravery in "The Cajun Navy," a documentary Durand started in 2012 and only recently finished. The film is making the rounds of film festivals, where Durand hopes it will garner the attention its subjects deserve. The documentary premiered at the Newport Beach International Film Festival and won the Remi award at the Worldfest Houston International Film Festival.

Durand conceived the project after talking with St. Martinville resident Doug Bienvenu, one of the stubborn few who circumvented law enforcement and subsequently rescued 797 people.

"I was so fed up, completely fed up," said Durand. "A lot went wrong with Katrina, a blame marathon. No one got credit for anything."

It was Bienvenu's story that hooked him.

"Even if I just have a Doug, I can do a short (film)," he said. "If there are others like this — and there were — that's the icing on the cake."

A filmmaker since 1981, Durand is, perhaps, best-known for his feature-length film with Glen Pitre "Belizaire the Cajun," which was the official 1986 Sundance selection. In it, Durand himself played a priest. He had produced 90-minute documentaries before, among them "Texas Rangers" and "Willie Francis Must Die Again."

"I knew it was work, and I needed help," he said. "So I went to the film department at UL-Lafayette and told them I'd teach a class in advanced documentary filmmaking in exchange for grunt work."

The student recruits located the interviews for Durand and acted as his research assistants, associate producers, sound technicians and editors.

"Kids in the class found everyone," he said. "Half of the students were originally from New Orleans."

A UL-Lafayette graduate himself, Durand credits the entire film to the university.

He says it's not as though there was an abundance of rescuers to choose from.

"The first weeding out was done by police — they turned back most of them," said Durand.

What was left were the few dozen that said, "We're not turning around," and sneaked past the perimeter. Those who pushed their way through took alternative routes, shortcuts and detours and even posed as part of a penitentiary bus convoy.

"Cajuns follow all laws that make sense and none that don't," Durand explained.

"Cajun Navy" utilizes stark black-and-white headings to separate segments and move the story forward. Photos of the aftermath were supplied by the documentary subjects themselves, some of whom took cameras with them on their rescue missions with the intent of documenting bodies for identification purposes. Actual aerial and ground footage used in the film was supplied by KLFY TV- 10 and KATC TV- 3.

"They were very generous with their pictures," said Durand.

Other than the photographs — as visually compelling now as they were then — there are only the words of those who were there: longtime New Orleans anchor Garland Robinette; then-Mayor Ray Nagin's press secretary Sally Foreman; Opelousas resident Frank Angelle, who told his wife he "wanted to go" after seeing the city in distress; and Bryan Smelker, who disguised himself as part of a prison escort.

"We could look off into the distance and see people hanging out of the windows," Smelker says in the film. "There was no way I was going back to Lafayette.

"Anarchy is the best word I can think of."

There is no narrator, no one to buffer the images for the viewer.

"Narrators say things people don't say in interviews. After trimming and moving things around as it evolved, it came together without one," said Durand, who used Danny Glover to voice over "Willie Francis." "You get a lot of surprises. It came together smoothly, and I went with first-person. It was more evolution than director's decision."

Despite Foreman's unflattering picture of FEMA and Bienvenu's none-too-stellar portrait of the National Guard, "Cajun Navy" is not a rebuke to state agencies but rather a tribute to the heroism of ordinary lives.

"There are national events that there is no preparation for," said Durand. "I thought someone needed to say 'Doug, Bryan — someone give them a hand.' The people from around here needed to be congratulated."

While he encountered no inherent problems making the film, Durand regrets his law practice prevented him from having the film ready for Katrina's 10th anniversary. He also wishes he could have included the rescuer who picked up what appeared to be gang members when no one else would, due to their appearance and the implied possibility of violence.

"One guy had nothing," he said, "but felt he needed to give something in return and offered his shirt."

Durand has submitted "Cajun Navy" to all 24 film festivals in the 40-minute-or-less category and is awaiting a reply from half of them.

"Oscar nominations come out of the festivals," explained Durand, who won the 2012 Nicholl Award for Screenwriting from the Academy of Motion Pictures Arts & Sciences for "Willie Francis."

"You just find a really good story," he said, "and get out of the way."

FLOODS

Louisiana Flood Victims Can Get Sales Tax Refunds On Damaged Property

By Jennifer Larino

New Orleans Times-Picayune, August 27, 2016

Louisiana flood victims can claim refunds for state sales taxes paid on clothing, furniture, electronics and other items that were destroyed by the floodwaters. Refunds are available only for damaged property not covered by insurance or disaster relief funds.

The Louisiana Department of Revenue said in a Friday (Aug. 26) news release that refunds are available for flood victims who lost property after severe storms and flooding in August as well as earlier this year in March. Eligible taxpayers must live in a parish declared a federal disaster area after one or both of the flooding events.

The state said it will refund the value of the sales tax paid on the original purchase of the destroyed property. Victims will not be able to get a refund for sales taxes paid on replacement property, according to the release.

Only individuals are eligible for refunds. Property owned by corporations, partnerships or any type of business does not qualify.

State law requires damaged property to meet the following criteria to be eligible for a refund:

A Louisiana taxpayer must have suffered the loss on property used in or around the individual's home, apartment or homestead in the state.

The destroyed property must have been moveable at the time of purchase and at the time of its destruction. That includes furniture, clothing, and electronics, but not cars, trucks, ATVs or other motor vehicles.

The taxpayer must have paid Louisiana state sales tax on the purchase of the destroyed property.

Moveable property eligible for a refund also includes recreational equipment used at home and appliances not attached to a house or building. Examples of items that are not eligible include central heating or cooling systems, lighting fixtures, hot tubs and spas, boat trailers, water or snow skis and golfing or tennis equipment.

Damaged property that is reimbursed by insurance, disaster relief funds or any other source is not eligible for a refund.

Parishes declared federal disaster areas after the August floods include Acadia, Ascension, Avoyelles, East Baton Rouge, East Feliciana, Evangeline, Iberia, Iberville, Jefferson Davis, Lafayette, Livingston, Pointe Coupee, St. Helena, St. Landry, St. Martin, St. Tammany, Tangipahoa, Vermillion, Washington and West Feliciana.

Parishes declared federal disaster areas after the March 2016 floods include Allen, Ascension, Beauregard, Bienville, Bossier, Caddo, Calcasieu, Caldwell, Catahoula, Claiborne, DeSoto, East Carroll, Franklin, Grant, Jackson, LaSalle, Lincoln, Livingston, Madison, Morehouse, Natchitoches, Ouachita, Rapides, Red River, Richland, Sabine, St. Helena, St. Tammany, Tangipahoa, Union, Vernon, Washington, Webster, West Carroll and Winn.

Bret Bielema, Arkansas Sending Water, Supplies To La. Flood Victims

By Jim Kleinpeter

New Orleans Times-Picayune, August 27, 2016

Add Arkansas and football coach Bret Bielema to the list of SEC schools helping victims of the Louisiana Flood of 2016.

Bielema and the Razorbaacks program loaded up on supplies to send to the relief effort in South Louisiana. South Carolina and Alabama have also contributed truckloads of supplies in the past two weeks.

Louisiana Republican Party Has A "Cash Flow" Problem In Wake Of Floods

By Julia O'Donoghue

New Orleans Times-Picayune, August 27, 2016

The Louisiana Republican Party's quarterly meeting closed Saturday (Aug. 27) with a plea from its chairman, Roger Villere, to donate to the organization.

Villere said the state political party is strapped for cash, though he wasn't specific about numbers. He said some of the issues may be connected to the impact of recent flooding on donors.

This is a busy and expensive season for the organization, with the presidential election and an open Louisiana Senate seat on the Nov. 8 ballot.

Villere said the party spent money in August based on some promises of donations that haven't materialized. Supporters had committed money before massive flooding hit Baton Rouge, Lafayette, and the surrounding areas. And some of those contributions never materialized.

The Republicans were also forced to cancel a major party fundraiser in August because of the flood. The event was supposed to be held at the Celtic Media Centre, which was being used as a shelter for thousands of people displaced from their homes at the time.

In an interview, Villere said the fundraiser has been rescheduled for Sept. 29, but the political party is hoping some donations come in before that time as well.

"It's really just about cash flow," he said.

Flooding Poses Challenges, Opportunities For Baton Rouge Mayoral Candidates

By Andrea Gallo

Baton Rouge (LA) Advocate, August 27, 2016

For the third time this summer, Baton Rouge's mayor-president race has a new issue at its forefront as residents look to rebuild from recent flooding and search for a vision of how the city-parish can heal after multiple tragedies over a short time span.

The flooding in East Baton Rouge parish alone is estimated to have swept through nearly 55,000 homes and leaves a long list of questions about how to rebuild when at least half those homeowners were not required to have flood insurance.

The city-parish's next mayor will have to address underlying infrastructure and drainage problems that some have blamed as part of the reason floods became so widespread. Some are already worrying that people will flee Baton Rouge permanently unless leaders act quickly to prevent future flooding.

The floods have presented new challenges for candidates on the campaign trail seeking to become the next mayor.

Mayoral candidates have seen their campaign headquarters flood, canceled fundraisers and been forced to rethink how they can get people to show up at the polls.

"A local mayoral race is heavily dependent on people having a mailbox," said Martin Johnson, a political communication professor at Louisiana State University, who pointed out the physical and geographical implications the floods will have on the mayoral race. Campaign mailers are usually one of the most widely used tools to reach prospective voters.

"The idea that you're going to door knock on somebody in high boots and gloves taking their stuff out to the door — that's just not a practical vision," Johnson said.

Further complicating the campaign dynamic are the other tensions and tragedies that have arisen in Baton Rouge this summer.

The campaigns had already switched directions twice in the past few months — first when Baton Rouge Police Department officers killed Alton Sterling and protests began in early July; second when a gunman killed three Baton Rouge law enforcement officers and critically injured a fourth later that month.

Questions about inequality, race, police distrust and other emotional topics were laid bare on Baton Rouge's table before the floods rushed in.

"In spite of what has happened with the flooding, we can't lose sight of those issues that were before us before the flooding happened," said Rev. Lee Wesley, pastor of Community Bible Baptist Church and one of the leaders of faith-based community group Together Baton Rouge.

Johnson said it's also possible the disaster will inspire residents to vote en masse because they are especially worried about the future of Baton Rouge. But he said such a dynamic often occurs when an incumbent is in the race.

Term-limited Mayor-President Kip Holden is running for U.S. Congress, leaving a crowded field of 12 trying to succeed him. Many of the leading candidates have already been especially visible helping in their communities, trying to distribute aid and more.

They've mostly said the city-parish will need to lean on Congressional and state leaders to tap federal funding for rebuilding. They also hope Congressional leaders can help lower the city-parish's match for FEMA reimbursement from 25 percent to 10 percent at the most.

Xavier University pollster and sociologist Silas Lee said the role of local government right now is to advocate for the resources to help people that local government cannot provide itself.

CANDIDATES CHART NEW TERRITORY

Mayoral candidate and former Democratic State Sen. Sharon Weston Broome is among the thousands of residents whose homes flooded. Around 18 inches of water entered her home in Baton Rouge's Park Forest neighborhood. She did not have flood insurance, and is staying with family while she rebuilds.

Since then, Broome has been volunteering around Baton Rouge and trying to make people aware of the resources available for them when they try to recover and rebuild.

"I don't see a mass exodus because of the floods," Broome said. "What I see are many people who paid for their homes and they say, 'I didn't have flood insurance before but I'm going to get some now.' And I hear people saying they want to stay in their homes as they rebuild. It could be for many of us the worst times in our lives, but most of the people I talk to see the end of the rainbow."

Republican State Sen. Bodi White, who lives in the especially hard-hit city of Central, is more worried about whether people will flee and he wants incentives for them to stay. White sent a letter to President Barack Obama earlier this week requesting help with finishing the Comite River Diversion Canal, which advocates say could have prevented floodwaters from reaching many homes.

Along with the Comite River Diversion Canal, White said he's interested in projects that would divert floodwaters from Bayou Manchac, Wards Creek, Jones Creek and other sources of backwater in East Baton Rouge.

Earlier in the week, White held the first of what he said could be several briefings on the flood recovery through the Senate Select Committee on Homeland Security that he chairs in the state Legislature. The committee received updates from FEMA, GOHSEP, law enforcement, the Louisiana National Guard, the U.S. Army Corps of Engineers and the state Department of Transportation and Development.

"So far, this mayor-president race, you have so many different things that happened that kind of shaped the race to me," White said. "The Sterling shooting and then the assassination of police officers, and then the education and the crime and the streets, which are still major issues. But another big issue now is bringing East Baton Rouge back together and keeping our citizens here."

Republican Metro Councilman John Delgado also said local waterways need to become a major priority. Delgado said the city-parish needs to tap its "rainy day" funds to help pay for rebuilding.

"That's something the local government has to get on the stick about, is the maintenance of these water ways in the parish that are within our control," he said.

Delgado predicted that Baton Rouge will not see a mass exodus of people but that jobs created by the need for construction in the city-parish will attract some new residents.

Democratic State Rep. C. Denise Marcelle said she is especially worried about the FEMA cap of $33,000 to help people without flood insurance rebuild their homes. Marcelle said she is afraid it will feed into blight problems that already affect the city-parish.

Marcelle said she's already seen a sign advertising six houses that flooded off Winbourne Avenue being sold at $90,000 for the batch. She expects that more will pop up if people cannot afford to gut and rebuild their homes, exacerbating the blight problem.

"If we don't get that funding, we're going to see a lot of people walk away from these houses and leave a lot of blighted houses," Marcelle said. "I'm hearing the same thing in all of these neighborhoods — how do I survive for this? This is not going to be enough money for me to repair my house. A lot of people have spent a lifetime building their homes and (acquiring) all of the stuff that's inside of their homes."

Independent mayoral candidate Darryl Gissel is a realtor, and he is already seeing the real estate implications the flooding has created. Experts have predicted major shifts in Baton Rouge's real estate market because a low number of homes were on the market before the floods and demand for new homes and rental housing has skyrocketed.

"It's going to change the direction in which we build," Gissel said. "Should we rebuild some of these inner city neighborhoods that are high and dry?"

Gissel said Baton Rouge needs to look closely at the successes and failures in rebuilding New Orleans after Hurricane Katrina, and that those can instruct how the city-parish should bounce back.

Lee, the Xavier University pollster and sociologist, cautioned about buying into any candidate who says they could have responded better to the natural disaster than the existing government leaders.

He said New Orleans voters gave their former Mayor Ray Nagin, later convicted on corruption charges, the benefit of the doubt when he ran for re-election after Hurricane Katrina because Nagin was trying to manage an unprecedented disaster.

"You can't try to exploit it because nobody can predict what impact it will have, a natural disaster," Lee said. "The minute someone tries to exploit it, that's seen as a cheap method of campaigning because you are exploiting people's misery."

None of Baton Rouge's mayoral candidates were ready to commit to asking for a bond issue or tax plan to pay for major drainage and infrastructure projects, though none of the candidates ruled it out, either.

HOW LONG WILL UNITY LAST?

The mayoral candidates have insisted that the unity seen across Baton Rogue in recent weeks should carry through in the future, despite analysts and academics predicting more fights over how flood relief aid is distributed and about how the city-parish is rebuilt.

Related

"Baton Rouge held together as a community better than anyone could have expected given where we were just a month ago," Delgado said.

Marcelle and Broome both said the barriers in Baton Rouge have fallen to the side since the storm, and that people have rallied together. Marcelle said the storm put residents "on an equal playing field," while Broome said the same mentality of "oneness" in the city needs to be carried into the future.

The candidates all pledged to distribute any storm aid to where it is needed the most, regardless of the ZIP code or the demographics there.

"A fair distribution of resources is what we have to do," White said. "You can't forget Baywood, you can't forget Pride, you can't forget north Baton Rouge and you can't forget south Baton Rouge."

As people rebuild, Wesley said, the mayoral election should become even more important in people's minds. But Johnson and political consultant Roy Fletcher both predicted that voter turnout could drop.

From a physical standpoint, Johnson said people who are not in their homes and in their communities will not be as easily able to vote. But the elections could be affected from a psychological standpoint as well.

"They're not paying attention, they're not going to pay attention and they shouldn't pay attention," Fletcher said of Baton Rouge voters who are rebuilding their homes. He said the mayor's race is far from many of their minds.

"Too many people are fighting for the lives and their futures."

Obama Administration Cabinet Officials Talk About SBA Loans Available

By Mark Ballard

Baton Rouge (LA) Advocate, August 26, 2016

Over jambalaya and catfish strips, Dr. Franklin Johnson told the head of the U.S. Small Business Administration that he has seen a 60 percent drop off in patients in the two weeks since intense rains led to massive flooding in the Baton Rouge area.

Two of his Dermatology Associates locations were open, but the offices in Central and Denham Springs would be closed well into the future, Franklin told SBA Administrator Maria Contreras-Sweet at luncheon Thursday put together by U.S. Sen. David Vitter so that Obama administration cabinet members could hear the personal stories of area businessmen and professionals impacted by the historic flooding earlier this month.

A couple of Franklin's offices had property damage. But that was not the real worry. He couldn't predict when his patients could focus on anything but ripping out water-soaked carpets and drywalls and getting their lives back in order. In the meantime, he had staff and loan payments to consider. And the business interruption insurance he had bought excluded flooding events.

Contreras-Sweet repeated what had become something of mantra for her visit to the Baton Rouge area: enroll for federal disaster assistance programs and start the process.

"A lot of people think, 'Oh, I'll be alright'," Contreras-Sweet said. "What they don't realize is that what happens is it takes a while to recover. They will lose customers over time."

In some parts of the 20 parishes inundated by floodwater and declared a disaster by President Barack Obama, as many as 80 percent of the homes and businesses were impacted to some level. That translates to customers hoarding dollars to get their lives back in order and suppliers being unable to fulfill their obligations, which could impact businesses not this month or next but several months out, said Contreras-Sweet, a banker by trade.

Even if in the end Johnson – and other small business owners – choose not to accept an SBA loan, the paperwork would be complete and the trigger, ready to be pulled, if they find they need the assistance, she said.

Businesses can borrow up to $2 million for physical damage and economic injuries in loans with interest rates below 4 percent.

The SBA also has loans available to cover uncompensated losses for homeowners – up to $200,000 to repair a disaster damaged residence or buy a new one – at interest rates from 1.56 percent to 3.13 percent.

Renters can borrow up to $40,000 to replace possessions.

Julian Castro, secretary of the U.S. Department of Housing and Urban Development, made the point to Dr. Johnson that congressmen would rely on the registration numbers to help calculate how much additional aid – above what is set aside for disasters – would be available, should they vote to award a supplemental appropriation, as was done after hurricanes Katrina/Rita and Sandy.

The impact of the flood with no name is still being calculated, Castro said. But fly-over imaging shows about 150,000 properties were damaged and FEMA indicates about 120,000 people have filed for assistance.

The lunch meeting hosted by Vitter, chairman of the Senate Small Business & Entrepreneurship, was at Mason's Grill, a Baton Rouge restaurant that had flooded, repaired itself with the aid of an SBA loan and reopened.

The meal was midway through two separate tours the cabinet officers made of disaster areas.

After viewing demolished public housing for the elderly in Denham Springs, Castro said he understood the need for aid.

"There's no question this is one of the worst natural disasters that we have seen in quite awhile," he said. "We see a real need for significant investment in getting people back to where they were before."

SBA District Director Michael Ricks announced Friday that the SBA had approved more than $35 million in federal disaster loans for Louisiana businesses and residents impacted by the flooding. The SBA had approved 20 business disaster loans for $1.3 million and 456 disaster loans for homeowners and renters totaling $34.8 million to help rebuild and recover from this disaster.

"This isn't just for business owners. A lot of times, if you're a renter you don't think to call on us," Contreras-Sweet said while Secretary of State Tom Schedler showed her around a SBA disaster assistance center set up in the State Archives.

Renters may be eligible for grants from FEMA to help with such disaster-related expenses as: renting a new place to live; medical and dental expenses; replacement or repair of personal property lost, such as vehicles, appliances and furniture, textbooks and computers used by students, and work equipment or tools used by the self-employed.

FEMA grants are not loans, are not taxable and do not have to be repaid.

Additionally, renters may qualify for a low-interest loan of up to $40,000 from the SBA to repair or replace personal property.

Eric Donaldson left one of the repurposed archives offices with a packet in his hand.

Floodwater rose almost to the ceiling of the ground floor of the Denham Springs apartment Donaldson and his wife rented while their home was being built. They lost all their furniture, appliances, and technology. Only their clothes survived, but the garments had to be soaked, washed and rewashed.

Donaldson retreated to his father's home and applied for assistance online. He was referred to the SBA and had come to the State Archives Thursday to talk with an SBA agent and receive the terms of the loan, which he has 60 days to consider. He'll probably accept the loan. "There are not many other options," Donaldson said.

William A. Tryon, of Pensacola, a SBA counselor, said the agents had handled the applications for 70 businesses and 69 homes in three days at the SBA center located at the State Archives. Tryon had become an agent after going through the process after Hurricane Ivan in 2004 washed over the island off Pensacola and destroyed his home. "I've been on the receiving end of this," he said.

Contreras-Sweet spent the morning with Vitter, U.S. Sen. Bill Cassidy and U.S. Rep. John Fleming and other officials touring St. Amant.

Speaking from the command center in St. Amant still set up with tables and cots for the National Guardsmen, firefighters and deputies who had worked around the clock pulling people from flooded homes, Ascension Parish Sheriff Jeff Wiley pointed out that most of the property owners did not have flood insurance. That was largely because they weren't in flood zones and their properties hadn't flooded in 1983, the last major event.

A suburb of Baton Rouge, Ascension is one of the wealthiest parishes in the state. Local government had spent money on pumps and levees, he said. But the amount of water overwhelmed the systems.

"This is a parish that takes care of itself," Wiley said. "But, we got knocked to our knees."

Now that the water had gone down, the rescuers were gone and the focus turned from Wiley's command center to recovery, most of the action was taking place next door at The Church, where trucks were stopping with food and water.

Driving down the streets of newly-built subdivisions, American flags flew from piles of rubble, many of which had spray painted "Romans 8:31" – "if God is for us, who could be against us?" Hanging in the air was that fetid smell of waterlogged carpets and drywalls, well known to many on the Gulf Coast but new to Contreras-Sweet and her SBA entourage.

Fleming, a Minden Republican, said he was struck by the photographs, knick-knacks and stuffed animals tossed onto the piles of ruin.

"It wasn't just appliances. Their entire lives were completely gutted and thrown out on the streets," Fleming said.

The U.S. Small Business Administration has opened seven Business Recovery Centers to serve as one-stop assistance sites for businesses and homeowners.

Visit http://sba.gov/laflood or call (800) 659-2955.

Businesses and residents who sustained damages are encouraged to register prior to the October 13 deadline with the Federal Emergency Management Agency by calling (800) 621 FEMA (3362) or (800) 462-7585 (TTY) for individuals who are deaf or hard of hearing.

"Gut Check Saturday" Helps Flood Victims Begin Rebuilding

By Timothy Boone

Baton Rouge (LA) Advocate, August 27, 2016

For the second Saturday in a row, volunteers organized by Together Baton Rouge were out helping people gut and clean up homes that were damaged in the recent flooding.

"I'm doing a happy dance with these people here today," said Brenda Jackson, who lives in the hard-hit Monticello subdivision. "It's truly a blessing from God that these people gave up their time."

Korey Jarmon, Jackson's son, signed her up for the cleanup last week. Jackson, who is retired, said she doesn't know how she would have gotten her home gutted without the volunteers. "I don't know anything about this," she said. Some family members were helping her clean up, but they became exhausted at the sheer volume of work.

Jackson said her goal was to get all of the drywall and flooring torn out of her home Saturday. "Those people are working like worker bees," she said, standing in her front yard before, while hammers clanged in the house behind her. "Put that in the paper."

More than 60 people took part in Together Baton Rouge's "Gut Check Saturday". They gathered at St. Mary's Baptist Church Saturday morning, put on matching light blue t-shirts and picked up cleaning supplies such as bleach, garbage bags and paper towels before heading out to the flooded homes.

"There are people out there waiting for you," said retired Lt. Gen. Russel Honoré, who helped organize the cleanup. "Do what you can to help them."

Honoré said getting houses gutted quickly is important, so mold growth doesn't set in and give homeowners another expensive headache to deal with.

Valarie Oliver said the help will make her Park Forest home ready for rebuilding. Oliver is temporarily living with family members. "I was just coming over here and doing a little bit of cleanup by myself," she said. Most of her family and friends are either too busy with work or cleaning up their own damage to help her.

"This is the major part of the process, to get everything gutted out," she said.

Together Baton Rouge has set up a website at togetherbr.nationbuilder.com/gutcheckla that allows people who need help gutting their property to put their home on a master list.

Tens of thousands of homes need to be gutted. Broderick Bagert, lead organizer with Together Baton Rouge, said the coalition of churches and community groups is working on ways to increase its capacity to clean up more houses.

A few streets over from Oliver's house in Park Forest, Toye Hebert, Charlie Whinham, Eva Windhoffer and Andy Johnson took a breather in the driveway of a Ridgemont Drive home. Whinham said the volunteers had just torn the water-logged carpet out of the house, a heavy, stinky task that took four people and a wheelbarrow to accomplish.

"It's one thing to see this on social media, it's another to actually see it in person," said Windhoffer, a student at Nicholls State University.

Red Stick Rumble Robotics Competition Delivers Welcome Respite For Flood-weary Students

By Samuel Carter Karlin

Baton Rouge (LA) Advocate, August 27, 2016

Piles of donated backpacks filled with school supplies, toiletries and toys lining the floor of Woodlawn High School's gymnasium Saturday underscored a day of robotics competitions that, for many, served as a respite from rebuilding flood-ravaged homes and a sense of normalcy for students whose schools remain closed.

The Dow Red Stick Rumble, a competition for 22 teams – around 400 students from Louisiana, Mississippi and Texas – showcased student-built and operated robots navigating an arena of obstacles and throwing gray dodge balls at castle towers they were bent on destroying. The event doubled as a flood relief effort, with dozens of the competitors bringing donations to support fellow students throughout the state.

The items donated included essentials such as paper towels, as well items like teddy bears for children. And some, said Woodlawn Robotics Coach Daniel Eiland, were things like posters for high school classrooms, to replace those added to debris piles in the aftermath of the floods.

Eiland said students and parents have been quick to help out the community by gutting homes and donating. Last week, the school hosted parents and restaurateurs who cooked around 1000 meals for flood victims.

Eiland said the competition was a good way to get students out of the stressful, difficult environment of clearing out flood ravaged homes at least for a time.

"It's been a long slog," Eiland said.

After the flood earlier this month, Eiland asked Scott Travis, third year principal of Woodlawn, whether the event should still go on. Students had spent six weeks working on their robots ahead of the competition.

"I said, 'We're still doing this,'" Travis recalled as robots in the arena behind him catapulted dodge balls across the gym. "Our folks need something to get their minds off of what is going on. And our students don't want to hang out at home anymore."

Woodlawn, like other East Baton Rouge Parish schools, has been closed in the aftermath of the floods and is set to reopen September 6.

Travis said there are still a handful of students and parents the school has not heard from. He estimates at least 10 Woodlawn families lost everything in the flood, and dozens more took on water.

Lafayette High School senior Burke Bolinger watched as his teammates tinkered with the inner-workings of their 120-pound robot following one of their matches. Bolinger said in the past couple of weeks he and his teammates have helped tear out the interiors of flooded houses in their city of Lafayette, which was particularly hard-hit.

"There's a lot of positive vibes out here," he said. "We're trying to make a difference, as small as it may be."

Rebekah Travis, a junior at Benjamin Franklin High School, a charter school in New Orleans, remembered sharing a bus with Hammond High Magnet School on the way to the world robotics competitions last year.

When Travis and her teammates heard Hammond High took on water in the floods, they immediately wanted to help. So Travis and her teammates organized the donation of dozens of backpacks full of food, toiletries and school supplies.

"There are people who lost everything," said Wytni Widmeier, a 20-year-old Woodlawn alumna who was on the robotics team in high school and now serves as a mentor. "And backpacks are expensive."

Carnival Aids Flood Relief, Encourages Cruise Guests To Do Same

Baton Rouge (LA) Advocate, August 27, 2016

Carnival Corporation Chairman Micky Arison and his wife Madeleine have matched the $250,000 donation made recently by Carnival Cruise Line and parent company Carnival Corporation to aid organizations assisting victims of the Louisiana floods.

The additional $250,000 donation was made through the Micky and Madeleine Arison Family Foundation and raises the total contribution from Carnival Cruise-related organizations to $500,000.

Recipients include the American Red Cross, Louisiana Association of United Ways and Save the Children.

In addition, guests sailing on Carnival cruises from New Orleans have the option to donate when they check in for their cruise and Carnival employees are being encouraged to donate, as well.

The American Red Cross is sheltering thousands of residents displaced by the flooding in southern Louisiana and delivering food, relief supplies and emotional support to flood victims. Donations to the Louisiana Association of United Ways will be dispersed among regional United Way organizations in communities affected by the floods to support long-term needs. Save the Children has deployed an emergency response team to Louisiana and is focused on meeting the critical needs of flood affected children and families and moving forward will be working to restore services essential to children's well-being.

Carnival has operated from the Port of New Orleans since 1994.

Edwards Asks For Patience On Recovery At Legis-Gator

By John Guidroz

Lake Charles (LA) American Press, August 27, 2016

As tens of thousands of residents in southern Louisiana shift from response to recovering from the recent historic flooding, Gov. John Bel Edwards asked for patience as government officials do their part in assisting them.

"Our primary goal right now is getting people back to their homes, back to their communities," Edwards told a sold out crowd at the 11th annual Legis-Gator luncheon, hosted by the Southwest Louisiana Economic Development Alliance. "(But) this doesn't happen overnight. We have a long way to go."

Edwards spoke of the three new housing assistance programs announced this week. The one officials are pushing the most is the Shelter At Home Program, which seeks to invest money in residents' permanent homes. It would cover the cost of work like removing carpet and insulation; repairing air conditioning and hot water heaters; and inspecting electrical and plumbing lines. The program, he said, will be open to the public Monday.

"If we can go into somebody's home and, with $15,000, make it secure, habitable and safe, then that's what we are going to do," Edwards said.

It's the first time the program is being rolled out in Louisiana. Other states, like New York and New Jersey, used a similar program after Hurricane Sandy's landfall in 2012, but that effort was criticized by some because of a lack of good-quality repair work.

Edwards said the state will work to make sure the program uses "our contractors (and) laborers."

Another program will provide temporary manufactured homes, including mobile homes approved by the U.S. Department of Housing and Urban Development. The third is a Multi-Family Lease and Repair Program that seeks to find available rental properties for displaced families.

Edwards also spoke of the record flooding in March that occurred "in every corner of the state." While residents affected by both floods are going through difficult times, he assured them that officials will work to help them recover.

"We know we are going to do everything we can to make them have a better life as soon as possible," Edwards said.

He spent time touring Lake Arthur on Thursday, visiting with residents and officials and praising them for using measures to prevent additional flooding from the Mermentau River.

During the flooding, Edwards said nine weather stations around the state recorded more than 21 inches of rainfall in less than 48 hours. Flood gauges stopped reporting because they were washed away.

The flooding claimed 13 lives. Edwards said the death toll could have been higher if not for residents quickly responding to rescue more than 30,000 people who were in danger.

"We saw people being neighbors to one another, not just neighbors to people who happen to live next to them ... but neighbors to strangers," he said.

When describing how Louisiana residents responded to the flooding, Edwards said the one word that came to mind was "resilient."

"Let me tell you what makes the state of Louisiana great; it's the people," he said.

Edwards also praised the working relationship the state has had with the Federal Emergency Management Agency and other agencies in the wake of the flooding. He said he has asked the federal government to reduce the state match from 25 percent to 10 percent and include the March flooding when seeking relief.

The flooding has damaged 125,000 homes, with less than 20 percent of homeowners having flood insurance. While FEMA is not an insurance program, Edwards said he is meeting Monday with federal lawmakers to "fashion a program that doesn't currently exist" to help residents.

"The worst thing we can have is people walking away from their businesses (and) homes," he said. "We're going to have to think outside the box."

Edwards said there are plans to use hazard mitigation funding to pay for drainage projects instead of elevating homes.

Awards

Senate President John Alario, R-Westwego, received the Legis-Gator of the Year award. His career as a state lawmaker dates back to 1972.

Freshman Rep. Stephen Dwight, R-Moss Bluff, received the Fusion Five award. Sen. Ronnie Johns, R-Sulphur, received the Governmental Affairs award.

The event was held at L'Auberge Casino Resort.

Governor Addresses Flood Recovery At LegisGator Luncheon

By Maranda Whittington

KPLC-TV Lake Charles (LA), August 26, 2016

LAKE CHARLES, LA (KPLC) –

Friday's LegisGator luncheon had a wide variety of speakers, but their focus was the same – flooding and flood recovery.

The heavy rains created heavy flooding that left many with damaged homes.

"Our primary goal is to get people back in their homes, and back in their communities, so they can go to their schools, to their churches and go to their jobs," said Gov. John Bel Edwards.

Edwards announced that he has created three new housing assistant programs for flood victims. Two are temporary but the third one, Edwards believes, will be the most beneficial because it will invest money in people's permanent homes.

"It's called 'Shelter at Home' and it will be open to the public starting Monday," said Edwards.

"Shelter at Home will grant $15,000 to making homes secure, habitable and safe. Edwards also addressed FEMA and the role it plays in the state.

FEMA is not designed to make people whole," said Edwards. "FEMA is designed to give you assistance and to stabilize your life so that you can recover from there."

Edwards called on congressmen to come together to help.

"If you all will work with me, I know that we would be successful on behalf of the people of Louisiana," he said.

Edwards ended his speech thanking those who have united together to help one another. He remains hopeful for our state.

"We are gong to be stronger and better than ever, and I want you to know, I have no doubt that our best days are ahead," he said.

For more information on the Shelter at Home program click HERE.

The application, phone number and websites for the program will be available starting Monday.

Governor Addresses Flood Recovery At LegisGator Luncheon

KSLA-TV Shreveport (LA), August 26, 2016

LAKE CHARLES, LA (KPLC) –

Friday's LegisGator luncheon had a wide variety of speakers, but their focus was the same – flooding and flood recovery.

The heavy rains created heavy flooding that left many with damaged homes.

"Our primary goal is to get people back in their homes, and back in their communities, so they can go to their schools, to their churches and go to their jobs," said Gov. John Bel Edwards.

Edwards announced that he has created three new housing assistant programs for flood victims. Two are temporary but the third one, Edwards believes, will be the most beneficial because it will invest money in people's permanent homes.

"It's called 'Shelter at Home' and it will be open to the public starting Monday," said Edwards.

"Shelter at Home will grant $15,000 to making homes secure, habitable and safe. Edwards also addressed FEMA and the role it plays in the state.

FEMA is not designed to make people whole," said Edwards. "FEMA is designed to give you assistance and to stabilize your life so that you can recover from there."

Edwards called on congressmen to come together to help.

"If you all will work with me, I know that we would be successful on behalf of the people of Louisiana," he said.

Edwards ended his speech thanking those who have united together to help one another. He remains hopeful for our state.

"We are gong to be stronger and better than ever, and I want you to know, I have no doubt that our best days are ahead," he said.

For more information on the Shelter at Home program click HERE.

The application, phone number and websites for the program will be available starting Monday.

FEMA Disaster Recovery Center Opens In Denham Springs Saturday

By Kevin Dupuy

WBRZ-TV Baton Rouge (LA), August 26, 2016

BATON ROUGE – FEMA will open a disaster recovery center in Denham Springs Saturday after historic flooding ravaged much of Livingston Parish last week.

The FEMA disaster recovery center will be open from 8 a.m. to 6 p.m. at the following location:

North Park Recreation Center (At the corner of Lockhart)
30372 Eden Church Road
Denham Springs, LA 70726

Represenatives from GHSEP, FEMA, the Small Business Administration, and volunteer groups will be available to answer questions about disaster aid and low interest disaster loans. Residents can also apply for federal disaster aid.

It is not necessary to visit a center to register for and receive federal disaster assistance. Disaster Survivor Assistance teams are canvassing many affected areas to register people for federal aid.

If possible, residents should register with FEMA online at DisasterAssitance.gov before visiting a recovery center.

Renters May Be Eligible For Federal Disaster Aid

By Kevin Dupuy

WBRZ-TV Baton Rouge (LA), August 26, 2016

BATON ROUGE – Renters who experienced losses from last week's historic flooding may be eligible for federal disaster aid.

According to a FEMA statement Friday, renters may be eligible for grants from FEMA to cover certain disaster related expenses, including:

Disaster related medical and dental expenses

Replacement or repair of necessary personal property (appliances and furniture, textbooks, computers used by students and work equipment for the self-employed)

Repair or replacement of vehicles damaged by the disaster

Disaster related funeral and burial expenses

FEMA grants are not loans and do not need to be repaid. FEMA says the grants are also not taxable income and will not affect eligibility for Social Security, Medicaid, welfare assistance, SNAP benefits or other programs.

Renters may also qualify for a low-interest loan up to $40,000 from the SBA to repair or replace personal property.

Residents can apply for aid online with any computer, smartphone or tablet at DisasterAssistance.gov or by calling 800-621-3362. . The toll-free telephone numbers are open from 6 a.m. to 10 p.m. daily.

FEMA Encourages Residents To Read Determination Letters Carefully

By Brock Sues

WBRZ-TV Baton Rouge (LA), August 26, 2016

BATON ROUGE – If you're a survivor of recent flooding and receive a letter that says your application for federal assistance is "ineligible" or "incomplete," be sure to read the letter all the way through to the end to find out why.

FEMA officials point out that all applicants have the right to appeal and, in many cases, a quick fix can remedy the situation.

FEMA listed some common reasons why people receive an ineligible determination:

The most common reason for ineligibility is you didn't provide FEMA with a copy of a letter verifying your insurance coverage and detailing your settlement. FEMA needs this to process your grant application.

Your insurance company will be able to provide you the documents. Find your insurance company's information online at the Louisiana Department of Insurance's website: www.ldi.la.gov/onlineservices/ActiveCompanySearch

Other reasons for ineligibility may include:

-You did not sign the required documents.

-You did not prove occupancy or ownership.

-Your identity may not have been verified.

-The damage is not to your primary residence, but to a secondary home or a rental property.

-Another member of your household may have applied and received assistance.

-Your disaster-related losses could not be verified.

What to do next:

You may take copies of the documents to your closest Disaster Recovery Center where a FEMA specialist can help you.

Find DRC locations by going online at fema.gov/disaster-recovery-centers or by downloading and using the FEMA app. You may also call the FEMA helpline at 800-621-3362. If you use TTY, call 800-462-7585. If you use 711 or Video Relay Service (VRS), call 800-621-3362.

Or mail copies of the needed documents within 60 days of receiving your letter to the address below:

FEMA – Individuals & Households Program
National Processing Service Center
P.O. Box 10055
Hyattsville, MD 20782-7055

You can also fax the documents to:

800-827-8112

Attention: FEMA – Individuals & Households Program

It's important to write the registration number that FEMA gave you after applying for help on all the documents. Write the federal disaster declaration number, DR-4277-LA, too.

If you have more questions:

If you registered, you should have received a booklet called "Help after a Disaster" that details how FEMA determines what's eligible for assistance. You can access the booklet online at www.fema.gov/help-after-disaster.

If you have questions about your application or about filing an appeal, call the FEMA helpline at If you use TTY, call 800-462-7585. If you use 711 or Video Relay Service (VRS), call 800-621-3362.

Visit a DRC to speak with a FEMA specialist who can help you appeal.

Tullier Family On Deputy's Condition, Loss Of Home During Flood

By Trey Schmaltz

WBRZ-TV Baton Rouge (LA), August 26, 2016

BATON ROUGE – As his neighbors toss flood debris and heirlooms to the curb, the soaked belonging of James Tullier's family remain locked in the first floor of his two story home in Livingston Parish.

Before the flood, Tullier and his wife were rarely home since their lives were upended by a gunman who shot their son, an East Baton Rouge Parish Sheriff's deputy, three times in July. The Tulliers rarely leave Our Lady of the Lake where their son, Nick, is under the care of doctors and nurses.

"He's hanging in there. He's fighting," James said in an exclusive interview first televised on WBRZ News 2 at 6:00 Friday. "He's fighting everyday."

Friday was the fortieth day the Tulliers have spent in the hospital. The family told WBRZ anchor Michael Shingleton, they don't count days – instead, they count blessings and miracles.

"Every day, to us, has been a miracle." James Tullier said doctors weren't optimistic about his son's survival, though, at the end of August, he still clings to life.

"He wasn't suppose to live longer than a day. Then he wasn't suppose to live longer than two days. Then five days. Then it became a 21 day forecast."

As the family listened, prayed, and hoped, they missed the sound of severe weather moving across the region. When Baton Rouge, Livingston and Ascension began flooding, the Tulliers were flooding heaven with prayers from inside the hospital, oblivious to what was happening outside.

Michael Shingleton asked, "You didn't know it was raining?"

"No," James Tullier answered."

"Not a clue?"

"No."

It is believed, the Tulliers' neighborhood took 92 inches of flood water. As their neighbors work to recover their homes and lives, the Tulliers pray for their son's recovery.

"Our priority has been with Nick. The house is an object. We know that it's a process that has to be dealt with, but to us, it's on the back burner."

James has been able to meet with both the Vice President and the President. This week, President Obama streamlined the process with FEMA and flood insurance inspectors. Vice President Biden set up the family with the nation's top doctor. The doctor is now familiar with Nick Tullier's condition.

And, the Tulliers ask people stay focused on their son's condition and not the condition of the family's home.

"People have offered to come and clean out our house. No, pray for Nick," Tullier said.

The Tulliers ask for prayers, hope and support. Nick Tullier's condition is updated frequently on this Facebook page, organized to share information on his health. James Tullier routinely posts. Social media hashtags #TullierStrong #TeamNick are used to share thoughts, support and messages, too.

Watch the exclusive report by clicking the attached video link.

STORY UPDATE: The Tullier's thank everyone for their calls to the Sheriff's Office. The family does not need help cleaning out or gutting their home. They have already been in touch with FEMA and their insurance company, and they're making progress. Keep praying for Nick. – Michael Shingleton – Twitter: @ShingletonWBRZ

Annual Ascension Hot Air Balloon Festival Cancelled

WBRZ-TV Baton Rouge (LA), August 26, 2016

GONZALES – Officials in Ascension Parish say that this year's Ascension Hot Air Balloon Festival is cancelled due to recent historic flooding and in anticipation of any further weather events.

"We are hurting, but on the mend, in Ascension Parish. Over 50% of our annual attendees at the Hot Air Balloon Festival are folks from the affected areas," said Ascension Parish President Kenny Matassa. "I want them to know we are experiencing this trial together, and next year we will bring the Hot Air Balloon Festival back for everyone to enjoy."

The festival was scheduled for Sept. 23 and 24 at the center off Louisiana Highway 30 and Interstate 10.

The usual site of the festival, the Lamar-Dixon Expo Center, remains fully operational and has served as a center for recovery activities in the parish. The expo center has been used as a shelter, a staging spot for debris and also is playing host to a FEMA Disaster Recovery Center.

Parish and state officials said they are also in discussions concerning the use of Lamar-Dixon for any future weather events that may threaten south Louisiana through the remainder of hurricane season.

Longview Citizen And Red Cross Veteran Travels To Louisiana For Flood Relief

By Hayat Norimine

Daily News (WA), August 28, 2016

Longview resident Julia Bishop is a veteran when it comes to disaster relief.

Bishop, 64, travels to disasters as a Red Cross volunteer three or four times a year. She will spend the next week working 12- to 15-hour shifts, every day, assisting flood victims in Baton Rouge, Louisiana

According to Red Cross official Brad Kieserman, the catastrophic flood devastating Louisiana is now the worst natural disaster to strike the United States since Hurricane Sandy four years ago.

Piles of garbage, damaged furniture and other belongings were left lining the streets after a prolonged rainfall overwhelmed the state. More than 20 inches of rain fell in less than three days. FEMA declared a major disaster in Louisiana on Aug. 14, the second time in just a few months that it had done so.

"If you drive down the streets, everybody's life is laying out there in the road," Bishop said.

Tens of thousands of homes have been damaged. More than 100,000 individuals and households have asked for FEMA assistance, and Bishop said the economic hardship is apparent. Small business owners often close their stores permanently from such disasters, unable to recuperate from such a financial loss.

As a shelter manager in Baton Rouge, Bishop assists in organizing shelters' needs and preparing supplies. Bishop said there are 15 shelters that hold anywhere from less than 100 people to as many as 1,300. Five of those shelters are for the staff, she said. Over 2,000 Red Cross volunteers are currently stationed in Louisiana.

Bishop is the only remaining Red Cross volunteer in Cowlitz County after its Longview office closed. She said many of them retired, others moved away or moved on.

But Bishop has "the disaster bug," she said, and while she works at Janus Youth in Portland, she said the organization allows her to fuel her passion for disaster relief on the side. She has assisted in the aftermath of Hurricane Sandy in the Northeast, tornadoes in the Midwest, wildfires in California, and several disasters in Texas.

For Bishop, it all started back in 2005 with her first trip (with 100 church volunteers from Longview) to Louisiana to assist with reliefs after Hurricane Katrina that August. Seeing how thankful the people were for the help, she said, made her realize that trip wouldn't be her last.

"When you can do what you can to help people in their worst time, it changes their lives," she said.

She is also inspired by people's survival stories. Sometimes, she said, it hits close to home. In 2011 a devastating tornado hit Joplin, Missouri, a town that reminded Bishop of her own hometown.

It looked "like a bomb went off there," Bishop said. She drew parallels between the Midwestern area to Longview, as if it had hit the Highlands, took out hospitals, fire departments and schools, and wiped out every business on Ocean Beach Highway.

"There was a lot of death there, that was hard," she said. "It seemed too much like Longview."

Bishop said in the process of being exposed to such tragedies, she also developed bonds and it makes her grateful for her own life. She has friends all over the country that she still keeps in touch with.

"It makes me very appreciative of everything I have," she said.

"I'm So Lucky": Homeowner Thankful Following Harrowing Louisiana Flood Experience

By Sara Smith

WCAU-TV Philadelphia, August 27, 2016

Kyung Kim was home with her dog when the flood waters began to rise in Lafayette, Louisiana.

Within a few hours, more than 2 feet of water filled the first floor of the home along Bourque Road. The lights went out and for three days she sat in the dark, watching snakes and catfish swim by her door.

At one point, people came by with a boat offering her a way out, but she didn't want to leave. Her husband, Steve, was away in Colorado and she was worried about the house.

"I told them no, I was staying," she said. They did help her charge her phone, though, so she could keep in touch with relatives.

Knowing the dire situation at home, Steve jumped on a plane for Baton Rouge – about 60 miles west of Lafayette.

He took a cab from the airport, but while the water had receded from the Kims' neighborhood, the road leading there was still inundated.

Desperate to get home, Steve waded, for a mile, through snake-infested waters.

"I saw him coming," Kyung explained, holding up her arms over her head, "with water up to here," she said gesturing to her chest.

The Kims moved to the United States from South Korea in 1999. Kyung runs a salon nearby. It's the couple's only source of income.

She says as soon as the water receded, she began scrubbing the house.

"I had no idea you had to do all that," she said pointing to the pile of debris on the side of the street. Thing is, if you don't rip out everything touched by the flood water, mold can take over the home.

On this Friday, the Kims have extra help in the clean up. Volunteers from Samaritan's Purse, a North Carolina-based Christian disaster relief organization buzz around like bees in bright orange shirts.

It's just one job site of more than 3,500 that have been requested by those affected by the flooding across the state.

Helping Louisiana Flood Victims

Volunteers from our region are helping victims of the disaster in Louisiana. NBC10.COM's Sara Smith tells us what kind of work Samaritan's Purse offers. (Published Saturday, Aug. 27, 2016)

Among the volunteers were Drew and Pat Alexander from Aldan, Pennsylvania, a small suburb in Delaware County.

"We both have a spirit for serving people in a time of need," Pat says of why she and Drew drove 20 hours south to help. "Some people run from disaster, we seem to run to disaster."

The Alexanders have been married 34 years and volunteer with multiple organizations together.

"We're at just about every disaster we can get ahold of," Drew explains. "We know the need is there and we have some ability to be able to help to ease people through those difficult times they're experiencing. That's our mission in life."

The Kims also met with a FEMA adjuster this day. They hope for some help from the government to rebuild. They, like so many others, don't have flood insurance.

Standing among the mess, Kyung feels grateful.

"I'm so lucky, look at all those cars, all those people helping us," she said.

Her thoughts about the volunteers is heartfelt, but unfortunately the work won't be over once they leave.

POLITICAL COMMENTARY, COLUMNS AND EDITORIALS

Jeff Sadow: Obama Shows Hypocrisy In Answering Flood

By Jeff Sadow

Baton Rouge (LA) Advocate, August 27, 2016

President Barack Obama finally came to Baton Rouge last week, prodded by this newspaper and other, mainly Republican, critics. Meanwhile, Louisiana's elected Democrats did their best to cover for his hypocrisy on presidential crisis visits.

Regarding what relief agencies describe as the largest American disaster since Hurricane Sandy hit the east coast nearly four years ago, at its start Obama authorized relief but didn't shorten his vacation to toney Martha's Vineyard in order personally to assess the situation. Obama's reluctance prompted a call-out from The Advocate on its editorial page, joined by many others, for him to visit Baton Rouge. Eventually he assented and appeared almost two weeks after the waters began invading structures and washing out infrastructure.

Apparently, flooding of such severity believed typically to occur every thousand years did not give Obama a sufficient chance to advance his ideological or electoral agenda. Just as April showers bring May flowers, so do mass shootings attract Obama, as during his terms in office nine times he quickly visited locations of such tragic events and the families of victims — although not last summer's unfortunate killings in a Lafayette theater that occurred while he traveled to Africa. At these gatherings, he demanded more gun control, although nothing short of disregarding the Second Amendment and turning the country into a police state might have prevented any of these lamentable occurrences.

Obama had graced Baton Rouge with his presence earlier this year — when he came to celebrate Democratic Gov. John Bel Edwards' unwise order to implement Obama's signature expansion of Medicaid. But it proved too much for him to help the city heal by coming soon after last month's unfortunate Alton Sterling shooting by police and the subsequent retaliatory assassinations of three officers.

Regarding water-caused natural disasters, shortly after Hurricane Sandy struck Obama managed to survey from above the damage. Broadcast media for several hours portrayed him acting presidentially, viewed by voters there and in swing states.

But Obama is not on this fall's ballot; Louisiana will vote overwhelmingly Republican; and, since floods don't lend themselves for use as ideological tools, when the waters rose Obama couldn't be bothered to sacrifice even one of the nine rounds of golf he played among the well-off in order to commiserate with the less fortunate. In the process Obama hung out Edwards to dry, leaving the state's most prominent flood victim to mumble about what stellar attention Obama's underlings paid to rescue and recovery matters and how a presidential drive-by would be too distracting.

One such underling, Secretary of Homeland Security Jeh Johnson, during his own trip to Baton Rouge noted Obama had "a very busy schedule;" after all, Obama paused during his vacation to headline a fundraiser for Democrat presidential candidate Hillary Clinton — the day after the disaster declaration. New Orleans Democratic Rep. Cedric Richmond, running for reelection, didn't mind Obama's absence for this or any reason, declaring "the federal government has our back."

As laughable as such excuses might be, at least they don't display Obama's own hypocrisy. As a candidate eight years ago, Obama criticized his predecessor, former George W. Bush, who traveled to the Gulf Coast five days after Hurricane Katrina struck in 2005 with rescues ongoing, as "a president who only saw the people from the window of an airplane instead of down here on the ground trying to provide comfort and aid."

Thanks for stopping in, Mr. President, even if we can't serve as a prop for your agenda.

Jeff Sadow is an associate professor of political science at Louisiana State University Shreveport, where he teaches Louisiana Government. Political Horizons: Congressman Argues Katrina Relief Is Related To Flooding Disaster

By Mark Ballard

Baton Rouge (LA) Advocate, August 27, 2016

Congressman John Fleming last week scratched his chin for a moment, wondering who Rahm Emanuel was paraphrasing when the president's then-chief of staff said, "You never let a good crisis go to waste."

Emanuel, now Chicago's mayor, said it a couple times but importantly when he was talking about an effort to aid the victims of Superstorm Sandy. Fleming ultimately opposed the effort — a now-uncomfortable position as Louisiana's delegation puts together a similar congressional request to aid the approximately 140,000 victims of the flood with no name.

Some internet commentators nodded to Winston Churchill as a source of the quote. But, other than a bunch of readers "liking" it, the sourcing on Churchill is rather scarce for a quote that has come to mean that a disaster could be exploited to find money for projects that otherwise wouldn't be approved.

The Freakanomics website tracked the quote down to a 1976 Medical Economics journal article, in which M.F. Weiner argued that a health crisis should be used to motivate healthier habits in the patient's lifestyle.

That's an origins story that Fleming and U.S. Sen. Bill Cassidy, both physicians who opposed the Sandy supplement, might appreciate.

Fleming, a Minden Republican, was using the quote to explain why he voted in 2013 against the final bill that provided Superstorm Sandy victims more financial aid than was set aside for "regular" disasters. He's being pummeled by opponents in the U.S. Senate campaign about the vote. Public Service Commissioner Foster Campbell said Fleming's political orthodoxy might haunt Louisiana's congressional delegation's efforts to find additional funding for south Louisiana flooding victims.

Fleming said he backed the bill when it was just for Sandy victims. He opposed the final measure because it was chock-a-block full of projects that, while tangentially related to disaster mitigation, had little to do with getting New Jersey and New York homeowners and businessmen back on their feet.

For instance, Fleming tried to strike as unrelated the $1.55 million for upgrading the emergency generator backup system at the National Conservation Training Center in West Virginia.

"Disaster funds must go directly to needed areas with no added pork," Fleming said.

So last week when Obama arrived to tour north Baton Rouge neighborhoods, Gov. John Bel Edwards pressed the president with his "ask." The four-page letter included all the expected stuff — please lower the portion the state would have to pay, and would you mind covering the full cost for temporary shelter and shelter-in-home assistance?

Perhaps under the theory of asking for the stars in the opening gambit, down there near the bottom of page three, Edwards requested that Obama forgive the state's portion to improve the levees around New Orleans after the 2005 Hurricane Katrina.

The U.S. Army Corps of Engineers is putting the finishing touches on a $14.5 billion storm protection system that installed pumps and improved levees. Under a complex formula, the state this year had to start paying $100 million a year until 2048 as Louisiana's match.

"These obligations are crippling to the state as we attempt to fund Master Plan projects designed to save the Louisiana coast," Edwards wrote the president. "A full waiver will allow Louisiana to spend these needed funds on coastal projects to prevent future disasters."

U.S. Sen. David Vitter said that Louisiana's congressional delegation always had argued for the federal government to pick up the tab.

"It's not particularly related (to this disaster), but it is and has been a priority for the delegation," Vitter said.

As the longest-serving member of Louisiana's delegation to Washington, Vitter is leading the effort to gather the statistics that support a request for federal appropriations above what is set aside for disasters. Louisiana's congressmen already are putting together ideas for the supplemental bill and Edwards hopes to meet with them this week or next to cobble out the details.

"Forgiving the $100 million debt is a big ask," Fleming said. "I don't think the president can do that without support from Congress."

He agreed that the Katrina levees protect a population not directly affected by this month's flooding. But he gamely argued that this request has a better link to the problem at hand than, say, relocating damaged roads in unspecified wildlife refuges or development projects in cash-strapped Puerto Rico — both in the Sandy supplemental legislation.

Every time south Louisiana gets hit hard by Mother Nature, and it happens frequently, new pain comes on a variation of the same theme — levees breaking, coastal erosion, water backing up, etc. "So, in that sense it's all part of the same problem, just a different verse of the same song," Fleming said.

At Random: Flood Makes Simple Question More Profound

By Danny Heitman

Baton Rouge (LA) Advocate, August 27, 2016

As a scholar who had studied the 19th century remarked some years ago, when people asked you how you were doing back then, they really wanted to know how you were doing. At a time when death and loss were all too common, a friend or neighbor's well-being couldn't be taken for granted. Inquiring after someone wasn't a rhetorical question; it was how you gauged whether a person in your life might truly be in need.

"How are you doing?" has that kind of emotional resonance these days in much of south Louisiana in the aftermath of a flood that's disrupted so many lives. When people ask about each other this month, the words usually come with a furrowed brow of concern. It's a natural response in communities where just about everyone either has a flooded home or knows someone who has.

My house stayed dry, but my sister-in-law and her 10-year-old son evacuated their neighborhood by boat, and they're staying with us until their place is fixed. In emptying the mess from their home after the flood, they came across a bowl of loose change. Last week, we wanted to do something frivolous as a respite from our troubles, so my nephew and I took his bowl of money to a grocery store that had one of those mechanical coin counters — the kind that sort nickels, dimes, pennies and quarters, spitting out a receipt that can be redeemed for paper cash.

There was a line at the coin sorter, something I'd never seen before. In front of us were customers for whom the counting of pennies didn't seem like a casual pastime. They looked poor, and I suspected that the flood had forced them to look with fresh eyes at every nickel to their name.

Pain is palpable throughout south Louisiana, as I tried to explain last week in an essay I wrote for The Wall Street Journal. Some friends wanted extra copies of the piece, so I stopped by a local newsstand to buy some. The owner hadn't answered his phone the day before, and I soon found out why. His house had flooded, and he felt relieved that his home could be repaired, with insurance covering most of the cost. But then fouled wiring sparked a fire, burning his place to the ground. On the day I had called, he'd closed his shop to rush to the fire. He arrived in time to see it reduced to cinders.

That's the story I got when I asked something so simple that many of us utter it from reflex: "How are you doing?"

There are thousands of answers to that question in south Louisiana this week, many of them tragic.

Many years ago, a Bosnian refugee described her newfound life in Louisiana to me as boring and happy. After enduring the destruction of war, she'd learned that the little dull things in life — a safe home on a quiet street — were blessings too easily overlooked.

In south Louisiana this month, those dull days before the flood can seem like chapters from a distant time.

Aid, Yes, But Talk Changes

Lafayette (LA) Daily Advertiser, August 26, 2016

Lafayette Parish residents got a cold splash of reality from Gov. John Bel Edwards this week.

Visiting flood-ravaged Youngsville, Edwards told residents there — more than 600 in that town had water in their homes — that the Federal Emergency Management Agency can't make them "whole."

No, it can't. Most Louisianans affected by the flood did not have flood insurance. That's at least understandable, because so many who were flooded were not living in what the government believes are flood zones.

"It's very similar to stories we've heard all over South Louisiana," Edwards said of his Youngsville visit. "Historic, unprecedented flood. Homes here have never flooded before. They don't live in a flood zone."

Flood zone or not, though, Louisiana is a water-rich environment. There are 5,000 miles of navigable water. It borders the Gulf of Mexico and the Mississippi River, one of the major water systems in the world. Flood possibilities shift with every development.

The Red River bisects Louisiana and other, robust rivers cut across and through it. We have bayous and canals, swamps and wetlands.

When it comes to water, Louisiana is a geographic wonder. It is the stuff of legends, too. Evangeline and Gabriel might tell you that, if those fictional characters could.

The hard truth that Edwards delivered is that without flood insurance, affected homeowners may have to depend on the slow, uncertain wheels of government for additional help. FEMA can help some — up to $33,000, but likely less.

The unnamed flood that beset 20 Louisiana parishes from Aug. 11-13, America's largest natural disaster since Superstorm Sandy, has changed lives here, and not for the better.

Edwards has made a pitch directly to President Obama for help additional to that which FEMA routinely provides; Louisiana's congressional delegation, which is not without skills and influence, must make the case to their colleagues for supplemental help.

That may be out of character for some of our delegation, which oftentimes preaches limited, not robust, government. It comes during the political campaign season, too. Flood insurance and coastal management are campaign issues that may have moved up — should have moved up — the political pecking order.

The state seems to be functioning at a high level for affected citizens. The federal government, too, is established on the ground and distributing good information as quickly as possible. That's not easy, especially with so many people displaced.

But when it comes to help, a federal government that's $20 trillion in debt seems an unlikely bet to solve every citizen's need in times of high water.

Louisianians need solutions for the flood effects now, but the country needs more planning and options for offering flood insurance and protections later. It's campaign season: What better time to talk?

Hurricane Irene Popular Again — Louisiana Flood? "Eh"

By Antonio Newell

Inquisitr, August 27, 2016

Five years after Hurricane Irene's damage, it still gets more coverage than Louisiana's flood. Sad.

Interestingly enough, Louisiana's flood crisis has been labeled the "worst natural disaster since Hurricane Sandy," according to Washington Post.

You know who made that statement? Brad Kieserman, vice president for disaster services operations and logistics for the Red Cross.

And mind you, Sandy's damage was estimated around $50 billion, with 200,000 homes lost — "second only to Hurricane Katina," notes Live Science.

Yet, Louisiana's massive flood has received nowhere near the coverage, support, or national outcry as Sandy or Irene. Why is Hurricane Irene Trending?

As mentioned, Hurricane Irene made landfall in 2011; it's the five-year anniversary.

Yes. There was definitely catastrophe. Actually, New York Daily News reports that — after a year of evaluation — the total damage was an estimated cost of $15.8 billion.

Now, if Louisiana's flood devastation is as bad as authoritative representatives say, why aren't flood headlines doing as well as "Hurricane Irene" headlines?

Is it not weird how the nation seemingly continues forgetting about Louisiana in its time of need? The same happened during Katrina.

This flood happened in and around the same city and region where Alton Sterling was murdered, where there was massive coverage in our faces day in and day out.

So, what's different now?

The Real Reason Why Louisiana's Flood Gets Little Love

What spurs your emotion? What makes you, as a reader, search for something informative? What catches your attention?

Here's a little secret. In large, news media outlets only report what you find interesting.

Take Hurricane Irene for example. What was significant about 2011 that had many people around the world on edge?

In 2011, people were concerned with natural disasters because the world was supposed to experience horrific devastation in 2012. Remember the infamous "Mayan calendar"?

Shortly before that time, but definitely during the "calendar" watch, Hurricane Sandy had also made its round of disaster wrath. The world was primed and ready for "natural disaster" news.

And now? Police brutality — as can be seen from Alton Sterling's coverage.

Five years later, after the Mayan calendar mayhem, we're still here. Disasters aren't "trending" now.

Louisiana Struggles for 'Likes' and Life

Hurricane Irene is currently trending because people remember its devastation and the feelings they had about it — just like Hurricane Katrina and Sandy victims.

However, also like Katrina survivors, victims of Louisiana's flooding will surely remember how alone they felt as the rest of the country went on about its life — wondering, rather, when Kylie Jenner's sextape will release, or if Donald Trump will finally release his tax returns.

This was — and is — a statewide catastrophe which should've gained more national concern. It wasn't some small flash flood.

According to National Public Radio (NPR), over 40,000 Louisiana homes have been found damaged, and the investigation is ongoing. Likewise, as concerns residents, at least twice that number are awaiting response from FEMA. The source mentions that the disaster stretches over 20 parishes (counties).

Do you realize the magnitude of this flood? That's an entire state in other parts of the country. Some states don't even have enough land for 20 counties.

The report notes that some people closely compare it to the devastation experienced during Hurricane Katrina.

Honestly, if you look at aerial shots from the hurricane and the flood aftermaths, it's difficult to tell which photos belong to what disaster.

But, does the rest of the United States care?

While these concerns have always been at the forefront of news reporting, social media integration has not. Now, with just a click of a few pages, research organizations, television crews, etc. can see exactly what you like to watch or read via your timeline.

Not so? Look at your personal timeline.

See anything regarding contributions you've made to flood victims? If you haven't even spoken about it in a week, the fact is you've moved on.

It's a harsh reality of these United States.

La. Floods Should Be Wake-up Call

By Amy Goodman

Albuquerque (NM) Journal, August 27, 2016

The floodwaters are receding in Baton Rouge, La., and the scale of the damage is revealing itself. It has been described as a 1,000-year flood, leaving at least 13 people dead and close to 60,000 homes ruined.

According to Weather Underground meteorologists Jeff Masters and Bob Henson, August has been the wettest month in Baton Rouge in 174 years, when records were first kept. They added, "Since June 1, Baton Rouge has picked up an amazing 40.95 inches – more rain in three months than downtown Los Angeles has recorded over the last five years (38.79 inches)!"

President Barack Obama traveled there Tuesday. "I think anybody who can see just the streets, much less the inside of the homes here, people's lives have been upended by this flood," he said after walking through part of the devastated city.

While Obama was criticized by his political opponents for not visiting Baton Rouge earlier, it's what happened one day later, in nearby New Orleans, that should have everyone concerned.

The Obama administration conducted a massive auction of offshore oil and gas drilling leases in the Gulf of Mexico.

The irony was not lost on Antonia Juhasz. She is a journalist and energy analyst who has long tracked the multinational petroleum corporations engaged in deep-water oil extraction.

"Following Obama #LouisianaFlood visit, Interior Dept to auction offshore drilling leases to 24 million acres in Gulf on 8/24 at Superdome," she tweeted, followed by, "After protests nearly shut down lease sale in March at Superdome, for first time, BOEM closes sale to public, makes viewing available online."

The BOEM is the federal Bureau of Ocean Energy Management. The agency was auctioning 23.8 million acres in the western section of the Gulf of Mexico, for deep-water oil and gas exploration and extraction.

We spoke to Juhasz on the "Democracy Now!" news hour, just before the auction began: "The timing of all of these events couldn't be more devastating," she said. "You have this historic flood. You have the president there to offer assistance from FEMA and to hopefully try and assist those on the ground, while at the same time the Interior Department is continuing the problems that help accelerate this storm in the first place, help make it more ferocious, help make these storms more frequent. And that, of course, is the burning of fossil fuels, leading to climate change."

Adding to the irony is the site of the auction: the Superdome. After Hurricane Katrina inundated most of New Orleans, this sports stadium became a refuge of last resort for an estimated 15,000-20,000 stranded residents.

While any one extreme weather event can't be directly attributed to climate change, storms, droughts, wildfires, floods and hurricanes all are expected to become more frequent and more severe as the planet warms. Those thousands in the Superdome after Katrina should be considered climate refugees. For this building now to house the auctions for drilling for more fossil fuels only adds insult to the injury.

There is growing grass-roots activism directly confronting the extraction and transport of fossil fuels, from communities in the Gulf of Mexico to the Great Plains in the northern U.S. and Canada.

On Tuesday, hundreds protested the planned auction. A huge banner floated beneath a balloon, reading "Another Gulf is Possible." Four demonstrators were arrested after refusing to leave the Interior Department office in New Orleans.

Last March, a similar auction of offshore Gulf drilling leases was almost canceled, as hundreds protested in the Superdome. That protest occurred just weeks after another massive flood hit southern Louisiana.

Meanwhile, in North Dakota, more than a thousand indigenous activists at the Sacred Stone Spirit Camp are blocking construction of the proposed $3.8 billion Dakota Access pipeline. They say the pipeline could contaminate the Missouri River, which provides water for the Standing Rock Sioux tribe and for millions more downstream.

Also on Wednesday, an action was held outside the federal District Court in Washington, D.C., where the Standing Rock Sioux tribe has filed suit against the U.S. Army Corps of Engineers over the pipeline.

Rather than enabling more dangerous deep-water oil extraction off the shores of the Gulf Coast, President Obama should be spending his remaining months in office doing everything in his power to reduce our national dependence on fossil fuels.

MAIN FEMA NEWS

NATIONAL NEWS

NBC: Severe Weather-Hermine. NBC Nightly News (9/5, lead story, 2:25, Snow, 16.61M) reported, "For millions of Americans up and down the East Coast this holiday, wasn't quite what they hoped. Churning surf, dangerous rip currents and high winds from Hermine closed down beaches and forced a lot of vacationers to leave the water on this Labor Day. It's the latest impact of a deadly storm that has lingered for days and the effect on businesses that rely on summer tourist dollars is still being tallied. Gabe Gutierrez is on New York's Long Island." NBC (**Gutierrez**) added, "Tonight, the stubborn storm is stalling off the northeast coast. Hermine now a post tropical cyclone that just won't quit, bringing fierce waves and rip currents." **Unidentified speaker**: "The wind's coming from the north and when you're out on the beach, it's hard to keep your head up and look." **Gutierrez**: "Though Hermine is 200 miles offshore, but a tropical storm warning is still under effect." **Unidentified speaker**: "I had taken the 9:30 ferry over and it was canceled." **Gutierrez**: "After Hermine made landfall in Florida on Friday, it's been blamed for two deaths, hundreds of thousands of people are left without power. Emergency declarations in eight states. On its way to Birmingham, the cruise ship Anthem of the Seas rocked by Hermine's waves." **Unidentified speaker**: "I ate in the restaurant, dishes going all over the place, it was pretty exciting." **Gutierrez**: "The choppy water kept people out of the water." **Unidentified speaker**: "When they start giving out the warnings, but Montock people are different, they go out anyway." **Gutierrez**: "In Ocean City, Maryland, the financial hit already stinging, several cancellations at this hotel on this last summer holiday weekend." **Unidentified speaker**: "This is our last hurrah, so to speak. This is our last big weekend to really make lasting memories." **Gutierrez**:

"In New Jersey, some business owners in Seaside Heights say their business was slashed in half." **Unidentified speaker**: "There was lots of people on the boardwalk, but people were on stand by, people going back to their homes and staying in town, and it hurt business a whole lot." **Gutierrez**: "This might be the best view of Hermine's strength off the coast of Long Island. Treacherous rip currents are expected along with beach erosion in the next few days."

NBC: Hermine-Forecast. NBC Nightly News (9/5, story 2, 1:00, Snow, 16.61M) reported, "Meteorologist Dylan Dreyer is joining us with more on where this stubborn storm is going next and the new hurricane that's out there now. Dylan?" NBC (**Dreyer**) added, "We'll talk about that one in just a second, but let's start with Hermine, which has been producing some heavier bands of rain across southeastern Massachusetts. It still has winds right now of 70 miles an hour. And it is still moving to the west-northwest. It will take a turn to the northeast tomorrow, then weaken as it passes very close to Nantucket Wednesday into Thursday. We are looking at sustained winds across eastern Long Island and Nantucket up around 40 miles an hour. Tomorrow, sustained winds around 30 miles an hour with even higher gusts, that will lead to more coastal flooding around high tide and beach erosion and those dangerous rip currents. Out in the Pacific, we have Hurricane Newton making landfall along Baja California tomorrow. Could produce some flash flooding Tuesday into Wednesday across the western United States."

ABC: Severe Weather-Hermine. ABC World News (9/5, story 5, 2:05, Vega, 14.63M) reported, "We want to turn now to the extreme weather. Hermine packing a punch this Labor Day weekend. Look at the high surf off Rhode Island. Coastal flood threats and tropical storm warnings tonight along the coast of New England. At least two people killed, including the driver of this tractor trailer, blown over by a gust of wind on a North Carolina bridge. And in Florida, where Hermine made landfall as a hurricane, tonight tens of thousands of residents still without power. ABC's Ginger Zee with the storm track in a moment, but first, ABC's Gio Benitez on the Jersey Shore." ABC (**Benitez**) added, "Tonight, winds from Hermine still packing a punch in parts of the Northeast. In Cape Cod, Massachusetts." **Unidentified speaker**: "Whipping across the beach, waves are picking up. No swimming ban in effect. But a surprising number of people are actually out here." **Benitez**: "Royal Caribbean's Anthem of the Seas got caught in the rough waters. They got out of it safely, but on the shore, rough, dangerous surf. And lifeguards warn, it could be deadly." **Unidentified speaker**: "As soon as you get waist deep, you are swept down the beach." **Benitez**: "And all of those businesses along the eastern coast; Fire Island already saying they've lost millions. And look at these empty beach chairs on the Jersey Shore. The beach itself, even more barren. And small businesses, like The Gables Hotel and Restaurant, taking a hit worth tens of thousands." **Sondra Beninati**, The Gables owner: "The phones were ringing like crazy and there was a mass exodus from the island." **Benitez**: "A mass exodus. And so, here are you, left with all these open tables that would have otherwise been filled." **Beninati**: "I know. I know. And people miss their holiday." **Benitez**: "And Cecilia, in the next few days, expect those dangerous rip currents and those big, rough waves are going to keep tearing down these massive dunes. Of course, they're going to need some repair for nor'easters in the fall and winter. Cecilia?"

ABC: Hermine-Forecast. ABC World News (9/5, story 6, 0:55, Vega, 14.63M) reported, "I want to bring in Ginger Zee. You have been tracking this for so long, and it's not over yet." ABC (**Zee**) added, "Feels like forever. And, yes, we've been tracking this system for weeks, Cecilia. Let's look at it. Hermine, still a post-tropical cyclone with max sustained winds of 70 miles an hour. It will weaken as it keeps turning back towards eastern Long Island, all the way through Cape Cod. And that's why we are still paying attention to this. You pile on water for two, three days, and you are going to erode those beaches, major rip currents. I wanted to show you this. We will see some rain bands coming out of this, 20 to 40-mile-an-hour gusts with it, and the shield of clouds makes it all the way back into parts of New Jersey. Then, we go to the middle of the nation, we've had big issues with severe weather the last 24 hours. Now flash flood warnings for Minneapolis. A quick look, Hurricane Newton, headed for Cabo San Lucas."

CBS: Severe Weather-Hermine. The CBS Evening News (9/5, story 3, 1:45, Quijano, 11.17M) reported, "Tonight, Hermine is still causing trouble after ruining a lot of Labor Day plans. They're still cleaning debris along the Florida Panhandle. Thousands are still in the dark. At least three people were killed in the South. The Northeast was spared the high winds as the storm headed out to sea. But Hermine is still sending large waves crashing in New England. Here's Demarco Morgan." CBS (**Morgan**) added, "As

Hermine turned up the northeast, she put a fizzle on the unofficial last day of summer. Thrashing waves and dangerous rip currents kept most beachgoers from New Jersey to Cape Cod out of the water. Geraldine Dry spent the weekend at Coney Island." **Geraldine Dry**, beachgoer: "No ocean for us. You step on to the water but the lifeguards were looking at us so we had to run off." **Morgan**: "Hermine kicked off with a punch, a category one hurricane that came ashore early Friday morning in Florida with 80 mile per hour winds and dumped up to 18 inches of rain. It quickly lost steam as it veered through the Carolinas. Still, tropical storm warnings were issued for shore towns up the East Coast. Overnight, rough waters brought to this Royal Caribbean cruise ship headed from New Jersey to Bermuda. Passenger Derek Peterman." **Derek Peterman**, passenger: "When you see the crew on a cruise ship starting to get dizzy and sick you know it has gotten pretty bad." **Morgan**: "The owner of the Beachcomber restaurant in Wellfleet, Massachusetts, is relieved to be spared by the brunt of the storm. Any concern when it was moving up Florida?" **Unidentified speaker**: "Pretty much from the beginning they thought it would stay east of us, which was fine with me." **Morgan**: "This slow-moving system is packing 60 mile per hour winds off the coast of New England, and could make landfall by Wednesday. Elaine, it's expected to head back out to sea later this week."

CBS: Severe Weather-Hermine.

The CBS Weekend News (9/4, lead story, 2:50, Quijano) reported, "Hermine is gaining strength and threatening to become a hurricane again. The slow moving system has already killed at least two people including a homeless man hit by a falling tree in Florida, and a truck driver blown off the road in North Carolina. Storm warnings and watches are posted along the Atlantic coast from North Carolina to Massachusetts. Tony Dokoupil is on the jersey shore." CBS (**Dokoupil**) added, "After mowing through Florida as a hurricane, tropical storm Hermine chewed the coast of Georgia and the Carolina Saturday bringing heavy rain and punishing wind. Rough seas rocked this Royal Carribbean cruiseship en route to New Jersey to Bermuda. Now Hermine may crash a five foot wall of water into the mid Atlantic. The storm is menacing picturesque coastline from Maryland to Massachusetts, much of it newly rebuilt after superstorm Sandy tore through in 2012. Tony Voz is the mayor of hard hit Seaside Heights, New Jersey. How bad was the damage when Sandy came through?" **Tony Voz**, Seaside Heights Mayor: "Devastating, devastating. This has all been rebuilt over the last four years. Approximately four years. The icon of it was destroyed. It was devastating." **Dokoupil**: "Sandy damaged thousands of homes in Ocean county. Residents are aren't taking any chances with Hermine which could bring record floods. Emergency coordinator Bill Hibell." **Bill Hibell**, Emergency coordinator: "Just out here making sure what is on the other side of the boardwalk but when the wind shifts I'm concerned with the bay area." **Dokoupil**: "New Jersey Governor Chris Christie put Hermine in context." **Chris Christie**, New Jersey Governor: "I want to make this clear, this is certainly not Sandy. Nowhere near that." **Dokoupil**: "But he warned against complacency." **Christie**: "The biggest thing today is for people not to be lulled by the nice weather that nothing is going to what, something is going to happen." **Dokoupil**: "The storm was already washing out holiday weekend plans." **Unidentified speaker**: "We didn't think it would be this bad with the waves being this, you know, tall. But I would imagine the undertow would take you right out, so yeah, I can understand their concern." **Dokoupil**: "Instead of one last weekend of summer fun, beaches for hundreds of mile as long the Atlantic coast are closed and swimming is forbidden. Farther south storm cleanup continued as officials tried to restore power to thousands of homes from Florida to Virginia. So far the mid Atlantic impact is economic. Adir Gallani runs Sea Side Eatery in the boardwalk in New Jersey." **Adir Gallani**, restaurant owner: "Today we were expecting a lot more people but because of the storm, a lot of people...we had a lot of cancellations from the hotel people." **Dokoupil**: "As it continues to churn up the Atlantic coast officials warning residents to secure loose items so they don't become project aisles, Elaine, in seaside heights many homes were elevated after sandy. For those that weren't, the fire department here has handed out about 500 sand bags."

CBS: Hermine-Forecast.

The CBS Weekend News (9/4, story 2, 1:05, Quijano) reported, "Meteorologist Pamela Gardner is tracking the storm at WBZ." CBS (**Gardner**) added, "The storm continues to churn up rough seas and some strong winds. Max winds 70 miles per hour moves east northeast at six miles per hour but it is soon to take a turn towards the mid-Atlantic states and that is where we have warnings and watches in place also across south eastern New England. The storm will continue to push slowly north, northwest and then linger to our south and west here. Tuesday morning, 75 mile per hour winds. That is equal to hurricane strength, Tuesday into Thursday, the storm exits out to sea and then we're done with it. But prior to this, we could pick up some beneficial rain in south eastern Massachusetts. One to two inches of rainfall, with the heaviest rain staying offshore and those max wind gusts, 50 miles per hour from time to time, right during labor day. And we're also dealing with some intense wind gusts of 35 to 60 miles per hour all along the coast, primarily lieu Tuesday morning with major erosion likely across the beaches."

ABC: Severe Weather-Hermine. ABC World News (9/4, lead story, 3:00, Llamas, 14.63M) reported, "We start again with the powerful and deadly storm, Hermine. The system making its mark up the eastern seaboard, killing two people since making landfall on Friday, including taking the life of the driver of this big rig in North Carolina. Hermine triggering a new state of emergency tonight. And dangerous rip currents and severe erosion. And a rocky ride for some cruise ship passengers heading to Bermuda. Ginger Zee in breezy points, queens, has been tracking the system for weeks now." ABC (**Zee**) added, "It seems like the storm that will never end, and for some, it's like the storm that never happened. So it's been sunny and beautiful Sunday for many folks because Hermine is still 350 miles south and east of me. It kept moving east, so some people got away from it. But that does not take away the impact at beaches from Virginia all the way to Nantucket. Tonight, big breakers taking a bite out of New Jersey beaches, eroding this shoreline in Holgate. In Ocean City, large waves, dangerous rip currents, and blustery winds busting beachgoers' labor day weekend. Rough waters rocking passengers aboard the Royal Caribbean's Anthem of the Seas, bound for Bermuda from New Jersey. And further south, in parts of Poquoson, Virginia, neighborhoods under water." **Unidentified speaker**: "We've dealt with this our whole lives, we just don't take our cars out in it." **Zee**: "Hermine first making landfall as a category one hurricane early Friday. It's been a night of tornado warnings, torrential rain. The eye just a couple of miles away. I was in the eye as it made landfall, tracking it all as 80-mile-per-hour winds battered the gulf coast, tossing trees. The gusting winds exploding and igniting power lines, leaving thousands without power. More than 60,000 in Florida still without service tonight. And claiming one life." **Unidentified speaker**: "Ferocious. Absolutely ferocious." **Zee**: "Pasco County, just north of Tampa, still under siege with flood waters after more rain from a different system fell on the already saturated land. The governor urging people to evacuate their homes. Not done yet, Hermine marching north, hitting Georgia and the Carolinas with tropical storm strength winds, gusts toppling this tractor-trailer in Columbia, North Carolina, killing the driver. And in Hatteras, the storm spawning a tornado, dumping these trailers into a creek and injuring four. I want to articulate again, this is not a rainstorm any longer. So, many will not see a drop of rain let alone clouds. But the beach erosion and advisories through Maryland, New Jersey, through parts of southern new England, that's what we're concerned about. As the waves push down the shoreline."

ABC: Hermine-New Jersey. ABC World News (9/4, story 2, 1:10, Llamas, 14.63M) reported, "And let's go to Long Beach Island, New Jersey. As some residents are taking no chances. Here's Eva Pilgrim." ABC (**Pilgrim**) added, "Tonight, Hermine taking aim at the same coastal communities devastated by Superstorm Sandy." **Glenn Knigge**, resident: "We've been here for some storms but it has never been anything like that." **Pilgrim**: "Glenn Knigge still remembers returning to the Jersey Shore, homes toppled, entire neighborhoods destroyed. Belongings turned into piles of trash. Four years later, rebuilt, but not willing to take any chances." **Chris Christie**, New Jersey Governor: "Our mode right now is sort of a wait and watch mode." **Pilgrim**: "Governor Chris Christie declaring a state of emergency, emptying out beaches that should be packed this holiday weekend. The biggest threats, coastal flooding, rip currents, and beach erosion. Crews working through the weekend to shore up sand dunes to keep the storm surge at bay. Knigge, cutting his weekend short, leaving tonight before high tide." **Knigge**: "I'll take a storm like this any day." **Pilgrim**: "Take a look. The dune here already taking a beating from the crashing waves this weekend. Tonight, the beach here is closed. Tom?"

ABC: Hermine-Forecast. ABC World News (9/4, story 3, 0:55, Llamas, 14.63M) reported, "We'll get back to Ginger Zee with more on the forecast and what to expect from Hermine." ABC (**Zee**) added, "That forecast includes Hermine taking a bit of a north and northwesterly track back towards say Eastern Long Island and parts of Nantucket. Again, it's still going to stay out to sea. This is no direct hit, there is no direct anything. You can see the coastal part of it will just be the piling of wind and waves. We put on the futurecast, you can see, very little rain makes it way on to the continental part of our states. As we go through even Monday, 7:00 pm, you'll start to see some rain bands in eastern Long Island and again right along the Connecticut and parts of the Rhode Island coast. Wind gusts could top 40 miles an hour. Some places could see 50. It's just, we don't get rid of Hermine until

Thursday. So, piling of waves and water, that's going to be the issue. Tom?"

CBS: Pacific Hurricane. The CBS Evening News (9/5, story 4, 0:15, Quijano, 11.17M) reported, "A new hurricane formed today in the Pacific. Newton is about 200 miles southeast of Cabo San Lucas, tracking toward the Baja Peninsula. Remnants could hit Arizona by Wednesday."

ABC: Oklahoma Earthquakes-Fracking. ABC World News (9/4, story 8, 1:35, Llamas, 14.63M) reported, "Next, a significant earthquake striking Oklahoma this weekend. Wells linked to fracking now shut down. With the frequency of these quakes on the rise, there's worry about new tremors. Here's Lauren Lyster." ABC (**Lyster**) added, "This sudden shaking sending stone plunging from the top of this building. The sides of homes crumbling right off. Food thrown from the shelves of this grocery store. The quake felt from Texas to Nebraska. The question tonight, was this 5.6 magnitude earthquake, the most powerful to hit the state in years and tied for the strongest ever, man made?" **Daniel McNamara**, US Geological Survey: "Several of the larger earthquakes in Oklahoma the last couple of years have been linked to waste water disposal from oil and gas production." **Lyster**: "Scientists say a lot of that water comes from a process called fracking. Much of the water injected back into deep wells in the ground, linked to tremors. More than 900 3.0 or larger quakes hitting the state last year. Jumping from just over 100 in 2013. And in response to the earthquake, dozens of wells ordered to be shut down around the epicenter."

CBS: Oklahoma Earthquake-Fracking. The CBS Weekend News (9/4, story 8, 2:10, Quijano) reported, "A powerful earthquake rattled central Oklahoma Saturday. The magnitude 5.6 quake centered near the city of Pawnee tied a state record and was felt in seven states. It also renewed concerns about the disposal of waste water from oil and gas production which has been linked to the recent outbreak of quakes in Oklahoma. Here's Mireya Villarreal." CBS (**Villarreal**) added, "Bricks and debris from historical buildings in Pawnee, Oklahoma, cover the sidewalks. This small city is the latest epicenter of concern over Oklahoma's oil and gas industry." **Unidentified speaker**: "It was bad, the whole thing was just going like this. It was bad." **Villarreal**: "In 2015 Oklahoma averaged 2.5 earthquakes a day with a magnitude of 3.0 or higher, a total of 907 at that rating shook the state last year compared to just two in 2008. Oklahoma geological survey experts have connected the increase of quakes from waste water from an oil and gas production known as hydraulic fracturing or fracking. Saturday's quake prompted the state to initiate the fastest shutdown of waste water wells in state history; 37 are scheduled to be closed." **Susan Hough**, US Geological Survey: "If we stopped all the activity tomorrow it is not like all the earthquakes would stop tomorrow." **Villarreal**: "Seismologist Susan Hough said induced earthquake mainly caused by waste water injection wells aren't as severe as naturally caused ones but that could change if Oklahoma and other states where fracking is booming don't take note. Is there a chance things could get worse?" **Hough**: "We expect that the regulatory steps are going to help overall, the rates are going go down and the hazard will go down. But we don't have an exact crystal ball so there is the potential certainly for more earthquakes. There is the potential for bigger earthquakes than what we have seen." **Villarreal**: "The 37 waste water wells set to be shuts down are just a small fraction of the 4,200 currently permitted by the state. Elaine, the Oklahoma governor has declared a state of emergency for the affected area."

CBS: Oklahoma-Earthquake. The CBS Evening News (9/3, story 4, 0:20, Morgan, 11.17M) reported, "An earthquake rattled central Oklahoma overnight. It was magnitude 5.6, centered near the city of Pawnee, and it was felt in seven states. Minor damage was reported, but no one was hurt. This is believed to be the strongest quake to hit the state since 1952. Oklahoma has seen a surge in earthquakes, blamed on the injection into the earth of waste water from fracking."

NBC: Oklahoma-Earthquake. NBC Nightly News (9/3, story 4, 1:50, Diaz-Balart, 16.61M) reported, "In the middle of the country, it was a jolting morning in parts of at least seven states as an earthquake in Oklahoma rattled millions and caused at least some damage there. The quake was the latest and the most powerful in a huge increase of earthquake activity in the region. Gadi Schwartz has that story." NBC (**Schwartz**) added, "Nearly a full minute of shaking in Oklahoma, a state now rivaling California as earthquake country." **Unidentified Speaker**: "It was the biggest one I've ever felt." **Schwartz**: "Today, a 5.6 quake in the small town of Pawnee. Emergency crews dousing fires while other areas saw 100-year-old stone facades come crashing down. And in grocery stores, aisle after aisle in shambles." **Unidentified Speaker**: "Right away, you could tell this was something different." **Schwartz**: "The quake fanning out across the country, felt in Nebraska, Missouri, Iowa, Arkansas, Texas, and as far as Illinois and Colorado. But more alarming than the shaking, an upward trend documented by the US Geological Survey showing a spike in Oklahoma earthquakes, a region with heavy oil and natural gas production. This year, for the first time, geologists putting out a map highlighting areas prone to human-caused earthquakes. They're linked to the practice of fracking and injecting waste water at high pressure deep into the earth." **Dan McNamara**, US Geological Survey: "There's a pretty strong chance this is also related to waste water injection." **Schwartz**: "Before 2000, the Sooner State saw about 2 quakes a year larger than a 3.0; in 2011, the number up to 63, and last year a staggering 890 quakes. The state recently ordered a cutback in waste water injection sites to reduce the number of earthquakes." **McNamara**: "Today, specifically, they're shutting down up to 40 wells within a five-mile radius of the epicenter." **Schwartz**: "Growing concern as the Heartland finds itself on increasingly shaking ground. Gadi Schwartz, NBC News."

Hermine Drifts Past Northeast, Threatening Storm Surge And 70 MPH Winds

By Alastair Jamieson, Alex Johnson And Elisha Fieldstadt

NBC News, September 5, 2016

Storm warnings were in effect Monday from Long Island to Nantucket as post-Tropical Cyclone Hermine drifted slowly up the Atlantic, promising near hurricane-strength winds, floods and beach erosion.

The National Weather Service said large waves will pound the East Coast from the mid-Atlantic states to southern New England through the end of Labor Day. Life-threatening rip currents are expected at least into the middle of the week, it added.

At 11 a.m. ET, Hermine was about 230 miles southeast of the eastern tip of Long Island, N.Y. The storm was moving northwest at 6 mph and expected to will "meander slowly offshore of the New England coast through Tuesday," according to the National Weather Service.

It said a storm surge of up to two feet was expected around the time of high tide late Monday along the coast of Long Island.

"The combination of a storm surge and the tide will cause normally dry areas near the coast to be flooded by rising waters moving inland from the shoreline," the NWS said in an advisory. "Along the immediate coastline, the surge will be accompanied by large and dangerous waves."

Connecticut's Gov. Dannel Malloy partially activated the state's Emergency Operation Center at the Hartford Armory at 6 p.m. Sunday to monitor conditions as Hermine churned to the south.

"We must keep our guard up," he said, according to NBC Connecticut. "I want to caution residents that weather conditions can change quickly. Especially with a slow-moving storm."

Tropical storm warnings were in effect Monday for the eastern seaboard from New Haven, Connecticut to Massachusetts's Sagamore Beach, Nantucket and Martha's Vineyard. Warnings were also in effect for Block Island and Long Island — from Fire Island Inlet to Port Jefferson.

Hermine was packing maximum sustained winds of 70 mph, just short of hurricane strength — and expected to remain near hurricane strength through Monday evening.

Beaches in Nantucket were closed for the Labor Day holiday, and New York City announced Monday that all beaches would be closed to swimmers for a third day Tuesday.

Boaters, meanwhile, were busy retrieving their vessels or making sure they were secure for Monday's holiday.

Hermine has been moving east since it battered Florida and the Carolinas on its way up the coast beginning Friday. But updated NWS projections indicated that its eastward motion is ending and that Hermine is likely to slowly veer northwestward through Tuesday back toward the Northeast coast.

Vacationers who fled the beaches Friday and Saturday kept business owners busy figuring out just how much revenue they'd lost.

"We live by the weather and we die by the weather," said Louis Gouvas, who's owned Louie's Pizza in Rehoboth Beach, Del., for almost 60 years.

A voluntary evacuation from Long Island's popular vacation destination Fire Island was lifted Monday, leaving some business owners on the narrow barrier island feeling that they had suffered from an overhyped forecast.

"Fire Island's small businesses from Davis Park to Kismet lost millions of dollars in lost revenue in what was supposed to be one of the most profitable weekends of the summer because of timid politicians who were slow to realize that the threat of Tropical Storm Hermine had dissipated," a Long Island Citizens for Good Government statement said.

But the storm, because it is slow-moving, remained unpredictable. Even under sunny skies, rip currents and storm-surges posed a threat, and the storm had a track-record of wreaking lasting havoc.

When it first made landfall as a hurricane in Florida Friday, the storm knocked out power to hundreds of thousands. Gov. Rick Scott said Monday that nearly 21,000 customers were still without power.

Just north of Tampa in Florida's Pasco County, residents were forced from their homes two days after the storm hit as run-off from flooded northern parts of the state washed over roads and through houses. About 2,500 residents were still displaced Monday.

Lenny Panzitta joined friends and neighbors who spent Sunday sawing up downed trees that were blocking the roads on Whitemarsh Island, off the Georgia coast.

Then "the electricity went off, and I said I hope another tree didn't come down where they were clearing, and it did," Panzitta told NBC station WSAV of Savannah.

"It knocked the transformer down," he said. "Nobody was hit, but now we have wires hanging over the road so you can't get through."

North Carolina Gov. Pat McCrory and other state officials spent the day touring farm damage in the eastern part of his state, where thousands of acres of crops remained under water.

Two deaths — one in Florida and one in North Carolina — have been blamed on the storm.

Editor's note: An earlier version of this story attributed three deaths to the storm, but a fatality in South Carolina has not been confirmed to have been Hermine related.

Truncated Hermine TV Alert Wrongly Airs Evacuation Order

Associated Press, September 4, 2016

ISLIP, N.Y. (AP) — Federal officials in New York are investigating an emergency alert system after a mistakenly truncated message about storm system Hermine wrongly advised TV watchers on Long Island of an ordered evacuation, authorities said Sunday.

The Saturday night confusion started after Suffolk County emergency officials used an aspect of the Federal Emergency Management Agency's alert system for the first time since gaining access to it after Superstorm Sandy. They had hoped to advise viewers that a voluntary evacuation had been ordered for Fire Island, a thin strip of land off of Long Island's southern shore and a popular summertime destination.

Instead, somehow only the first part of the message — that an evacuation order had been issued — was broadcast to viewers. That the order was voluntary and only applied to those on Fire Island didn't make it onto TV screens.

"It caused obvious and expected questioning," said Gregory Miniutti, chief of communication for Suffolk County's Department of Fire Rescue.

Lauren Lefebvre, a spokeswoman for the FEMA region that covers New York, said officials are investigating what caused the message to be shortened.

It wasn't immediately clear how many TV viewers saw the wrong alert. Nearly 3 million people live on Long Island, with 1.5 million people in Suffolk County and another roughly 1.3 in Nassau County, census records show.

After county officials realized the misleading alert had been sent to the public around 7:30 p.m. Saturday from FEMA's Integrated Public Alert and Warning System, a clarifying alert was subsequently issued, Miniutti said.

Emergency officials gained access to the FEMA broadcast system after 2012, when Superstorm Sandy caused major devastation, flooding and even deaths across Long Island and throughout New York and New Jersey.

Suffolk County normally uses another system that sends out emergency messages and mass notifications through text messages or reverse 911 calls to landlines, Miniutti said. But on Saturday evening officials decided to use the FEMA broadcast system because most of the people on Fire Island are tourists and visitors who don't have landlines or sign up for emergency alerts on their phones, he said.

___

This story has been corrected to show that 1.3 million people live in Nassau County, not 321,000, and that the Suffolk County Department of Fire and Rescue chief's last name is Miniutti, not Miniutto.

Hermine Launches Waffle House Storm Team

By Jennifer Leslie

WXIA-TV Atlanta, September 2, 2016

NORCROSS, GA. – The Waffle House storm team left company headquarters in Norcross early Friday to roll to restaurants impacted by Tropical Storm Hermine in South Georgia, Florida and South Carolina.

By noon, Waffle House had 14 restaurants without power. It was able to open two stores that had to close in the morning.

"If we have running water and gas, we can stay open and cook even when the power goes out," said Pat Warner, Vice President of Culture at Waffle House. "We're there 24/7 the rest of the year, so we want to be there when a storm goes through. We owe it to our customers and associates."

Warner said company officials have already been in touch with FEMA to help monitor the "Waffle House Index."

That's a term coined by FEMA Director Craig Fugate when he led emergency operations in Florida.

"If a Waffle House restaurant is open or on generator, emergency workers can keep moving," explained Warner. "If it's closed, they need to stop and start working."

Warner said the company began developing its emergency response plan in 1989 when Hurricane Hugo made landfall near Charleston, South Carolina.

"Katrina was the biggest test," Warner said. "We had to shut down 107 restaurants because of evacuations. We lost 7 restaurants."

Waffle House now has a mobile command center to help restore communications between headquarters and restaurants impacted by a storm like Hermine.

Warner said power is the main issue with this storm. The company's first priority is getting generators to restaurants that lost power.

"Staying open helps everyone get back that sense of normalcy," he added.

Hurricane Newton Heads Toward Resorts In Mexico's Baja

By Ignacio Martinez

Associated Press, September 5, 2016

CABO SAN LUCAS, Mexico (AP) — Hurricane Newton soaked Mexico's western Pacific coast Monday and took aim at Baja California's twin resorts of Los Cabos, where residents and officials braced for a possible direct hit two years after they were slammed by a major storm.

Newton's maximum sustained winds increased to 75 mph (120 kph), according to the U.S. National Hurricane Center in Miami, making it a Category 1 hurricane. The storm was centered about 215 miles (350 kilometers) southeast of Cabo San Lucas and San Jose del Cabo and was moving northwest at 16 mph (26 kph) on a forecast path that would bring it near or over the area Tuesday morning.

Some foreign tourists were still walking the streets of Cabo San Lucas on Monday even as workers began nailing plywood over the windows of businesses.

Los Cabos Mayor Arturo de la Rosa Escalante said storm shelters were being opened and low-lying areas would be evacuated.

"There is no need for mass buying," he said. "There is enough food and fuel for the next 20 days."

Los Cabos police were stationed at shopping malls to guard against the kind of looting that occurred after Hurricane Odile struck the area in 2014 as a Category 3 storm, with 125 mph (205 kph) winds.

Earlier Monday, as a tropical storm, Newton dumped torrential rains that prompted some 100 people to evacuate their homes and damaged residences in Uruapan in the Pacific coast state of Michoacan, the city government reported.

Some roads were blocked by flooding and mudslides in the neighboring state of Guerrero, where some people were evacuated by helicopter. No deaths were reported in either state.

A hurricane warning was in effect for Cabo San Lucas and the nearby coastline. Coastal portions of five Mexican states could see 5 to 10 inches of rain, with isolated maximums of 15 inches, the hurricane center said.

Newton was expected to cross over the peninsula and enter the Gulf of California, also known as the Sea of Cortez, on Wednesday. The hurricane center said the storm was likely to continue north into Arizona as a tropical depression later in the week.

Nearly $9 Billion In Damage After Catastrophic Louisiana Flooding, Gov. John Bel Edwards Tells President Barack Obama

Associated Press, September 3, 2016

BATON ROUGE (AP) — Louisiana Gov. John Bel Edwards says his state had more than $8.7 billion in damage from catastrophic flooding in August, and the figure will increase as officials finish assessing damage to roads and other public infrastructure.

The governor's office Saturday released a letter Edwards sent Friday to President Barack Obama.

Edwards asks that Congress this month approve $2 billion in federal aid for Louisiana for housing, economic development and infrastructure. He says it's a "very reasonable request," adding to other federal programs assisting in Louisiana's flood recovery.

Edwards says damage has been documented to more than 55,000 houses, and that could double as aid applications and inspections continue. More than 80 percent of damaged homes lacked flood insurance because most were outside the flood plain. More than 6,000 businesses flooded.

Analysis: Flood Recovery Programs Complex, Require Patience

By Melinda Deslatte

Associated Press, September 4, 2016

BAKER, La. (AP) – FEMA. SBA. NFIP. To navigate the complex world of flood recovery takes not only an acronym dictionary, but patience, persistence – and a binder to keep track of the applications.

People have to sift through local, state and federal regulations that range from home permitting requirements to elevation standards.

Since flooding ravaged south Louisiana more than three weeks ago, thousands of storm victims can't live in their houses. Transportation, jobs and children's school plans were disrupted. On top of that hair-pulling stress, add in the complexity of available assistance programs, and it's easy to see how discouraging the recovery can be.

U.S. Rep. Garret Graves, a Republican who represents much of the most heavily damaged region, said aid has been too sluggish so far.

"People need to know what type of assistance is going to be available to them. That's something that's key," Graves said after taking a Florida congressman on a tour of the damage. "You have people sitting around that don't have a home, that don't have cars, that don't have wardrobes. In some cases, their employers are under water."

At a Tuesday night meeting in Baker for flood victims, representatives of at least eight state and federal agencies – a myriad of acronyms – offered information about disaster programs and recovery tips in a pile of handouts so numerous they covered a long table.

Mayor Darnell Waites, in office only since July, had questions of the agencies assembled, as did a dozen flood victims who arrived at the local school seeking information.

One man talked of seeing a flood insurance adjuster, then hearing nothing. A woman worried her flood insurance wouldn't cover her losses and wanted to know what else is available. Another woman wanted to get a FEMA mobile home while she repaired her house.

People scribbled down phone numbers and websites in notebooks and on scraps of paper trying to keep track of the programs and agencies they should contact.

For the homeowners who had flood insurance, their path to recovery started by filing claims with the National Flood Insurance Program, NFIP for short. But fewer than one in five homeowners with damage is estimated to have paid for the flood coverage.

The main stop for anyone with flood damage, with or without insurance, is the Federal Emergency Management Agency, FEMA.

Hundreds of millions of dollars in aid has been approved so far, with more than 130,000 households registered for assistance. But the grants offered there max out at around $33,000 and the average that people have received in past disasters falls far short of that amount.

FEMA aid is aimed at helping people get more stable, not at making them whole.

"It's not an insurance program. It's to get people back on their feet," said Gov. John Bel Edwards. He said even with available FEMA aid, people are "still going to have a hard time."

That's where the U.S. Small Business Administration steps in. The SBA offers low-interest disaster loans to homeowners, renters and businesses for repair and replacement of damaged property. Repayment terms can be up to 30 years. Applications are separate from FEMA registration.

For housing help, the Edwards administration has set up a FEMA-funded "shelter at home" program that offers up to $15,000 in modest, quick repairs to help people get back into their houses while they do larger reconstruction work. That requires a separate registration beyond the FEMA application, and the aid doesn't count against other available FEMA assistance.

Homeowners with more severe damage who aren't able to tap into the "shelter at home" program could be eligible to set up a FEMA-issued mobile home in their yards.

At the meeting in Baker, it quickly became clear that some folks were farther along in cleanup and recovery than others.

One man spoke of an elderly neighbor who didn't leave during the flood, hadn't gutted his home and refused to leave even as mold climbed up the walls and onto the ceiling. Officials with state and federal agencies rushed to get the address, saying they'd send someone to his home.

People And Governments In More Parishes Can Get FEMA Help

Associated Press, September 2, 2016

BATON ROUGE, La. (AP) — Individuals who suffered flooding damage in St. James and West Baton Rouge parishes in the August floods are now eligible for federal disaster assistance.

The Federal Emergency Management Agency made the announcement Thursday, adding them to a list of 20 other south Louisiana parishes that have been declared federal disaster areas.

People can go to www.DisasterAssistance.gov to register or call 1-800-621-3362 any day from 6 a.m. to 10 p.m. Residents of the parishes who have already registered don't need to act again.

The agency also says that governments in Assumption, Cameron, St. Charles, St. James, St. John the Baptist and West Baton Rouge parishes are now eligible for FEMA assistance in repairing damage to public assets or cleaning up, joining a list of 20 other parishes.

FEMA Offers Temporary Work To Louisianians To Help In Flood Recovery

Associated Press, September 4, 2016

BATON ROUGE, La. — Louisiana residents looking for temporary work have an opportunity to help in the flood recovery process by working with the Federal Emergency Management Agency.

FEMA is advertising through the Louisiana Workforce Commission to fill open positions at its disaster recovery offices in the state.

These are full-time jobs, but of temporary duration, with benefits including health insurance, sick leave and holiday pay.

To apply, visit www.laworks.net, the website for Louisiana Workforce Commission – Helping Individuals Reach Employment.

FEMA is seeking a variety of skilled workers, including administrative assistants, construction cost estimators, construction trade workers, drivers, environmental experts, historic preservation specialists and travel agents.

Candidates must be U.S. citizens, 18 years or older and have a valid government identification card, such as driver's license or military ID.

The Latest: Red Cross Casework Starting For $125/person Aid

Associated Press, September 4, 2016

BATON ROUGE, La. (AP) — The Latest on Louisiana flooding (all times local):

3:15 p.m.

The American Red Cross says it's beginning recovery casework to help people connect with services other than the Federal Emergency Management Agency.

Senior vice president Harvey Johnson says the Red Cross can also provide $125 per person to people who have major damage to their homes but don't qualify for federal disaster assistance. That would mean $500 for a family of four.

The agency says the recovery casework is starting even as volunteers continue to operate shelters, serve meals and distribute relief supplies in south Louisiana.

Regional executive Joshua Joachim says "People in Louisiana are ready to take the next step, to try to get back to a normal life, to have a home again instead of staying in a shelter."

He says anyone affected for the floods should apply to FEMA.

The Federal Emergency Loans Louisiana Isn't Getting

By Danny Vinik

Politico, September 2, 2016

Fifteen miles outside of Baton Rouge, on a road washed out by the flooding that submerged a nearby highway, Robert Formeller is rebuilding his property, or trying to. An insurance agent and sole proprietor of the real estate company Formeller Investments LLC, he owns three small office buildings in Denham Springs, Louisiana. Having lived through the disastrous Louisiana floods in 1983, Formeller invested almost $100,000 raising the office buildings above historic flood levels.

But the torrential rains that struck the Baton Rouge region in August flooded the buildings anyway. He's been spending days and nights since working to recover his business before mold sets in and his tenants move out. "He's tapping into every loose dollar he can find to get things moving and get on top of the recovery," said his daughter, Nicole Gould.

As millions in disaster-relief money pours into Louisiana, you might think a good federal disaster policy would get money to people like Formeller almost immediately, giving them enough short-term cash to keep their businesses afloat. And you'd be right: experts on disaster recovery think getting money quickly to small-business owners is crucial not just for the owners, but letting the community around them recover. One oft-cited study by the Federal Emergency Management Agency found that 40 percent of small businesses that close for even a day after a disaster never reopen.

"[Small businesses] are so much the part of a fabric of a community," said Robin Keegan, the former executive director of the Louisiana Recovery Authority, which was created following Hurricanes Katrina and Rita to oversee the recovery. "In most cases, the recovery of a community is almost a mission rather than a profit-making endeavor. They need the resources to be part of that recovery."

After Katrina, Congress passed a new law designed to do just that. The Immediate Disaster Assistance Program, 1 of 3 emergency loan programs created under a 2008 law, was supposed to funnel money to small businesses within 36 hours of a disaster, with a government guarantee for the lender. But as POLITICO reported last year, that program — which was supposed to be piloted in 2010 — had never actually managed to secure a loan for any small business.

Congress held a hearing on the problem last summer, but today, as Louisiana faces its worst disaster since Katrina, the emergency loan program still hasn't secured a single loan. What has happened, instead, is a bit of buck-passing. Last year, Congress was pointing the finger at the Small Business Administration, which was supposed to administer the loans but had never actually helped issue one. This year, Congress has the agency's feedback on what went wrong — but it's unclear what, if anything, lawmakers plan to do about it.

So far the SBA has spent $3 million on the program. Its eight-year history has become a story of slipshod reporting and missed deadlines. And it still hasn't funneled a dollar to people like Formeller.

"That would be critically important, especially getting it up in 36 hours," said Charles D'Agostino, executive director of the LSU Innovation Park, a research complex in Baton Rouge. "We don't have a week. We don't have two weeks."

The emergency loan program was invented to fill a gap. Businesses actually can get disaster relief from Washington, but it takes a while — after Superstorm Sandy, the Government Accountability Office found it took nearly 40 days for SBA to review disaster loan applications from small businesses. In that time, they can lose inventory, miss payroll, lose all their customers, and usually need short-term cash to keep the doors open. The Small Business Disaster Response and Loan Improvements Act was supposed to do that, offering loan guarantees to local banks, with a goal of approving the money for businesses within 36 hours.

Congress appropriated $3 million in the 2010 fiscal year for the SBA to pilot the program, and the agency actually released rules for it the same year. But the pilot never happened, with the agency repeatedly pushing back its projected launch date. The GAO investigated the delays and delivered a scathing report against the agency in 2014. The watchdog pinpointed two main problems: faulty computers and an unwillingness among lenders to participate.

Last summer, despite the GAO report, the program still hadn't made a loan, and POLITICO reported that lawmakers were increasingly concerned with SBA's ability to get it up and running. The agency said it had solved its computer problems but had been unable to persuade banks to take part in the program under the strict financial terms required by law. It reiterated that complaint this summer, sending a letter in July to Rep. Nydia Velázquez (D-N.Y.), the ranking member of the House Small Business Committee, outlining comments it had received from lenders who refused to participate in the program.

Is the program doomed because banks simply won't help? The National Association of Government Guaranteed Lenders, a trade association for banks and other institutions, sent detailed objections to the loan rules in a comment to the SBA, and went so far as to argue that disaster funding shouldn't be their job, writing: "providing loans to assist such individuals and entities is an inherently governmental function and is a role unsuited to private commercial lenders."

But on the ground, it's not clear how big an obstacle that really is. In Baton Rouge, Nicole Gould said that a local bank quickly said it could lend her father the emergency money he needed — even without the government guarantee. She'd originally tried to help her father apply for disaster loans from the SBA, but gave up on trying to fill out the forms after spending hours on them and getting only halfway through. "There's not enough time to spend on a 10-hour application," she said. "We just talked to the banker and he promised us the lending is on and their rate is going to be very close to 4 percent anyway. They already have the first mortgage on the property. They have a vested interest in the property succeeding."

The state of Louisiana has had good luck working with local banks as well. After Katrina, the state set up a temporary bridge loan program to help small businesses recover. Like the Immediate Disaster Assistance Program, the Louisiana program worked through private-sector lenders. Its terms were slightly better than the federal program: The SBA law offers banks an 85 percent repayment guarantee; Louisiana offered 100 percent. The program delivered $10 million in loans to 407 small businesses within three weeks.

The idea does require some community spirit on the part of banks: Even with a 100 percent loan guarantee, "It's not going to make the banks any money," said Adam Knapp, who was the policy director for the Louisiana Economic Development agency at the time and now is the CEO of the Baton Rouge Area Chamber,. "They are doing it out of their goodwill."

The NAGGL did not respond to a message asking for further comment on its objections to the loan program.

By all accounts, the SBA has improved its processes for responding to natural disasters in recent years. It has been quick to set up field offices in the region and put out information for how affected businesses can apply for loans. But the flooding in Louisiana is putting the agency to its first major test since Sandy. Through Thursday, the agency had received 801 applications for its traditional business disaster loans. So far it has approved only 92 for a total of $7.9 million; it declined 243, with 415 still pending. (51 were withdrawn.) Carol Chastang, a spokesperson for the agency, said the applications are being processed within five days — not quite 36 hours, but far better than the SBA's processing times after Sandy. However, keeping up that pace will be critical as more small-business owners file their applications. The agency received nearly 15,000 applications after Sandy. While the numbers aren't expected to reach that high in the Baton Rouge region, Knapp estimates that 12,000 small businesses were affected, so the number of applications could rise considerably in the coming weeks.

"Getting cash out within about a week is really the time frame you want," said Michael Hecht, the president of Greater New Orleans, a regional economic development group.

So the complaints do seem to have improved at least one part of the disaster lending program. As for the quicker emergency loan program launched in 2008? The short answer is that it's been punted: The SBA has told Congress what the problems are, so in theory the impetus for fixing them falls on Congress. Potential solutions to make it more appealing to banks include increasing the loan guarantee and loosening restrictions on the loan term and associated fees, which would require changes to the law. In November, Congress passed legislation, sponsored by Velázquez, that made small changes to the traditional disaster loan program and gave businesses affected by Sandy another chance to apply for aid, but did not address the loan programs created under the 2008 legislation.

In response to questions about whether Congress was considering changes to the program, Velázquez said in a statement, "We should look carefully at potential changes to improve these other disaster loan initiatives, encourage private sector involvement and create more options for businesses impacted by disasters. It is inexcusable that the agency has taken 8 years and still hasn't been able to get this program off the ground. If legislative changes are necessary, we can look into them and I would hope my Republican colleagues would be open to such an effort, but regardless the agency needs to make this initiative a priority." Any changes will ultimately be up to the committee chairman, Steve Chabot (R-Ohio), and Republican leaders in Congress. Chabot's staff said they were awaiting another GAO report in October.

Meanwhile, in Baton Rouge, the community is coming together to help each other in any way it can. D'Agostino, who has worked with small businesses in the region for almost 30 years, said he and his staff drove around handing out Visa gift cards and household goods like toothbrush and toothpaste—the small items that are critical for people to get their lives back on track but are easily overlooked. He offered small businesses a computer with Internet and a phone to call suppliers, cancel deliveries and inform customers their orders would not arrive on time.

"It's a monumental thing," he said, adding, "This is not going to be a short process."

After publication, Rep. Velázquez's office provided an additional statement on the need for the Small Business Administration to prioritize the emergency loan program. The story has been updated to include it.

Louisianans Spurn Government And Crowdsource Aid In Wake Of Floods

Cajun Army harnesses power of social media to rescue people and locals have turned to sites such as Amazon to raise necessities and distribute them

By Matthew Teague

The Guardian (UK), September 2, 2016

The flooded people of southern Louisiana are losing a race against mold, hunger and homelessness, driving an already insular region into deeper mistrust of the federal government and other outside agencies.

The flood in mid-August was one of the first natural disasters of its scale in the US to unfold in the fully connected world of social media, and many residents are finding that the response of the Red Cross and federal groups has not kept up with the speed of the internet. So residents are turning to technology to organize themselves and, to some extent circumvent the government.

More than 150,000 houses were affected by the flood. On Wednesday, state lawmakers blasted the response from the Federal Emergency Management Agency (Fema) in a House homeland security committee meeting. Congressman Clay Schexnayder said Fema's mobile home program has set up just one mobile home in his district.

"We're not expediting it fast enough to get these trailers in place. I'm confused as to why it's taking us so long to do that," he said. "Having one trailer set up so far out of all of this, one trailer – where I'm from I don't call that satisfactory at all."

Julie Ralph of Saint Francisville, Louisiana, said: "I know there are some people who lost everything and are getting pretty much peanuts from Fema. It's a drop in the bucket compared to what they lost."

So people are crowdsourcing, she said, bypassing Fema and the government. Ralph created a page on Amazon for donations of supplies such as toilet paper and toothbrushes, which she then distributes through the affected area.

The social media bypass began in the immediate aftermath of the flood, with the instant formation of the "Cajun Navy", a group of hunters and fishermen who used their boats to rescue tens of thousands of stranded residents.

They used Facebook and Google maps to pinpoint where people needed help, with locations and detailed information for rescuers like: "Rescue urgency:

Moderate as of 2am Aug 15. Personal Information: 2 are elderly, 1 has alzheimers and diabetes … They are in room over garage."

It's impossible in these still-early days to measure the exact impact of social media on the recovery in Louisiana – say, how many Twitter posts resulted in rescues or donations or volunteer hours – but government agencies are scrambling to get a sense of it; they're realizing dialing 911 for help isn't the only option now, or even the fastest.

Emergency responders are studying a group called Louisiana Task Force 1 Urban Search and Rescue Team, or LATF-1, an emergency response team that realized the importance of social media during the floods while others didn't. "LATF-1 was a governmental entity that could help, and in many cases, it was the only one responding via social media," team members wrote in an industry debriefing.

During the floods the taskforce started receiving requests for help via Facebook messages, which was unprecedented. "After the first message was received LATF-1 leadership made the decision to respond to all messages as they were received," they wrote. That created a logistical nightmare, but along the way they started to develop new tools for social media: ways of streamlining requests, feeding them to other agencies and weeding out false alarms.

On a larger, national scale, technologists are now puzzling over how to use all that data. "This year's Louisiana flood was one of the first attempts to leverage data from the population and then integrate that data back to a place where the public could use it," according to Government Computer News, a publication for technology experts. "The next generation of citizens and community leaders will have the skills and tools to be able to make better informed decisions."

Meanwhile, in Louisiana, people continue to make it up as they go.

Ralph, who distributed supplies via Amazon, said people are now crowdsourcing demolition and repairs. As floodwaters receded and rescue turned to recovery, the Cajun Navy evolved to become the Cajun Army.

"As it stands, the boots on the ground are the Cajun Army," Ralph said, "and anyone who can be summoned through Facebook or Twitter by people sharing how bad things are to get people to come over and help."

The Cajun Army's volunteers have created a website and its Facebook page has more than 5,000 members, who post requests and responses like this one Wednesday, from Todd Rossnagel in Baton Rouge: "Greetings Army. I have someone who needs a hand pulling wet insulation out from under her raised house. It's in Baton Rouge on S Tiger Bend. Please let me know if you can come help out and I can share the contact info."

Three hours later he wrote: "I received a phone call – thanks."

Together Baton Rouge is a collective of community groups now focused on tearing out damp home interiors.

The group said in a statement Wednesday: "Fifteen of the 288 house-gutting requests we've received so far on gutcheckLA.com, or 5% of the total, are living – literally sleeping – in mold-infested homes. All of those 15 are elderly women, most with medical issues. Projecting that percent out, there are probably between 1,600 and 2,600 people, mostly seniors, in that situation. That's a public health crisis."

In response, Together Baton Rouge is hiring 100 people for one month, at $15 an hour, to gut 2,000 homes. Donations will cover the quarter-million-dollar cost, they said, and as more donations come in they will hire more people.

Among those affected is Amber Cassady, whose home in Denham Springs has black mold that has bloomed across her ceiling, making the youngest of her five children sick, she said, and her car is completely flooded. Fema said on Wednesday that it is essentially handing out money as fast as it can – $202m so far. But Cassady said she was denied a Fema grant because although the water came up to her threshold it didn't enter at the ground floor; instead the rain, pouring at a rate up to 3in an hour, leaked in through her roof.

Now she stays home with the children, ranging in age from two weeks to seven years, because school and daycare are all canceled for the foreseeable future. Her husband, Shane, does auto body work and hitches rides every day.

"Fema told me to get a small loan, but I don't have credit. I have a low income," Cassady said on Wednesday. "I get depressed because I can't take my kids anywhere and I'm scared this mold is going to get us all sick."

Louisiana Residents Weigh Options For Temporary Housing

NPR, September 2, 2016

Louisiana residents displaced by the recent floods started registering for state and federal programs to provide a way to live in or near their flood damaged homes.

ARI SHAPIRO, HOST:

Tens of thousands of people are still homeless in Louisiana because of last month's floods. Many moved in with relatives when their homes were damaged. Others went to shelters. Federal and state officials are offering other housing options. None is a quick fix, as WWNO's Ryan Kailath reports.

RYAN KAILATH, BYLINE: After her house took on 4 feet of water, Maura Lewis and her family were rescued by boat and taken to a shelter. Now she's at a federal disaster center in Baton Rouge, where contractors are on hand to advise homeowners on how long restoring their home might take.

MAURA LEWIS: Four to six months and maybe even closer to a year's what I'm thinking because it's just so many homes that have been destroyed.

KAILATH: Lewis and her three kids are staying with her in-laws, but they can't stay there forever. She wants a place of her own by next week. At another disaster center, Arthur Williams is in line at 8 a.m. in a Chicago Bulls shirt and basketball shorts. He learns that FEMA, the Federal Emergency Management Agency, will spring for a hotel room. Here's the catch.

ARTHUR WILLIAMS: All the hotels are booked around here forever, booked all the way up to Lafayette.

KAILATH: The Chicago native lives and works in a suburb of Baton Rouge, 90 minutes from Lafayette.

WILLIAMS: And our kids go to school here so that would be – and I work here – and that would be impossible.

KAILATH: There is another option – one of FEMA's new manufactured housing units. These mobile homes have built-in sprinklers and other safety measures to distinguish them from the notorious trailers used after Hurricane Katrina. Idea is, park the trailer on your lawn and live there while you rebuild. Arthur Williams doesn't qualify for one because his property is in a flood zone. Maura Lewis does qualify, but...

LEWIS: How long is it going to take, you know? You're talking about thousands and thousands of people who – a trailer would fit on their lot, too.

KAILATH: So far, exactly one family has gotten a trailer. One. The state is now touting another program called Shelter at Home. It pays for basic fixes to make your home livable – if you're approved. Even then, as Richard Carbo of the governor's office cautions, it's not a home makeover.

RICHARD CARBO: This will not make your home the way it was before the storm. This is not a rebuild. It is a repair.

KAILATH: This program was first tried after Superstorm Sandy. Rapid Repairs, as it was called, was beset with problems like shoddy construction and lost paperwork. Jimmy Oddo helped implement the program. At the time, he was a New York City councilman. He says when he read that Louisiana is trying something similar...

JIMMY ODDO: Just reading this has made me slightly nauseous and raised my blood pressure significantly. Good luck, Louisiana.

KAILATH: So far, more than 14,000 Louisianans have signed up. Not Maura Lewis.

LEWIS: Shelter at Home? It could be an option, but with the requirement of no more than 2 feet, it probably will not be.

KAILATH: The requirement she's referring to says if your home took on more than 2 feet of water, it has to be reviewed before you're eligible. And the list of other eligibility requirements is two pages long. When I asked Arthur Williams if he was interested in Shelter at Home...

WILLIAMS: This is my first time hearing about that. So where do you suggest we have to go for that?

DARLENE TULLIER: Unfortunately, FEMA and the state are both trying to help, but they aren't working together so...

KAILATH: That's Darlene Tullier. She shuttles between disaster centers now, playing emergency case manager for 13 family members.

TULLIER: I wish there were a person that each of these families could go to who could handle their process.

KAILATH: Maura Lewis finally found a solution. She's renting an apartment. FEMA will defray a good chunk of her rent, and she'll need that. She's still paying the mortgage on her flooded house. But that FEMA assistance only lasts for two months. For NPR News, I'm Ryan Kailath in Baton Rouge.

La. Lawmakers Will Seek More Flood Recovery Money

WWL-TV New Orleans, September 2, 2016

WASHINGTON — Louisiana lawmakers plan to push for more federal aid to speed flood recovery efforts when they return to Congress next week.

Congressional, state and local officials are still assessing damage from last month's flooding that killed 13 people and destroyed tens of thousands of homes and businesses. But congressional lawmakers say they're working on legislation and met Monday with Gov. John Bel Edwards to discuss early needs.

"It's going to require a tailored response," said Republican Rep. Garret Graves, whose district includes hard-hit Baton Rouge. "The needs are pretty extraordinary."

With less than five weeks before Congress breaks for elections, Louisiana lawmakers vow to step up pressure to get colleagues to act.

"I certainly appreciate that this (effort) is going to have some challenges associated with it just because of the schedule, elections and everything else," said Graves. "But I'll tell you there's no doubt that these funds are needed yesterday."

Graves said the legislative wish-list will likely include Community Development Block Grant disaster recovery aid. Lawmakers also hope to create a task force of state, federal and local officials to coordinate and track recovery efforts.

To bolster their case, Louisiana members of Congress will invite colleagues in key positions to tour damaged communities. Rep. John Mica, R-Florida, who chairs a subcommittee with jurisdiction over the Federal Emergency Management Agency, toured Monday with Graves. California Rep. Maxine Waters, top Democrat on the Financial Services Committee, visited last Friday.

"You can't understand the gravity of this unless you see it," Graves said.

Last week, Democratic Rep. Cedric Richmond, who also represents parts of Baton Rouge, and Waters called for a field hearing in the city. Republican Sen. David Vitter, chairman of the Small Business and Entrepreneurship Committee, will hold a hearing Sept. 15 in Washington.

Lawmakers are also looking to tap economic aid and housing-repair programs and explore U.S. Army Corps of Engineers projects to stabilize the Amite and Comite rivers.

Steve Ellis, vice president of Taxpayers for Common Sense, predicts there will be bipartisan support.

"I don't think anybody wants to appear to be hard-hearted," he said. "I would be surprised, considering the level and the scale of the loss, that there wouldn't be something."

Ellis said Congress could attach recovery aid to a continuing resolution to fund government operations, to emergency legislation to fund anti-Zika efforts, or to some other legislative vehicle.

"If they needed to do anything more with the flooding in Louisiana, they certainly could," he said. "But that's going to be more short-term, and what we really need is some systemic changes in how we approach disasters."

One possible complication, Ellis said, is that lawmakers who represent areas outside Louisiana that also have been hurt by recent flooding may push "to get a piece of the pie.''

President Barack Obama, who recently visited the state, urged Louisiana Republicans to press GOP leaders on recovery measures. That would include Louisiana Rep. Steve Scalise, the majority whip and the No. 3 Republican in the House.

Obama said federal disaster relief funds will cover short-term cost, but "the issue is going to be less what we need to do in terms of paying for the short term — it's going to be the medium-term and the long-term rebuilding."

Obama declared 20 parishes major disaster areas. More than 128,000 households have registered for FEMA aid.

FEMA Administrator Craig Fugate said the state may also need help from other federal agencies to fund emergency road repairs and provide housing aid. He said it's too early to determine final costs, but FEMA already has approved $385 million in aid to flood victims.

"That should be some indicator ... this is not going to be a small event; it's going to be rather large," he said.

Graves said he expects most of the recovery efforts can be funded with existing pots of money or by shifting funds.

Lawmakers are looking to model legislation introduced after other disasters, including Superstorm Sandy, which hit New Jersey and New York in 2012.

"That storm absolutely deserved a recovery package," Graves said.

Rep. Bill Pascrell, D-New Jersey, called on Congress to cut short its recess to help flood victims, even though some Louisiana lawmakers voted against a Sandy disaster aid package.

Pascrell said the lawmakers "found the dumbest reasons to vote against" the package, but that shouldn't count against them.

"I'll have a Jersey moment with those guys, believe me," Pascrell said. "But retribution has no place in politics. It's petty politics when I'm being asked, why help these people when these three congressmen didn't help you in your state."

Republican Sen. Bill Cassidy was still a member of the House when lawmakers voted in January 2013 on the Sandy aid package. He, Scalise and Republican Rep. John Fleming opposed an amendment offered by Rep. Rodney Frelinghuysen, R-New Jersey, that provided nearly $34 billion for block grants. The Louisiana lawmakers said some of the Sandy aid measures included funding unrelated to the 2012 storm.

Their votes against Sandy aid may come back to haunt them now that their state faces similar needs, said Pearson Cross, a political scientist at the University of Louisiana at Lafayette.

"There may be some people who have longer memories and look at that and say, payback time,'' he said. "One would hope not."

Graves said most communities will be affected in some way by a disaster.

"Disasters happen, and folks need to know that when you have a catastrophic disaster, something on the scale of a 1,000-year event, that your government is going to be there to provide some degree of a safety net," he said.

Benchmark Used To Gauge Flood Size Can Muddy The Water

By Jo Craven McGinty

Wall Street Journal, September 2, 2016

Full-text stories from the Wall Street Journal are available to Journal subscribers by clicking the link.

Flooding Of Coast, Caused By Global Warming, Has Already Begun

By Justin Gillis

New York Times, September 3, 2016

Huge vertical rulers are sprouting beside low spots in the streets here, so people can judge if the tidal floods that increasingly inundate their roads are too deep to drive through.

Five hundred miles down the Atlantic Coast, the only road to Tybee Island, Ga., is disappearing beneath the sea several times a year, cutting the town off from the mainland.

And another 500 miles on, in Fort Lauderdale, Fla., increased tidal flooding is forcing the city to spend millions fixing battered roads and drains — and, at times, to send out giant vacuum trucks to suck saltwater off the streets.

For decades, as the global warming created by human emissions caused land ice to melt and ocean water to expand, scientists warned that the accelerating rise of the sea would eventually imperil the United States' coastline.

Now, those warnings are no longer theoretical: The inundation of the coast has begun. The sea has crept up to the point that a high tide and a brisk wind are all it takes to send water pouring into streets and homes.

Federal scientists have documented a sharp jump in this nuisance flooding — often called "sunny-day flooding" — along both the East Coast and the Gulf Coast in recent years. The sea is now so near the brim in many places that they believe the problem is likely to worsen quickly. Shifts in the Pacific Ocean mean that the West Coast, partly spared over the past two decades, may be hit hard, too.

These tidal floods are often just a foot or two deep, but they can stop traffic, swamp basements, damage cars, kill lawns and forests, and poison wells with salt. Moreover, the high seas interfere with the drainage of storm water.

In coastal regions, that compounds the damage from the increasingly heavy rains plaguing the country, like those that recently caused extensive flooding in Louisiana. Scientists say these rains are also a consequence of human greenhouse emissions.

"Once impacts become noticeable, they're going to be upon you quickly," said William V. Sweet, a scientist with the National Oceanic and Atmospheric Administration in Silver Spring, Md., who is among the leaders in research on coastal inundation. "It's not a hundred years off — it's now."

Local governments, under pressure from annoyed citizens, are beginning to act. Elections are being won on promises to invest money to protect against flooding. Miami Beach is leading the way, increasing local fees to finance a $400 million plan that includes raising streets, installing pumps and elevating sea walls.

In many of the worst-hit cities, mayors of both parties are sounding an alarm.

"I'm a Republican, but I also realize, by any objective analysis, the sea level is rising," said Jason Buelterman, the mayor of tiny Tybee Island, one of the first Georgia communities to adopt a detailed climate plan.

But the local leaders say they cannot tackle this problem alone. They are pleading with state and federal governments for guidance and help, including billions to pay for flood walls, pumps and road improvements that would buy them time.

Yet Congress has largely ignored these pleas, and has even tried to block plans by the military to head off future problems at the numerous bases imperiled by a rising sea. A Republican congressman from Colorado, Ken Buck, recently called one military proposal part of a "radical climate change agenda."

The gridlock in Washington means the United States lacks not only a broad national policy on sea-level rise, it has something close to the opposite: The federal government spends billions of taxpayer dollars in ways that add to the risks, by subsidizing local governments and homeowners who build in imperiled locations along the coast.

As the problem worsens, experts are warning that national security is on the line. Naval bases, in particular, are threatened; they can hardly be moved away from the ocean, yet much of their land is at risk of disappearing within this century.

"It's as if the country was being attacked along every border, simultaneously," said Andrea Dutton, a climate scientist at the University of Florida and one of the world's leading experts on rising seas. "It's a slow, gradual attack, but it threatens the safety and security of the United States."

One night eight years ago, Karen Speights, a Norfolk resident, was sitting at the dinner table with her mother, eating crab legs dipped in butter and a tangy sauce. She felt a tingle.

"Ma!" she cried. "My feet are wet!"

Her mother laughed, but then she felt it, too: a house that had not flooded since the family moved there in 1964 was soon awash in saltwater. Ms. Speights initially hoped that flood was a fluke. Instead, it turned out to be the first of three to hit their home in less than a decade.

Nowadays, Ms. Speights, an administrative worker at a utility company, is wondering how to get her and her mother out of the neighborhood before the water comes again, without taking too much of a financial hit. And she pays more attention to problems that once seemed remote, like warnings from scientists about the rising sea.

"I believe it because we're living it," Ms. Speights said as she sat on her sofa, nodding toward the nearby tidal marsh that sent water into her living room. "The water has to be rising if we never flooded, and all of a sudden we've flooded three times in eight years."

Because the land is sinking as the ocean rises, Norfolk and the metropolitan region surrounding it, known as Hampton Roads, are among the worst-hit parts of the United States. That local factor means, in essence, that the region is a few decades ahead in feeling the effects of sea-level rise, and illustrates what people along the rest of the American coast can expect.

The biggest problems involve frequent flooding of homes and roads. As the sea rises, hundreds of tidal creeks and marshes that thread through the region are bringing saltwater to people's doorsteps.

This summer, on a driving tour of Norfolk and nearby towns, William A. Stiles Jr. pointed to the telltale signs that the ocean is gradually invading the region.

He spotted crusts of dried salt in the streets, and salt-loving marsh grasses that are taking over suburban yards. He pointed out trees killed by seawater. He stood next to one of the road signs that Norfolk has been forced to install in recent years, essentially huge vertical rulers so people know the depth of floodwaters at low-lying intersections.

"There's just more and more visible impacts: water on the street, water that won't clear from the ditch, these intense rain events, higher tides," Mr. Stiles said.

"It's beginning to catch the attention of citizens, restaurant owners, business people, politicians. There's just much more of a conversation, and it's not just in the politically safe places. It's everywhere."

Mr. Stiles, known as Skip, heads a local environmental group, Wetlands Watch. At his suggestion, students at two local universities began looking at the neighborhood where Ms. Speights lives, Chesterfield Heights. It has had little history of flooding, but that is starting to change as the water rises.

The plan the students developed has morphed into an ambitious program to safeguard the neighborhood, and another nearby, for decades. The Obama administration recently gave Virginia more than $100 million to carry the plan out. The administration has also enlisted one of the universities, Old Dominion in Norfolk, to spearhead a broad effort at better planning.

But the size of that grant illustrates the scope of the problem confronting the region, and the country: protecting a single neighborhood from rising water can easily cost tens of millions of dollars. Sea walls and streets may have to be raised, or movable gates built along waterways so they can be closed at times of high water.

While the Obama administration is trying to create a few showcase neighborhoods, there is no sign Congress is prepared to spend the money that cities and states say they need: tens of billions of dollars just to catch up to the current flooding problems, much less get ahead of them. Norfolk alone, a town of 250,000 people, has a wish list of $1.2 billion — or about $5,000 for every man, woman and child in the city.

As the national response lags, experts warn that the flooding is putting the country's defense at risk.

Several studies have concluded that Naval Station Norfolk, the world's largest naval base, is profoundly threatened by rising seas, as are other coastal bases. The Pentagon has managed to build floodgates and other protective measures at some facilities. But attempts by the military to develop broader climate change plans have met fierce resistance in Congress.

That was the case this summer, when an effort by the Pentagon to appoint officers to take charge of climate resilience led to a House vote prohibiting taxpayer money from being spent on the plan.

"When we distract our military with a radical climate change agenda, we detract from their main purpose of defending America from enemies" like the Islamic State, said Mr. Buck of Colorado, the Republican congressman who sponsored the measure. His amendment passed the House 216 to 205, though the Senate has yet to agree to it.

Many people in Congress, almost all of them Republicans, express doubt about climate science, with some of them promulgating conspiracy theories claiming that researchers have invented the issue to justify greater governmental control over people's lives. So far, this ideological position has been immune to the rising evidence of harm from human-induced climate change.

The Obama administration has been pushing federal agencies, including the Pentagon, to take more aggressive steps. But without action in Congress, experts say these efforts fall far short of what is required.

"In the country, certainly in the Congress, it hasn't really resonated — the billions and perhaps trillions of dollars that we would need to spend if we want to live on the coast like we're living today," said David W. Titley, a retired rear admiral who was the chief oceanographer of the Navy, and now heads a climate center at Pennsylvania State University.

"I haven't seen any evidence that there is serious thought about this: what does a world of three, four, five feet of sea-level rise look like?"

Deep in a thicket of trees on an out-of-the-way island in the Florida Keys, a diesel engine roared to life. Soon a drill bit was chewing through ancient limestone, pulling up evidence from the geological past that might shed light on the future of the planet.

On a sultry day in March, Dr. Dutton, the University of Florida scientist, stood watch over the drilling operation, inspecting her samples as they emerged from the ground. She spotted fossilized corals, proof that what is now the dry ground of Lignumvitae Key was once underwater.

With taxpayer funding from the National Science Foundation, Dr. Dutton is chasing what might be the most urgent question in climate science: How fast is the ocean going to rise?

"Is it going to happen in decades, or centuries, or a thousand years?" Dr. Dutton asked as she took a break to eat lunch on a tarpaulin spread under the trees. "This will give us an example to say, 'Well, the last time this happened, here is how long it took.'"

The opponents of climate science in Congress, and the tiny group of climate researchers allied with them, have argued that the concerns of thousands of mainstream scientists about the future are based on unproven computer forecasts.

In reality, their concerns are based in large part on mounting evidence of what has happened in the past.

Through decades of research, it has become clear that human civilization, roughly 6,000 years old, developed during an unusually stable period for global sea levels. But over longer spans, coastlines have been much more dynamic.

During ice ages, caused by wobbles in the Earth's orbit, sea levels dropped more than 400 feet as ice piled up on land. But during periods slightly warmer than today, the sea may have risen 70 or more feet above the current level.

Dr. Dutton and other leading scientists are focused on the last sea-level high point, which occurred between the last two ice ages, about 125,000 years ago.

After years of surveying ancient shorelines around the world, scientists determined that the sea level rose by something like 20 to 30 feet in that era, compared with today. But how long did it take to make that jump? That is the question Dr. Dutton, using improved research techniques, wants to answer.

Large parts of the Florida Keys are simply ancient coral reefs that grew during the period of high seas, and were exposed when the levels fell. Trees, roads and houses now sit atop the old reefs. By recovering samples, Dr. Dutton hopes to date a sequence of corals as they grew along with the rising sea, potentially revealing the rate at which the water rose.

The research, likely to take years, may supply a figure for how quickly the ocean was able to rise under past conditions, but not necessarily a maximum rate for the coming decades. The release of greenhouse gases from human activity is causing the planet to warm rapidly, perhaps faster than at any other time in the Earth's history. The ice sheets in both Greenland and West Antarctica are beginning to melt into the sea at an accelerating pace.

Scientists had long hoped that any disintegration of the ice sheets would take thousands of years, but recent research suggests the breakup of West Antarctica could occur much faster. In the worst-case scenario, this research suggests, the rate of sea-level rise could reach a foot per decade by the 22nd century, about 10 times faster than today.

In 2013, scientists reached a consensus that three feet was the highest plausible rise by the year 2100. But now some of them are starting to say that six or seven feet may be possible. A rise that large over a span of decades would be an unparalleled national catastrophe, driving millions of people from their homes and likely to require the abandonment of entire cities.

In essence, by revealing how sensitive the ice sheets have been to past warming, Dr. Dutton's research may answer the question of whether such a rapid jump is possible.

Along those parts of the United States coast that are sinking at a brisk clip, including southern Louisiana and the entire Chesapeake Bay region, including Norfolk, the situation will be worse than average. On the Pacific Coast, a climate pattern that had pushed billions of gallons of water toward Asia is now ending, so that in coming decades the sea is likely to rise quickly off states like Oregon and California.

Along the East Coast, scientists with the National Oceanic and Atmospheric Administration say that many communities have already, or will soon, pass a threshold where sunny-day flooding starts to happen much more often.

"When you look at the historical record, there's no trend saying the flooding is going down," said Dr. Sweet, the NOAA expert. "The trends are all very clear. They're going up, and they're going up in many of these areas in an accelerating fashion."

Late last year, in Paris, nations reached a landmark global agreement to cut emissions. It is fragile, and might not survive if Donald J. Trump is elected president in November; he has vowed to scrap it.

But the air is already so full of greenhouse gases that most land ice on the planet has started to melt. So even if the deal survives, it will, at best, slow the rise of the sea and perhaps limit the ultimate increase. Many climate scientists, including Dr. Dutton, believe a rise of at least 15 or 20 feet has already become inevitable, over an unknown period.

As Brad Tuckman walked the piece of land in Fort Lauderdale where he is building a grand new house, he pointed toward the canal that wraps around three sides of the property.

It is scenic, with yachts plying the water, yet as the sea has risen, street flooding in the area has become a recurring nuisance. So before starting construction, Mr. Tuckman said he spent nearly a half-million dollars to raise the sea wall and truck in dirt to elevate the land.

"The predictions of what's going to happen over the next 20, 30, 40 years — it's real," said Mr. Tuckman, the founder of a company offering creative services to the retail industry.

In South Florida, among the worst-hit parts of the country for sunny-day flooding, people are not waiting for state or federal help. Those who can afford it are starting to act on their own. A company, Coastal Risk Consulting, has cropped up to advise them, and is offering its services nationally.

Cities and counties in the region have formed an alliance and enlisted professors to help them figure out what to do. They are hiring "chief resilience officers," an idea pioneered by the Rockefeller Foundation in New York, which is paying some of the salary cost.

In Miami Beach and Fort Lauderdale, as well as in older Northern cities like Boston and New York, tidal marshes and creeks were filled in a century or more ago to make new land, and it is in these areas — "back bays," as some of these spots are called — where the flooding is happening first.

That is because they remain the lowest spots in the landscape, vulnerable to the rising water nearby. Old drain pipes empty into the tidal creeks, and at high tide the water can back up through these pipes, bubbling into the streets seemingly from nowhere.

In Miami Beach, the city engineer, Bruce A. Mowry, has come up with a plan for combating the flooding. He rips up problematic streets, raises them with extra dirt and repaves them, installing new drains and giant pumps that can push water back into the bay. The approach has already been shown to work in several neighborhoods.

A controversy has erupted about whether Miami Beach is polluting Biscayne Bay with the water, but the city is pushing ahead. Miami Beach plans to spend at least $400 million on its plan by 2018, raising the money through fees imposed on homes and businesses.

The huge county government for the region, Miami-Dade County, is developing its own resilience strategy, one likely to cost billions. It has committed to rebuilding some of its decaying infrastructure, like a sewage plant, in a way that safeguards against sea-level rise and storm surges.

"I don't see doom and gloom here; I see opportunity," said Harvey Ruvin, the clerk of courts for Miami-Dade County, who has been a leading voice on the environment in Florida for a half-century, and who recently led a county task force on sea-level rise. "We're talking about the most robust possible jobs program you can think of, and one that can't be outsourced."

Many of the Republican mayors in the region are on the same page as Democrats in requesting national and state action on climate change, as well as pushing local steps. James C. Cason, the Republican mayor of Coral Gables, has convened informational sessions that draw hundreds of residents, and he has received no complaints for his stance.

"I hope in coming years when we have to spend a lot of money, the citizens will still support it," Mr. Cason said in an interview.

Still, his city, and others in South Florida, have some hard decisions to make.

Some property owners cannot afford to raise their sea walls, putting their neighborhoods at increased risk of flooding. Will they be held legally responsible when floods do occur? A strict policy could force some people from their homes. Conversely, should public money be spent to do the work, even if it largely benefits private property?

Just for streets, storm drains and the like, South Florida governments will need to raise billions, and they have yet to figure out how. Moreover, if the rise of the sea accelerates as much as some scientists fear, it is doubtful the cities will be able to keep up.

The region has one mayor, Philip K. Stoddard of South Miami, who is a scientist himself — he studies animal communication at Florida International University — and has been a close reader of scientific papers about climate change since the 1990s.

"I remember lying in bed at night thinking, 'I hope this isn't real,'" Dr. Stoddard, a Democrat, recalled. "I hope other data comes in that contradicts it. It took me several years to get my head around it and say, 'Oh, God, it is real.'"

Now he is focused on easing the pain for South Miami, with a $50 million system of sewer pipes to replace septic tanks threatened by the rising water table.

"You can play it really badly and let unpleasant things happen earlier," he said. "Or you can push them off by doing some infrastructure repairs and some thoughtful planning."

He is, though, under no illusions about the long-term fate of the region he calls home.

"We're putting enough heat in the ocean to send water over us, no question," Dr. Stoddard said. "Ultimately, we give up and we leave. That's how the story ends."

Jackson Considers $1.67 Million Grant To Hire 9 Firefighters

Associated Press, September 4, 2016

JACKSON, Mich. (AP) — A southern Michigan city that has sharply reduced the number of firefighters over the past decade is trying to determine the financial ramifications if it accepts a $1.67 million grant to hire nine firefighters for two years.

Jackson public information officer Will Forgrave told the Jackson Citizen Patriot (http://bit.ly/2ccnj7V) the concern is pension costs. He says even though the firefighters could only be employed two years, they would still pay into the pension plan.

City Councilman Daniel Greer says officials don't want to hamstring taxpayers with unanticipated costs.

The grant is from the Federal Emergency Management Agency. The city accepted a $1.9 million grant in 2012. It has since eliminated all the positions it created.

The city had nearly 40 firefighters in 2006. It now has 15.

Yakama Tribal Members Evicted In Push To Clean Up Housing

Associated Press, September 5, 2016

WAPATO, Wash. (AP) — For the past few weeks, Stephanie Shippentower and Billie Shoulderblade have been helping renovate homes at a Yakama Nation housing project they were recently kicked out of.

Shoulderblade was long behind on her rent. Shippentower had been caught living there with her dad after she was evicted two years ago because of repeated police calls to her house.

Both women are among a wave of evictions that began in June, the largest the tribe has seen in recent history, with more than 270 tribal members kicked out of housing across the 1.2 million-acre reservation for violating lease agreements.

Yakama Nation Housing Authority officials acknowledge that rules have long been ignored in at least one housing project, where overcrowding from unauthorized tenants for years fostered drug use, crime and unkempt properties. While the push to clean up housing projects is sudden and drastic, housing officials say something has to be done to improve the quality of life.

Many of those evicted — more than 50 families and 130 people, including Shoulderblade and Shippentower — have taken refuge at the tribe's RV park in Toppenish, where they are living in tents and are allowed to use restrooms, showers and laundry facilities. The tribe is providing food daily.

"My kids aren't used to sleeping in tents," said Shoulderblade, who's living in a tent with her seven children and husband. "It broke my heart to see my kids suffer."

A bulk of the evictions have been at the Apas Goudy housing project in east Wapato, where a massive $14 million project to refurbish the tattered homes there is underway.

But funding requirements for the project prompted Housing Authority to step up enforcement of rules that had largely gone ignored for years at Apas Goudy, where crime and drugs have been common, said Housing Authority Director Craig Dougall.

That funding comes from a state housing program, in which investors fund the project upfront and reap tax credits for 10 years. Those investors set requirements to ensure that the property is maintained, and the requirements are more stringent than regulations set by the Federal Housing Authority, Dougall said.

"I'd say my position is we're running into extreme social conditions, social problems with crime, with overcrowding. A number of these issues come with a housing park with no rules being enforced," Dougall said. "The Housing Authority has had a hand in these poor conditions. Hopefully (we're) honest enough to admit our own failures and strong enough to address them."

Now Shoulderblade and Shippentower have taken jobs with the Housing Authority as a way to make up for past problems and get back into permanent housing.

On this recent afternoon, both women labored on demolition work inside one home at the project.

"My hope is to get back on my feet and take care of my kids," said Shippentower, mother of five children ages 2 through 19. "It's going good now — I'm learning a lot. It's temporary, but they said (the job) could go into a permanent position."

Providing a safe and clean environment for children is the thrust behind refurbishing the housing project, Dougall said.

"There are many good tenants and we owe them the protections provided by our policies and mission for safe, decent and affordable housing," he said. "We are not judging our membership, but we are responsible for the conditions of our housing parks. We need to take this responsibility more seriously."

But the move hasn't come without controversy. Several evicted tribal members who refused to be identified, saying they feared retaliation from the Housing Authority, said they were given little notice and that the enforcement action was too sudden and harsh.

Not so, says grants and housing coordinator Debra Whitefoot. Letters were sent to tenants early last year informing them of the refurbishing project, funding requirements and what would be expected to meet those requirements and community meetings were held, she said.

"They knew over a year ago that this was coming," she said.

Big challenge

The Yakima Housing Authority is a tribal agency that operates 750 homes and duplexes stretching across the Lower Yakima Valley from Toppenish to White Swan. It also provides repairs and other services to more than 3,000 homes occupied by tribal members on the reservation. Housing employs about 120 workers, most of them tribal members.

Apas Gaudy, a project of 58 homes and duplexes on Larena Lane on Wapato's east side, has been one of its biggest challenges.

Meth labs were discovered at four houses during the evictions, each costing some $40,000 to clean up, Housing Director Dougall said, largely blaming outsiders who found tribal members and the project easy prey for drug operations because of lax policing.

"This one housing project is not reflective of Yakama culture at all," said Dougall, who was hired by the tribe a year and a half ago. "This is a complete collapse. I said we've got to address the drug culture here because we've got too many good people, children and elders living here too."

The housing project has a capacity of about 180 residents, but the housing authority found more than 500 people living there. For example, 18 people were found living in one three-bedroom home, Dougall said.

"We can't blame tribal members who take in family in need, as is customary within the Yakama culture. We can blame ourselves for not having the discipline to build more housing for our membership over the years."

Of the authorized tenants at Apas Goudy, 178 were evicted, he said.

There's also an accumulation of about $1.5 million in unpaid rent at all housing projects, he said.

But the neighborhood hasn't always been that way, said Whitefoot, who lived there as a child in the early 1970s. "Years ago, Apas Goudy was a nice housing project," she said. "The park was nice — everyone had nice yards, lawns."

Lease agreements require tenants to pass drug tests, remain current on rent and take care of the property. But Whitefoot said changes in tribal leadership over the years as well as differences in philosophy over how to run the Housing Authority led to less enforcement.

Now, current tribal leaders want to change that.

Tribal leaders couldn't be immediately reached for comment before leaving for North Dakota, where they've joined other tribes in protest of a proposed oil pipeline.

"They see a need to send a different message to the people, provide a positive environment for the children," Whitefoot said.

Controversial move

Evictions were triggered in the process of relocating tenants in the housing project to temporary housing elsewhere while homes are being refurbished, Dougall said.

Those who are current on their rent and pass drug tests will be placed temporarily in alternative housing until their homes are rebuilt, while those who don't meet the requirements are evicted, he said.

"But there was no initial plan to launch a mass eviction," Dougall said.

If anyone in a family failed a drug test, the entire family was evicted, he said.

A combination of unpaid rent and failed drug tests was responsible for most evictions, Whitefoot said.

But a group of seven evicted tenants who met with a Yakima Herald-Republic reporter argue otherwise. They wouldn't provide their names for publication, citing a fear of being blacklisted from future tribal housing programs.

They complained of unfair drug tests, and accused the Housing Authority of training staff "on the spot" to conduct urinalysis drug test. They also say collection cups were used by more than one tenant, and merely rinsed after each use.

Evicted tenants say Housing refused to accept the negative test result from a professional drug treatment facility of a woman who was contesting Housing's results. Tenants disputing screenings had the option of getting tested by an outside professional, and Housing would pay for it if the results were negative.

Housing Director Dougall said two tenants were tested again by a local drug treatment provider. Results of one test were overturned after learning the tenant was on prescribed painkillers while the other was upheld because of cocaine use, he said.

Dougall said he has staff that are certified by a national drug test supplier in administering drug screens.

Evicted tenants also blame housing for not fulfilling its side of lease agreements, letting homes fall into disrepair.

Residents described homes where people had to use chains for door locks; where asbestos was common in the walls and flooring; where, no matter how much they cleaned, cockroaches would manage to get inside through the connecting pipes between structures.

"Housing allowed the homes to go down the way they did," one evicted tenant said. "They never took care of Apas. They knew about the problem; they knew about the situation in the homes."

Dougall said often tenants refused to allow Housing Authority staff into the homes to conduct annual inspections and that overcrowding led to much of the wear and tear.

"As a result, the home deteriorates far more than you would expect," he said.

Tenants can appeal evictions before a board appointed by the Yakama Tribal Council. Although several tenants challenged the evictions, none were overturned. Dougall said.

Controversy often surrounds efforts to clean up housing projects, said U.S. Department of Housing and Urban Development spokesman Leland Jones in Seattle.

"My impression would be the Yakama Housing Authority isn't the first to face this challenge and it won't be the last," he said. "To its credit, I think what the Yakama Housing Authority is saying 'We're not going to take it anymore,' and that's a tough thing for a housing authority to do. They're putting their foot down."

Cultural change

Standards have to be met if living conditions are to improve in the housing project, Dougall said. To that end, Housing is offering those evicted employment, education programs and even access to substance abuse recovery programs.

Displaced tenants who commit to substance abuse treatment or any other needed services to help them improve will be allowed into transitional housing and eventually into permanent housing, Dougall said.

In January, the tribe purchased a 41-unit apartment complex at 310 S. Ahtanum St. in Wapato that's now being used as transitional housing for the homeless as well as housing for homeless veterans.

The tribe also purchased the former armory on Division Street in Toppenish that it plans to use as a homeless shelter, and has applied for 100 trailers from the Federal Emergency Management Agency that will be used for transitional housing.

Dougall said tenants who have been evicted will be allowed into the shelter when winter comes. If they commit to treatment or agree to begin working off any unpaid rent, they will be allowed into transitional housing, and eventually into permanent housing if they stay the course, he said.

"Our sincere hope is that people who are affected by this get help and get all the services the tribe provides and develop a sustainable lifestyle," Dougall said. "If we can develop a generation of sustainable parents, then the children will see that and follow."

FEMA HOUSING

Louisiana Flood Did More Than $8 Billion In Damage

By T. Becket Adams

Washington Examiner, September 6, 2016

The Louisiana floods last month caused a $8.7 billion in damage, a number that is expected to increase as officials continue to take stock of the damage, Gov. John Bel Edwards announced this week.

Edwards' office revealed the estimated cost of the flooding damage Saturday when it released a copy of a letter the governor sent President Obama earlier this week.

The governor's letter to Obama asked for a "very reasonable" $2 billion in federal aid, and said it would be the bare minimum necessary to help the state recover from a flood that claimed the lives of 13 Louisianans.

"While short-term relief for immediate needs available through [Federal Emergency Management Agency] for items such as temporary rental assistance, essential home repairs and other disaster-related needs are greatly needed and greatly appreciated, our full recovery will not be realized without additional help," Edwards' letter read.

The storm has drawn a national response from relief organizations and other good Samaritans. It has even caught the attention of the two 2016 presidential candidates.

On the left side, Democratic nominee Hillary Clinton tweeted her sympathies and directed social media users to donations pages belonging to groups specializing in offering aid to disaster victims.

On the other side of the aisle, GOP nominee Donald Trump and his running mate, Indiana Gov. Mike Pence, went to Baton Rouge personally to assess the damage and speak with the victims.

At the time, Edwards caught some heat for seemingly referring to Trump's visit as a shameless photo-op. The Democratic governor later claimed he was not attacking the GOP nominee.

"I didn't dismiss his trip as a photo op. Before he came down I said I — we welcome him here," the governor said last month on CNN. "We want him to be helpful and we hope that doesn't turn into a mere photo op. So you got the story backwards," he added.

"Okay. So, was he helpful? Now that it's come and gone, was he helpful? Was it a good thing that he came down?" the CNN reporter continued. The Democratic governor agreed that, yes, Trump's visit was indeed helpful to the state.

"Yes, for the reasons that I stated earlier because it helped to shine a spotlight on Louisiana and on the dire situation that we have here, that it was helpful," he said.

"And I will tell you that I also appreciated the good phone call, the conversation that I had with [Indiana] Gov. Pence," he added in reference to Trump's running mate, "who was sincere and genuine when he called, and we spoke for a long time on Friday morning about their desire to be helpful."

As of Friday, there were a reported 50,000 houses in Louisiana damaged by the flood waters, Edwards' letter to Obama said.

"More than 80 percent of damaged homes lacked flood insurance because most were outside the 100-year flood plain," the Associated Press reported, adding "the majority of flooded households were for people with low to moderate incomes, and 20 percent were renters."

The governor said that number of houses damaged by the heavy rains will undoubtedly increase as additional applications pour in and state officials continue to inspect the damage.

"The majority of these citizens did not carry flood insurance, and I impress upon you that they will not be able to make critical decisions on rebuilding their homes and their lives without the availability of CDBG-DR funds," Edwards wrote to the president. "This additional assistance is critical to Louisiana's full recovery from these floods."

He also said that more than 6,000 businesses were damaged, and that more than 1,400 bridges are now in need of inspections. Edwards also told the president that approximately 30 state roads were washed away, and that there is roughly $110 million in damage to agriculture.

The storm, which began on Aug. 12, poured nearly 2 feet of rain in some parts of Louisiana during a 48-hour period, the AP noted, adding, "and the flooding has been described as the worst disaster in the U.S. since Superstorm Sandy struck the East Coast in 2012."

City Council Considering Acceptance Of $1.67 Million Federal Grant To Hire Firefighters

By Danielle Salisbury

MLive (MI), September 3, 2016

JACKSON, MI – Jackson has been awarded a $1.67 million grant to hire nine firefighters for two years beginning in February.

The City Council has to decide by October whether to accept the award, distributed by the Federal Emergency Management Agency's Staffing for Adequate Fire and Emergency Response program. It would bolster a shrinking firefighting force in Jackson, but any long-term financial impact on city taxpayers has to be considered, city officials said.

At issue is a "rapidly unsustainable increase in pension costs," according to a statement from city public information officer Will Forgrave. "The city believes it's critical to consider the city's future and make sure the decisions made today do not negatively impact citizens years down the road."

Though the grant, awarded Aug. 19, would pay the firefighters' wages and they might only be employees for two years, they would still pay into the city retirement plan, Forgrave said.

Resources are limited and the city has to be careful about adding employees to any department, City Councilman Daniel Greer said. "We don't want to hamstring the taxpayers into an unanticipated cost."

Firefighters have, in the past, supported the grant-funded hires, saying dwindling numbers affect services and safety.

It would be the second time the city collected such an award. The city accepted a $1.9 million, two-year grant in 2012 and has since eliminated all the positions it created.

The firefighter union president, when reached Friday night, said the union contests some of the figures contained in the city's Friday statement.

It highlighted a steadily dropping number of building fires from 2012 to 2015. Response times to home fires remained steady during that same period and in 2012 and 2013, just 4.5 and 2.5 percent of department calls were fire-related, according to the statement.

The union is to release its own statement next week.

Talk of the grant come as contract negotiations between the city administration and firefighters are underway. "Just like the SAFER grant before it, we want to have a contract before we accept the grant," Forgrave said.

Layoffs early this year brought the number of city firefighters to 15. As late as 2006, there were almost 40 department firefighters and until 2011, there were three operating fire stations. Now, there is one.

In the meantime, a fluctuating tax that funds firefighter and police pension costs has increased from 0.4 mills in 1974 to 7.2 mills, costing city property owners $4.1 million annually, Forgrave reported.

If accepted, the city, even if there is a fiscal emergency, could not lay off any firefighters during the period of the grant.

Jackson hired 13 firefighters using the last SAFER grant; four of them were able to move into permanent positions made available by retirements and one left to take a job in Summit Township.

The city was able to extend the employment period for about a year because it still had about $719,000 left in the grant when it expired in 2014.

Two firefighters were allowed to remain employed until early this year, but they too were laid off as a plan to collaborate with the Summit Township Fire Department never got off the ground.

Federal Grant Of $167,522 Will Help Firefighters

By Sherry Kuyt

MLive (MI), September 2, 2016

Thornapple Township Emergency Services has been selected to receive an Assistance to Firefighters Grant in the amount of $167,522 from the Federal Emergency Management Agency.

The grant will be used to replace all scuba units currently in service in the department, according to a department press release. Using the grant and a matching amount of $8,376, the department will be able to replace current scuba units that have reached the end of their life expectancy and have become costly to maintain.

This is the fourth time in six years the department has been successful in receiving the grant to assist in purchasing critical fire and EMS equipment.

Thornapple Township provides fire-rescue and ambulance (advanced life support) transport response for residents of Thornapple Township through a voted fire millage and service fees. In addition, a portion of Irving Township contracts with Thornapple Township for fire-rescue services.

The Emergency Services Department Building is located at 128 High St. in downtown Middleville. The building includes the apparatus bay, living quarters and office/administration space, including a state-of-the-art training room. In addition, the department owns an offsite training facility for flashover training, which was obtained through a previous federal grant.

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

Mobile Homes Take A Beating From Hermine. And It Wasn't The Wind

Miami Herald, September 4, 2016

When Larry Johnson and his wife moved to Bradenton three years ago, it was a dream come true to get waterfront property in Braden Castle Park. Most days, they have breakfast on their back deck while watching the sun rise over the Braden River.

But on Friday, the 68-year-old Johnson woke up hours before the sun would rise, although it would never make an appearance.

He, like others, worried what high tide would mean for the already rising water onto his property.

"I wanted waterfront not 'watertop,'" Johnson said.

At high tide, the water, far surpassing the seawall, was one third of the way up the ramp to his back deck. The deck and home are raised four feet above the water level.

"It came up into carport yesterday afternoon and then even higher last night," Johnson said.

The street in front of his home was completely underwater.

"It was knee-high when I walking down the street yesterday afternoon," Johnson said.

From his driveway, he could no longer see the boat launch and the dock, normally about four feet above the water level, was now about one foot above the water.

Manatee County Emergency Management officials are still working to assess the overall damage caused by Hermine.

"Mobile home parks seemed to take the biggest beating," Emergency Management Chief Don Hermey said Saturday.

Anna Maria Island also took a strong hit, with streets still flooded as of Saturday afternoon.

Hermey said residents need to report any structural damage to their homes to enable him to provide state and federal officials with the most accurate estimate of local damage.

In order for a disaster declaration to include Manatee County and get the Federal Emergency Management Agency to respond to the area, Hermey said he will have to be able to show impact with total damage estimates of about $1.3 million. Statewide, counties affected by Hermine are working to estimate the damages that will have to reach $25 million for it to be declared a disaster.

Hermey anticipates there are still some stragglers who have been unable yet to access damage to their homes, but they likely will do so this weekend.

Flooding wasn't the only problem experienced by mobile home residents during Hermine. In Swan Lake

Village, wind gusts damaged roofs of some mobile homes on Thursday.

Back in Braden Castle Park on Saturday, the flooding was receding, leaving a mess of vegetation debris behind. Johnson was out pressure cleaning the mess left on his driveway.

Johnson said that in the three years he has lived in Braden Castle since he and his wife moved from Minnesota, they had never seen flooding quite that bad. Sometimes the water behind his home will even recede out a good 25 feet, he said, exposing the river bank.

"That even makes this more impressive," Johnson said.

Post-Hermine Scams Reported In Taylor County

By Michael Moline

Saint Peters (FL) Blog, September 5, 2016

First comes the natural disaster. Then come the scam artists.

Someone is going around Taylor County claiming to represent the Federal Emergency Management Agency and demanding $150 to help people file Hurricane Hermine-related insurance claims, the state Department of Financial Services said Monday.

"There is no fee to file a FEMA claim and Floridians who encounter this scam should report it by calling the Department's Consumer Insurance Helpline at 1-877-693-5236," the department said in a news release.

"Consumers can also utilize this helpline to get free help with the filing of hurricane-related insurance claims," the agency said.

"It's unconscionable to think that someone would lie and cheat their way into profiting off of catastrophe but, unfortunately, it happens," state Chief Financial Officer Jeff Atwater said.

"I strongly urge all Floridians to remain vigilant against such scams, and to report all suspicious activity to authorities immediately. My office will thoroughly investigate reports of insurance and financial fraud and will prosecute the offenders to the fullest extent of the law."

The department's Division of Investigative and Forensic Services has dispatched fraud investigators to the county.

Officials expect that this is just the beginning, and urged policyholders to contact insurers directly to report storm damage.

"Be wary of strangers who call on the telephone or who knock on your door asking for personal information," the department said. "Ask for a telephone number so can you call back to verify that the entity is legitimate; hang up on anyone who refuses to coordinate in providing such information."

Demand to see contractors' credentials before you sign anything, the department said. Check them out with the state Department of Business and Professional Regulation, here.

"Beware of fly-by-night repair companies and hire only licensed and reputable people," the agency said.

Read everything carefully. Ask questions — like, who is responsible for paying, you or your insurer?

Understand that only a licensed public adjuster or attorney can file an insurance claim on your behalf. You can check credentials here. And you can find more information here.

When in doubt, call the department's insurance consumer hotline at 877-693-5236.

FLOODS

More Parishes Added To Disaster Declaration

Monroe (LA) News Star, September 2, 2016

Six parishes have been added to the federal disaster declaration from the August flood, U.S. Rep. Charles Boustany said in a press release late Friday afternoon.

Boustany, R-Lafayette, said St. James and West Baton Rouge were added to individual assistance designated parishes, which means flood victims are eligible for help from the Federal Emergency Management Agency.

Assumption, Cameron, St. Charles, St. James, St. John the Baptist and West Baton Rouge were all added to the public assistance designated areas, which means those governments can qualify for federal aid for response and recovery expenses.

Twenty south Louisiana parishes were already included in the disaster declaration.

Understanding FEMA Flood-recovery Programs, Why You're Not Getting "Thousands Of Dollars" Immediately

By Mark Ballard

Baton Rouge (LA) Advocate, September 2, 2016

Unrealistic expectations are leading to a lot of questions, and sometimes anger, about the disaster assistance available and how the programs work, said officials with the Federal Emergency Management Agency.

"A lot of survivors think they'll get thousands and thousands of dollars," said Alberto Pillot, FEMA's media information manager. "They think replacement value. But it's not. It's immediate needs … What do you need right now to get into safe and sanitary shelter? There are programs available that can get closer back to whole."

FEMA gives out tax-free grants of up to $33,000, regardless of income levels, as part of the Individuals and Households Program, or IHP.

Victims from catastrophic flooding from the storm that began the night of Aug. 11, living in one of the 20 parishes declared a disaster by President Barack Obama, can get money to help pay for temporary housing, home repairs, medical and dental needs, new clothing, furnishings, appliances and a number of other expenses.

Counts are not complete but the federal government estimates about 160,000 properties were flooded.

Gov. John Bel Edwards and the Louisiana congressional delegation are preparing a bill to ask Congress to approve money over and above what is set aside for disasters. The supplemental money would go to the U.S. Department of Housing and Urban Development, which would send the money to Louisiana in form of grants for storm victims to rebuild.

In the meantime, however, the basic federal aids available for people without insurance are loans from the U.S. Small Business Administration and the IHP.

Survivors must apply with FEMA for disaster assistance online or over the phone.

Their damaged residence will be inspected.

From the inspector's report of specific damages, the family structure and a predetermined amount for a minimal replacement, FEMA calculates a grant.

For instance, if a family of four had damage to four bedrooms, one which is used as a guest room and the other is for a child who is away at college, leaving husband and a wife and one child using two bedrooms, FEMA would give enough to replace the bedding for three people. It would be up to the applicant to go out and purchase the beds — three singles or a single bed and double bed.

Depending on the damage, FEMA also will replace chairs, couches, tables and lamps. The thing to remember, Pillot said, is that the replacement is minimal. The money won't be enough to replace a ruined leather couch and love seat set. "You may not get a leather couch, but you'll have something to sit on, something to get you going," Pillot said.

FEMA will buy what's necessary: washing machines, window air-conditioning units, televisions and refrigerators are on the list. Dishwashers are not, at least for the young and the healthy.

"It's a matter of what is necessary to get back up and running," Pillot said.

If one vehicle was flooded and the other was not, then chances are no money will be set aside for a second car, he said.

The letter outlines basically what the money is for: this much for repairs, that much for appliances.

"You'll have to come back and explain why it was spent. You have to justify why you need more," Pillot said.

If the survivor spends the money dedicated to hiring an electrician to buy a stainless steel sub-zero refrigerator, rather than something much simpler inexpensive, chances are very good that FEMA will not give more money for the electrician.

"What you do with the grant and how you choose to spend the money, well, be wise," Pillot said.

Damage From Flood Is At Least $8.7B, Governor Says

Tampa Bay (FL) Times, September 3, 2016

Baton Rouge, La.

Damage from flood is at least $8.7B, governor says

Louisiana Gov. John Bel Edwards says his state had more than $8.7 billion in damage from catastrophic flooding in August, and the figure will increase as officials finish assessing damage to roads and other public infrastructure. The governor's office Saturday released a letter Edwards sent Friday to President Barack Obama. In it, the Democratic governor asked that Congress this month approve $2 billion in federal aid for Louisiana for housing, economic development and infrastructure. He said it's a "very reasonable request," adding to other programs assisting in Louisiana's flood recovery, such as aid from the Federal Emergency Management Agency. "While short-term relief for immediate needs available through FEMA … are greatly needed and greatly appreciated, our full recovery will not be realized without additional help," Edwards wrote.

Los Angeles

Shooting at county jail wounds 2 employees

A Fresno, Calif., man was taken into custody Saturday after shooting two correctional officers in the lobby of the Fresno County Jail. Thong Vang, 37, entered the jail lobby shortly after 8:30 a.m. Saturday, saying he wanted to visit someone and trying to get to the front of the line, Fresno County Sheriff Margaret Mims told reporters. When he was ordered to wait his turn, Vang began to exhibit “bizarre behavior,” pacing back and forth around the lobby, Mims said. During the confrontation that ensued, Vang pulled out a gun and shot correctional Officers Juanita Davila and Toamalama Scanlan, neither of whom were armed, Mims said. Another correctional officer fired several shots at Vang, who then retreated into a hallway before ultimately dropping his weapon and saying that he wanted to be arrested, Mims said. Vang, who had been previously convicted of rape, was held at gunpoint while the two injured officers were taken to ambulances outside.

Atlanta

Giant female panda delivers twins, again

Atlanta’s zoo said a 19-year-old giant panda gave birth to a set of twins Saturday. Zoo Atlanta said giant panda Lun Lun delivered the twin cubs at 7:20 a.m. and 8:07 a.m. It’s Lun Lun’s second pair of twins. Officials said Lun Lun was artificially inseminated in March. Lun Lun and 18-year-old male panda Yang Yang have seven offspring together, all resulting from artificial insemination.

Bangladesh

Islamist party leader is executed for role in 1971 war

A senior Islamist party politician was hanged Saturday for crimes committed during Bangladesh’s 1971 war of independence against Pakistan, an official said. The execution of Mir Quasem Ali, 64, a leader of the Bangladesh Jamaat-e-Islami party, was carried out three days after the Supreme Court dismissed his plea for a review of his death sentence. Jail officer Prashanta Kumar Bhoumik said Ali was hanged at Kashimpur jail in central Bangladesh. Ali, also a business tycoon and financier of the party, was sentenced to death in November 2014 by a tribunal set up to prosecute people who worked with the Pakistani military during the war. Both the Pakistan army and its local agents were responsible for atrocities on unarmed civilians during the nine-month conflict in what was then the eastern wing of Pakistan. The defendant received the death sentence for crimes including abductions and killings.

Turkey

Turkish forces expand intervention in Syria

Turkey launched a new incursion into Syria on Saturday, dispatching additional tanks and troops across the border to support Syrian rebels fighting the Islamic State, expanding the scope and reach of its 10-day old military intervention. The private Dogan news agency reported at least 20 tanks and five armored personnel carriers crossed at the Turkish border town of Elbeyli, across from the Syrian rebel-held town of al-Rai. The incursion is unfolding about 35 miles west of Jarablus, where Turkish forces first crossed into Syria last month.

Hong Kong

Voting gets under way in a crucial election

Hong Kong voters headed to the polls today for the specially administered Chinese city’s most crucial election since the hand-over from Britain in 1997. The vote for lawmakers in the Legislative Council is the first since 2014 pro-democracy street protests rocked the Asian financial hub, and the outcome could lead to a fresh round of political confrontations over Beijing’s control of the city.

FEMA Inspectors Make Rounds In Baton Rouge Area

By Kevin Frey

WAFB-TV Baton Rouge (LA), September 2, 2016

BATON ROUGE, LA (WAFB) –

FEMA has completed more than 65 percent house inspections after August’s historic floods in the Baton Rouge area.

The organization has 1,100 inspectors on the ground, each completing about five inspections each day. Overall more than 130,000 people have signed up with FEMA after the flood.

“We’re looking at the amount of damage to the home itself, the real property, and then what is required to bring it back to that safe, habitable, sanitary condition,” said Darrell Habisch, a FEMA representative.

Wait times for FEMA inspectors to visit homes have dropped in recent days from about three weeks to now seven days.

While waiting, FEMA encourages flood victims to clean out their homes, removing mold and other water-logged items.

“We want you to document, take photos, and document the damage, but don’t wait for a call from FEMA – you can’t live in that environment,” Habisch said.

On Friday, Brenda Roberts visited her home for the first time since it took on more than three feet of water. The rising waters forced her to evacuate by airboat.

"I couldn't imagine. It didn't seem real. This is not happening. Maybe the water won't get high, maybe nothing will be damaged. It was in disbelief," Roberts said.

Outside her home, however, sits evidence of a devastating, inescapable truth. Piles of memories dot every curb in her neighborhood off Greenwell Springs Road.

"When I came down the street and I saw everybody's life on the street, it was heartbreaking," Roberts said.

A FEMA inspector joined Roberts at her home, documenting the skeletal remains of what was once her home.

"It was totaled, everything in this house was totaled," she told the inspector.

Her piano, a side table from her great-grandparents, her computer and more were destroyed in by the water. In their place now sit piles of sheetrock and paneling.

The trials of the past weeks have been difficult, but Roberts said they have brought out the best in so many.

"You'll see things, and it chokes you up, and then someone will respond with a tremendous amount of kindness," Roberts said.

Some important tips:

FEMA will call to set up an appointment

The inspector will have a FEMA ID

If they seem suspicious, it is okay to turn them away

Northshore Homeowner Said Flood Relief Option Set Her Up For Foreclosure

By Jennifer Crockett

WDSU-TV New Orleans, September 5, 2016

Hammond, La. – As people across Louisiana work to save their flooded homes, some are having trouble catching a break from their bank.

Cathleen Dell and her husband William live in Hammond. Floods spared their home in March, but in the two were not so lucky in August.

The couple and their pets were rescued from the flood by boat. They lived with a friend while their home sat in water for a week. It's now stripped and drying out, but the panic they felt as the water was rising still keeps them up at night. This time, it's mounting bills for repairs that's swamping them.

Cathleen is a teacher. William retired from the U.S. Army. The home they bought two years ago is not in a designated flood zone, and they did not have coverage. The Federal Emergency Management Agency is helping a little, but the couple contacted their mortgage company to apply for forbearance on their mortgage, so they could use that money for repairs.

Instead of getting temporary relief, she said the terms their private mortgage company laid out could have easily made things worse and possibly led to foreclosure. According to her paperwork, all of the payments would come due at once, including fees. Dell thought she was signing up to have her payments suspended for 90 days and repaid at the end of her loan.

"Our house payment is basically is almost $1,300 a month," Cathleen said. "So, there was no way that we were going to be able to afford a $10,000 house note on March 1."

Cathleen wants other homeowners to read their paperwork carefully before agreeing to any new terms.

"I contacted you guys because I want people to make sure that they're reading their information," Cathleen said. "I don't want anybody to have to lose their home again over paperwork."

Kemberley Washington is a certified public accountant practicing in New Orleans. She said terms for forbearance on conventional mortgages vary, and that the Dell's aren't alone.

"It's really actually to the discretion of the lender, so the lender really has control," Washington said.

She said there are more protections in place on government-backed mortgages, such as an FHA loan, but there is no way to know what you're signing up for unless you call and ask.

"Ask, 'When will I have to make this payment?' 'Is there interest that will be accrued on this payment?' There are so many different terms and things that an individual needs to know, but those questions need to be asked right there in the beginning," Washington said.

Washington put together the following information to help guide homeowners through the rebuilding process. She also said the Department of Housing and Urban Development, or HUD, can be a good resource to council homeowners about their different options, even with private mortgages.

Tips from Kemberley Washington, CPA:

According to HUD, if you are unable to pay your mortgage because of a natural disaster, there may be relief available to you. Lenders can stop or delay foreclosure for 90 days and also waive any fees.

What type of mortgage do you have?

First, the type of assistance that may be available depends on the type of mortgage you have. According to the Home Buyer Institute, there are different types of loans, which includes government backed mortgages and conventional loans.

A government backed mortgage protects lenders against losses. These loans include an FHA or VA loan, which provides certain relief options after a natural disaster. A conventional (regular) loan may provide options; however, these may differ based on the lender.

What type of assistance is available for government loans?

For government insured loans, lenders can evaluate your loan for mitigation assistance to help you keep your home. Also, lenders may execute a loan modification, temporarily suspend mortgage payments up to six months and waive late charges or other options to help the homeowner. Keep in mind, for conventional loans, you must reach out to the lender to see what relief may be available.

What steps should a homeowner take?

A homeowner should contact their lender immediately if they are unable to make the payments. Before signing any documents, get an understanding of the new terms of your payments. For instance, you should ask questions such as:

When will the amounts be due in full?

Will interest incur on the amounts suspended?

What are the new terms of the modification?

If homeowners are not satisfied with the options provided by the lender, they are encouraged to contact HUD's National Servicing Center at 800-569-4287. In addition, they can also contact FEMA for financial assistance.

Poll: Amid Zika Fears, Support For Funding

By Susan Page

USA Today, September 5, 2016

WASHINGTON — Nearly a third of Americans say fears of the Zika virus are affecting travel or other plans by members of their families, a broad impact that is fueling support for Congress to pass funding to curb spread of the disease in the United States.

In a USA TODAY/Suffolk University poll, those surveyed by more than a 3-1 margin — 62%-19% — said Congress should approve additional funding to fight the virus rather than continue to divert funds from other programs. The Senate could vote on a $1.1 billion measure on Zika as early as Tuesday, when lawmakers return after a seven-week recess.

Senate Democrats have blocked a version passed by the House because it includes provisions they say would bar funding for Planned Parenthood, which provides health-care services to pregnant women and others most affected by the mosquito-borne virus. Dozens of cases of Zika, which can cause devastating birth defects, have been diagnosed in Florida and elsewhere since Congress left town.

"It does scare me," said Carol Fisher, 56, a nurse from Teaneck, N.J., who was among those called in the poll. "It has the potential to blow up in a world-wide problem with the way people travel, the idea of containing this to a neighborhood in Miami is just ridiculous. It's almost like that movie, Contagion, where it keeps going and going and going." (The 2011 medical thriller tracked a mysterious and deadly disease that spread worldwide after a Minnesota woman returned from a business trip to Hong Kong.)

The poll of 1,000 likely voters, taken Aug. 24-29, has a margin of error of plus or minus three percentage points.

The other most pressing item of business for Congress during its final four-week session before the election is a short-term funding bill to keep the federal government operating after the new fiscal year begins Oct. 1.

Last week, Thomas Frieden, director of the Centers for Disease Control and Prevention, warned that the health agency is almost out of money to fight Zika's spread. "The cupboard is bare," Frieden told reporters.

Dr. Anthony Fauci of the National Institutes of health gives a presentation about the Zika virus at the Georgetown University Law Center on Aug. 31. (Photo: Chip Somodevilla, Getty Images)

Three in 10 Americans, including 36% of those who live in the South, the most affected region, say concern about Zika has affected travel or other plans by themselves or family members. There's no partisan profile to the reported impact, which is roughly the same among Republicans and Democrats.

Both Democrats and Republicans were inclined to back additional funding to combat Zika. Democrats supported the idea by an overwhelming margin, 78%-11%. Republicans also backed the new funding, but by a narrower 44%-27%; another 28% said they were undecided.

"Personally, I don't think it's something to worry about," said Joe Thomas, 64, of Trinity, N.C., who was among those surveyed. Thomas, in a follow-up interview, said other priorities were more important. "We need to get to the matters at hand."

Florida GOP Ready To Retreat From Planned Parenthood Fight

By Sarah Ferris

The Hill, September 3, 2016

Several House Republicans in Florida say they're willing to concede defeat in their party's months-long battle over Planned Parenthood if that's what it takes to pass a $1.1 billion funding package for the Zika virus.

With Zika spreading rapidly in south Florida, even some of the most conservative members of Congress say GOP leaders should strike a deal with Democrats to get emergency money to their home state.

"Take everything out of it except Zika funding, and don't put any riders in it," Rep. Ted Yoho (R-Fla.), a member of the conservative House Freedom Caucus, said in an interview Thursday.

Another Freedom Caucus member, Rep. Curt Clawson (R-Fla.,) is urging the Senate to reconsider the House's earlier Zika funding bill — which did not pick a fight over Planned Parenthood — even if it means providing less money overall.

"It is time for members to pull all levers in both chambers of Congress to get a funding measure to the president's desk," Clawson wrote in a letter to GOP Leaders, along with another Florida Republican, Rep. Mario Diaz-Balart.

Other Florida Republicans — including Rep. Ileana Ros-Lehtinen and Rep. Dennis Ross — have hinted recently at relenting in the fight over Planned Parenthood by urging GOP leaders to drop political issues from the bill.

The two parties have been deadlocked over a Zika response since February. Democrats have pressed for more money, while Republicans have argued the White House should use existing funds, like those from the Ebola virus or ObamaCare.

In June, the fight intensified as House and Senate Republicans put forward a new bill that targeted Planned Parenthood — ditching the upper chamber's previous deal with leading Democrats.

The bill's language does not mention Planned Parenthood. Specifically, it says that only health services "provided by public health departments, hospitals, or reimbursed through public health plans" can receive the Zika funding from Congress.

Republicans, including the top health appropriator Rep. Tom Cole (R-Okla.), have acknowledged that the bill targets Planned Parenthood, while stressing that they are willing to pay almost as much money as the Obama administration has asked for.

"We do have provisions, obviously, to make it more difficult for Planned Parenthood. But in divided government, it's a pretty fair compromise," Cole said in a recent interview.

Eight months later, lawmakers from Florida are feeling the pressure as their home state deals with the first outbreak of Zika in the continental U.S.

Florida's Republican Gov. Rick Scott is planning to make his second trip to Congress this year to lobby for Zika funding. He will be waiting when Congress returns from its seven-week recess next Tuesday, and plans to meet with Senate GOP leadership, according to one lawmaker.

More than 600 people in Florida have tested positive for the Zika virus, which can cause birth defects in newborns. Eighty of those cases are in pregnant women, according to data from the Florida Department of Health on Thursday.

Speaker Paul Ryan (R-Wis.) has said he is committed to passing Zika funding by Sept. 30, the deadline when the Centers for Disease Control and Prevention (CDC) says it will run out of funds.

Rep. Carlos Curbelo (R-Fla), who faces a close election race in his South Florida swing district this fall, asked Ryan about Zika funding on a House GOP conference call last week.

“Speaker Ryan assured me that this was going to get done,” Curbelo said in an interview Thursday. He added that he is urging his GOP colleagues to support a Zika bill even if it means dropping the Planned Parenthood provisions.

When asked about a scenario in which the Zika bill was not approved, he said: “I’m unwilling to even consider the possibility.”

“This Planned Parenthood clinic in Puerto Rico, is that really worth killing Zika funding over?” Curbelo said. “The question that comes, is Zika funding a chief priority for you or not? I certainly hope that at the very least, for every representative or senator for the state of Florida it would be.”

Outlook: Congress Returns To Fights Over Spending, Zika

By Alex Rogers

National Journal, September 6, 2016

House Re-pub-lic-an lead-ers will be faced with two no-win de-cisions this week, as the House Free-dom Caucus looks to force a vote to im-peach IRS Com-mis-sion-er John Koskin-en and the con-fer-ence meets to dis-cuss the length of an im-pend-ing con-tinu-ing res-ol-u-tion.

The House Free-dom Caucus is ex-pec-ted to re-sume its quest to im-peach Koskin-en as soon as Wed-nes-day by bring-ing to the floor a priv-ileged mo-tion for-cing a House vote. If they do so, the House must vote on the meas-ure by Fri-day.

GOP lead-ers have been care-ful to stay pub-licly neut-ral on the top-ic be-cause the vote puts them and many of their mem-bers in a tough polit-ic-al po-s-i-tion. Al-though most likely do not be-lieve that Koskin-en de-serves to be im-peached and fret set-ting a pre-ced-ent of im-peach-ing mid-level ad-min-is-tra-tion of-fi-cials, there is little polit-ic-al up-side among the Re-pub-lic-an base to de-fend-ing the IRS.

The meas-ure is sure to be dis-cussed at a Wed-nes-day morn-ing con-fer-ence meet-ing. But the Free-dom Caucus is be-ing bolstered by re-ports this week that the IRS did not tell tax-pay-ers that their So-cial Se-cur-ity num-bers were stolen by un-doc-u-mented im-mig-rants, so it is un-likely that lead-er-ship or oth-er mem-bers can talk them out of push-ing the im-peach-ment.

On Fri-day, the House is ex-pec-ted to hold a second con-fer-ence meet-ing to dis-cuss the length of a con-tinu-ing res-ol-u-tion, which could again put lead-er-ship at odds with the House Free-dom Caucus. Lead-ers are look-ing to a CR through Decem-ber in or-der to give the ap-pro-pri-ations com-mit-tees more time to fin-ish a po-ten-tial om-ni-bus bill. The Free-dom Caucus, however, wants to can-cel the lame-duck ses-sion and pass a CR through March.

Sen-at-ors, mean-while, will re-turn to Wash-ing-ton on Tues-day night fa-cing an acute sense of deja vu, as they vote again on pre-vi-ously blocked spend-ing bills.

The Obama ad-min-is-tra-tion has pleaded Con-gress for months to pass le-gis-la-tion to help fight the spread of the Zika vir-us, as the num-ber of cases in Flor-ida and Pu-erto Rico pre-dict-ably jumped over the sum-mer. But Sen-ate Demo-crats have blocked a bill sup-por-ted by Re-pub-lic-ans, primar-ily over con-cerns that it would pre-vent some fund-ing for Planned Par-ent-hood. Re-pub-lic-ans con-tin-ue to counter that the $1.1 bil-lion bill ad-equately provides for wo-men’s health through com-munity health cen-ters.

After its pro-ced-ur-al vote on that bill, the Sen-ate ex-pects to vote on ad-van-cing a $575 bil-lion pack-age fund-ing the De-fense De-part-ment. Demo-crats have blocked it be-fore, while ur-ging Re-pub-lic-ans to pub-licly pledge that ap-pro-pri-ations bills will have par-ity between de-fense and nondefense spend-ing. While the Sen-ate agreed to that concept in its de-fense bill, House Re-pub-lic-ans have pushed to spend bil-lions more in a sep-ar-ate war-time ac-count, which many Demo-crats op-pose.

Here’s what else is on tap this week:

EN-ERGY AND EN-VIR-ON-MENT

A week after vis-it-ing the site of Louisi-ana’s dev-ast-at-ing floods, Rep. John Mica will con-vene a hear-ing on the Fed-er-al Emer-gency Man-age-ment As-so-ci-ation’s re-sponse. After his trip, Mica raised con-cern about the speed with which FEMA was de-liv-er-ing claims checks to flood vic-tims and the tem-por-ary hous-ing struc-tures the agency had brought in. Fri-day’s hear-ing in the House Over-sight sub-com-mit-tee on trans-port-a-tion and pub-lic as-sets could also touch on what the fed-er-al gov-ern-ment can do to en-sure that af-fected res-id-ents can re-build their homes.

The bid to pass the first com-pre-hens-ive en-ergy bill in more than a dec-ade re-sumes Thursday, when House and Sen-ate lead-ers open a form-al con-fer-ence on the bill. Ne-go-ti-at-ors will have to strip veto-bait pro-vi-sions—in-clud-ing lan-guage on Cali-for-nia’s drought, en-ergy de-vel-op-ment on tri-bal lands, and re-search fund-ing—from the House-passed bill, while fa-cing a crowded and nar-row work cal-en-dar to move a fi-nal product.

The House En-ergy and Com-merce Com-mit-tee will con-tin-ue a long-term re-view of the na-tion's elec-tri-city grid with a hear-ing on the cre-ation of today's de-reg-u-lated en-ergy mar-ket. The Wed-nes-day hear-ing in the En-ergy and Power sub-com-mit-tee will be the first without chair-man Ed Whit-field, who is resign-ing at the start of the week.

HEALTH

The polit-ic-al fight over Zika fund-ing will dom-in-ate the Sen-ate's health care agenda this week, while in the House, the Ways and Means health sub-com-mit-tee will hold a hear-ing Wed-nes-day about how to in-centiv-ize bet-ter qual-ity care with-in Medi-care's hos-pit-al cov-er-age. The En-ergy and Com-merce Com-mit-tee's health care pan-el meets Thursday to dis-cuss five pub-lic-health bills, in-clud-ing meas-ures that would deal with dia-betes, con-gen-it-al heart fail-ure, and end-of-life care.

TECH-NO-LOGY

A meas-ure to im-prove call qual-ity in rur-al areas will get a hear-ing in the House on Thursday. The bill put forth by a bi-par-tis-an group of le-gis-lat-ors would hold ser-vice pro-viders to a new set of stand-ards and pro-ced-ures to ad-dress the un-re-li-able call qual-ity mem-bers say is af-fect-ing their rur-al con-stitu-ents. The hear-ing will be held by the Com-mu-nic-a-tions and Tech-no-logy sub-com-mit-tee of the En-ergy and Com-merce Com-mit-tee.

An-oth-er House hear-ing will look at the state of the com-mer-cial re-mote-sens-ing in-dustry—the space-based sur-vey-ing of earth for map-ping, crop mon-it-or-ing, weath-er fore-cast-ing, and oth-er ap-plic-a-tions. Mem-bers of the Space sub-com-mit-tee of the Sci-ence, Space, and Tech-no-logy com-mit-tee will hear from in-dustry lead-ers and aca-dem-ics.

WHITE HOUSE

Pres-id-ent Obama will spend the bulk of this week over-seas, par-ti-cip-at-ing in three sum-mits at-tract-ing more than 50 world lead-ers. He starts in Hang-zhou, China, site of the G-20 sum-mit. That meet-ing wraps up Monday with a press con-fer-ence. From there, the pres-id-ent flies to Vi-en-tiane, be-com-ing the first U.S. pres-id-ent ever to vis-it Laos. He will at-tend the U.S.-ASEAN and East Asia sum-mits, with a speech planned Wed-nes-day on the im-port-ance of the Trans-Pa-cific Part-ner-ship trade deal. On Wed-nes-day he will take a side trip to the cul-tur-al cen-ter of Lu-ang Pra-bang for a speech on un-ex-ploded ord-nance re-main-ing from the Vi-et-nam War and a town-hall meet-ing. The ASEAN and EAS sum-mits take place on Thursday back in the cap-it-al city of Vi-en-tiane. On Fri-day, he heads back to the United States.

The Day Zika Deal Died: A Cautionary Tale Of Congressional Gridlock

By Lindsay Wise

McClatchy, September 2, 2016

Democrats and Republicans were tantalizingly close to a deal on funding Zika prevention measures this summer when it all fell apart in the final 48 hours, according to interviews with a half-dozen senior congressional staffers involved in the talks.

The staffers, three Democrats and three Republicans, spoke to McClatchy anonymously because of the sensitivity of the negotiations. They described a week of intense talks thwarted, in the end, by political entrenchment and unfortunate timing.

"I thought we were really close," said one staffer who was in the room the last time negotiators from both parties met in June.

Had there been more time, more space, had the atmosphere been a little different, maybe progress could have been made.

Republican staffer involved in Zika negotiations

But outside that room, partisan rhetoric was heating up. And time was running out.

The House of Representatives had to pass a bill in time for the Senate to take it up before the July Fourth recess. After that, members of Congress would be out of Washington for the rest of the summer.

This was the last chance to boost funding to fight Zika before peak mosquito season hit and the country registered its first locally transmitted cases of the disease.

The story of how Congress missed that chance is a cautionary tale about the politics of gridlock: In an election year, it's more tempting to beat up your opponents for intransigence than make concessions you have to sell to your own base.

"The closer you get to the election, the more the whole thing gets tied up in the politics of the election coming up," said Bill Hoagland, senior vice president of the Bipartisan Policy Center in Washington.

"This year in particular," he said, "the degree of polarization is very, very high."

The parties' presidential conventions were just days away, and it was becoming increasingly clear that control of the Senate was on the line in November.

Further complicating matters was a Democratic sit-in in the House of Representatives to demand votes on gun control that began shortly before noon on June 22, the same day that Republicans presented their final draft of the bill to Democrats.

"It was not a good situation for Kumbaya," as one Democratic staffer put it.

Pressure to fund a response to the Zika virus begin in February, when President Barack Obama requested $1.9 billion to boost vaccine research and ramp up testing and mosquito control efforts. Evidence was growing that Zika could cause debilitating brain damage in unborn children, as were fears of an outbreak in the continental United States.

On May 18, the House passed a bill that provided $622 million for Zika through September, only about a third as much as Obama had requested. The spending was entirely offset by budget cuts, with half of the money coming from unspent Ebola funds.

The bill also included grant funding language for states and U.S. territories that was so restrictive that even Republicans admitted it likely would prevent the use of the money for contraception, which was crucial to preventing Zika-related birth defects.

The White House threatened to veto it.

The Senate passed its own bill the next day. The bipartisan compromise worked out by Republican Sen. Roy Blunt of Missouri and Democratic Sen. Patty Murray of Washington sailed through by a vote of 89-8. That legislation would have provided $1.1 billion in emergency funds, which by definition did not have to be financed by any spending cuts.

There were no provisions about how states could spend grant money or language about lifting environmental regulations to spray for mosquitoes, even temporarily.

There's no question the sit-in didn't help. It just threw that gasoline on that fire. . . . Would it have made a difference? Who knows? But it certainly didn't help.

Bill Hoagland, senior vice president, Bipartisan Policy Center

Blunt and Murray were among 32 members of Congress from both parties who were appointed to a special "conference" committee to reconcile the House and Senate versions of the bill.

That committee met only once, on June 15.

The real work got underway afterward, at the staff level.

Staffers broke into teams to tackle different sections of the bill, hashing out details face-to-face, by phone and email. By all accounts, the negotiations were intense but made progress for nearly a week until coming to loggerheads over the final three issues: funding cuts, Planned Parenthood and pesticides.

Two senior Democratic staff members and two senior Republican staff members from the House and Senate appropriations committees led the talks in the final stages. The four have decades' worth of experience on the Hill and a tradition of working together across party lines on everything from emergency funds for Ebola to massive omnibus spending bills.

It was clear from the outset that Democrats were unwilling to compromise on funding. They wanted what they had agreed to in Blunt and Murray's bipartisan Senate bill: at least $1.1 billion in emergency funds, no offsets.

There is a definition in the law of what constitutes an emergency, Democrats said, and Zika meets the definition by any standard. Accepting cuts would create a terrible precedent, they said.

Republicans directly involved in the talks agreed that their counterparts had no leeway to negotiate the matter.

"They just didn't have license at whatever level, I don't know what level," a Republican staffer said. "It was a theological issue."

Although cuts were off the table, there was some back and forth on the language about block grants and pesticides, with each side making offers and counteroffers.

On pesticides, Republicans decided to lift the pesticide rules for 180 days, thinking the time limit might be palatable to Democrats.

Republicans also dropped the original House language on grants and ended up with an alternative they considered to be a compromise. The grants could go to health services provided by public health departments or reimbursed through Medicaid. At the last minute they added hospitals, too.

But since Planned Parenthood isn't eligible for Medicaid reimbursement in Puerto Rico, this was a no-go as far as Democrats were concerned.

From Blunt's perspective, House Republicans' insistence on including block grant language to keep funds from Planned Parenthood distracted from the more serious obstacle to an agreement: How to pay for new Zika spending?

Had that language not been included, he said, "then it would have become more clearly a fight about would you pay for an emergency" instead of a partisan battle over Planned Parenthood.

Believing they were at an impasse with

Democrats, House and Senate Republicans withdrew to confer among themselves on June 21.

That morning, Democratic lawmakers began to imply publicly that they weren't happy.

At 10:03 a.m. Senate Minority Leader Harry Reid tweeted, "Republicans should not turn Zika health emergency into a partisan game by siphoning money from Ebola or Affordable Care Act."

Murray went on the floor of the Senate two hours later to warn against taking money from one public health priority to support another.

"With the health and well-being of women and babies on the line – now is not a time for nickel-and-diming," she said.

The next day, at about 11:30 a.m. on June 22, Georgia Rep. John Lewis and other Democratic House members walked onto the floor of the House and sat down. What began as a hastily planned gesture quickly escalated into a full-fledged sit-in to demonstrate Democratic frustration over the Republican refusal to hold votes on gun control.

When House Republicans turned off the chamber's cameras, Democrats switched on their cellphones to broadcast images of the sit-in via the internet and C-SPAN. Within hours, a sympathetic crowd started to gather outside the building, adding to the pressure on Republican House Speaker Paul Ryan to bring the legislature back to regular order or adjourn.

Elsewhere in the Capitol, Republican staffers presented Democrats with their final draft of the Zika bill. It would cut $750 million from Obamacare, Ebola and the Department of Health and Human Services to pay for $1.1 billion in spending on Zika.

By far the largest chunk of cash came from $543 million intended to set up Affordable Care Act exchanges in the U.S. territories. In a quirk of the budget, the money couldn't be used for the purpose originally intended and so was "dead money" that enabled both parties to avoid cutting programs they really cared about.

Democratic staffers made it clear they hadn't been posturing. They weren't empowered to talk about offsets or accept the riders as proposed.

The feeling among staffers involved in the negotiations was that the differences could be worked out eventually. But time was not on their side.

Although there were two more working days on the calendar that week, Republicans were eager to end the sit-in that had roiled the House floor that day.

And they had to get a bill to the Senate with enough time for that chamber vote before the summer recess or risk getting blamed for missing the window to act.

Republicans filed the bill at 10:04 p.m. on June 22. It had none of the customary Democratic signatures that characterize a bipartisan agreement.

Ryan brought the bill to a vote at 3:11 the next morning, amid deafening shouts of "shame" and boos from Democratic protesters. It passed on a party-line vote as Democrats sang "We Shall Overcome" and waved papers with the names of gun victims on them.

Ryan then adjourned the House until July 5, effectively ending the sit-in.

Outraged Senate Democrats vowed to block the bill.

They did so before the summer recess and are expected to do so again Tuesday, when Congress returns to Capitol Hill.

Editorial: Zika Spread Should Spur Congress To Act

Palm Beach (FL) Post, September 3, 2016

After a seven-week hiatus, Congress returns to Washington on Tuesday to a list of must-do legislation. One item that should be at the top of the list: a vote to provide crucial emergency funding to fight the spread of the Zika virus.

The time for partisan excuses and political dysfunction is long past. The virus, which can cause serious birth defects, continues to spread while money dedicated to preventing it dwindles.

"Basically, we're out of money," Tom Frieden, who heads the U.S. Centers for Disease Control and Prevention, said last week. "… and we need Congress to act to allow us to respond effectively."

Frieden said of the $222 million that the CDC was allocated for domestic Zika response this year, about $200 million has been committed. "The rest will be gone by the end of September."

By the way, we're in the peak of mosquito season — which typically lasts through the end of October in the United States. As reports of virus infections broaden, the CDC "might not have the resources" to respond and send teams to support state and local officials, Frieden said.

How pathetic has been Congress' response to this burgeoning public health threat? When the lawmakers folded their tents on July 15, the total number of Zika infections in Florida — ground zero for the virus in the U.S. — was 276, including 43 pregnant women. None local.

As of Thursday, Florida had 49 locally transmitted cases, 576 travel-related cases and 80 infections involving pregnant women, according to the state Department of Health website.

Palm Beach County now has three locally acquired cases of Zika virus. And 33 cases of travel-related Zika.

That's as many non-travel-related Zika cases as the entire island of Cuba. Officials there also say they've diagnosed just 30 people with cases of the virus they got outside the island. That's because they've taken what The AP calls "a militarized nationwide campaign of intensive mosquito spraying, monitoring and quarantine."

Even casting a suspicious eye toward the Cuba figures does not diminish the plain good sense of our making a similar full-fledged attack. Especially after the state Department of Agriculture announced Thursday that it had detected Zika in three mosquito samples from an area of Miami Beach where the virus has been transmitted. Those were the first mosquitoes that have tested positive for the virus in Florida.

The news prompted Gov. Rick Scott to direct state health officials to "aggressively expand testing and outreach efforts in the areas around the traps that caught the positive mosquitoes." This aggressive expansion will take money. More than the $26.2 million that Scott has earmarked for the fight. And obviously, more than the CDC and U.S. Department of Health Human Services have on hand.

Zika is an economic, as well as health care, threat to Florida. So we were heartened to see all 27 members of the Florida congressional delegation put their names on a letter to Frieden last month demanding a bigger share of $16 million in emergency money set aside by the agency.

Scott has taken an unhelpfully partisan approach by steadily blaming the Obama administration for not responding swiftly enough to the growing threat. This, despite the fact that the White House recommended $1.9 billion to fight the virus in February.

The governor, when he travels to Washington this week, needs to direct his ire toward his party brethren in the Republican-led Congress who, in a silly game of chicken, refused to support the $1.9 billion allocation and then failed to reach agreement on a $1.1 billion plan before heading home for summer recess.

Scott should tell them to stop playing politics with the lives of Floridians and pass a straightforward Zika bill that, this time, isn't laden with "poison pills" that, for example, punish Planned Parenthood and honor the Confederate flag.

On Aug. 3, Scott said: "We will continue to do everything possible to keep our residents and visitors safe."

We're holding you to that, governor.

As of Thursday, Florida had 49 locally transmitted cases, 576 travel-related cases and 80 infections involving pregnant women.

Our Views: We Are All In The Front Line In Mosquito War

Baton Rouge (LA) Advocate, September 2, 2016

Even if you are among those fortunate enough to avoid drastic home repairs in the wake of last month's flooding, there is still work for you to do: mosquito prevention.

The record-breaking deluge of August is only going to worsen the chronic problem of mosquitoes in southern Louisiana. God forbid that there are more heavy rains or a tropical storm, but even regular showers will continue to collect in basins of all types, from ponds to flower pots to old tires.

These are breeding grounds for mosquitoes, and in recent years, Louisiana has been challenged by infections from the West Nile virus. The disease can lead to deadly consequences for infants and the elderly, or others with compromised immune systems.

The potential for Zika to come to Louisiana is also there, although there are no reports of mosquito-borne cases.

Rebecca Christofferson, an assistant professor at the LSU School of Veterinary Medicine, has been awarded a research grant provided by the National Institutes of Health for $1.2 million to study the mosquito-borne viruses, Zika and chikungunya. Both viruses have recently emerged in the Western Hemisphere.

That's a big grant, and one that shows how valuable to everyday life is the intellectual talent in Louisiana's universities. But if the heavy brain work must be done by specialists, Christofferson recently told the LSU Science blog that every resident can help prevent the spread of these potentially lethal diseases.

"Flood waters flush out mosquito larva that have already been there but leave behind lots of standing water that is prime real estate for mosquito breeding. People cleaning up can help mitigate this by getting rid of any sources of standing water they see in or around their homes," Christofferson said. "So to everyone: Wear a mosquito repellent with DEET. The EPA has a website that will match you with the appropriate repellent. Re-apply as you sweat and dump out standing water around your homes."

We are fortunate that Zika has not found its way here yet, but Louisiana has seen more than a dozen cases of West Nile this year. Standing water is where the pests proliferate.

As Christofferson advises, mosquito repellent is vital during a long Labor Day weekend when many people are out and about. But in yards and ditches, flower pots or other containers, the battle lines against infection are within reach of ordinary citizens.

Tending to the yard and eliminating mosquito breeding grounds — indeed, factories for their production — is a basic public health battle that can be done by everyone.

Zika Virus Is Spreading And Remains Global Emergency, According To The WHO

By Lena Sun

Washington Post, September 2, 2016

The World Health Organization said Friday that the growing spread of Zika around the world and basic gaps in knowledge about the virus's devastating complications in babies continue to make Zika a global health emergency.

After convening its expert committee this week, the U.N. health experts said that more research needs to be focused on what other factors beside the mosquito-borne virus could be causing severe birth defects, such as microcephaly.

One of the most fundamental questions in this current epidemic is why countries like Brazil, the epicenter of the current epidemic, have reported nearly 2,000 cases of microcephaly and other brain abnormalities, while countries like Colombia have reported fewer than three dozen cases.

Scientists need to examine possible factors that could affect Zika's damage, including genetic factors, environmental contaminants, and other co-infections, said David Heymann, the committee's chair and an infectious disease professor at the London School of Hygiene and Tropical Medicine.

"A whole range of co-factors must be eliminated to say, with certainty" that the only culprit is the Zika virus, he said.

Peter Salama, WHO's executive director for outbreaks and health emergencies, said researchers need to understand whether the time lag between when an outbreak occurs to when birth defects show up nine months later could account for country-by-country differences, or "is it truly something to do with cofactors."

Meanwhile, the virus continues to infect new countries, including most recently Singapore, which reported 189 confirmed cases Friday.

"An extraordinary event is becoming, unfortunately, an ordinary event," Heymann said.

WHO officials also said Brazil reported no confirmed cases of Zika following the Rio de Janeiro Olympics. That data is based on information collected by authorities on people who sought treatment at health facilities who were athletes or spectators.

Most people with Zika don't have symptoms, but Salama said enhanced surveillance by WHO of the Olympic delegations shows no large-scale transmission of Zika, confirming the earlier assessments of WHO and the Centers for Disease Control and Prevention that the Olympics posed no significant additional risk of spreading Zika.

A study published Thursday identified eight countries in Asia and Africa that researchers say are at the greatest risk of Zika virus transmission.

The countries — India, China, the Philippines, Indonesia, Nigeria, Vietnam, Pakistan and Bangladesh — all have hot and humid climate conditions; the type of mosquitoes that primarily spread the virus; a high volume of travelers returning from Zika-affected areas in the Americas; and large, dense populations. And several have limited health-care resources.

With the geographic expansion of Zika, one of the most urgent questions is whether the virus will cause the same kind of brain damage and other complications to babies in Asia and Africa.

A big unknown is the extent to which communities in Asia and Africa might have immunity to Zika, because the virus has sporadically been reported on both continents. The virus occurs in two different strains, the Asian strain and the African strain. It's unclear whether infection with one strain will protect people with the strain now circulating in the Americas, which is the Asian strain.

Zika was first identified in Uganda in 1947 in a monkey. But in Africa, "it's not even known how large outbreaks have been in the past in humans," Heymann said. "They've not come on the radar screen. They've never been reported in outbreaks."

Singapore authorities are still determining which strain of the Zika virus is causing its outbreak.

In Guinea Bissau in West Africa, the Zika virus reported in four cases suggests it is the African strain, which has not previously been associated with birth defects. Guinea Bissau also had detected five cases of microcephaly before its outbreak of Zika.

"Is that reporting bias or were they epidemiologically connected?" said Salama, of the WHO. "We don't know the answer."

Previous infections with Dengue, a related virus that is widespread in Brazil, may also amplify the damage from Zika, according to lab studies.

Olympics Had No Zika Cases, WHO Says

By Peter Sullivan

The Hill, September 2, 2016

The World Health Organization (WHO) said Friday that there have not been any confirmed cases of Zika among people who attended the Olympics.

The announcement comes despite concerns preceding the games that the Olympics could provide a dangerous opportunity for the virus to spread.

The WHO said the Emergency Committee on Zika "congratulated Brazil on their successful application of appropriate public health measures during the Olympic Games."

"To date, there have been no reports of confirmed cases of Zika virus among people who attended the Games, both during the games and since their return," the statement continued.

International health authorities had said that the Olympics would not be a danger for furthering spread of the virus.

A group of 150 health experts had called on the Olympics to be postponed or moved because of Zika concerns.

Dr. Tom Frieden, director of the U.S. Centers for Disease Control and Prevention, said in May that "there is no public health reason to cancel or delay the Olympics."

He said travel to the Olympics would make up "less than 1 percent" of all travel to South American countries affected by the Zika virus.

Zika Count Rises To 215 In Singapore

By Maggie Fox

NBC News, September 4, 2016

Singapore reported another big batch of Zika virus cases Sunday, bringing its total count in just a week to 215, and World Health Organization officials said the spread of the virus definitely still constitutes a global health emergency.

Zika's apparent quick spread out of Latin America and in Asia and Africa has WHO officials worried. They have no idea if the virus will spread as explosively as it has in the Americas, and they cannot predict if it will cause a fresh wave of birth defects and side-effects such as the paralyzing Guillain-Barré syndrome.

Miami-Dade mosquito control worker Carlos Vargas looks for the Aedes aegypti mosquito larvae at a home in Miami, Florida, on June 8. Rhona Wise / AFP – Getty Images

They don't even know if they can keep track of it if it spreads into countries with poor healthcare systems and little facility to test people for the virus.

"There's still an urgent need to continue global research and this still does remain an emergency of international concern," said Dr. David Heymann, chairman of WHO's emergency committee. "Zika is beginning to spread, continuing to cause outbreaks in many countries around the world."

"This extraordinary event is rapidly becoming, unfortunately, an ordinary event. And Zika is beginning to spread, continuing to cause outbreaks in many countries around the world," Heymann told reporters.

Tiny Singapore — the city-state is only about two-thirds the size of Washington, D.C. — only first saw Zika a week ago. It's moved quickly to try to contain local spread of the virus, carried by the same mosquitoes that spread dengue virus. It has also quickly reported every case it finds to WHO.

"The way the government of Singapore has handled the outbreak really represents a role model," said Dr. Peter Salama, executive director of WHO's Health Emergency Program.

It's not entirely certain that the strain is the same one that swept across Latin America, causing at least two outbreaks in south Florida, Salam added. Singapore's Ministry of Health said genetic sequencing had shown the virus spreading there was of Asian lineage and that it was not from South America. But the South American strain was also shown to have originated in Asia and not directly from Africa, so it was not clear precisely what the ministry meant.

Experts are worried because they cannot predict what Zika will do. The virus was first identified back in 1947 and seemed relatively innocuous. When it did infect people, which appeared to be rarely, it didn't even cause symptoms in most of them and appeared to cause, at worst, a rash, muscle aches and fever.

But when it showed up in Brazil, authorities immediately noticed a giant increase in cases of microcephaly, a severe birth defect defined by a small head. It's caused when the virus attacks the brain cells in a developing fetus, killing them off and stunting the growth of the skull.

Now Zika has been shown to cause a range of other, sometimes less-visible birth defects. There's no doubt it's the virus causing them — it's been found in the damaged brain tissue of miscarried babies and lab experiments have shown that the virus zeros in on immature brain cells.

It's also causing a rare paralyzing side effect seen with other infections called Guillain-Barré syndrome.

The question no one can answer is whether all this is new. "A year ago, there wasn't a test for Zika," says U.S. Centers for Disease Control and Prevention Director Dr. Tom Frieden. Zika is closely related to dengue and chikungunya and tests mix them up.

There had not been a good test that could tell if someone was infected with Zika in the past, and no one can say how many people in Asia or Africa have been infected with Zika previously — or whether they will be immune if it comes around again. There are two known strains of Zika: One that originated in Africa, and the one that spread from Asia to Latin America.

"This is a new manifestation of an old disease," Salama said. "This is a new manifestation of an old disease."

Added to all that, Zika is difficult to prevent. Most people don't show obvious symptoms when they are infected, making it hard to track. They can unknowingly spread it through sex, or infect mosquitoes that can then bite someone else.

The Aedes mosquitoes that spread Zika are very hard to kill, and the steady march of the virus illustrates just how easily travelers can carry it from one country to another.

"Even if they do not feel sick, travelers returning to the United States from Singapore should take steps to prevent mosquito bites for three weeks so that they do not spread Zika to uninfected mosquitoes," the CDC advises.

The same advice goes for any country or territory with active Zika outbreaks — including parts of Miami.

"Travelers returning from Singapore who have a pregnant partner should either use condoms or not have sex for the rest of the pregnancy," the CDC adds.

"People who have traveled to Singapore should use condoms for at least eight weeks after travel to protect their sex partners. Men who have Zika symptoms or are diagnosed with Zika should use condoms for at least six months after symptoms start; women with symptoms should use condoms for at least eight weeks after symptoms start."

People in Zika zones should use mosquito repellent, cover up and stay inside behind screens as possible, the CDC and WHO both advise. And women who might become pregnant need full access to birth control, they both added.

Singapore Should Brace For Long-term Battle With Zika: Experts

Study Finds Rumors Hurting Zika Efforts

By Maggie Angst

Milwaukee Journal Sentinel, September 4, 2016

The Zika virus is not spreading from vaccines or chemicals. It's not a part of some big scheme by the U.S. Congress or pharmaceutical companies. Yet, rumors and conspiracy theories like these fill the screens of Facebook users.

Medical researchers are raising concerns that this public health misinformation could impede efforts to limit the spread of the virus.

Megha Sharma, a senior pediatrics fellow in neonatal-perinatal medicine at the Medical College of Wisconsin, led a team analyzing Facebook as a social media health information platform, specifically for the Zika disease pandemic.

Sharma, an expecting mother, spends most of her days treating infants with diseases and counseling expecting mothers.

"In my practice, I've seen many mothers misinformed about a lot of things— especially the Zika virus," Sharma said. "A lot of false beliefs are finding their ways into the minds of patients."

In the last several years, Facebook has become a news powerhouse, and it has the potential to play a decisive role in times of public health crises.

Roughly two-thirds of U.S. adults use Facebook, and 30% of the general population obtains news from the website, according to Pew Research Center.Misleading posts

Sharma's study consisted of searching Facebook using the keywords "Zika virus" for posts and videos in the past month containing public health information about the disease.

The top 200 posts were selected for analysis by two independent physician reviewers and then classified as relevant or misleading. The classification was based on the quality of scientific information, emphasis on prevention and citations of credible sources.

One of the most popular misleading posts Sharma found was a video called "10 reasons why Zika virus fear is another fraudulent medical hoax and vaccine industry funding scam." The video has more than 690,000 views, 35,000 shares and 700 supportive comments on Facebook.

It claims that the federal Centers for Disease Control and Prevention "fabricated the science linking Zika to microcephaly," that Congress used Zika to "remove bans on other toxic pesticide chemicals" and that microcephaly cases in Brazil "were caused by larvicide chemicals, not by Zika."

Microcephaly means that an infant is born with a small head, which is the biggest symptom of Zika. This condition causes brain malformations that can lead to long-term cognitive issues.

Sharma said Facebook posts claim larvicidal chemicals created by multinational conglomerates are causing birth defects like microcephaly rather than the virus itself. This claim was also shared on social media in an article from The Wall Street Journal, which emphasized that mosquito larvicide might be responsible for the birth defect rather than Zika. This claim is an unfounded rumor, according to Sharma.

Yet, the Brazilian government shut down a larvicidal factory in February because of this conspiracy, Sharma said.

"This is undermining the efforts to control disease," Sharma said.

During her time as a pediatrician, Sharma frequently saw a tendency for patients to blame major public health issues on vaccines.

"As someone who has taken care of babies for a while, I know that vaccines have no role in the risk of autism, the risk of behavior problems, and the risk of the Zika virus," Sharma said.

On the other hand, the World Health Organization, one of the most prominent organizations for health information dissemination, received only about 43,000 views for its video briefing on the facts about Zika.

Sharma concluded that posts with credible information about Zika are not as popular or widely viewed as misinformation and conspiracy theories.

Sharma hopes her research will encourage public health authorities to monitor the information on Facebook.

Two physicians at Tulane University School of Medicine, Kapil Yadav and Keith Ferdinand, were co-authors on the study with Sharma. The team's research study has been accepted for publication in the American Journal of Infection Control and should be available online in about a month.

"It's most important during a time of public health crisis or epidemics that the right information gets through, so patients and people are aware of the effects and the preventative measures that need to be taken," Yadav said.

The misleading information leads expecting moms to disregard the true measures for limiting Zika, such as avoiding travel to certain areas and watching for certain symptoms, Sharma said. That contributes to the spread of ZIka, according to Sharma.

"Every single day that I go to the hospital, I have a fear that this (Zika) is something we will see in a patient in Wisconsin," Sharma said. "But this misinformation spreads farther and is more contagious than the disease itself."

EMERGENCY PREPAREDNESS

Officials: Automated System Caused False Evacuation Alert For Hermine

By David Schwartz

Newsday (NY), September 5, 2016

A countywide evacuation order that crawled ominously — and falsely — across Suffolk television screens Saturday night as Tropical Storm Hermine approached was caused by the federal alert system that automatically generated a summary of the county's warning but cut off the longer message, federal and county officials said Monday.

A spokeswoman for the Federal Emergency Management Agency said its officials are investigating why the message, sent by Suffolk County Fire, Rescue and Emergency Services, was shortened. County officials said they wouldn't use the Emergency Alert System again until they had answers.

Sent from county emergency offices in the basement of a county building in Yaphank, the message that was supposed to appear was for a voluntary evacuation of Fire Island. Instead, what showed up on television screens at 7:40 p.m. on Saturday night read, "Civil Authorities have issued an Evacuation Immediate for the following New York counties: Suffolk. Effective until September 04-07:10 AM EDT. This is an emergency message from." It ended there.

The partial message sparked a flood of 911 calls from concerned residents and agencies, said Greg Miniutti, chief of communication for the Department of Suffolk Fire and Rescue.

"It was controlled chaos," Miniutti said. "The phone was ringing off the hook."

While Bellone's team took to Facebook to correct the alert and the police sent their own messages that county residents didn't need to leave, Miniutti and his team scrambled. They couldn't cancel the message. But they tried to send another.

They guessed a shorter version might go through, rather than the 600-character advisory originally sent. And it did.

About 10 to 15 minutes after the first message, the original warning reappeared with the new message — "UPDATED Message — Voluntary evacuation of Fire Island ONLY by 1 pm Saturday 9/4/16" — tacked onto the end.

Miniutti said the dispatch supervisor who sends the alert typed in the message correctly through the county's Code Red system, which it buys through a vendor to interact with the federal systems, including the Emergency Alert System.

FEMA spokeswoman Lauren Lefebvre said the original message that appeared on television is generated automatically by the computer system. The agency is investigating why the rest of the county's message wasn't broadcast.

"We've formally asked New York State Emergency Management to find out what happened," Suffolk Fire, Rescue and Emergency Services Commissioner Joseph Williams said. "Not to point fingers, but to find out what happened. We want to make sure what happened doesn't happen again."

The county will continue to use other aspects of the federal notification system, which allows it to send messages in other ways, including text messages to mobile phones near specific cell towers — as it did on Saturday night when the voluntary evacuation of Fire Island was enacted.

Lefebvre said she did not know of another instance when an abbreviated automated alert was sent in error. She said the public should continue to pay attention to local officials, newscasts and emergency alerts.

"It's peak hurricane season. Alerts will go out if needed and are critical and contain lifesaving messaging," she said.

NATIONAL PREPAREDNESS MONTH

FEMA: September Is Nat'l Preparedness Month

By Alex AuBuchon

Alabama Public Radio, September 5, 2016

September is National Preparedness Month, and the Federal Emergency Management Agency is urging Alabamians to be prepared for disasters.

FEMA is partnering with the Ad Council to encourage people to take time to develop a plan in the event of a disaster. The agency says families should think about things like supplies to have on hand, locations of local shelters and where to go in the event of an emergency.

Rafael Lemaitre is the director of public affairs for FEMA. He says flooding is the most common and costly disaster the agency encounters, which means having flood insurance is crucial.

"This is not something that is covered under standard homeowner insurance policies, but it's important that folks just take time to protect themselves, because if something were to happen, FEMA assistance isn't designed to make you whole. Insurance, however, can replace what you lose."

Lemaitre also encourages people to download FEMA's app, with readiness checklists and built-in alerts from the National Weather Service. The app is free on Apple's App Store and Google Play.

Our Views: Labor Day Closes Summer Of Sadness In South Louisiana, Hopefully Brings A Page Turn

Baton Rouge (LA) Advocate, September 4, 2016

The arrival of Labor Day brings the unofficial end of summer, concluding a season in the life of Louisiana that no one could have envisioned when schools closed for the vacation break last May.

This has been a summer of sadness in south Louisiana, the timing made all the more ironic because summer, of all the seasons on the calendar, is supposed to be the most carefree time of the year.

Instead, cares crowded the summer of 2016 like hordes of locusts in some biblical plague. The July 5 shooting of a black man during a struggle with police at a Baton Rouge convenience store prompted protests in Louisiana and across the country. The July 17 shooting of six Baton Rouge law enforcement officers by a gunman bent on revenge left three lawmen dead, bringing even more international attention to an already wounded city. Then came last month's historic flooding in south Louisiana, a tragedy that displaced thousands of homeowners and killed 13 people.

Although Labor Day is typically devoted to backyard barbecues and time off the clock, this won't be a day of rest for many south Louisiana residents. They'll be working hard to clean out and repair flood-damaged homes, a drudgery others confronted after hurricanes Katrina and Rita.

Labor Day began as a celebration of the American capacity for hard work, a reality made evident here in the aftermath of the August flood. Thousands of homeowners, taking their destinies in their own hands, are gutting their homes and reclaiming their lives, affirming the basic resilience of Louisiana's people.

Louisiana is known around the world as a place to have a good time, a reputation we embrace. But when crisis calls, our people work harder than anyone to fix what is broken, to heal what is hurting, to restore what's been lost. The labor of recovery that so many undertake this Labor Day is a hard job, but it's a labor of love for a state that will rebound, better than ever.

With Labor Day, a page turns. We hope the holiday signals a slow return to routine after an anguished summer. May we once again enjoy cooler temperatures, football, calmer skies. And may more of us be settled in our own homes again – maybe by Halloween.

Our Views: A Bipartisan Stand On Louisiana Recovery

Baton Rouge (LA) Advocate, September 4, 2016

In a deeply partisan presidential campaign season, a natural disaster has reminded Louisiana residents that in times of crisis, petty party politics should have no place in relief and recovery.

Shortly after the flood, Gov. John Bel Edwards, a Democrat, asked Republican Lt. Gov. Bill Nungesser to help local officials in flooded areas navigate the federal bureaucracy for aid. As president of Plaquemines Parish, Nungesser gained lots of experience in disaster management, leading the parish through five hurricanes and the BP oil spill. Edwards' willingness to cross party lines and enlist Nungesser in the recovery is a healthy sign that when trouble calls, the state's leaders can be grown-ups.

The governor's meeting with Louisiana's congressional delegation to chart the state's recovery needs was another welcome development. The delegation includes outgoing Republican U.S. Sen. David Vitter, Edwards' rival in the governor's race last fall, as well as other members of the GOP who have disagreed with the governor on basic matters of public policy.

But the issue of disaster assistance for Louisiana should inspire bipartisan unity, and we hope the apparent cooperation among members of the delegation and the governor proves durable. "The meeting was very productive, and as we continue to get a clearer picture of the damage sustained in this historic flood, we will continue to fight together for a stronger Louisiana," Edwards said of his session with the delegation.

The delegation has lost seniority in recent years — the coin of the realm in congressional influence — so working together will be especially important in getting Louisiana the recovery resources it needs.

We urge the state's senators and congressmen to work with the governor to develop a coherent request for the extra federal help only Congress can approve.

The basic ingredients of such an aid package should include housing assistance for displaced residents and funding for long-delayed flood control projects for the region.

National attention for the flood's aftermath is already fading. Given the narrowly closing window of opportunity to gain congressional support for Louisiana's recovery, the state's leaders must act quickly and decisively to press Louisiana's case.

They can boost their chances of success — and

Louisiana's prospects for recovery — by acting together, Republicans and Democrats united.

Our Views: It's Not Enough To Finish The Comite Canal

Baton Rouge (LA) Advocate, September 2, 2016

If there's a convenient scapegoat for the flooding of recent weeks, it is the Amite River Basin Commission, principally charged with building the Comite River diversion canal that might have mitigated some of the damages from floods in the Amite basin.

This week, the commission met for the first time since the floods, mostly to mostly to sign off on some emergency contracts.

The diversion canal is not the only project of the 13-member commission, a board with represenatives from the six parishes in the Amite basin. But in light of disaster, there is a lot of focus on failure to complete the canal, which has faced challenges for years: a lack of state and federal funding even as taxpayers in four parishes have been chipping in property taxes since 2001; what commissioners say is a low estimate of the benefits of the project from the U.S. Army Corps of Engineers; debates over property "takings" for the canal – a politically controversial matter in conservative suburbs.

What cannot be denied, though, is the evidence that the lack of a diversion canal is not a plausible scapegoat for all of last month's flooding.

State Climatologist Barry Keim told the Press Club of Baton Rouge this week of the almost unbelievable readings of rainfall from the storm, including the amazing 33 inches-plus at Watson in Livingston Parish.

At the Amite commission meeting, Executive Director Dietmar Rietschier noted that the dimensions of the disaster were such that no single project could have saved all those engulfed by flood waters.

Indeed, many of the neighborhoods damaged in East Baton Rouge Parish suffered from flash floods because of past neglect of more basic drainage projects that were smaller than the Amite canal but certainly expensive.

The cost of the diversion canal remains an issue, but as Rietschier said, the floods may prod the Corps and Congress into a crash program to complete the project.

It would be after the fact, that's true. But if the canal can perform as projected, future floods that are less severe can be mitigated and damage sharply reduced downstream of the Comite project.

We encourage policy makers at the state, federal and local level not to regard the Comite canal as a magic bullet. Even if completed, it won't make up for a long-term failure to invest in more drainage projects throughout our generally low-lying area.

These aren't the sexiest public works projects in the world, and and they're costly – but far less costly than the flooding pain that so many of our families are enduring now.

MAIN FEMA NEWS

NATIONAL NEWS

ABC: Iowa Flooding. ABC World News (9/25, story 8, 1:30, Llamas, 14.63M) reported, "Now to the flood emergency in Iowa. Rivers rising, forcing evacuations in Cedar Rapids. And families facing some of the worst flooding in years. The danger expected to grow worse during the week. Here's Rob Marciano in the flood zone." ABC (**Marciano**) added, "Tonight, the major flooding disaster in Iowa is only getting worse. Up to seven feet of water submerging homes. Entire neighborhoods swamped by rivers. The only way in or out, by boat." **Unidentified speaker**: "We built what we thought was good enough, but it wasn't. We'll rebuild back." **Marciano**: "This baby deer getting caught in the water surge, a good Samaritan rushing to rescue it from the dangerous currents. In cedar rapids, they're scrambling to fill thousands of sandbags to protect against the growing threat. Evacuations begin tonight as residents brace for one of the worst floods in the city's history." **Ron Corbett**, Cedar Rapids Mayor: "We really need to push hard these next days to be fully prepared for that crest." **Marciano**: "The water coming up to street level, which is why they built these temporary barriers. Forecasts have the crest at 23 feet. A long duration event they haven't seen since 2008. Tom?"

CBS: California-Wildfire Airdrop Plane. The CBS Evening News (9/24, story 7, 1:50, Ninan, 11.17M) reported, "At least five large wildfires are burning in California, and the worst part of the fire season is actually just beginning. With red flag warnings posted across the state, tonight Chris Martinez takes us aboard California's top weapon for battling its biggest fires." CBS (Martinez) added, "Firefighters battling California's largest wildfires call this their 'big gun.'" R.K. Smithley, pilot: "When you're up there trying to save lives and property, it's pretty intense." Martinez: "R.K. Smithley is the pilot of a DC-10 passenger aircraft that's been transformed into a powerful weapon against flames." Smithley: "Somebody that was very, very smart — way smarter than me — decided, 'Let's put three tanks on a DC-10.'" Martinez: "Together, those tanks carry more than 11,000 gallons of fire retardant, about nine times more than any other plane in the fleet. All three tanks can be rapidly refilled." Smithley: "Twelve to 15 minutes, these babies are full and we're going." Martinez: "What makes this plane unique isn't just its payload but also how it's flown, making fighter-style turns just 250 feet above the ground. You don't expect that of an aircraft like this." Smithley: "No. We fly this in some amazingly tight spaces." Martinez: "Spaces firefighters often can't reach from the ground. Without that air support…" Unidentified Speaker: "We'd see a lot bigger fires. We'd see a lot more rapid growth. We'd see fires lasting longer, consuming more ground resources." Martinez: "Smithley says he knows how critical his job is." Smithley: "People on the ground are relying on us doing it right. That's what it's about, right there." Martinez: "That thought is top of mind, he says, every time he makes a drop. Chris Martinez, CBS News, Sacramento."

ABC: Severe Weather-Storms. ABC World News Tonight (9/23, story 4, 0:50, Muir, 14.63M) reported, "We are tracking a severe storm threat as we begin this weekend, tonight from Texas all the way north. Two confirmed EF1 tornadoes now in Utah, this one in Washington Terrace. Heavy rain in the Midwest, severe flooding in Greene, Iowa. The system is moving east at this hour. So let's get right to meteorologist Rob Marciano, tracking it all. Rob?" ABC (Marciano) added, "Hi, David. That storm that spawned the tornadoes in Utah, as you mentioned, is on the move. We've got severe thunderstorm watches posted for eastern Wyoming, for Nebraska, South Dakota. By tomorrow, strong storms expected from Minnesota all the way into Texas. And for California, our first big Santa Ana wind event. It's going to peak on Sunday, hot, dry winds over 50 miles per hour, fire watch posted there. And here in the East, the summerlike heat is over, a fall cool finally coming this weekend. David?" Muir: "All right, Rob Marciano with us on a Friday. Rob, thank you."

NBC: Severe Weather-Storms. NBC Nightly News (9/23, story 4, 1:35, Guthrie, 16.61M) reported, "States of emergency are in effect tonight in parts of the Midwest, where 48 hours of relentless rain triggered deadly floods. The National Guard is now being called in to help, while out west, tornadoes have struck hard. We get details now from NBC's Gadi Schwartz." NBC (Schwartz) added, "Across the country, weather systems so powerful that rain-heavy wind gusts swept sideways. In Utah." Unidentified Speaker: "Look at that!" Schwartz: "Dark storm clouds brought out onlookers with cameras." Unidentified Speaker: "There goes the transformer." Unidentified Speaker: "Oh, my gosh!" Schwartz: "A small twister damages homes. This one knocked clean off its foundation and cracking its roof in half. While men in chest-high waters built up walls with sandbags. In the Midwest, monster rain totals. Parts of Wisconsin and Iowa seeing over a half-a-foot of rain in 48 hours. And in Minnesota, a whopping 13 inches in some areas. Rivers overflowing into towns across those states. A dock with a boat swept into a dam. A train derailment spilling diesel fuel into the Mississippi. The damaging flood waters killing at least two men in Wisconsin. And the death toll from these storms may have been even higher if not for quick-acting Minneapolis police officers." Unidentified Speaker: "Yeah, we're going to try to yank him up." Schwartz: "Their body cameras capturing a daring nighttime rescue of a man being swept away in a flood channel." Unidentified Speaker: "My partner was hanging on to the back of my belt so I wouldn't fall over the edge." Schwartz: "A reminder of the dangers of torrential downpours that can threaten lives with each storm." Unidentified Speaker: "There it goes." Schwartz: "Gadi Schwartz, NBC News."

State Of Emergency Declared For Wright County

By Kacey Ginn

Wright County (IA) Monitor, September 25, 2016

In a special meeting this morning, the board of Supervisors unanimously voted to declare a state of emergency for Wright County due to a high accumulation of rainfall and flooded rural roads.

So far, flooding has been found to be particularly affecting the northern half of the county, prompting Belmond-Klemme Community Schools to dismiss class at 11:30 a.m. Heavy rainfall in Hancock County overnight is expected to continue affecting Wright County as the water flows downstream.

"We've got several areas of rural roads that are under water," said Jim Lester, County Emergency Management Coordinator. Board Chairman Stan Watne also wanted to urge drivers to be cautious.

Roads superintendent Chase Pruismann reported that they've closed 50 roads so far, with 100 more flagged and coned. Problem areas include the grove southeast of Belmond and various roads near the Iowa and Boone Rivers in Boone, Belmond, and Pleasant townships.

The Federal Emergency Management Agency also released a statement today urging Iowans to be prepared for flooding. "Additional rainfall, even in smaller amounts, when combined with an already saturated ground, could quickly lead to hazardous conditions," said FEMA Region VII Administrator Beth Freeman. "It's critical that Iowans prepare now to do what's needed to be safe in the wake of current and near-term flooding, as well as other severe weather."

The emergency declaration will allow state assistance and for county emergency funds to be used for road repair and barricading, if needed.

24 Tips From FEMA That Will Prepare You For Flooding

Des Moines (IA) Register, September 23, 2016

With active flooding underway in parts of Iowa and the threat of more to come, FEMA is urging Iowans to be ready to take life-saving actions on short notice.

"Additional rainfall, even in smaller amounts, when combined with an already saturated ground, could quickly lead to hazardous conditions," said FEMA Region VII Administrator Beth Freeman. "It's critical that Iowans prepare now to do what's needed to be safe in the wake of current and near-term flooding, as well as other severe weather."

Haylie Wasem, 18, (in gray) was evacuated from her home on the southeast side of Waverly as floodwaters continue to rise through northern Iowa. Neighbor Elizabeth Bluhm, 19, said floodwaters are about two feet from her home.

FEMA's Region VII office in Kansas City, Missouri has been in regular contact with emergency management officials in Iowa as both agencies actively monitor severe weather and flooding in many parts of the state.

"This flooding is a serious situation for many Iowans," Freeman added. "We can't stress enough how important it is for citizens to stay informed of ever-changing conditions, to follow official emergency instructions, to have an emergency plan for all members of the family, including pets, and to be ready to quickly put that plan into action."

Flooding is not unfamiliar to many Iowans but it helps to refresh on the immediate steps to stay safe:

Be Informed and Know the Danger:

Keep track of severe weather and flood forecasts, and take them seriously. To do that:

Plan for the Worst:

Severe weather can strike suddenly so have a plan to stay safe and take life-saving action if needed. The plan should include:

For more information on creating an emergency plan, visit Ready or www.beready.iowa.gov.

Be Ready:

Gather essential items in one place if evacuation is needed. Those should include:

Wallets, purses, car/house keys, eyeglasses, cash, credit cards;

Medicine and basic first-aid supplies;

Daily living supplies for infants/young children, family members who are elderly or have access and functional needs, and pets;

Important information such as numbers for bank accounts, insurance policies (health, auto and property) and credit cards;

Important phone numbers of relatives, employers, schools and medical professionals such as pharmacies, physicians and veterinarians;

Chargers for mobile devices;

One or more changes of clothes. Include long pants, socks, boots and/or sturdy shoes;

Bottled water and high-protein, non-perishable food such as a peanut butter, tuna and nuts.

Talk through the emergency plan with all family members so that everyone knows what to do.

If there is time, consider making a more complete emergency supply kit for homes and cars. To learn how, visit Ready or Ready Iowa.

FEMA Won't Change Maps After Floods; Some Worry Of Consequences

Baton Rouge (LA) Advocate, September 24, 2016

Daniel Champton didn't buy flood insurance for his home in the Ascension Parish town of Galvez. Based on federal flood maps, he wasn't required to.

In August, he became one of the tens of thousands of south Louisianians living outside of federally designated high-risk flood zones whose houses took water.

Yet Federal Emergency Management Agency officials — tasked with not only responding to those victimized by floods but also with helping prevent the damage to begin with — have made it clear over the past month they won't revisit the accuracy of those maps.

Even more recently, officials doubled down on that promise, saying that not only would the flood maps stay the same, the widespread devastation won't prompt increases in flood insurance premiums. The reason is simple, FEMA officials have said: The rain that brought on the flood was so unprecedented it won't force a re-examination.

Leaders in the hard-hit Baton Rouge area have welcomed FEMA's assurances as needed continuity for their constituents.

But some researchers and critics of the flood-map process are raising questions about that approach, saying the scale of the flooding is actually a reason to take another look at the maps. They argue that inspection should not only reflect on the conclusions the maps come to but dig deep into the way they are developed and how construction throughout the region over the past couple of decades has altered drainage.

Craig Colten, an LSU historical geography professor, urges revising the maps. He noted the August flood was Louisiana's second major flood caused by rain in 2016. Severe rain in March brought high water to Livingston and Tangipahoa parishes and elsewhere. But he said he understands why people might be glad to hear FEMA doesn't plan to change the maps, which could lead to higher insurance costs or even pricey elevation of homes.

"I'm always sympathetic. If my house was out there and been flooded, I'd be in the same boat, and I would be basically facing extraordinary expenses, but I think in the long run, what's really unfair is to force these people who've suffered damage to face the risk again and face the peril that that they'd have to rebuild again," said Colten, who has written about Louisiana's efforts to tame its swamps and coastal environment. "Which is more expensive? Raising a house now or relocating now, which might be a big financial burden, but if they have to do this again in five or 10 years, it's an even bigger burden, to say nothing of the emotional cost."Bigger storms?

Meanwhile, nationally, experts are rethinking the FEMA maps relied on by the National Flood Insurance Program. Some see the current map methods as out-of-date, painting with too broad of brush that, in combination with local building rules, fails to adequately convey the risk of flooding to property owners.

Sally Ann McConkey, who coordinates hazard assessment and mapping for the Illinois State Water Survey and has advised FEMA on updating its maps, said the flood maps are designed for a bigger picture purpose than what's needed for local growth planning. They're created to manage the financial risk for national flood insurance and don't provide the kind of safety standard that the public or even local government officials might expect, she said.

The threshold used by FEMA on those maps is the 100-year flood. Where such a disaster is likely to strike drives who must have flood insurance if they have a mortgage on a property.

Despite the name, the 100-year flood is statement of probability — a flood that has a one-in-a-hundred chance of happening in a given year, though also a more than one-in-four chance of happening over the life of a 30-year mortgage.

Further, the models behind the FEMA maps don't take into account additional levels of uncertainty from the growing effects of incremental sea level rise and the prospect of even more severe increases due to global climate change, floodplain experts say.

Chad Berginnis, executive director for the Association of State Floodplain Managers and a former Ohio hazard mitigation officer, said the nation's flood modeling, which relies on statistics from years of past rainfall and flooding, has the built-in assumption that the future will be the same as the past. But floodplain managers across the nation are seeing that storms are increasingly more intense than the statistical data used to create flood maps had predicted, he said.

"We are seeing change in our atmospheric events, and so what does that mean for the future?" Berginnis asked.

Flood maps also might not adequately reflect changes in drainage because of construction. McConkey said FEMA chronically has lacked the funding to consistently update flood maps to account for new development and other changes. She suggested the best solution to avoid future flooding is to tightly control and limit development in the 100-year floodplain.

"That's really the key, is to get of out high risk areas because the rains are going to come. You can't build enough reservoirs; you can't build enough levees," McConkey said.

East Baton Rouge, Ascension and Livingston parishes all have flood maps that are 9 years old or newer, but important studies of the hydrology that underlie those maps mostly date from 2005, before periods of strong home construction in the parishes.

However, Shannon Dupont, East Baton Rouge's floodplain manager, said he believes with the flood mitigation the city-parish has long required on new development, the map is still current. FEMA also updated parts of the parish map in 2012.Elevation requirements

FEMA maps define the breadth and depth of a 100-year flood, designating the area that would be affected as a "floodplain" that is at highest risk of inundation. Researchers create the maps by combing through historical river and rainfall data, using airborne laser surveying equipment and tapping other information. When interpreted by local building codes, the 100-year-floodplain sets the mark for how high new properties must be built at a minimum, also known as the "base flood elevation."

In most of East Baton Rouge and Ascension parishes, new structures and subdivisions generally must be built 1 foot above the 100-year flood elevation determined by FEMA. In Livingston Parish, they must be built at or above that elevation.

Local officials around Baton Rouge said any bid to remap based on the August flood could deal a death blow to their communities. The governments of East Baton Rouge and Ascension parishes, as well as the city of Central, actually took steps post-flood to ease elevation regulations, which in some cases had previously been set higher than federal minimum requirements.

The exact toll of the flood across south Louisiana is still being tallied, but state officials estimate waters swamped 150,000 homes and businesses in at least 25 parishes. Thousands of homeowners are now awaiting damage assessments that will determine if they have to bear the added expense of elevating their homes, in addition to the repairs. Those within the 100-year floodplain that incurred damage adding up to 50 percent or more of the value of the home might have to elevate, depending on how high the structure is already raised.

"If they were to take this flood event that was so much of an anomaly and change the base flood elevation, you decimate the city, and folks are going to want to leave this city," Central Mayor Jr. Shelton said.

FEMA says it ultimately will use the data from this flood for regular map revisions, but the agency does not typically change the maps after one major flood. And, in any event, the process of making the map changes probably wouldn't be finished soon enough to affect rebuilding, local officials say.

But the idea of quickly putting in new elevation standards after a major event is not without precedent. After Huricane Katrina in 2005, FEMA established advisory elevation standards for New Orleans when the levee failures called into question what a safe elevation would be in the future. Communities had to adopt the advisory elevations to get access to money through the Road Home, the state rebuilding program funded by federal dollars.

Some have speculated that the Augst storm wasn't just a 100-year flood but in fact a 1,000-year flood — an event that has a 0.1 percent chance of happening in a given year and is 10 times less likely than FEMA's benchmark.

Local officials point to that fact, and the record-breaking river levels, to suggest the flood shouldn't prompt map changes.

"This thing that we just experienced in this parish, by any stretch of the imagination, whether you ask any meteorologist that's an expert on this type of an event, is exceedingly rare," Metro Councilman Trae Welch said. "To the point to where — I don't know where the 1,000-year number came from, but we don't base base-flood elevations on 1,000-year events and we shouldn't base base-flood elevations on 1,000-year events."

FEMA officials themselves have said part of the reason they aren't remapping is the enormous scale of the flood.

"All we administer to is the 100-year. So there are not going to be any advisory base flood elevations or map changes," Mark Lujan, FEMA's top mitigation expert for the South, told Sorrento residents in a meeting last month.

While the recent flood was a big one, it may not hit that 1,000-year mark. Climatologists have documented that a 1,000-year rain occurred in several places hit by the flooding. But soil conditions and other factors can affect runoff, making the official "size" of the flood less than the rain storm.

Todd Baumann, data chief for the United States Geological Survey in Baton Rouge, said recently that his agency has not yet determined the extent of the flood, but early data showed flooding was "routinely higher than a 1 percent event and, in multiple locations, approaching the 0.2 percent (500-year) range."

Insufficient data

Put down in various shades and tied to an entire architecture of local building regulations, FEMA flood maps have an air of certainty to them. Like road maps, they are marked with lines, abbreviations and numbers, showing where and how high the 100-year flood will reach with an implied level of precision that filters down to local building rules.

But Bob Jacobsen, a consulting environmental engineer and hydrologist for the Amite River Basin Commission, argues that the maps, while they achieve what Congress has mandated, don't paint an accurate enough picture of how flooding happens in the basin. Instead, federal, local and state officials should come together to devise better models, he said.

One problem with the maps is they are based on a limited historical record, even though it can take several hundred years worth of data to establish the true extent of a 100-year flood, Jacobsen said.

With that range of uncertainty, the flood height at the Denham Springs gauge on the Amite River for a 100-year event could vary by plus or minus 4 feet, Jacobsen estimated. The gauge saw its record height exceeded by 4.7 feet last month, still falling within the 100-year flood range that Jacobsen believes exists.

A written statement from FEMA did not dispute Jacobsen's assertions but did say the agency works with local officials to improve the maps' accuracy, continually evaluates the maps in light of new data and scientific methods, and strives to improve communication of the maps' findings to the public.

Insurance implications

Roy Wright, FEMA deputy associate administrator for insurance and mitigation, told a Congressional committee earlier this month that flood insurance claims filed over the August floods in Louisiana already had totaled 29,000, making it the fourth biggest storm since the creation of the program.

Only Katrina in 2005, Hurricane Sandy in 2012 and Hurricane Ike in 2005 were higher, he said.

While exact numbers are still uncertain, preliminary data suggests the flood touched thousands of homes in the Baton Rouge region outside the zones FEMA designated as at high risk of flooding — the areas where mortgage holders must have flood insurance.

For years, federal officials, joined by local and state leaders across Louisiana, have urged people to buy flood insurance whether they live in a high-risk zone or not.

But Jacobsen and Wright agreed that by using hard thresholds like the 100-year flood, the insurance program often creates a binary choice with the homeowners: In the plain, you need insurance; out of it, you don't.

Champton, the homeowner in Galvez, got 6 inches of water. Unknown to him, more than half of the lots in the Twelve Oaks of Galvez subdivision, including his, had been in the 100-year floodplain at the early stages of development a decade ago and would have been required to have flood insurance.

But, under parish rules, dirt had to be added to raise those lots above the floodplain before they could be sold, said developer Michael Boies. The lots were built up 2.4 to 3.6 inches above the projected level of inundation from a 100-year flood, according to FEMA map amendments.

Boies then was able to get the flood map amended under a legal process through FEMA to exclude those lots from insurance requirements.

Champton said he wasn't told about the map change when he bought his house. But the St. Amant native also said he never would have thought the Galvez area was vulnerable. "I never ever considered flooding until ... right after we flooded," he said.

In October, a committee that reviews FEMA's flood mapping procedures recommended the agency move away from the 100-year-flood threshold for insurance rating purposes. Instead of looking at swaths of homes, individual structures would be examined.

But Wright said that while he agrees with the goal, it's a "transformative" leap that will require lots of new data, major changes in what FEMA does for insurance underwriting and revamping local development rules.

"It will take us years to get there, and it's not exactly clear what we're moving toward," Wright said.

Meanwhile, local officials who oppose map changes, like Central's Mayor Shelton, said this flood offers a succinct lesson: Buy flood insurance.

"If you're somebody who flooded, I don't care if it's the first time your house flooded, if you see that possibility and don't do something to minimize that issue, then shame on you," Shelton said.

Louisiana Officials Ramp Up Shelter At Home Program

Associated Press, September 23, 2016

BATON ROUGE, La. — A top aide to Gov. John Bel Edwards says the Shelter at Home program has "ramped up" in recent days.

The Advocate reports (http://bit.ly/2csRPv9) Julie Baxter Payer and others, including officials of the Federal Emergency Management Agency, issued an update on the flood recovery.

Payer touted the Shelter at Home program, which allows families to stay in damaged homes during repairs if the work needed to remain there costs less than $15,000.

Single-family homeowners are eligible for work like repairs to kitchen sinks, shower tubs, exterior door replacements and bathroom privacy walls.

About 19,000 people have applied for the assistance.

Payer says the program began less than three weeks ago and is moving faster than any previous such aid after a storm.

West Virginia County School Board Lands $1.5m Flood Grant

Associated Press, September 23, 2016

CHARLESTON, W.Va. — A West Virginia county school board has landed a $1.5 million federal grant for flood recovery efforts.

On Friday, U.S. Sens. Joe Manchin and Shelley Moore Capito announced the grant for the Kanawha County Board of Education.

The Federal Emergency Management Agency grant will help the board address flood-related issues in Kanawha County schools.

Five schools across the state, including two in Kanawha County, are being rebuilt because of extensive flood damage.

The June 23 floods killed 23 people and devastated homes, businesses and infrastructure.

Cedar Rapids Begins Evacuations Ahead Of Major Flood

Water from last week's storm to north hits city that has been preparing since 2008 event

By Joe Barrett

Wall Street Journal, September 25, 2016

Iowans Leave Homes As Floodwaters Rise

By William Petroski

USA Today, September 25, 2016

DES MOINES — As the Cedar River continued to rise Sunday, residents were asked to leave low-lying areas of Cedar Rapids that are in danger of flooding.

The National Weather Service predicts the river will reach a crest of 23 feet in Iowa's second-largest city Tuesday morning. Officials have asked those in downtown areas of the city near the river to leave by 8 p.m. Sunday. They expect it could be a week before people will be able to return home.

Jen Winter, Cedar Rapids public works director, cautioned that despite the revised flood projection to 23 feet, "this is still a major flood event" and floodwaters may still seep out of areas where steps have been taken to hold back flood waters.

Cedar Rapids City Manager Jeff Pomeranz says the city has been preparing to deal with a major flood since a major flood that hit the area in 2008, and that those preparations should help.

"All this work is coming together. You can see the benefits of planning and preparation in the various streets and infrastructure improvements and the protection systems in order to make sure that our city is safe," Pomeranz said. "That could not have happened without tremendous preparation by our city, our county government, our private sector and most importantly our citizens."

Cedar Rapids Mayor Ron Corbett said that city officials learned Wednesday that they had four days to react to the flood, and he praised residents for taking ownership of their community in the flood fight.

"This is the last day to get all the work done that needs to be done, and people have been working very hard," Corbett said. "I know that there have to be a lot of sore backs and sore arms and shoulders for all the work that has been done. It was citywide, really."

Corbett also said that all areas of Cedar Rapids were the subject of efforts to establish flood defense, unlike plans for flood control developed by federal officials that only would have protected the east side of the river.

MidAmerican Energy said Sunday that 890 Cedar Rapids properties had been identified for natural gas service disconnection because of flooding. Affected customers would be contacted by phone, the company said. In Plainfield, natural gas was being shut off to 20 homes in low-lying area due to high water levels from the runoff.

Police Chief Wayne Jerman said a curfew will be imposed from 8 p.m. Sunday until 7 a.m. Monday and police officers will patrol flood affected areas. He said 300 to 400 Iowa National Guard troops will be assisting police and 60 additional sworn law enforcement officers will be arriving to assist Cedar Rapids police with their operations.

Officials said that as of Sunday morning, no looting had been reported and that National Guard troops who assist law enforcement officers will not be armed.

In Palo, a small community in Cedar Rapids, city officials said no water use was mandatory for all local residents. Officials said the sewer system had been taking on a large amount of water and a sewer line had possibly been severed. The water system remained operational, however. In addition, a mandatory evacuation was in effect for parts of Palo, and a curfew in the evacuation area had been declared from 8 p.m. Sunday to 6 a.m. Monday.

In Charles City, the Cedar River was slightly under 16 feet late Sunday morning after cresting Saturday at 20.95. Flood stage is 12 feet in Charles City, and the river was forecast to fall below that level sometime late Sunday night.

In Waverly, the Cedar River was at 12.79 feet late Sunday morning, which was just above flood stage of 12 feet.

In the Waterloo and Cedar Falls area, where the Cedar River crested Saturday morning, local officials were keeping their fingers crossed that flood damage will be significantly less than the devastation experienced in the 2008 flooding.

"I am so proud of the towns we have here," said Black Hawk County Emergency Management Coordinator Lorie Glover. "Waterloo, Cedar Falls, Evansdale and some of the others were extremely pro-active — two and three days ahead of the flood, using lessons learned from 2008. They did a phenomenal job."

At least four bridges were still closed in Waterloo on Sunday, and Fletcher Avenue was shut down from University Avenue to Highway 63 because of flooding on Black Hawk Creek. However, bridges on U.S. Highway 63 and several other roads remained open.

The river peaked Saturday in Waterloo at 22.65 feet, which was well above flood stage of 13 feet, but less than the 2008 record crest of 27 feet.

"We do have pockets of damage in some areas that we will be looking at, but the water is still very high," Glover said. "We need to wait until it goes down a little bit before we can get into some areas to look at what damage there will be."

Local residents "sandbagged and sandbagged" around businesses in an effort to mitigate flood damage, so damage totals to businesses aren't clear yet. Glover said she already knows that some residents have water in their basements and some houses may have water on the first floor, but she can't get a better idea until flooding recedes.

However, it appears there has not been any catastrophic damage in Black Hawk County, unlike 2008, when a railroad bridge collapsed in downtown Waterloo under enormous pressure from the swollen Cedar River.

"This time the bridge was battered pretty good by the water, but it has held up and it is doing well," Glover said.

Residents Evacuate Cedar Rapids Homes Ahead Of Flooding

Associated Press, September 25, 2016

CEDAR RAPIDS, Iowa — Several thousand residents of Cedar Rapids left their homes Sunday as floodwaters began to spill out of the rising Cedar River, and Iowa's second-largest city worked to apply the lessons officials learned after the record 2008 flood.

The river crested Saturday night in Waterloo and Cedar Falls, which are about 55 miles (90 kilometers) upstream from Cedar Rapids, which is Iowa's second-largest city, with about 130,000 people.

The water levels in Cedar Falls and Waterloo were slightly lower than had been expected, but they still reached levels that were second only to those in 2008, when a major flood devastated the region.

The National Weather Service predicted that the river will crest at 23 feet (7 meters) in Cedar Rapids on Tuesday morning — well below the 2008 record of 31.12 feet (9.5 meters). Officials asked those living in about 5,000 downtown homes near the river to evacuate. They said it could be days before people can return home.

The Cedar Rapids school district said Sunday that it is canceling classes through Wednesday because of the flooding. District officials will reevaluate the situation by Wednesday afternoon.

Cedar Rapids City Manager Jeff Pomeranz said the city has been preparing to deal with a major flood since that of 2008, which caused billions of dollars of damage. City workers and volunteers have been working for days to build a temporary system of levees to try to contain the floodwaters.

"All the work is coming together, and you can see the benefit of planning and preparation," Pomeranz said.

After the 2008 flood, about 1,350 homes near the Cedar River were bought out and destroyed to reduce the amount of damage that future floods could inflict. About 45 acres of green space sit in that area today.

On Sunday morning, more than 100 volunteers helped remove the seats from the restored Paramount Theater in Cedar Rapids and move them up to the second floor to protect them from floodwaters. The theater was heavily damaged in the 2008 flood because it is one block from the Cedar River, and it cost $35 million to restore.

Unlike in 2008, residents have had more time to prepare for a flood. The benefit of that extra time was clear in the small town of Palo upstream where residents of more than 80 homes evacuated.

Kim Hutchins, whose home in Palo is about 10 miles upstream from Cedar Rapids, told the Des Moines Register that she spent Saturday packing up her kitchen while some friends unhooked her furnace in the basement and moved it up to the garage. Most of her furniture was piled onto trailers to move.

"They've been telling us it was coming for days. Last time, we had eight or 10 hours to get out," said Hutchins, 53, who planned to go stay with her mother.

Palo residents were being urged not to use water on Sunday because of a sewer line break and area flooding. Officials said they were working to repair the sewer line quickly. In the meantime, they were providing bottled water to residents.

Officials in Waterloo and Cedar Falls hope their communities will sustain less damage in this flood because of steps taken since 2008, but Black Hawk County Emergency Management Coordinator Lorie Glover said the extent of the damage won't be clear until the water recedes.

In Waterloo, the Cedar River crested at 22.95 feet (7 meters) Saturday. That's well below the 2008 record of 27 feet (8.2 meters), but still caused major flooding. It remained at 22 feet Sunday afternoon.

"We do have pockets of damage in some areas that we will be looking at, but the water is still very high," Glover said. "We need to wait until it goes down a little bit before we can get into some areas to look at what damage there will be."

Parts of southern Minnesota and southwestern Wisconsin experienced flooding over the past few days, but it appeared that most of the threat of major flooding had passed in those states by Sunday.

In the southern Minnesota town of St. Clair, eight to 10 homes remained evacuated Sunday. Assistant Blue Earth County Emergency Manager Eric Weller said Sunday that "we were very lucky overnight" that not much rain fell.

The Latest: Iowa Cities Donate Sandbags To Cedar Rapids

Associated Press, September 25, 2016

CEDAR RAPIDS, Iowa — The Latest on flooding along rain-swollen rivers in Iowa (all times local):

4:20 p.m.

Nearby communities are donating several thousand filled sandbags to Cedar Rapids as the city prepares for flooding.

Waterloo and Cedar Falls endured the crest of the Cedar River Saturday evening.

So on Sunday those cities sent their extra sandbags about 55 miles (90 kilometers) downriver to Cedar Rapids.

Forecasters say flooding is expected to begin in Cedar Rapids Sunday night and reach its height by Tuesday.

___

3:05 p.m.

Brady Coleman spent most of the days before his wedding filling sandbags, but the flooding didn't derail Saturday's ceremony in Shell Rock, Iowa.

Coleman and his bride, Abby Rundle, thought about moving the ceremony to another town because of the record flooding on the Shell Rock River in northeast Iowa.

But some of the main routes into that other town were blocked by flooding.

Rundle told the Des Moines Register (http://dmreg.co/2cDzNVr) the couple took a chance and had the wedding in Shell Rock, as planned.

Most family members were able to attend even if they had to take detours to get there.

___

1:55 p.m.

Residents in the northeast Iowa town of Palo are being urged not to use water on Sunday because of a sewer line break and flooding in the area.

About 80 homes were evacuated Saturday in Palo because of the rising Cedar River.

Officials said they were working to repair the sewer line quickly. In the meantime, they were providing bottled water to residents.

___

1:45 p.m.

About 10 homes remain evacuated in the southern Minnesota town of St. Clair, but the flooded Le Sueur (leh soor) River is receding.

Assistant Blue Earth County Emergency Manager Eric Weller said Sunday, “We were very lucky overnight” that not much rain fell. But he says crews are still pumping at the wastewater treatment plant’s lift station, and residents of the town of 870 are still advised not to take showers or use toilets.

Weller says two bridges remain closed because of high water, but schools are expected to reopen Monday.

Meteorologist Bill Borghoff at the National Weather Service in Chanhassen, Minnesota, says the threat of major flooding is over for southern Minnesota.

___

1 p.m.

The Cedar Rapids school district has cancelled classes for three days and closed its offices because of the flooding expected in Iowa’s second largest city.

The district said Sunday that no classes will be held through Wednesday.

The flooding along the Cedar River is expected to reach its peak on Tuesday, but it may take several days for the water to recede.

District officials will reevaluate the situation by Wednesday afternoon.

___

11:35 a.m.

The National Weather Service has revised its forecast for the Cedar River near Iowa’s second-largest city of Cedar Rapids.

The river is expected to crest there on Tuesday morning at 23 feet. That level will cause significant flooding in Cedar Rapids, but it has been reduced since earlier forecasts for a crest above 25 feet.

But officials are preparing for the worst flooding since 2008.

As River Rises, Iowans Apply Lessons From 2008 Floods

Associated Press, September 25, 2016

CEDAR RAPIDS, Iowa — Volunteers filled sandbags and homeowners began moving things out of their basements on Saturday, and one small town evacuated about 100 homes in preparation for flooding along the Cedar River in Iowa.

The river is expected to crest Tuesday in Cedar Rapids, Iowa’s second-largest city with a population of about 130,000. But with more rain expected Saturday night, officials there warned people to evacuate downtown areas of the city near the river by 8 p.m. today.

“We have emergency personnel that can help you if needed,” Cedar Rapids Mayor Ron Corbett said Saturday. “They’ll risk their lives for you. But we don’t want them to risk their lives.”

At the Cedar Valley Montessori School in downtown Cedar Rapids on Friday, about 100 volunteers from area high schools helped move all the school equipment above the ground floor.

Stacy Cataldo, head of the Montessori school, told television station KCRG that many remember how flooding damaged the school in 2008 and don’t want that to happen again.

“We’re applying those lessons as we move forward,” she said.

Just upriver in the small town of Palo, about 100 homes in low-lying areas were evacuated on Saturday.

City Clerk Trisca Dix said that the mandatory evacuation in the town of about 1,000 took place Saturday afternoon before the river was expected to crest tonight at 24.5 feet.

Mayor Tom Yock told the Des Moines Register that volunteers and work crews scrambled Saturday to protect as much of the town as possible. Palo was devastated by record flooding in 2008.

Many people moved their belongings to the upper levels of their homes and built sandbag barriers before evacuating, he said.

“We’re just trying to be more proactive than we were in ‘08, trying to save as many homes as we can,” Yock said.

In Cedar Rapids, Fire Chief Mark English asked the curious to stay out of the flooded areas, saying that some heavy equipment used to build earthen dams and erect flood barriers has been hindered by gawkers. He said an estimated 1,500 properties near the river were expected to get at least some flooding.

Iowa Gov. Terry Branstad and other state officials toured flood-damaged areas Saturday in the Cedar River basin.

Officials warned that residents who have been asked to evacuate should plan to remain out of their homes and businesses for up to a week. A curfew in Cedar Rapids also was to go into effect today beginning at 8 p.m.

There was some good news on Saturday: When the Cedar River crests Tuesday, it's expected to be at 24.5 feet — nearly a foot lower than projected earlier.

Floods Force Mandatory Evacuations In Iowa

By Kelly McGowan

USA Today, September 24, 2016

Residents are being told they must evacuate their homes in Palo near Cedar Rapids due to flooding, a TV station tweeted Saturday morning.

People who live in the southeast corner of the Linn County town were evacuating at 10 a.m. CT Saturday, according to KGAN-TV.

Evacuations in Cedar Rapids are set to begin at 8 p.m. Sunday. Officials, including the Iowa National Guard, will enforce an 8 p.m. to 7 a.m. curfew in evacuated areas along the Cedar River.

"We know it's a very stressful event for someone to have to leave their home, their belongings, and walk away," Cedar Rapids Mayor Ron Corbett said at a news conference Saturday morning. "Our home is our castle."

The city released maps showing areas that are predicted to be inundated by floodwaters if the Cedar River reaches a flood level of 24 feet or more. Current forecasts call for that level to be exceeded by at least a foot.

Cedar Rapids announced the evacuation decision to give residents time to plan, Corbett said.

"We want you to today take care of your belongings and your pets," Corbett said. "Tomorrow, we want you to take care of yourself."

The Cedar Rapids evacuation is not mandatory, Fire Chief Mark English said, but is very strongly recommended.

"I hope next week ... I can proclaim that no lives were lost," Corbett said.

Cedar Rapids officials are helping with sandbagging and evacuation efforts in Palo, and encouraged anyone who is not volunteering to avoid the affected areas.

The Red Cross opened a shelter Saturday at Cedar Hills Community Church in Cedar Rapids, organization spokesman Peter Teahen said.

Red Cross has plans to open more shelters in the coming days.

Teahen also urged people to check on their neighbors, especially those who are disabled.

As of 11:30 a.m. Saturday, the National Weather Service forecasted that the Cedar River would crest at 99.5 feet at 1 a.m. Sunday in Cedar Falls, at 25.5 feet at 1 a.m. Sunday in Waterloo, and at 24.5 feet at 7 a.m. Tuesday in Cedar Rapids.

Harvest Halts, Processors Close As Rains Swamp Upper Midwest

Rains Wash Away Once-promising Crops In Western Wisconsin

Associated Press, September 25, 2016

MADISON, Wis. — Floods and mudslides are washing away promising-looking corn and soybean crops in western Wisconsin.

Before the recent flooding, farmers were looking at a potentially record-setting harvest after a near-perfect growing season, the Wisconsin State Journal (http://bit.ly/2cU9BFN) reported.

But farmers hit by mudslides in the valleys "are basically in hell right now," said Vance Haugen, the agriculture agent for the UW Extension in Crawford County.

Farmers whose fields are covered in water or mud may have to wait until the ground freezes before they can harvest whatever is left, Haugen said.

"Farmers are getting psychologically worn down," Haugen said.

He said farmers are in the middle of harvesting corn silage used for animal feed, "and the quality goes down the longer you take to harvest it. And if you go into the fields too soon with your machinery you can squash the soil structure and it can take years — sometimes decades — to repair some of that damaged soil."

Corn already is showing signs of poorer quality in wet areas, Haugen said. Farmers worry that the quality of their corn will dip so low that it won't meet the standards to make ethanol, he said.

Adam Hady, the ag agent for the UW Extension in Richland County, said corn stalks also are weakening in some areas. That will lead to machinery breakdowns during harvest, he said.

"The crops were so beautiful and a lot of guys went from believing that this was going to be one of the best harvests ever to wondering if they'll even get into their fields for the harvest," Hady said.

Because the flooding has happened in just one region and a bountiful harvest is still expected in most grain-producing states, prices for corn futures have not risen, analysts say.

"So now they're going to get poor prices with less of a crop. That's tough to take," Haugen said.

After last week's heavy rains, forecasts call for a dry week ahead in southwestern Wisconsin.

The Latest: About 100 Homes In Palo, Iowa, Evacuated

Associated Press, September 24, 2016

CEDAR RAPIDS, Iowa — The Latest on flooding along rain-swollen rivers in Iowa (all times local):

5:30 p.m.

About 100 homes in low-lying areas of the small Linn County town of Palo along the Cedar River have been evacuated.

City Clerk Trisca Dix tells The Associated Press that the mandatory evacuation in the town of about 1,000 took place Saturday afternoon before the river was expected to crest Sunday night at 24.5 feet.

Mayor Tom Yock told the Des Moines Register that volunteers and work crews scrambled Saturday to protect as much of the town from flooding as possible.

Yock said the town, which was devastated by record flooding in 2008, is trying to be more proactive this time around.

He says many people moved their belongings to the upper levels of their homes and built sandbag barriers before evacuating.

4:10 p.m.

Iowa Gov. Terry Branstad and several other state leaders on Saturday toured flood damage in Clarkesville and Shell Rock and assessed flood preparedness plans underway in Cedar Rapids.

Branstad was joined by Lt. Gov. Kim Reynolds, Iowa National Guard Adjutant General Tim Orr and Iowa Department of Homeland Security and Emergency Management Director Mark Schouten.

Branstad and Reynolds also expect to assess flood damage next week.

On Friday, Branstad signed a disaster proclamation for 13 northeast Iowa counties affected by flooding. It activates the Iowa National Guard to assist in preparedness and in response when there's damage.

3:30 p.m.

Cedar Rapids officials are asking curious residents to stay out of downtown and flooded areas.

City Manager Jeff Pomeranz said Saturday that people wanting to get a glimpse of rising Cedar River have been getting in the way of workers trying to protect property.

Pomeranz says heavy equipment brought in to build earthen dams and erect flood barriers was hindered Friday because of heavy traffic from gawkers.

Officials also don't want traffic from onlookers clogging streets for those trying to evacuate areas around the river before it's expected to crest on Tuesday.

11:10 a.m.

Officials have lowered their estimate of where the swollen Cedar River will crest in Cedar Rapids, but they are still asking people to stay out of the Iowa city's downtown on Sunday night.

City Manager Jeff Pomeranz said Saturday at a news conference that the river is expected to crest at 24.5 feet on Tuesday, which is nearly a foot below the earlier expected crest of 25.3 feet.

Downtown Cedar Rapids is still expected to see flooding that will affect an estimated 1,500 properties.

Fire Chief Mark English asked those living in an area outlined on a flood map posted on the city's website to evacuate their homes by 8 p.m. Sunday. A curfew will be in place from then until 7 a.m. Monday.

Police chief Wayne Jerman says 73 checkpoints will be set up to ensure that residents and their properties remain safe.

___

This item has been corrected to reflect that it's the Cedar River, not the Mississippi River, that is threatening to flood Cedar Rapids.

___

10 a.m.

Iowa officials are pleading for volunteers to help fill sandbags and scrambling to erect earthen dams and berms to stave off flooding.

Cedar Falls officials issued calls Friday night and Saturday morning for volunteers, ahead of heavy rains forecast for Saturday night. Volunteers have been asked to bring work gloves, appropriate footwear and shovels.

Flooding has already forced road closures and evacuations in several communities upstream.

The National Weather Service has issued a flood warning for the area, including Waterloo, Waverly, Hampton and Eagle Grove in Iowa. While sunny skies were expected for much of Saturday, the weather service says storms Saturday night into Sunday are expected to bring more heavy rain to the area.

___

This item has been corrected to remove reference to the Mississippi River, which is not near Cedar Falls. It is the Cedar River that flows through the city.

The Latest: Iowa Governor Signs Disaster Proclamation

Associated Press, September 23, 2016

DES MOINES, Iowa — The Latest on flooding along rain-swollen rivers in Iowa and Wisconsin (all times local):

5:20 p.m.

Iowa Gov. Terry Branstad has signed a disaster proclamation for 13 northeast Iowa counties affected by flooding. It activates the Iowa National Guard to assist in preparedness and in response when there's damage.

The proclamation also enacts a grant program for homeowners meeting poverty guidelines to apply for up to $5,000 in financial aid to repair damage to a home or car or to replace food or clothing lost in the flood.

The Iowa Department of Homeland Security and Emergency Management has coordinated the delivery of state resources to the affected communities, including more than 120,000 sandbags, 22 water pumps and 400 flood cleanup kits.

___

5 p.m.

Gov. Scott Walker plans to tour flood damage in a southwestern Wisconsin village.

Walker's office announced Friday that the governor would visit Gays Mills on Saturday afternoon.

The village of about 500 people sits on the Kickapoo River. Dozens of homes in the village were damaged by flooding in 2007 and 2008. The floods drove part of the village to relocate to higher ground.

WXOW-TV reports (http://bit.ly/2d4O3nG) flooding over the last few days has left Gays Mills' downtown underwater, forcing village officials to reschedule the annual Apple Fest.

State emergency officials said Friday that state Highways 131 and 171 in Gays Mills were closed due to water over the roadway and a washout.

___

3 p.m.

Sandbagging is underway in the southern Minnesota town of St. Clair, where the Le Sueur River continues to rise after torrential rains earlier this week.

Officials say the floodwaters have already far surpassed the levels they saw in 2010, and the river isn't expected to crest until Saturday at the earliest.

The floodwaters are threatening sewer lift stations, which officials say will likely cause basement flooding. The town's more than 800 residents have been encouraged to cover their drains, remove valuables from their basements, and not to flush their toilets or run water.

While more than 7 inches of rain fell on St. Clair from Wednesday night into Thursday, the main problem is that even more fell upstream in the Waseca area, and that water is now making its way downriver.

___

This story has been corrected to state that 7 inches of rain fell on St. Clair, not St. Cloud.

___

10:50 a.m.

Authorities say a second person has died in the storms and flooding hitting western Wisconsin.

Vernon County sheriff's officials say 79-year-old Joseph Menne attempted to drive through floodwater on a road near his home on Thursday.

Investigators say he was in a pickup truck pulling a trailer that got stuck in six feet of water. The flood water eventually filled the pickup compartment. Menne was reported missing about 7 p.m. His body was found about two hours later.

The torrential rain and flooding also killed 53-year-old Michael McDonald in the same western Wisconsin county on Thursday, when his home slid down the side of a bluff and onto a highway.

The flooding and mudslides heavily damaged the small community where McDonald lived near the base of a bluff along the Mississippi River.

___

10:30 a.m.

Authorities in several eastern Iowa cities and counties are mobilizing resources to handle flooding from the rain-swollen Cedar River.

The river has already left its banks upstream, forcing evacuations in several communities upstream along its path through northeastern Iowa. More rain fell Thursday night and earlier Friday, and the National Weather Service says the flash-flooding threat remains high.

The weather service says more rain could change forecasts, and local officials say at least moderate flooding seems a certainty.

Just across the Mississippi River in southwest Wisconsin, residents of the tiny community of Victory are recovering from storms and flooding that caused one death. Authorities say local resident Michael McDonald died Thursday when his house slid onto state Highway 35.

___

6:30 a.m.

Residents of a tiny Wisconsin community along the Mississippi River are recovering after torrential rain and flooding ripped through the town and caused one death.

Heavy rain, flooding and mudslides have caused widespread damage in Victory, an unincorporated community in the Town of Wheatland. Authorities say 53-year-old resident Michael McDonald died after his house slid onto Highway 35 on Thursday.

Vernon County Sheriff John Spears says the community has been devastated and torn apart by the flooding.

The landslides and flooding closed roads throughout the area and contributed to a train derailment in Crawford County. Although the storms have moved away, the National Weather Service extended a flooding warning for Crawford, Vernon and Richland counties through Friday morning.

Utah Hit By Tornados, Flooding

Thousands of residents remained without power, schools canceled

Associated Press, September 23, 2016

SALT LAKE CITY—People across Utah were reeling Friday after storms ripped through the state, including two tornados that damaged more than a dozen buildings hundreds of miles apart.

Thousands of people remained without power after the severe weather that also flooded streets and dropped golf-ball-sized hail.

No serious injuries have been reported, but at least 12 homes were badly damaged by a tornado in the northern city of Washington Terrance, the Standard-Examiner of Ogden reported.

A garage was lifted from its foundation, trees were ripped from the ground and cars were dented by hurtling chunks of debris. Authorities say the cleanup is just beginning, but could take days or weeks.

Classes were canceled Friday at several area schools.

Another twister tore roofs off buildings in the southern Utah town of Panguitch, marking the second touchdown there in less than a month, officials said.

Severe weather also caused extensive flooding in southern Utah and dropped hail near the Great Salt Lake. In the town of Roosevelt, several homes were affected by the rising water, which also filled part of State Street. STT -0.59 %

Up north, hail pelted Antelope Island on the Great Salt Lake and the winds ripped the roof off a building.

2 Tornados Touch Down Hundreds Of Miles Apart In Utah

Associated Press, September 23, 2016

SALT LAKE CITY — Two tornados touched down hundreds of miles apart in Utah, damaging about two dozen buildings and knocking out power to thousands of people.

The severe weather also flooded streets and dropped golf-ball-sized hail in some areas.

No serious injuries were reported, but damage from one tornado left 21 homes unlivable the

Washington Terrace area, sheriff's Lt. Nate Hutchinson told the Deseret News.

Resident Gaelynn Sewell's lost her home in the storm, leaving her without as much as a toothbrush or clean clothes.

"We lost things that can never be replaced," Sewell told The Salt Lake Tribune.

A garage was lifted from its foundation, trees were ripped from the ground and cars were dented by hurtling chunks of debris, officials said.

About 50 families were evacuated due to the tornado, and damages were expected to top $1.5 million. Classes were canceled at several schools.

A group of students from Utah Military Academy was nearly caught in the twister while running a 5K race. Pelted by flying debris, the group tried to hang onto trees — some of which snapped in half.

"If felt like there was a huge, almost like a slingshot bringing you back toward the tornado," Jacob Hite told the Deseret News. "It was pretty much like trying to run away from a huge vacuum cleaner."

Authorities say the cleanup could take weeks. Utah Gov. Gary Herbert planned to survey the area.

Another twister tore off a roof as it damaged two buildings in the southern Utah town of Panguitch. It was the second time in less than a month that a tornado touched down there, officials said.

Severe weather also caused extensive flooding in southern Utah and dropped hail near Great Salt Lake.

Flooded Roads In Southeastern Minnesota Reopening

Associated Press, September 24, 2016

ROCHESTER, Minn. — Roads are reopening in southeastern Minnesota as flood water recede.

The Minnesota Department of Transportation says Highway 105 near the Iowa border south of Austin reopened early Saturday after being closed because of flooding from the Cedar River.

Highway 250 north of Lanesboro also reopened Saturday morning. But Highway 65, which is Main Street in Albert Lea, remains closed with a local detour in place.

MnDOT says rivers in southeastern Minnesota remain at high levels. Motorists should not try to drive through standing water on roads.

North of Minneapolis, parts of Highway 169 remain closed in both directors on the border of Maple Grove and Brooklyn Park because of flooding. The Star Tribune reports the road is expected to remain closed until Sunday. More rain is forecast for the area.

Heavy Rain Leads To Flood Warning In Northwestern Oklahoma

Associated Press, September 25, 2016

SEILING, Okla. – Forecasters have issued a flood warning for parts of northwestern Oklahoma following thunderstorms that dropped more than 2 inches of rain in some areas.

The National Weather Service in Norman said Sunday a flood warning for the North Canadian River near Seiling in Dewey County is in effect until this evening.

Forecasters say that at 9 a.m. Sunday the river's level was slightly higher than its 11-foot flood stage and minor flooding was occurring. River levels were expected to fall later Sunday and will fall below flood stage late Sunday afternoon.

The flooding could inundate croplands, pastures, oil wells and rural roads. Affected areas include Major County downstream to the headwaters of Canton Lake in Dewey County. Forecasters say livestock should be relocated to places higher than nearby river banks.

N. Carolina Flooding From Julia Closes Schools, Spews Sewage

Associated Press, September 23, 2016

WINDSOR, N.C. — Damage from flooding in eastern North Carolina approached the level of destruction left behind by Hurricane Irene in 2011, Gov. Pat McCrory said Friday.

But instead of the hurricane's storm surge, the cause of this week's flooding was days of rain.

"We literally have water up to people's waist and above, and many houses have been flooded," McCrory said at a news conference.

About 63 people across northeastern North Carolina have had to be rescued from their homes by fast-water rescue teams. Another 61 were taken to safety from threatened nursing homes.

For much of this week, the remnants of Tropical Storm Julia sat spinning off the coast, dropping anywhere from a foot of rain in parts of North Carolina to nearly 18 inches in the Hampton Roads region of Virginia.

Schools canceled classes, a downtown was submerged and overwhelmed sewers spewed untreated wastewater.

McCrory said the Bertie County seat of Windsor appeared to suffer the worst, although floodwaters appeared to be receding. The town of about 3,000 along the Cashie River received more than a foot of rain.

Windsor Police Chief James Lane asked people to stay out of downtown. He said business owners need a chance to assess damage after flood waters inundated the business district. The Cashie River reached 15 feet (5 meters) on Thursday, 2 feet (2/3 meter) above major flood stage.

Windsor Fire Chief Billy Smithwick said the river was dropping “pretty quickly” and that 35 homes had been damaged. The American Red Cross put that number at around 60 homes.

But other parts of northeastern North Carolina were also flooded.

A news release from Elizabeth City reported that 1 million gallons of untreated wastewater flowed into the Charles Creek and the Pasquotank River.

City manager Rich Olson told the Virginian-Pilot (http://bit.ly/2d61wxB) that floodwaters had overloaded manholes, sending sewage into the city’s storm water system and on into the waterways. The leakage began Wednesday and continued for about 24 hours, the city said.

School district websites in several counties also reported closings for a second day or more, including Bertie, Currituck and Hertford.

Media outlets reported that Pender County schools are operating on a two-hour delay Friday after the area received 7 inches of rain, with more on the way.

Gov. McCrory had declared a state of emergency in 11 counties Thursday.

California Wildfire In Sonoma County Sends Residents Fleeing

Associated Press, September 25, 2016

CLOVERDALE, Calif. — A wildfire that erupted amid hot, dry conditions and gusty winds in Sonoma County north of San Francisco has sent about 90 people fleeing from their homes.

The California Department of Forestry and Fire Protection says the blaze in rural Cloverdale began Sunday morning and spread to 1,500 acres (607 hectares), or more than 2 square miles (5.2 square kilometers).

Fire spokesman Paul Lowenthal says about 90 people in 36 homes were evacuated, and that the fire was threatening the Geysers geothermal field.

Firefighters were battling the blaze in steep terrain, temperatures in the high 90s, and strong winds in the higher elevations of northern Sonoma and northern Napa counties.

The fire is about 10 percent contained.

Moderate Earthquakes Recorded Off Oregon, California Coasts

Associated Press, September 25, 2016

PORTLAND, Ore. — Scientists say two moderate earthquakes occurred off the Oregon and California coasts late Saturday and early Sunday but neither triggered a tsunami warning.

The U.S. Geological Survey says a 5.0 earthquake occurred in the Pacific Ocean about 93 miles southwest of Gold Beach, Oregon, at about 10 p.m. Saturday.

Scientists say a 4.6-magnitude quake in the ocean about 97 miles west of Brookings, Oregon, followed at about 3 a.m. Sunday.

Neither quake prompted a warning from the National Tsunami Warning Center.

Haitians Gathered In Tijuana Awaiting Entry To U.S. Now Face Likely Deportation

By Sandra Dibble

Los Angeles Times, September 23, 2016

Hundreds of Haitians in Tijuana preparing to present themselves to U.S. officials at the San Ysidro Port of Entry face an unpleasant surprise: the probability of detention — and eventual deportation to their impoverished country — under a new policy by the U.S. Department of Homeland Security.

A day after the new policy went into effect, Haitian men who gathered in small groups on Friday morning outside the Padre Chava soup kitchen said they had heard nothing of the changes and asked anxiously for details.

“I don’t believe it,” Miterson Derisseau, a 25-year-old tile-setter from Port-au-Prince, said in French.

“Did Obama’s party decide this? He has a generous heart; he cannot deport us to our country,” added Derisseau, who hopes to join his sister in Boston.

Announced Thursday by Homeland Security Secretary Jeh Johnson, the new policy entails the resumption of regular, noncriminal deportations to Haiti, more than six years after these were suspended on the heels of the country's devastating 2010 earthquake. Haitians without visas now face the same treatment as most foreigners who show up at the border without permission to enter the United States: detention and deportation, unless they express fear of persecution upon being sent back.

The changes have come on the heels of an unprecedented and unexpected flow of Haitians to the San Diego border, more than 4,346 in the first 11 months of the current fiscal year — out of a total of 4,844 nationwide. Last year's total for San Diego was 315, while the national total was 795. The figures were released Friday by U.S. Customs and Border Protection.

In congressional testimony on Thursday in Washington, the director of U.S. Immigration and Customs Enforcement, Sarah Saldaña, called it "an emergency situation" and said she had learned of "40,000 Haitians who are en route to the United States," through South and Central America.

Most of the Haitians in Tijuana have come by land from Brazil, where they moved after the 2010 earthquake to find work, but found survival increasingly difficult as the South American country has suffered a severe economic downturn.

The Haitians usually obtain safe passage through Mexico with a document called "oficio de salida" that allows them in the country for a limited time period, usually about 30 days, enough time to make it to the U.S. border.

Until Thursday, when the new policy went into effect, most Haitians presenting themselves at the San Diego border were allowed into the United States under humanitarian parole, and typically released with notices to appear before an immigration court at a later date.

But as of Thursday, the reception changed: Haitians seeking entry now are subject to a fast-track process called Expedited Removal that entails immediate detention.

It is unclear how soon the deportations to Haiti would take place, said Faye Hipsman, an analyst with the Washington-based Migration Policy Institute.

"The big factor is cooperation with Haiti," Hipsman said. "My understanding is that this was a unilateral decision made by DHS," she said, adding that the Haitian government has yet to publicly respond.

Until now, many Haitians have been traveling to established Haitian communities in New York City and Miami, where activists have been closely following news of the Haitians in Tijuana. Marleine Bastien, executive director of FAMN Haitian Women of Miami, was part of a group from Miami who came to the San Diego-Tijuana border recently to understand the situation.

"My heart really bleeds for them. I saw their faces. I saw their hope, such hope," said Bastien, who has been collaborating with members of the San Diego Immigrant Rights Consortium.

Tijuana government officials have worked to distance themselves from the situation, privately stressing that the migrants are a federal matter, not a municipal one. Requests for interviews went unanswered this week.

As they have attempted to serve the rising numbers of Haitian migrants, Tijuana's four main shelters have found themselves overwhelmed. Of 2,823 people receiving shelter at Padre Chava since May 27, a total of 1,831 have been Haitians, according to the center.

Near the U.S. border, at the Desayunador Salesiano Padre Chava, a shelter and soup kitchen, the news of the policy had yet to fully hit on Friday morning. And the few who had an inkling of the changes remained undeterred, said Margarita Andonaegui, the shelter's administrator.

"Up to now, everyone has decided to go ahead" and keep their appointments with U.S. Customs and Border Protection at the San Ysidro Port of Entry. "Only one person asked me, 'What do you recommend?'"

Costa Rica Gets 100 Illegal Immigrants A Day Hoping To Get To U.S.

Children From Central America Flood U.S. Border--Again

By Alan Gomez

USA Today, September 23, 2016

The number of Central American children fleeing to United States is booming once again, as security and economic troubles continue to grip El Salvador, Guatemala and Honduras.

The rush of minors across the southwest border became a political firestorm in the summer of 2014, prompting the Obama administration to enact emergency measures to stem the flow and drawing intense scrutiny from critics of the president's immigration policies.

Last year, the efforts seemed to work as the number of unaccompanied minors from those three countries entering the U.S. dropped from nearly 70,000 in 2014 to 39,970.

Now the exodus to the USA is back on the rise. In the first 11 months of the 2016 fiscal year, which ends in September, 54,052 children made the journey.

There are many reasons for the surge:

--In El Salvador, people are fleeing a staggering level of violence that has made the country the murder capital of the world. It recorded a homicide rate of 104 people per 100,000 in 2015, the highest for any country in nearly 20 years, according to data from the World Bank.

--In Honduras, violence has come down in recent years, with a 15% drop in homicides in 2015, meaning many people leaving there are seeking better economic opportunities in the United States.

--In Guatemala, pockets of intense violence are driving some to the U.S. But Guatemalan officials said at the United Nations this week that their migrants are leaving mostly for economic reasons and should not be considered refugees.

And in all three, U.S. politics are at play. Republican presidential nominee Donald Trump has made a crackdown on illegal immigration a central tenet of his campaign, vowing to build a giant wall along the southwest border and deport millions of undocumented immigrants living in the U.S.

Mark Krikorian, executive director of the Center for Immigration Studies, a group that advocates against illegal immigration, said the prospect of a Trump presidency is a terrifying one for would-be immigrants, and is spurring the current rush of minors.

Krikorian said the Obama administration's "policy of deterrence" — warning Central Americans that they will be deported if they make the voyage — has fallen flat.

"Eighty percent of the people (Customs and Border Protection) catches are released," Krikorian said. "That's not deterrence. You'd be an idiot not to get into the United States now while you can."

The countries are making some progress in addressing their problems. In Honduras, the government created a commission to review all 14,000 members of the national police force, which has long been plagued by corruption. In the past few months, the commission has interviewed nearly 300 high-ranking police officers and dismissed 110 of them, according to a report from the Wilson Center, a Washington-based think tank.

In El Salvador, the government passed a law that's made it more difficult for gang members to continue running their operations from prisons. Before, people could easily smuggle cell phones into jail and even set up WiFi networks near the prisons so leaders could stay in contact with their gangs. But the new law has slowed that, according to Reuters.

President Obama requested $1 billion to help the so-called Northern Triangle countries improve their economies, security institutions and immigration enforcement capabilities. Congress approved $750 million in December, but most of that money hasn't arrived.

Nebraska Town Considers Banning Smoking In Apartments

By Margery A. Beck

Associated Press, September 25, 2016

Some leaders in a blue-collar Nebraska suburb that's home to Offutt Air Force Base are borrowing an idea from a vastly more liberal state: Ban apartment renters from smoking cigarettes and e-cigarettes inside.

The proposal, which would be one of the few such restrictions outside of California and is similar to federal rules for public housing across the U.S., isn't meant to protect the health of the city's 50,000 residents, but instead to prevent fires.

Councilman Don Preister proposed the ban, which wouldn't affect duplexes and single-family homes, in August after cigarette smoking at a single Bellevue apartment complex led to two fires a month earlier. The second fire destroyed the building, displacing dozens of people, and injured four, including a firefighter.

"We had firefighters in the building … when the floor started giving way," Preister said. "Had they not evacuated, we could have lost lives in the fire. I want to prevent that going forward."

But some residents in the city that borders Omaha set in a deeply conservative state see the proposal – set for a vote by the City Council on Monday – as an example of government overreach.

"I don't see how you're going to tell people what they can do in their homes," Brent Clatterbuck, who owns three apartment complexes in Bellevue, told the City Council earlier this month. "You're messing with somebody's home."

Even some anti-smoking advocates noted that Nebraska would seem an odd choice for the proposal.

"It would be surprising, if it had come up in isolation," said Pat McKone of the American Lung

Association, an anti-smoking group. "But there was a fire. We all understand – no matter what our political persuasion – that fire kills."

The ban, which Preister acknowledged would have secondary benefits of reducing health problems caused by secondhand smoke, is similar to those in dozens of California cities. Federal officials have adopted similar rules in public housing nationwide, but cities have rarely taken up the effort.

The Nebraska Department of Health and Human Services, which oversees the anti-tobacco group SmokeFree Nebraska, said it couldn't find any local ordinances in Nebraska or surrounding states that are similar to the Bellevue proposal.

"Smoking is both a health and safety issue," McKone said. "I'm not sure why we separate the issues of secondhand smoke and fire safety. Both are a danger to those living in multifamily dwellings."

Preister, who said he has nothing against smokers, argues that such a ban would also lower insurance premiums by preventing expensive fires. U.S. Fire Administration statistics show smoking is the No. 1 cause of home fire deaths.

Opponents of the proposal said officials haven't thought through the proposed change.

Margie Guy, a smoker who also rents four apartments located above her bridal boutique, recently told council members that three of her four renters smoke and two live on fixed incomes.

"Who are we to tell them they can't smoke in their own homes?" Guy asked. "What are the costs of actually enforcing these laws? Has anybody looked at that?"

James Hardy, a smoker who lives in an apartment, argues the measure would violate a state law that says people have a reasonable expectation of privacy in their own homes. He also contends it relegates apartment dwellers, who are often poorer than homeowners, to second-class citizens.

"By passing this law, you're effectively saying to the whole country, 'If you're a private property owner, you may still exercise your personal liberties and still have a reasonable expectation of privacy within your own dwelling' … you're saying to the denizens of all apartments that this new class of citizen must surrender their civil liberties by virtue of where they chose to live."

David Sutton, a spokesman for Richmond, Va.-based Altria Group Inc., which owns the nation's biggest cigarette maker, Philip Morris USA, said in an email there are places where smoking should be banned, such as in small enclosed areas, such as elevators, and places where children primarily are, such as schools.

"Complete bans go too far," he said. "Owners of private residences and other private places should determine the smoking policy for that particular location."

Preister understands the arguments against his proposal. He's not backing down.

"I can empathize with smokers who are continually feeling put upon," he said. "However, smoking is a choice. It's not a protected class. … They just need to go outside or to a safe place."

FEMA HOUSING

For Disabled Flood Victims, Answers On Housing Take On Special Urgency

By Andrea Gallo

Baton Rouge (LA) Advocate, September 23, 2016

Julie Harvey has been sleeping in her wheelchair since last month's floods swallowed up her home, her handicap accessible van, the red curtains she just bought and the souvenirs from a trip to Hawaii before a degenerative disease took hold.

She and her husband, Roy, both 55, have been trying for more than a month to receive a manufactured housing unit from the Federal Emergency Management Agency. Harvey is battling Lou Gehrig's disease, also called amyotrophic lateral sclerosis, or ALS.

As they stay in a Baton Rouge hotel, they wonder why Harvey's condition did not place them at the top of the list to receive a FEMA housing unit and how many other disabled people are living in similar circumstances. FEMA estimates that 15 percent of Louisiana's flood victims will need some form of accessible housing to accommodate a disability.

Advocates for people with disabilities say they should be prioritized for housing after disasters.

"Not only do they have special needs but sometimes they don't have the resources both physical and monetary to help themselves," said Lois Simpson, executive director of the Advocacy Center of Louisiana, which serves disabled people and senior citizens. "They should go to the front of the line."

After The Advocate asked FEMA specifically about Harvey's case on Friday, the Harveys received a call from the agency saying that they would survey their property in Central and that they should be receiving a housing unit. But prior to the newspaper's inquiry, Harvey had spent weeks calling FEMA and asking about whether she could receive one of the units and never received answers.

Related

In determining whether people are eligible for mobile homes, disabilities may not be a reason why somebody is moved up on the list.

"We aim to treat all eligible survivors equally, as our assistance is based on a case-by-case basis," a FEMA representative said in response to a specific question as to whether disabled people are given preference for mobile housing units.

The statement said FEMA encourages "all survivors — regardless of their specific situation — to call us and let us know about their situation. We will work with them and help them find solutions that fit their individual needs."

FEMA has made strides in recent years to try to ensure that their disaster responses include accommodations for people with disabilities, and Simpson said she has seen the improvements. The agency has an Office of Disabilities Integration and Coordination, which was created after their response to Hurricane Katrina did not include enough accommodations for disabled people.

Related

Instead of working directly with disabled people impacted by floods, the office works mostly within FEMA to make sure that their responses and protocols are inclusive for disaster survivors with disabilities. They send interpreters for sign language to FEMA town hall meetings and make sure that disaster recovery centers have signs and equipment for people hard of hearing or with bad vision.

They also meet frequently with a group called Emergency Management Disability and Aging Coalition, which makes use of Louisiana's existing agencies and advocacy groups for disabled people and senior citizens.

Marcie Roth, director of FEMA's Office of Disabilities Integration and Coordination, encouraged disabled flood victims looking for help to reach out to FEMA directly and to make use of advocacy groups for people with their particular disability.

Roth also encouraged people to mention their disability every time they reach out to FEMA.

Harvey said she tried to do just that, but FEMA never referred her to anyone who could speak to her about the complications her disability presented.

ALS attacks cells that control muscles until it kills those who have it. Along the way, people with ALS lose their ability to walk, to eat, to use the bathroom and to breathe on their own. ALS has no cure, but medicine can help to slow down the progression of the disease.

Related

"If I had to live in a trailer for the rest of my life, I'd be fine with that," Harvey said. "I don't want to spend the rest of my life in hotel rooms."

She and her husband both grew up in Baker and have been married for 35 years. They had been living in their home in Central for 25 years before it flooded, and stayed with a cousin before moving earlier this month to the Homewood Suites on Corporate Boulevard.

Harvey was diagnosed with ALS in 2012. She can still use her arms, talk and eat on her own. But she needs her husband's help to screw open bottles and has started needing his help over the past few weeks to wash her hair in the shower — something she could do by herself before the floods.

They worry that the stress from the floods is making her worse.

Sleeping poses one of the biggest challenges. She's on a breathing machine that requires her to be elevated when she sleeps, and the beds in the hotel where the Harveys have been staying for nearly a month do not adjust or elevate her the way she needs to be.

Harvey needs lots of specialized pillows to prop her up and keep her elevated, which the hotels do not have even in their handicap accessible rooms.

Their specialized bed was lost to the flood. She now spends all day, every day, in her wheelchair. She watches TV during the day, attempts to sleep at night and struggles too much to open the hotel doors to let her dog, Buck, play outside no matter how much he whines.

She was thrilled when FEMA finally contacted her late Friday afternoon saying they were working on a mobile housing unit for them, after unsuccessfully trying for weeks to get a response.

Related

Roth said FEMA has multiple housing unit options for people with disabilities. They have handicap accessible units, which have bigger bathrooms where wheelchairs can spin around, but they can also modify newer units with wheelchair ramps, grab bars or other accommodations for people who need them.

Other units need simpler fixes, like visual fire alarms for people who are deaf.

"We're not simply saying, everybody who has a wheelchair gets this unit," Roth said. "What we're doing is supporting a good match."

Other people trying to work through the system and find FEMA manufactured housing units for disabled people are still going through the same frustrations Harvey experienced.

Elizabeth Chapoton, a volunteer advocate for people with disabilities, has been working with a few families staying in hotels.

She said she constantly gets conflicting information about what people need to do to receive a housing unit. FEMA says people requesting units need to stay in touch with the agency and make sure to send them the proper paperwork.

"I need to know if these mobile units are real, if they're happening, and an actual timeline," Chapoton said. "If these people are not eligible for them, they need to be told so and moving on. Because they're holding onto a lot of hope here."

Related

The Harveys envision putting a housing unit on their property in Central, which is in a floodplain.

Local officials have to provide permits for people to place FEMA housing on their property. FEMA says mobile units can only be placed on a floodplain if there are no other housing resources, like commercial sites or rental properties nearby.

FEMA also says that people can stay in mobile housing units for up to 18 months.

"The first week, possibly two weeks, we cried more than anybody I've ever seen," Julie Harvey said, trying to fight back tears. Her husband rubbed her back and brought her tissues.

"But we're not complaining," she added. "We've had a lot of help."

Permit Office Sees Renovations Flurry

By Lauren Langlois

Hammond (LA) Daily Star, September 25, 2016

Tangipahoa Parish Permit Office processed more than 180 permits from Aug. 16 to Sept. 23 for residential renovations.

Many of those sought the free permits to rebuild after their homes being flooded in August.

Many of the renovations are happening in Ponchatoula, with permits for residential renovations in Robert, Hammond, Tickfaw and Independence coming up frequently as well.

The parish permit office has also processed permits for Federal Emergency Management Agency mobile homes provided to flood victims. So far, 10 permitted mobile homes are on private lands and 18 are in a trailer park on Miller Lane off Airport Road in Hammond.

Parish President Robby Miller said residents have not yet moved in to the emergency mobile homes inside the trailer park, but they should be moving soon as the mobile homes are about ready.

The permit office began seeing requests for FEMA mobile home permits starting last Friday. Six FEMA mobile homes went to residences in Ponchatoula, while one went to a home in the Village of Tangipahoa, two went to Hammond and one went to Independence.

For the period Aug. 16 through Sept. 23, there were 70 new construction permits for residential homes in the parish.

Parish President Denies Trailer Politics

By John Dupont

Livingston Parish News (LA), September 24, 2016

LIVINGSTON — Parish President Layton Ricks on Wednesday denied a Baton Rouge TV station's allegations that political pull put his daughter and son-in-law first in line to receive a FEMA trailer.

The report Tuesday on WBRZ said some parish employees requested the station's investigation after they questioned the issuance of a FEMA trailer to Ricks' daughter.

"I have zero control over FEMA," Ricks told The News. "A parish president gets no control over something like that."

More than 1,400 displaced residents have applied for the mobile housing units in the flood-affected areas. Approximately 40 had moved into the MHUs as of Wednesday.

FEMA grants top priority to first-responders.

He said his son-in-law – a war veteran – works as a first-responder with the Denham Springs Police Department. His daughter also works for DSPD.

"What you have is a war veteran trying to work as a policeman all the while his home is flooded and he's trying to work around the clock, while getting a few hours of sleep while he tries to rebuild their home," Ricks said.

The parish president said his daughter is eight months pregnant and falls into a "high risk" stage.

"I have another daughter who is flooded and she is staying with friends," Ricks said. "She doesn't have a FEMA trailer and she's not married to a first responder.

"It's a sad day when people begrudge first responders," he said.

Ricks does not believe his family members should receive preferential treatment.

He does not believe, however, that they should be "punished" for their association with him if they go through the same application process.

Ricks is also working to repair his home, which received floodwater and damage to newly purchased furniture.

"I don't have a FEMA trailer, yet I'm still slammed and snowed under," he said.

SpayMart Founder Comes To Rescue Of Kitties From Louisiana Flood

New Orleans Times-Picayune, September 24, 2016

When I talked to Lynn Chiche on Wednesday morning, she was getting medical records together for the 10 cats she was taking from her SpayMart Sanctuary in Picayune, Miss., to Louis Armstrong International Airport in New Orleans. She was thrilled because they were on their way to new forever homes.

"It's going to be awesome," she said. "Alaskan Airlines is doing once-a-week transports, taking flood dogs and cats to the Northwest. The Cat Adoption Team in Portland , Ore., has agreed to take 10 of our cats."

I was not surprised when she told me about the days she had spent in late August, visiting overstressed and overcrowded shelters from Denham Springs to Opelousas, leaving supplies and picking up kitties – a whole lot of kitties, as it turned out.

"I never intended to take so many," she said, which made me laugh.

Once, a long time ago, Chiche told me she was like an alcoholic, except it wasn't another drink she craved.

"I just always have to save one more cat," she said.

That could be her motto.

She and Pam Casey founded SpayMart in 1998 with the mission of promoting spaying and neutering to help solve the pet overpopulation crisis in southeast Louisiana. They settled on saving cats after visiting local shelters and asking, 'What can we do to have the biggest effect on euthanasia rates?" The answer was always the same: Educate people about the need to spay and neuter their pet cats. Educate people about the need to spay and neuter feral cats, too.

"Most shelters were killing five cats for every dog they euthanized," Chiche said. "That number has stayed about the same over the years."

Shortly before Katrina, the nonprofit group was getting ready to open a low-cost, high-volume spay-neuter clinic, but the storm tore the roof off the building and destroyed everything inside.

It flooded Chiche's house in Metairie, too, and she and her husband ended up in a FEMA trailer in rural Mississippi. The property included a 17,000 square-foot building that would become the SpayMart cat sanctuary.

Eventually, the FEMA trailer was replaced by a double-wide, and Chiche has been there ever since, caring for hundreds of cats. She brings adoptable cats to the SpayMart Thrift Shop on Veterans Boulevard in Metairie, adopts out senior cats to senior humans, and has a Community Kitten Foster Program in southeast Louisiana, where volunteers foster litters of kittens until they're ready to be adopted.

She takes in special-needs cats, older cats rescued from hoarder cases, cats left behind when people move out of apartments, kittens found in parking lots. She has always told me she wants to keep her numbers at "no more than 250," but when I ask her how many she has at the sanctuary, she usually admits to "almost 300."

I knew she would be rescuing cats after the August flooding, and I was happy to learn that Patty Hegwood had been with her. The two animal advocates are longtime friends.

"Patty brought money and support from Best Friends, and I told her, 'Why don't you and I get in the car and see where the help is needed most,'" Chiche said.

Hegwood was the business partner of Dr. Rollie Norris at Ark Animal Hospital on Jefferson Highway until 10 years ago. She left Metairie in 2006 and went to work for Best Friends Animal Society in Angel Canyon, Utah, so she could "help animals on a national level."

After the historic flooding, she came back to Louisiana to assess the situation.

"She talked them into letting her come," Chiche said.

Everywhere the two women went, they were moved by the devastation.

"It just pulled at your heart," Chiche said. "The shelter in Denham Springs was completely destroyed. It looked like after Katrina. The Companion Animal Alliance in East Baton Rouge got it really, really bad, too."

They visited one shelter and rescue group after another and left behind donations of dog and cat food, bowls, blankets, leashes and other supplies.

"I had put out a plea through the Thrift Shop," Chiche said.

As they went from place to place, they saw members of other familiar New Orleans area rescue groups, like ARNO, the St. Francis Animal Sanctuary, and Zeus's Place. And as they made their way west, they met others who shared their mission.

"Like Cat Haven and Companion Animal Alliance and Acadiana Animal Aid," she said.

It wasn't until they got to their last stop on Aug. 28 – the St. Landry Parish Animal Control in Opelousas – that Chiche felt the full impact of the disaster.

"I'd never seen so many dogs in my life. It was just row after row after row of them," she said.

The St. Landry shelter takes in dogs and cats from several rural areas where strays are handled by police departments, and there's no other animal control.

"It's just an endless stream of dogs and cats, puppies and kittens coming in," Chiche said.

She had already grabbed six older cats from Lamar-Dixon that day – pets whose families could no longer keep them because they had lost their homes – but when she entered the cat holding area at St. Landry, she knew she had to take more.

"The whole area was full, and cats were spilling out into the annex," she said. "It was mommas and babies and half-grown kittens. You see those little faces, and your heart just breaks."

She started walking up and down the rows, looking for the friendliest cats, the prettiest kittens, the most adoptable ones.

"I spent 30 minutes trying to make selections," she said.

Then she spied a pitiful tabby kitten with a look of total defeat on his face.

"He had his head down, and one arm was hanging outside the cage," Chiche said. "He had obviously given up hope."

She told Hegwood "I don't think I can do this," and Hegwood said, "Do you want me to pick?"

"I told Patty, 'No, I think I'm just going to take them all,'" Chiche said.

The room got very quiet, and the director said, "What did you say?" wondering if she had heard correctly. And then the director was crying and Chiche was crying, and they were loading up 59 cats and kittens. She named the sad little kitten "Reggie," and he is now a beautiful, playful 5-month-old ready to be adopted.

"I named every single one of them," Chiche said. "They're already all of our children."

When I asked her how many cats she'd have at the sanctuary after the 10 left for their new homes in Oregon, she said, "Over 300."

But that's all right. She did what Reggie's sweet little face inspired her to do.

What heartens Chiche is knowing how many other rescues in south Louisiana are passionate about saving animals.

"That's the little silver lining in all the sadness," she said. "I met so many people who are doing what we're doing. We're making progress. It's just going to take some time."

Lake County's Recovery: South Lake County Fire Continues Commitment To Protect, Rebuild Community

By Elizabeth Larson

Lake County (CA) News, September 25, 2016

SOUTH LAKE COUNTY, Calif. – The year 2015 will be remembered by many for the personal destruction it brought in the form of the Valley fire.

Tens of thousands of people were driven from their homes, thousands were left homeless.

The southern Lake County landscape – known for its pine forests as well as oak-studded vistas – was drastically changed and is unlikely to recover fully within the lifetimes of many those who loved it.
